A Free Library and Reading Room, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

Note.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Liverpool (*Free Public Library, Duke Street*).
Macclesfield (*Useful Knowledge Society*).
Manchester (*Chetham Hospital*).

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d.*

Free Patent Museum and Library, South Kensington.

NUMBERS of VISITORS for the Week ending 26th March, 1859.

Day of Month.	Day of Week.	Morning.	Evening.	Total.
Mar. 21	Monday -	189	622	811—Fine.
„ 22	Tuesday -	330	546	876— „
„ 23	Wednesday	118	71	189—Dull&Cl.
„ 24	Thursday*	154	—	154—Cloudy.
„ 25	Friday -	111	—	111—Fine.
„ 26	Saturday -	233	—	233— „
	Total -	1135	1239	2374

* The Museum closes at 5 o'clock.

Total number of visitors since the period of free daily admission (12th May, 1858) to 26th March, 1859, —80,238.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price 21*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

In course of Publication, by Order of the Commissioners.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s.* 5*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.
BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

LONDON:
Printed by GEORGE E. EYRE and WILLIAM SPOTTISWOODE, Printers to the Queen's most Excellent Majesty.
Published at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 547. FRIDAY, APRIL 1, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

2880. To ROBERT WILSON, senr., and ROBERT WILSON, junr., of Livesy Street, Manchester, in the county of Lancaster, for the invention of "Certain improvements in the preparation of leather in combination with india rubber and other materials, for the manufacturing of hose pipes and other purposes where leather is required to be impervious to water, steam, or frost."

On their petition, recorded in the Office of the Commissioners on the 16th day of December, 1858.

460. To THOMAS EARLE, of Clapham, in the county of Surrey, Contractor, for the invention of "Improved apparatus for conveying signals to railway trains in motion."

462. And to WILLIAM BASFORD, of Burslem, in the county of Stafford, Brick and Tile Manufacturer, for the invention of "Improvements in the method of, and means for, drying bricks and tiles preparatory to their being burnt, and also in the construction of kilns or ovens for burning such bricks, tiles, pipes, pottery, or earthenware, and in the mode of charging or placing these said articles therein to be burnt or fired, and also in certain appliances for regulating the heat therein."

On both their petitions, recorded in the Office of the Commissioners on the 19th day of February, 1859.

516. To GEORGE PEOVER, of Wilmington Square, Clerkenwell, in the county of Middlesex, Mathematical Instrument Maker, for the invention of "An improved optical instrument, being an improvement upon the kaleidoscope."

On his petition, recorded in the Office of the Commissioners on the 25th day of February, 1859.

600. To JAMES KING, of Moss Mill, near Rochdale, in the county of Lancaster, Cotton Spinner and Manufacturer, and ALFRED WILCOCK, of the same place, Mechanic, for the invention of "Improvements in certain parts of machines used in preparing, spinning, and doubling cotton and other fibrous materials."

602. To WILLIAM HALLILAY, of Wakefield, in the county of York, Gentleman, for the invention of "Improvements in apparatus for preventing smoke and economizing fuel."

604. To CHARLES MILLS, of High Street, Camden Town, for the invention of "Improvements in the action of pianofortes."

606. To EDWARD DEANE, of No. 1, Arthur Street, East, London Bridge, in the city of London, Gas Engineer, for the invention of "Improvements in apparatus for the transmission of gas and other fluids."

608. And to BENNETT MITCHELL BELLING, of 55, Queen's Road, Bayswater, Dentist, for the invention of "An improved apparatus for hardening india rubber for the bases of teeth."

On their several petitions, recorded in the Office of the Commissioners on the 8th day of March, 1859.

610. To JOHN ALLIN WILLIAMS, of Baydon, in the county of Wilts, Farmer, for the invention of "Improvements in machinery or apparatus for cultivating land by steam power."

612. To JOHN ROBINSON NICHOLSON, of Redditch, in the county of Worcester, Doctor of Medicine, for the invention of "New or improved machinery to be used in the manufacture of needles, a part or parts of which said machinery may also be used for pointing pins and other like articles."

614. To GEORGE COPE PEARCE, of Cyfarthfa, in the county of Glamorgan, Engineer, for the invention of "An improvement in cornets, trumpets, trombones, and other like wind instruments."

618. And to WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in billiard tables."—A communication from abroad by Abraham Bassford, of New York.

On their several petitions, recorded in the Office of the Commissioners on the 9th day of March, 1859.

620. To JOHN COWDERY MARTIN, of High Street, Barnes, in the county of Surrey, Naval Architect, for the invention of "An improvement in the manufacture of cannon and small fire-arms, and of projectiles to be used with the same."

622. And to RICHARD FREDERICK WOODWARD, of Birmingham, in the county of Warwick, Manufacturer, for the invention of "An improvement or improvements in the manufacture of certain kinds of scale beams and fittings used therewith."

On both their petitions, recorded in the Office of the Commissioners on the 10th day of March, 1859.

624. To JAMES HENRY BURTON, of Enfield Lock, in the county of Middlesex, England, for the invention of "An improvement in breech-loading fire-arms."

630. And to ALFRED VINCENT NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "An improved construction of steam engine, applicable also to the raising of water."—A communication from abroad by Samuel Huse, of the United States of America.

On both their petitions, recorded in the Office of the Commissioners on the 11th day of March, 1859.

632. To WILLIAM EDWARD NEWTON, of the Office of Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "An improvement in endless chain propellers for boats and other vessels."—A communication from abroad by Anson Wolcott, of New York.

638. And to RICHARD ALLISON, of Birmingham, in the county of Warwick, Engineer, for the invention of "Improvements in apparatuses for boring and sinking."

On both their petitions, recorded in the Office of the Commissioners on the 12th day of March, 1859.

640. To RICHARD WALLER, of No. 50, Baker Street, Portman Square, in the county of Middlesex, Gentleman, for the invention of "Improvements in joining leather, flexible and textile materials, for the production of boots and shoes, and articles of the like description, and harness, strapping, bags, sails, tent-covers, portmanteaus, and such other articles, together with machinery and apparatus for that purpose."

642. To ALFRED TYLOR, of Warwick Lane, Newgate Street, for the invention of "Improvements in apparatus for regulating the supply of water to water-closets and other vessels."

644. To DAVID JOY, of Leeds, in the county of York, Engineer, for the invention of "Improvements in hydraulic engines and meters."

646. To EDWIN SMITH, of Dudley Port, in the county of Stafford, Agent, for the invention of "Improvements in treating or preparing furnaces used in the manufacture of iron."

648. And to JOHN SAMUEL DAWES, of Smethwick House, near Birmingham, Gentleman, for the invention of "A new or improved method, or combination of arrangements for the better securing and collecting of night-soil or town manure, and rendering it more valuable for agricultural purposes."

On their several petitions, recorded in the Office of the Commissioners on the 14th day of March, 1859.

650. To CHARLES DESURMONT, of Seclin, France, Gentleman, and CHARLES GOUDEAU, of Alost, Belgium, Mechanical Engineer, for the invention of "Certain improvements in looms for weaving."

652. To CHARLES RITCHIE, of No. 143, the Strand, in the county of Middlesex, Engineer, for the invention of "Improvements in calculating machines."

654. And to BENJAMIN RIDER, of No. 61, Red Cross Street, Boro', in the county of Surrey, Leather Dresser, and Hat Leather Manufacturer, for the invention of "Improvements in hats, caps, and other coverings for the head, and in the apparatus used in the manufacture of such articles."

On their several petitions, recorded in the Office of the Commissioners on the 15th day of March, 1859.

655. To JOHN DIXON and ROBERT CLAYTON, both of Bradford, in the county of York, Engineers, for the invention of "Improvements in rolling iron and steel for manufacturing railway wheels and for other purposes."

657. To WILLIAM ROBERTSON, of Dundee, in the county of Forfar, North Britain, Engineer, and JAMES GUTHRIE ORCHAR, of the same place, Engineer, for the invention of "Improvements in weaving."

659. To JAMES PARKER, of Claremont Cottage, Lilford Road, Camberwell, Surrey, Solicitor's Clerk, for the invention of "Improvements in lever sails, and in submerged feathering-propellers."

661. To FRANCIS MORDAN, of Goswell Road, in the county of Middlesex, Manufacturer, for the invention of "A means of keeping a stopper connected with a bottle, jar, or such like receptacle, when removed from the mouth thereof."

663. To JAMES FULLER, of Reading, in the county of Berks, Turner, for the invention of "Improvements in churns."

665. To JOSEPH MICHEL-DENYS, of Charleroi, in the kingdom of Belgium, Gentleman, and No. 4, South Street, Finsbury, London, for the invention of "Certain improvements in the construction of railway crossings."

669. To GEORGE HAMILTON, of St. Martin's-le-Grand, and WILLIAM HENRY NASH, of Poplar, Engineer, for the invention of "Improvements in tumbler or lever locks, and in keys for such and other locks."

671. And to THOMAS WILLIAM MILLER, of Her Majesty's Dockyard, Portsmouth, for the invention of "Improvements in blocking or securing ships

and other vessels whilst being removed, examined, or repaired."

On their several petitions, recorded in the Office of the Commissioners on the 16th day of March, 1859.

673. To CHARLES GARNETT, of the firm of Peter and Charles Garnett, of Cleckheaton, in the county of York, Machine Makers, for the invention of "Improvements in machinery for ginning cotton, and for cleaning cotton and certain other fibrous materials."

675. To EDWARD THOMAS HUGHES, of the firm of Hughes and Son, Patent Agents, No. 123, Chancery Lane, London, W.C., for the invention of "Improvements in machinery or apparatus for crushing sugar-canes and other materials."—A communication from Saint Jean Thérèse, residing at Lamentin, Martinique, French colony.

677. To THOMAS SKELTON, of Plaistow, in the county of Essex, Draughtsman, for the invention of "Improvements in steering apparatus."

679. To PH. LAROCHETTE ainé, of Paris, in the empire of France, for the invention of "Improvements in machinery for brewing."

681. And to ARTHUR WARNER, of No. 31, Threadneedle Street, in the city of London, and WILLIAM HENRY TOOTH, of Sumner Street, Southwark, in the county of Southwark, for the invention of "Improvements in the manufacture of iron."

On their several petitions, recorded in the Office of the Commissioners on the 17th day of March, 1859.

683. To WILLIAM COOK, of the town and county of the town of Kingston-upon-Hull, Coppersmith, for the invention of "A smoke consumer."

685. To Sir WILLIAM GEORGE ARMSTRONG, Knight, of Newcastle-upon-Tyne, in the county of Northumberland, Civil Engineer, for the invention of "Improvements in the means of igniting explosive projectiles."

687. To JOHN MOLESWORTH, of Rochdale, in the county of Lancaster, Gentleman, for the invention of "An improvement in telegraphic communication."—A communication from abroad by Frederick Newton Gisborne, and Francis O. J. Smith, of Boston, in the United States of America.

689. To JOHN HINKS and GEORGE WELLS, of Birmingham, in the county of Warwick, Manufacturers and Co-partners, for the invention of "A new or improved penholder."

691. To ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, for the invention of "An improvement in the manufacture of cast steel."

693. And to CHARLES LAMBERT, of Sunk Island, in the county of York, Farmer, for the invention of "Improvements in corn and seed drills."

On their several petitions, recorded in the Office of the Commissioners on the 18th day of March, 1859.

695. To THOMAS ALLEN, of Waingate, Sheffield, in the county of York, Clothier, for the invention of "Improvements in petticoats."

697. To EDMUND LEOPOLD BENZON, of Sheffield, in the county of York, Steel Manufacturer, for the invention of "An improvement in the casting of steel."—A communication from Ewald Riepe, residing at Pau, France.

699. To HENRY WHITAKER, of Newman Street, in the county of Middlesex, for the invention of "A new musical instrument, to be called 'The Cherubine Minor.'"

701. To WILLIAM HAIGH, of Reddish, in the county of Lancaster, Paper Maker, for the invention of "An improved manufacture of paper, to be employed for the purposes of packing and other similar uses."

703. To ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, for the invention of "An improvement or improvements in the manufacture of cast steel."

705. And to ALFRED VINCENT NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "Improvements in propelling vessels."—A communication from abroad by Theodore W. Phinney, of Newport, Rhode Island.

On their several petitions, recorded in the Office of the Commissioners on the 19th day of March, 1859.

707. To WILLIAM HAGGETT, of Sherborne, in the county of Dorset, Architect and Surveyor, for the invention of "An improved method of treating metals and other materials to increase their strength."

709. To WILLIAM HUDSON, of Burnley, in the county of Lancaster, Machinist, and CHRISTOPHER CATLOW, of the same place, Overlooker, for the invention of "Certain improvements in looms for weaving."

711. To GEORGE FERGUSON, of the Strand, in the county of Middlesex, Naturalist, for the invention of "The combination and application of certain materials for the destruction of insects and vermin."

713. To SIGISMOND LEONI, of Saint Paul Street, in the county of Middlesex, Manufacturer, for the invention of "Improvements in the manufacture of useful and ornamental articles, surfaces, and works, parts of articles and parts of machinery or apparatus, from talc and other silicates of magnesia, and from the same combined with other substances."

715. To GEORGE GREGG, of Sheffield, in the county of York, Currier, for the invention of "Improvements in currying or manufacturing leather."

771. And to WILLIAM RHODES, of Wade Street, Thornton Road, Bradford, in the county of York, Whitesmith, for the invention of "Certain improvements in fire-proof safes."

On their several petitions, recorded in the Office of the Commissioners on the 21st day of March, 1859.

719. To JOHN DAVIS, of No. 18, Frith Street, Soho, in the county of Middlesex, Professor of Music, for the invention "Improvements in musical instruments."

721. To WILLIAM ARMAND GILBEE, of No. 4 South Street, Finsbury, London, Patent Agent, for the invention of "An improved apparatus for stretching and polishing silk thread."—A communication from abroad, by Messrs. Lyonnet and Prenat, of St. Etienne, France.

723. To Frederick Ashford, of Commercial Road East, London, in the county of Middlesex, for the invention of "Improved means of fastening and securing treasure or bullion cases."

725. To Edward Maynard, of the city of Washington, in the district of Columbia, and United States of America, for the invention of "Improving breech-loading fire-arms."

729. To Sir Peter Fairbairn, of Leeds, in the county of York, Knight, and Robert Newton, of Leeds aforesaid, Commercial Traveller, for the invention of "Straightening and separating the fibres of silk waste, and laying them in parallel lengths preparatory to combing or dressing."

731. To Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improvements in fire-arms and ordnance, and in projectiles and apparatus to be employed therewith."—A communication from Charles Rochaz, residing at Paris.

733. And to Charles A. Watkins, of the firm of Hamilton and Co., Brush Manufacturers, of Greek Street, Soho Square, for the invention of "Improvements in the manufacture of brushes."

On their several petitions, recorded in the Office of the Commissioners on the 22nd day of March, 1859.

Invention protected for Six Months by the Deposit of a Complete Specification.

Notice is hereby given, that the petition of

780. William Mossman, of No. 50, Cumming Street, Pentonville, in the parish of Clerkenwell, in the county of Middlesex, Manufacturing Stationer, praying for Letters Patent for the invention of "Improvements in machinery applied to embossing or cutting presses, for the better and more expeditious manner of manufacturing ornamental cut out and embossed work in paper, leather, parchment, cloth, foil, and other materials," was deposited and recorded in the Office of the Commissioners on the 29th day of March, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Patents Sealed.

List of Letters Patent which passed the Great Seal on the

1*st April,* 1859.

2194. William Brierley the elder, of Cleckheaton, in the county of York, Machine Maker, for an invention of "Improvements in looms for weaving carpets and other fabrics."—Dated 2nd October, 1858.

2198. John Chappell Holman, of London Street, Fitzroy Square, in the county of Middlesex, and Edward Walter Holman, of Grafton Street, Fitzroy Square, in the same county, Piano-forte Manufacturers, for an invention of "An improved piano-forte action."—Dated 2nd October, 1858.

2206. James Mills, of Manchester, in the county of Lancaster, Machinist, for an invention of "Certain improvements in machinery or apparatus for roving, slubbing, or spinning cotton and other fibrous materials."—Dated 5th October, 1858.

2207. Anthony Bessemer, of Upper Holloway, in the county of Middlesex, Gentleman, for an invention of "Improvements in the manufacture of iron and steel, and in apparatuses to be employed therein."—Dated 5th October, 1858.

2209. William Menelaus, of Dowlais Iron Works, in the county of Glamorgan, Manager, for an invention of "Improvements in machinery for straightening rails and wrought iron bars."—Dated 5th October, 1858.

2211. John Harcourt Brown, of the Abbey Mills, Romsey, in the county of Hants, for an invention of "Improvements in the manufacture of projectiles."—Dated 5th October, 1858.

2213. John Harcourt Brown, of the Abbey Mills, Romsey, in the county of Hants, for an invention of "Improvements in the manufacture of cartridges."—Dated 5th October, 1858.

2219. George Collier, of Halifax, in the county of York, for an invention of "Improvements in winding machines."—Dated 6th October, 1858.

2223. William Malam, of Clapham Road, in the county of Surrey, Gas Engineer, for an invention of "Improvements in apparatuses for the manufacture of gas."—Dated 6th October, 1858.

2225. Charles Baylis, of the Poultry, in the city of London, Solicitor, for an invention of "An improved mode of constructing and arranging underground chambers in populous cities or towns for the reception of gas and water pipes and telegraph wires."—Dated 6th October, 1858.

2230. David Naylor, of Stockport, in the county of Chester, Carpet Manufacturer, for an invention of "Improvements in looms for weaving carpets and other fabrics, and in the methods of manufacturing the same."—Dated 7th October, 1858.

2248. Antoine Ephrem Galliard, No. 2, Seymour Place, St. James' Churchyard, Clerkenwell, Middlesex, for an invention of "Making self-supplying portable fountains to play water or water perfumed."—Dated 9th October, 1858.

2251. Lewis Hope, of Bishopsgate Churchyard, in the city of London, Merchant, for an invention of "Improvements in electric telegraph cables."—Dated 9th October, 1858.

2292. William Clark, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for an invention of "Improvements in tanning hides, and in apparatus employed therein."—A communication from Antoine Louis Adolphe Favier, residing abroad. — Dated 14th October, 1858.

2296. Thomas Archer, junior, of Dunston, near Gateshead, for an invention of "Improvements in apparatus for preventing explosions of steam boilers."—Dated 14th October, 1858.

2303. Thomas Moore, Brewer, of the firm of Tennant Brothers, Exchange Brewery, Sheffield, in the county of York, for an invention of "Im-

provements in refrigerators."—Dated 15th October, 1858.

2307. George Fergusson Wilson, of Belmont, Vauxhall, in the county of Surrey, for an invention of "Improvements in preparing compounds containing sulphur for preventing and destroying blight, mildew, and insects."—Dated 15th October, 1858.

2364. Robert Kennedy and James Armstrong, both of Lisburn, in the kingdom of Ireland, for an invention of "An improved kiln for drying grain."—Dated 22nd October, 1858.

2372. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in pumps."—Dated 23rd October, 1858.

2376. Joseph James Welch and John Stewart Margetson, both of Cheapside, in the city of London, for an invention of "Improvements in the manufacture of scarfs for gentlemen's wear."—Dated 25th October, 1858.

2383. Stephen Rossin Parkhurst, of the city and state of New York, United States of America, for an invention of "Improvements in cotton gins."—Dated 25th October, 1858.

2406. Abel Heywood, of the city of Manchester, Paper Maker and Stainer, for an invention of "Improvements in machinery or apparatus for suspending paper and woven fabrics to be dried."—Dated 28th October, 1858.

2409. William Munro, of 32, Bartholomew Close, in the city of London, Manufacturing Chemist, for an invention of "A new manufacture of capsules and other metallic articles."—Dated 28th October, 1858.

2436. William Palmer, of the city and state of New York, United States of America, for an invention of "Improvements in fire arms."—Dated 1st November, 1858.

2439. Marc Antoine François Mennons, of the British and Foreign Patent Offices, 39, Rue de l'Echiquier, Paris, in the empire of France, for an invention of "An improved combination for the production of voltaic electricity, and its application as a curative agent to certain parts of the human body."—A communication from a Foreigner residing abroad.—Dated 2nd November, 1858.

2879. William Morgan, of Witton Park Ironworks, near Darlington, in the county of Durham, for an invention of "Improvements in the manufacture of iron."—Dated 15th December, 1858.

2987. Thomas Bell, of Plaistow, in the county of Essex, for an invention of "Improvements in purifying gas."—Dated 30th December, 1858.

68. Edward Cobbold, of Hendon, in the county of Middlesex, Gentleman, for an invention of "Improvements in instruments for writing and marking, and for the preparation of certain substances for conversion into instruments for writing and marking, and for the application to useful purposes of certain products arising from preparation aforesaid."—Dated 8th January, 1859.

147. William Newman, of Aston, near Birmingham, in the county of Warwick, Brassfounder, for an invention of "New or improved furniture for window and other blinds."—Dated 18th January, 1859.

249. Henry Rawson, of Leicester, for an invention of "Improvements in machinery for preparing wool and other fibrous substances."—Dated 27th January, 1859.

250. James Buckingham, of Walworth Common, in the county of Surrey, Civil Engineer, and George Salt, of Saltaire, near Bradford, in the county of York, Manufacturer, for the invention of "Improvements in the construction and adaptation of drawing and other rollers employed in drawing and compressing fibres, which improved construction of rollers is also applicable in compressing fabrics."—Dated 27th January, 1859.

302. John Buncher, of Birmingham, in the county of Warwick, Brass Founder, for an invention of "Improvements in the manufacture of eyes or fastenings for stair rods."—Dated 2nd February, 1859.

326. Patrick Adie, of the Strand, in the county of Middlesex, Mathematical Instrument Maker, for an invention of "Improvements in apparatus for taking levels and measuring angles."—Dated 4th February, 1859.

352. Doctor Ernst Bagnicki, of New York, in the county and state of New York, in the United States of America, for an invention of "An improved syringing apparatus for curing leucorrhea and similar sexual diseases."—Dated 8th February, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 30th March, 1859, inclusive.*)

28th March.

786. John Gray, of Peckham, in the county of Surrey, Engineer, for an invention of "Improvements in steam-boilers, furnaces, and fire bars."—Dated 1st April, 1856.

923. William Tytherleigh, of Birmingham, in the county of Warwick, Accountant Clerk, for an invention of "A new or improved method of coating or covering iron or articles of iron, with copper or alloys of copper."—Dated 18th April, 1856.

29th March.

770. Benjamin Looker the younger, of Kingston-upon-Thames, in the county of Surrey, Brick and Tile Manufacturer and Potter, for an invention of "An improved mark or indicator to be let or fixed into the ground in burial grounds and other places."—Dated 31st March, 1856.

902. William Fuller, of Jermyn Street, in the county of Middlesex, Ice Pail Manufacturer, for an invention of "Improvements in ice pails."—Dated 15th April, 1856.

908. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improvements in fire-arms and powder flasks."—A communication from Colonel Sam. Colt.—Dated 16th April, 1856.

30th March.

1024. Joseph Rigby, of Ashton-under-Lyne, in the county of Lancaster, Mechanic, for an invention of "Improvements in machinery for grinding or sharpening the card cylinders and rollers of carding engines."—Dated 30th April, 1856.

FOREIGN PATENTS.

FRANCE.

CURRENT LIST of PATENTS of Invention and Certificates of Addition.

1859.

(Communicated by His Excellency the Minister of Agriculture, Commerce, and Public Works.)

NOTE.—The duration of a Patent is fifteen years, except where determined by that of a previously existing foreign Patent.*

424. FRANÇOIS RADI, of 113, Grande Rue Vaugirard, for "A tent with double roofs, one above the other."—Dated 28th January, 1859.

425. DELESTRE and VILMORIN, the former of 5, Quai Conti, the latter of 30, Quai de la Mégisserie, Paris, for "Caoutchouc tops of pencils."—Dated 28th January, 1859.

426. ANTOINE PAUL COLOMER, of 102, Rue St. Louis, Paris, for "A system of advertisements."—Dated 28th January, 1859.

427. ANGE ELÉONORE JEAN DENIS TUMELAIS, of 20, Rue Notre Dame des Victoires, Paris, a Certificate of Addition to his Patent of 16th October, 1857, for "An apparatus worked by air or water, being a substitute for all kinds of motive power." —Dated 28th January, 1859.

428. PEAN and PIGEON, of 61, Passage Choiseuil, Paris, for "A cake called 'gold bread à la romaine.'" —Dated 28th January, 1859.

429. PIERRE DENIS NOLET, of 35, Rue de la Lune, Paris, for "A travelling copying press."—Dated 28th January, 1859.

430. CHARLES FRÉDÉRIC RAPP, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in sewing machines." — Dated 28th January, 1859.

431. RIVOIRE and DELEGUE, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "A combined bed and spring mattress, and single spring mattress, with varying surfaces and peculiar arrangements."—Dated 28th January, 1859.

432. FÉLIX DEHAYNIN, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "An improved machine for conglomerating coal dust." —Dated 28th January, 1859.— (Belgian Patent, expiring 28th January, 1879.)

433. FRÉDÉRIC FREPPEL, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 27th February, 1857, for "Sizing fabrics in weaving."— Dated 28th January, 1859.

434. THÉODORE AUGUSTE MARIE SORTAIRE, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 11th December, 1858, for "A self-acting system of conveying telegraphic messages." — Dated 28th January, 1859.

435. AUBIAS CHARLES ISIDORE HENRY, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A chocolate machine."—Dated 28th January, 1859.

436. JEAN JACQUES TAXILE DE LA FENESTRE, of 144, Avenue des Champs Elysées, Paris, for "A wet process for extracting carbon from peat and other fuel."—Dated 29th January, 1859.

437. ANDRÈS, BURDEL, and CHICARD, represented by Ricordeau,. of 23, Boulevart de Strasbourg, Paris, for "A composition for reviving cloth and lace work of scarlet wool."—Dated 29th January, 1859.

438. NAPOLÉON XAVIER GIVAUDAN, domiciled Rue Labate, Montmartre, for "An essence applicable to various purposes."—Dated 26th January, 1859.

439. JEAN LOUIS FRANÇOIS FEMINIER, of 65, Rue Neuve des Petits Champs, Paris, for "A kind of pins."—Dated 29th January, 1859.

440. ALEXANDRE HENRI DUFRESNE, of 6, Rue de Seine, Paris, for "A new mode of applying machines used in engine-turning, copying, &c."— Dated 29th January, 1859.

441. HENRI LOUIS MARIE, of 10, Rue St. Ferdinand aux Ternes, a Certificate of Addition to his Patent of 12th October, 1858, for "New arrangements of economical pavilions and houses." —Dated 29th January, 1859.

442. BREMOND and THUILLIEZ, the former of 70, the latter of 65, Rue Neuve des Mathurins, Paris, a Certificate of Addition to his Patent of 4th January, 1859, for "Improvements in various parts of spinning apparatus."—Dated 29th January, 1859.

443. ROSE DIDIÈRE EMILIES DÉCHANET, of 54, Rue de Paris, Clichy la Garenne, for "An embroidery stitch."—Dated 29th January, 1859.

444. BEAUCOURT and VOEGELI, represented by Zacharie, of 40, Rue de Bourbon, Lyon, département du Rhône, for "A system of levers with a fulcrum for smoothening the action of keyboards of organs."—Dated 31st January, 1859.

445. DAVID SAMUEL PAGÈS, of Roquecourbe, département du Tarn, for "Manufacture of woollen double socks without wrong sides."—Dated 1st February, 1859.

446. JOSEPH BÉRANGER, of 3, Cours Bourbon, Lyon, département du Rhône, for "A water counter and regulator."— Dated 1st February, 1859.

* For the French Patent Law see No. 228 of this Journal.

447. Fraissinet and Beau, of Alais, département du Gard, for "Chambered tissue of iron ribbons." —Dated 1st February, 1859.

448. Louis Parent, of St. Marcel-les-Châlon, département de Saône et Loire, for "Manure composed of waste of animal matter and fecal matter." —Dated 2nd February, 1859.

449. Léonard Quinet, of Anzin, départment du Nord, for "Applying gun barrels to handles of swords."—Dated 2nd February, 1859.

450. Antoine Barbary, of Guéret, département du la Creuse, for "An apparatus for preventing boiling milk from flowing over."— Dated 2nd February, 1859.

451. François Payre, of 7, Rue du Haut-Vernay, St. Etienne, département de la Loire, a Certificate of Addition to his Patent of 6th August, 1853, for "A system of ribbon-looms." — Dated 2nd February, 1859.

452. Charles Chrétien, of 50, Rue d'Armentiers, Lille, département du Nord, a Certificate of Addition to his Patent of 15th November, 1858, for "An economical washing machine with a reciprocating motion."—Dated 3rd February, 1859.

453. Lesis-Détève, of Beaumetz-lez-Doges, département du Pas de Calais, for "An economical motor."—Dated 26th January, 1859.

454. Carpentier, of Boulogne, département du Pas de Calais, for "An apparatus for facilitating the practical teaching of the legal system of weights and measures for the use of schools and private persons."—Dated 28th January, 1859.

455. Adolphe Rousseau, of 25, Rue des Licés, Avignon, département de la Vaucluse, for "A regulating hinge hook for doors and windows."— Dated 31st January, 1859.

456. Mrs. Portes-Mesnard, of Montmoreau, département de la Charente, for "A process for promoting the growth of hair."—Dated 31st January, 1859.

457. Jacques Désiré Fenaut, of La Neuvillette, département de la Marne, for "A moveable and continuous circular templet."—Dated 1st February, 1859.

458. Jean Chemineau, of 60, Bordeaux, département de la Gironde, for "Railway switches."— Dated 2nd February, 1859.

459. Lizes and Cordurié, of Carmans, département du Tarn, for "An improved aerial railway." —Dated 2nd February, 1859.

460. Danion and Co., of 42, Rue de Paris, Lambizellee, département du Finistère, for "A system of weighing by means of so-called 'oscillating steelyards.' "—Dated 2nd February, 1859.

461. Eugène Charles Maldant, of 25, Quai des Chartrons, Bordeaux, département de la Gironde, for "Constructing recipients used in preparing and preserving timber by means of common or compressed wood."—Dated 3rd February, 1859.

462. Emmanuel Escoubé, of 24, Rue des Arts, Toulouse, département de la Haute Garonne, for "An apparatus for tightening gloves."—Dated 1st February, 1859.

463. François Emmanuel Verguin, of 36, Rue de l'Arbre-sec, Lyon, département du Rhône, a Certificate of Addition to his Patent of 2nd February, 1858, for "Manufacture of colouring substances."—Dated 2nd February, 1859.

464. Jean Marie Luizet, of 12, Route du Bourbonnais, Lyon, département du Rhône, for "A system of pumps."—Dated 2nd February, 1859.

465. Henry Duchesne, of 30, Rue Condé, Dijon, département de la Côte d'Or, for "Shirts and collars without buttons."—Dated 3rd February, 1859.

466. Jules François Descours, of 38, Cours Perrache, Lyon, département du Rhône, for "A machine for moulding bricks, drain-pipes, and all soft or pulverulent substances."— Dated 3rd February, 1859.

467. Yver Auguste Behm, of Basse-Yutz, département de la Moselle, for "A process for strengthening and hardening tanned leather."— Dated 3rd February, 1859.

468. Pierre Minot, of 12, Rue des Remparts d'Ainay, Lyon, département du Rhône, for "A safety clock-valve with unequal lever-arms for steam, gas, and other apparatus." — Dated 3rd February, 1859.

469. Auguste Revérand, of 15, Rue Centrale, Lyon, département du Rhône, for "A bolting-hutch for painters and builders." — Dated 4th February, 1859.

470. Jean Emmanuel Verpillat, of 26, Rue Tronchet, Lyon, département du Rhône, a Certificate of Addition to his Patent of 28th April, 1858, for "Bobbins for doubling thread."—Dated 4th February, 1859.

471. Adrien Cabarrus, of Grignols, arrondisement de Bazas, département de la Gironde, a Certificate of Addition to his Patent of 27th July, 1858, for "Railway breaks."—Dated 5th February, 1859.

472. Mathieu Serre, of 1, Place du Marché, St. Etienne, département de la Loire, a Certificate of Addition to his Patent of 23rd April, 1858, for "A rocking regulating system for removing the irregularities in holes, &c."—Dated 5th February, 1859.

473. Louis Charles Darcourt, of Albert département de la Somme, for "A kiln for calcining bones for the manufacture of animal charcoal."— —Dated 3rd February, 1859.

474. Jean Vérière, of 28, Rue des Princess, Meudon, département de Seine-et-Oise, for "A system of pumps."—Dated 3rd February, 1859.

475. François Jean Paul Larrose, of Erée, département de l'Ariège, a Certificate of Addition to his Patent of 23rd February, 1858, for "An instrument called 'stadia-sight' with a differential system, &c."—Dated 3rd February, 1859.

476. Augustin Bel, of Castres, département du Tarn, a Certificate of Addition to his Patent of 20th May, 1858, for "Construction of lime-kilns." —Dated 5th Febuary, 1859.

477. Jean Baptiste Thenault, of Triancourt, département de la Meuse, for "A dyeing process." —Dated 5th February, 1859.

478. Jules Mollo, of 10, Rue Ste. Colombe, Bordeaux, département de la Gironde, for "A valve whereby the stroke of rams may be dispensed with."—Dated 8th February, 1859.

479. Neveux and Jamenayre, represented by Brun, of 36, Rue Ste. Sophie, Bordeaux, département de la Gironde, for "A system of unloading vessels and lighters."—Dated 8th February, 1859.

480. Edmond Guer, represented by Ricordeau, of 23, Boulevart de Strabourg, Paris, for "An apparatus for instantaneously putting out burners of lamps with liquid gas."—Dated 29th January, 1859.

481. François Binet, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 9th March, 1858, for "A liqueur-case."—Dated 29th January, 1859.

482. Girot Brothers, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in seats for gardens, public walks, and other places."—Dated 29th January, 1859.

483. Macé and Boulanger, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "A mechanical system of dressing-boxes."—Dated 29th January, 1859.

484. Christian Sharps, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in fire-arms."—Dated 29th January, 1859.

485. Thomas James Sloan, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "A system of opening folding doors."—Dated 29th January, 1859.

486. Melchior Colson, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Arrangements in steam engines, applicable especially to the extraction of coal."—Dated 29th January, 1859.

487. Frantz Arton Schmider, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in locks."—Dated 29th January, 1859.

488. Félix Tussaud, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in the construction of oars."—Dated 29th January, 1859.

489. Félix Tussaud, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in machines for beating leather."—Dated 29th January, 1859.

490. Albert Poncelin, of 60, Rue de Paris, Clamart, a Certificate of Addition to his Patent of 27th December, 1858, for "An apparatus for obtaining seltzer water."—Dated 29th January, 1859.

491. Denis Lemesle, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in the manufacture of steel buttons."—Dated 29th January, 1859.

492. Pierre Marius Philippe Bourjeaurd, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "A pessary."—Dated 29th January, 1859.

493. Denis Lemesle, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 1st February, 1854, for "Improvements in the manufacture of buttons."—Dated 29th January, 1859.

494. Louis Henri Poully, of 5, Rue de l'Echelle, Paris, a Certificate of Addition to his Patent of 18th January, 1859, for "A ladies' page."—Dated 29th January, 1859.

495. François Noël Clairin, of 11, Carrefour de l'Observatoire, Paris, for "Improvements in furniture for mantlepieces of chimneys."—Dated 31st January, 1859.

496. Emile Pierre Rousseau, of 9, Rue de l'Ecole de Médecine, Paris, for "A mode of purifying the juice of plants, being applicable especially to refining sugar."—Dated 31st January, 1859.

497. Leloup and Beaumont, the former of 8, Rue Garancière, the latter of 64, Rue de Rivoli, Paris, for "Manufacture of animal oil."—Dated 31st January, 1859.

498. Edouard Gorges, of 11 bis, Avenue de la Porte-Maillot, Paris, for "Preserving alimentary substances."—Dated 31st January, 1859.

499. Jean Puyo, of 64, Grande Rue à la Chapelle, St. Denis, a Certificate of Addition to his Patent of 14th January, 1856, for "Applying the metrical system to glass vessels."—Dated 31st January, 1859.

500. Charles Amédée Lange, of 70, Rue de Ménilmontant, Paris, for "An apparatus for obtaining gaseous liquids."—Dated 31st January, 1859.

501. Charles Marie Mathiau, represented by Barrault, of 33, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 12th February, 1858, for "A system of packing flowers, &c."—Dated 31st January, 1859.

502. Auguste Louis Risbourg, of 6, Rue St. Laurent, Belleville, for "Means for dry-rubbing floors of apartments."—Dated 31st January, 1859.

503. Constantin Peruez, of 84, Rue de Dunkerque, Paris, for "A composition for dyeing."—Dated 31st January, 1859.

504. Louis François Allier, represented by Gardissal, of 29, Boulevart de Strasbourg, Paris, for "Improvements in gold chains, bracelets, necklaces, &c."—Dated 31st January, 1859.

505. Emile Constant Martin, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Purifying natural phosphate of lime."—Dated 31st January, 1859.

506. Louis Emile Tabarié, of 82, Rue de Vaugirard, Paris, for "Improvements in electrical batteries."—Dated 1st February, 1859.

507. Alexandre Portebois, of 29, Avenue Trudaine, Paris, for "An apparatus for regulating the gauze-wire and felt of paper machines."—Dated 1st February, 1859.

508. Eugène Anatole Pérignon, of 2, Rue des Beaux-Arts, Paris, a Certificate of Addition to his Patent of 29th September, 1855, for "Improvements in boilers of steam engines, &c."—Dated 1st February, 1859.

509. Miss CORDONNIER and LEHUGEUR, of 118, Rue de Paris, St. Denis, for "A system of petticoats."—Dated 1st February, 1859.

510. GEORGE SCABORN PARKINSON, represented by Kirkpatrick, of 11, Rue Martel, Paris, for "An improved apparatus for working railway breaks and establishing a communication between guards and drivers of engines."—Dated 1st February, 1859.—(English Patent, expiring 29th July, 1872.)

511. HENRY RAYMOND, of 130, Rue St. Honoré, Paris, a Certificate of Addition to his Patent of 4th December, 1858, for "A washing machine."—Dated 1st February, 1859.

512. JEAN LABENSKI, of 11, Rue Salleneuve, Batignolles, for "An apparatus called 'carburator,' with a steady level, obtained by means of a float clack valve, whereby the lighting power of gas is increased."—Dated 1st February, 1859.

513. ALBY and GAUVAIN, of 86, Rue Miroménil, Paris, for "A process for conglomerating woodshavings."—Dated 1st February, 1859.

514. HENRY KINSMAN SWET, represented by Bresson, of 57, Rue de Bretagne, Paris, for "A plastic substance for moulding various articles."—Dated 1st February, 1859.

515. GIBUS and Son, of 40, Rue Beaubourg, Paris, a Certificate of Addition to their Patent of 12th September, 1855, for "A flexible hat."—Dated 1st February, 1859.

516. JULIEN ISIDORE LEFEBURE, domiciled with Belivenly of 20, Rue de Paradis Poissonnière, Paris, a Certificate of Addition to his Patent of 21st February, 1857, for "A process for retting flax, &c."—Dated 1st February, 1859.

517. JULES CHRISTIAN WALTZ, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 3rd October, 1854, for "Ornamental saddlery."—Dated 1st February, 1859.

518. MARC ANDRÉ BAUDIT, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in buckles for braces, belts, &c."—Dated 2nd February, 1859.

519. JEAN LOUIS GEORGES LEDOUX, of 62, Faubourg St. Denis, Paris, for "An apparatus for washing feathers."—Dated 1st February, 1859.

520. FEICHTWANGER and Co., for "A double portemonnaie."—Dated 2nd February, 1859.

521. LAURENT BREVAL, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in steam engines and apparatus."—Dated 2nd February, 1859.

522. MATHIEU FRANÇOIS CAUMES, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in apparatus for maintaining ladies' dresses."—Dated 2nd February, 1859.

523. DENIS VICTOR EUGÈNE FERRIER, of 29, Boulevart Montmartre, Paris, a Certificate of Addition to his Patent of 21st August, 1858, for "A spherical clock in which the motive spring is done away with."—Dated 2nd January, 1859.

524. MONTAGUE and MOSES, represented by Courrouve, of 3, Rue de la Bourse, Paris, for "Improvements in handles of umbrellas, parasols, &c."—Dated 2nd February, 1859.—(English Patent, expiring 10th August, 1872.)

525. MULLER and Co., of 33, Rue de Chabrol, Paris, for "Improvements in the manufacture of ceramic articles."—Dated 3rd February, 1859.

526. DE ROUSSEN and RENAULT, represented by Dreyfous, of 54, Rue de Bondy, Paris, a Certificate of Addition to their Patent of 14th July, 1858, for "Means of communication between localities."—Dated 3rd February, 1859.

527. CROCHARD, LENCAUCHEZ, and POUCHET, represented by Dreyfous, of 54, Rue de Bondy, Paris, a Certificate of Addition to their Patent of 3rd July, 1858, for "Improvements in the treatment of fecal matter."—Dated 3rd February, 1859.

528. JEAN JACQUES SAUTOU, of 3, Rue de Louvins, Paris, a Certificate of Addition to his Patent of 29th July, 1858, for "Screw towing-boats."—Dated 3rd February, 1859.

529. DROUET and Co., of 5, Place du Marché St. Martin, Paris, for "Plates of belts."—Dated 3rd February, 1859.

530. JOANNIS and BANVILLE, the former of 30, Rue Sainte, the latter of 167, Boulevart de Longchamps, Marseille, département des Bouches du Rhône, for "A system of drying applicable to silk mills."—Dated 3rd February, 1859.

531. EDOUARD EDMOND FREMENTIN, of 30, Rue St. Michael, Tours, département d'Indre-et-Loire, for "A machine for making corks."—Dated 3rd February, 1859.

532. PIERRE MATHIEU, of Blere, département d'Indre-et-Loire, for "A table and desk for teaching by means of moveable type."—Dated 3rd February, 1859.

533. Messrs. GARNERI and BOSSY, of 9, Rue Fortunée, Marseille, département des Bouches du Rhône, for "A machine and paste for making ashlars."—Dated 4th February, 1859.

534. HIPPOLYTE DURAND, of Vaissac, canton de Nègrepelisse, département de Tarn-et-Garonne, a Certificate of Addition to his Patent of 26th April, 1856, for "A machine for grinding wheat."—Dated 5th February, 1859.

535. DUJARDIN, of Lille, département du Nord, for "A printing telegraph."—Dated 10th February, 1859.

536. JEAN DAVID RAPP, of 34, Faubourg de Pierre, Strasbourg, département du Bas Rhin, for "A system of levers."—Dated 31st January, 1859.

537. PAUL EMILE VARÉ, of Beauvais, département de l'Oise, for "Impressions on wood for joiners' work and cabinet work."—Dated 4th February, 1859.

538. NAPOLÉON MOUTTET, of 29, Rue de la Halle, Hâvre, département de la Seine Inférieure, for "Exhilarating perfumes."—Dated 5th February, 1859.

539. FÉLIX RENAUD, of 6, Place Satonay, Lyon, département du Rhône, for "Extracting and triturating dye-wood."—Dated 7th February, 1859.

540. Tabourin, Son, and Co., of 20, Rue Constantine, Lyon, département du Rhône, for "A local or portable motive power obtained by the agency of compressed atmospheric air."—Dated 7th February, 1859.

541. Aron Blum, of 48, Rue Chabot-Charny, Dijon, département de la Côte d'Or, for "Manufacture of white ceruse or carbonate of lead from the ore of natural lead and various kinds of acids, and potash."—Dated 7th February, 1859.

542. Sylvain Morand, of 11, Rue d'Aubecourt, Lille, department du Nord, for "A mode of removing grates for the purpose of cleaning heating apparatus."—Dated 9th February, 1859.

543. Charles Nicolas Bigel, of 20, Rue St. Pierre, Lyon, département du Rhône. for "A pad with a moveable reservoir for distributing colour by a mechanical means."—Dated 9th February, 1859.

544. Fraehon-Dugas, Crollard, and Co., of Voiron, département de l'Isère for "A drying apparatus for the manufacture of paper."—Dated 9th February, 1859.

545. Jean Eugène Biard, of 3, Rue Porte Basse, Bordeaux, département de la Gironde, a Certificate of Addition to his Patent of 10th July, 1856, for "Traps for catching small birds, &c."—Dated 9th February, 1859.

546. Constant Watiez-Lenglet, of Pas, département du Pas de Calais, for "A motive power applicable to all kinds of machines."—Dated 7th February, 1859.

547. Henri Rey, represented by Lucien, of 41, Rue du Renard, Marseille, département des Bouches du Rhône, for "A process for extracting hydrogen gas from water, and for carbonizing the same."—Dated 8th February, 1859.

548. Martin Brothers, of 25, Grand Chemin d'Aix, Marseille, département des Bouches du Rhône, a Certificate of Addition to their Patent of 31st July, 1858, for "A system of flat tiles."—Dated 8th February, 1859.

549. Jean Louis Honoré Gentilhomme, of 58, Rue des Petits-Pères, Marseille, département des Bouches du Rhône, for "Hydraulic tiles."—Dated 9th February, 1859.

550. Bellegueulle and Raiche, of Liancourt, département de l'Oise, for "Monorphic foot coverings."—Dated 9th February, 1859.

551. Premier, senr. and junr., of Romans, département de la Drôme, a Certificate of Addition to their Patent of 4th December, 1858, for "A mechanical process for making preserved fruit."—Dated 10th February, 1859.

552. Jean André Chiron, of Puyant, département du Gard, for "An apparatus for reducing motive power."—Dated 11th February, 1859.

553. Ambroise Pellegrin, of Draguignan, département du Var, a Certificate of Addition to his Patent of 29th May, 1858, for "A system of metallic reeds for weaving, &c."—Dated 11th February, 1859.

554. Jean Bernard, of La Rochelle, département de la Charente Inférieure, for "A modern economical lamp combined with a teapot."—Dated 11th February, 1859.

555. Pierre Arsène Desseaux, of Honfleur, département du Calvados, a Certificate of Addition to his Patent of 29th November, 1855, for "A machine for the manufacture of oakum for vessels."—Dated 11th February, 1859.

556. Romain Vildeneuve, Rue d'Elbeuf, Rouen, département de la Seine Inférieure, for "Applying winding machines to common mules."—Dated 8th February, 1859.

557. Charles Augustin Dubin, of Clermont, département de l'Oise, for "A sapping machine."—Dated 10th February, 1859.

558. Jean Michel Bouchou, of Haute Rivoire, département du Rhône, for "A sideral dial or instrument for ascertaining the true time of stars."—Dated 10th February, 1859.

559. Jean Baptiste Aimé Boulenger, of Auneuil, département de l'Oise, a Certificate of Addition to his Patent of 11th February, 1858, for "Inlaid mosaic flagstones of baked clay."—Dated 10th February, 1859.

560. Philippe Bigard, of 1, Impasse Savoie, Lyon, département du Rhône, a Certificate of Addition to his Patent of 10th August, 1858, for "A submarine life apparatus, &c."—Dated 10th February, 1859.

561. Prosper Colomb, of Origny Ste. Benoite, département de l'Aisne, for "An apparatus for manufacturing figured tissues."—Datad 12th February, 1859.

562. Aléxis Frédéric Herbillon, represented by Clerdent, of 2, Rue d'Amboise, Paris, a Certificate of Addition to his Patent of 13th January, 1858, for "Improvements in the manufacture of dolls by using cork."—Dated 3rd February, 1859.

563. Hélis and Saintgeot, of 234, Rue St. Martin, Paris, for "A system for preventing trains from running off the rails."—Dated 3rd February, 1859.

564. Adolphe Henri Lepoint, of 45, Rue de Grenelle, St. Germain, Paris, for "Horses' collars of flat leather."—Dated 3rd February, 1859.

565. Louis Emile Constant Martin, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 4th January, 1859, for "Purifying natural phosphate of lime."—Dated 3rd February, 1859.

566. Louis Emile Constant Martin, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 31st January, 1859, for "Purifying natural phosphate of lime."—Dated 3rd February, 1859.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

LIST of PATENTS, with Claims annexed, issued from the United States Patent Office, for the week ending 8th March, 1859, and each bearing that date.

No. 23,144. ABRAHAM ANDREWS, of Bernville, Pa., for an "Improved water-wheel."

"What I claim as my invention, and desire to secure by Letters Patent, is, the curved concave buckets, in combination with the spiral chamber beneath, substantially as described."

No. 23,145. I. B. ATWATER, of Berlin, Wis., for an "Improvement in car-coupler."

"Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement of the falling gate C, provided with projection *n*, loosely hinged door *a* turned over at its top, and provided with inclined projection *o*, adjustable piece *i*, pin E, lever D, and catch *m*, the several parts being combined and operated substantially in the manner and for the purpose herein specified."

No. 23,146. STEUBEN T. BACON, of Boston, Mass., for a "Register of sheets of paper."

"Having described my improvement, what I claim as my invention, and desire to secure by Letters Patent, is, punching or cutting holes in sheets of paper, for the purpose of securing a more perfect and rapid register in printing and paper-folding machines, substantially as described."

No. 23,147. THEODORE BAILEY, of Friendship, Va., for an "Improvement in dumping wagon."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, a wagon which dumps itself by the approximation of the wheels, as set forth. 2nd, the combination of a spring catch H, with the divided reach, substantially as and for the purposes set forth."

No. 23,148. DAVID BEARD, of Shippenburgh, Pa., for an "Improvement in connecting hubs and axles of vehicles."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the peculiar manner of effecting a combination of the hub, short auxilliary axles, and intermediate stationary axle, whereby internal auxilliary bearings for the short axle, and an external main bearing for the hub, are provided, substantially as and for the purposes set forth. 2nd, making the end of the main axle convex, and the main bearing in the inner end of the hub concave, substantially as and for the purposes set forth."

No. 23,149. WILLIAM BEERS, of Milan, Ohio, for "Improved yokes of ships' rudder posts."

"I am aware that india-rubber has been employed in various ways for producing tight joints, and for protecting parts of machines liable to injury from friction or concussion, therefore I do not claim the use of rubber as a new device; but what I do claim, and desire to secure by Letters Patent of the United States, is, the construction of a divided yoke for rudder posts, in combination with the employment of a guard of india-rubber, or other elastic packing, between the yoke and the post, in order to prevent injury to the rudder post, and also to facilitate the repair of damages produced by the common yoke, substantially as set forth."

No. 23,150. WILLIAM BEERS, of Milan, Ohio, for an "Improved ship's steering apparatus."

"Having thus fully described my invention, what I claim and desire to secure by Letters Patent of the United, is, 1 the slotted arm or arms, constructed, arranged, and employed in the manner and for the purposes substantially as set forth. 2, I claim the elastic friction collar or collars S, and the elastic guard or guards P, in combination with the above described steering machine, for preventing concussion and friction, substantially as described. 3, I claim the friction rollers L, in combination with the screw nut G, for preventing the nut from binding upon the screw, substantially as set forth."

No. 23,151. HENRY WILLIAM BEINS, of New York, N.Y., for an "Improvement in treatment of vulcanized rubber."

"What I claim as my invention, and desire to have secured by Letters Patent, is, the process above described of cementing vulcanized india-rubber to and covering it with a new layer of unvulcanized india-rubber composition, in the manner and for the purposes set forth."

No. 23,152. I. B. BLAIR, of Philadelphia, Pa., for an "Attachment to ruling machines."

"What I claim as my invention, is, the application of one or more magnets (electro-magnets) to any ruling machine for ruling paper, in such manner that the magnets shall, either directly or indirectly, be made to control the operations of the pens, through the agency of the paper, in braking, closing, or changing the circuit of electricity."

No. 23,153. J. L. BOOTH, of New York, N.Y., for an "Improvement in grain separators."

"I do not claim, broadly, the invention of endless belts for elevating and carrying grain or other materials; but I claim, and desire to secure by Letters Patent, as an improved article of manufacture, a grain separator composed of a box A, belt B, plates (*d*), hopper C, pulleys (*b*, *b*), and otherwise constructed, substantially as herein shown and described for the purpose specified."

No. 23,154. DANIEL BOWMAN, of Tampico, Tenn., for an "Improvement in fish-traps."

"I claim making the dams to incline towards each other, and up stream, so as to shelve over and make a dark recess to induce the fish to run towards the shute and trap when the water is clear as well as when it is muddy. I also claim the cover of the shute, for the purpose of shading the water and making it dark, so that the fish will be induced to enter the shute and trap."

No. 23,155. ISAIAH C. BURGET, of Davenport Centre, N.Y., for an "Improvement in horse rakes."

"The particular improvements which constitute my said invention, and which I claim as having been originally and first invented by me, are, first, the arrangement of the treddles J, J, hung to the frame, in combination with the rake bar and yoke for raising one end of the rake without disturbing the other, substantially as set forth. Second, the combination of the springs *g* with the arm E, and catch plate I, for holding the rake bar in position, and at the same time to allow it to yield bodily to any obstruction there may be upon the ground, substantially as set forth."

No. 23,156. HENRY CLIFTON, of Buffalo, N.Y., for an "Improvement iu trunks."

"Having thus fully described the nature and object of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, in combination with a trunk made up of a series of drawers, such as described, the hinged plates for holding and locking said drawers to the frame of the trunk, though the intervention of the lid and its lock, substantially as herein described and represented."

No. 23,157. JOHN H. COOPER, of Philadelphia, Pa., for an "Improvement in sewing machines."

"I claim, and desire to secure by Letters Patent, the combination of the shuttle N, shuttle holder *n*, arm L, crank K, and arm M, or its equivalent, when the said holder *n* is attached to or forms a part of the arm L, when the latter is carried by the crank K, and when the whole of the parts are arranged for joint action, substantially as and for the purpose herein set forth."

No. 23,158. ALLEN CUMMINGS, of New York, N.Y., for an "Improvement in ash-sifters."

"Having now described my device of 'ash-sifter,' what I claim therein, and desire to secure by Patent, is, the combina-

tion of the pyramidal or conical formed distributor interposed between the entrance and the sieve, the latter being of similar form, inverted, these being arranged in relation to each other and to the diaphragm and receptacles, substantially as and for the purpose explained."

No. 23,159. C. H. Dawson, of Jacksonville, Ill., for an "Improvement in cultivators."

"I do not claim, broadly, placing one plow by the side of another to form a gang plow, nor do I claim placing one plow before another, both being secured to one beam, and one adjusted lower than the other, to form a sub-soil plow, for such devices have been previously used; but, having thus described my invention, what I do claim as new, and desire to secure by Letters Patent, is, the plow beams D, D, arranged as shown, in connection with the roller *o*, applied to the machine, substantially as and for the purpose set forth."

No. 23,160. Michael A. Deitz, of Brooklyn, N. Y., for an "Improvement in lamps."—Antedated 8th September, 1858.

"Having thus described my improvement, what I claim as new, and desire to secure by Letters Patent, is, the arrangement of an air chamber (*d*) in the top of a lamp having a flat wick, when said lamp is provided with a cone or deflector (B) for feeding air to the flame, and the air chamber (*d*) with a series of holes (Z) for the admission of fresh air, and openings (*f*) for its passage upwards along the sides of the wick tube, or their or either of their equivalents, in the manner and for the purposes substantially as set forth."

No. 23,161. A. F. Endriss, of New York, N. Y., for an "Improvement in machines for folding and registering paper."

"What I claim as new and of my invention, and desire to secure by Letters Patent, is, the arrangement of a series of folding knives F, F^1, F^{11}, at right angles to one another, in the same sliding frame B, which is constructed and operated substantially as set forth. And I also claim arranging the sliding frame B in such a manner that it operates a registering apparatus *k*, by means of a lever *o*, substantially as and for the purpose specified."

No. 23,162. James L. Fagan, of Anaqua, Texas, for "Improved rotary pumps."

"What I claim as new, and desire to secure by Letters Patent, is, the combination of the rotating hollow shaft B, provided with a valve *b*, the cylinder A attached to said shaft, perforated at *a*, and having the adjustable or hinged valve or piston H secured within it, and the stationary stop or cut-off I attached to the bed plate C, and fitted within the cylinder A, the whole being arranged and applied for joint operation, substantially as and for the purpose set forth."

No. 23,163. James P. Gage, of New York, N. Y., for an "Improvement in balloons."

"I am aware that the idea of producing an advance or lateral motion of balloons by pressure upon the air of flat surfaces, fans, or wings, has been before entertained; I do not therefore claim that as my discovery and invention; but what I claim as my invention, and for which I desire Letters Patent, is, the operating upon the air by the instrumentability of the balloon itself, constructed in a diamond or lozenge-shaped figure, or any other substantially similar figure, presenting a flat surface to the air, arranged and adjusted with the car suspended from the lowest central point of the balloon by a rod, with link joints or their equivalents, and operated by the fore and aft and side halyards, in the manner and for the purposes described; and I also claim the manner of arranging and adjusting a diamond-shaped flat frame or surface (or any similar shape) to a spherical balloon, with the car suspended underneath (as shown in Figure VIII.), operating in the manner and for the purposes described."

No. 23,164. Chas. C. Garrett, of Spring Hill, Ala., for an "Improvement in cotton-seed planters."

"What I claim as new, and desire to secure by Letters Patent, is, I claim in combination with the wheel J, and brushes *j*, *j*, the adjustable plates *k*, *k*, arranged substantially as and for the purpose specified."

No. 23,165. Samuel Gaty and Amos Howe, of St. Louis, Mo., for an "Improved method of operating puppet valves of steam-engines."

"What we claim as our invention, and desire to secure by Letters Patent, is,—First, the steam lifters J, J, exhaust lifters *k*, *k*, and puppet heads B, B^1, with their respective faces, as herein described, for the purpose of operating steam and exhaust valves of pupet valve steam engines. Second, the lifter J, in combination with the jointed lifting piece T, puppet head B, and graduated cut-off ring or sector M, for the purpose of producing a variable expansion motion, self-regulating or otherwise, substantially as herein described. Third, the relative adjustment of the cutt-off rings M, M, for the purpose of admitting steam in equal quantities in each end of the steam cylinder, in the manner herein described."

No. 23,166. W. Y. Gill, of Henderson, Ky., for an "Improved steam gauge."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, constructing a steam gauge, in which a piston acts in opposition to a spring, in such a manner that the lower portion of the same acts as an alarm by means of openings *c*, and so that the indication may be marked on one or more sides of the upper portion E of the stem, substantially as herein specified. 2nd, constructing the portion C of the piston of a smaller diameter than the lower and upper portions E, B, and arranging the spring F on the portion C, above the lower packed portion B and below the indicating portion E, substantially as and for the purposes set forth."

No. 23,167. Jonathan Griffin, of Stanford, N. Y., for an "Improvement in burning fluids."

"What I claim as my invention, and desire to secure by Letters Patent, is, the burning fluids A, C, and D, formed in the manner, and of the materials, substantially and for the purpose set forth."

No. 23,168. John Griffin, of Louisville, Ky., for an "Improvement in cotton harvesters."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the cylinder C, one or more provided with a perforated plate a^1, flexible tube or tubes *d*, and made to communicate with a steam boiler A, by means of the tubes *f*, *g*, D, substantially as and for the purpose set forth."

No. 23,169. A. J. Hamilton, of Kewaunee, Ill., for an "Improved method of operating farm gates by approaching vehicles."

"Having fully described the construction and operation of my improved automatic gate, what I claim therein as new, and desire to secure by Letters Patent, is, 1stly, in combination with the two road levers D, D^1, constructed as described, the rigid actuating rods *k* and *m*, crank lever *h*, latch rod *g*, swivel bar *b*, and latches *c* and *d*, substantially as described for the purposes set forth. 2ndly, in combination with the road levers D, D^1, the elevations or hedges E and E, as described, for the purposes set forth."

No. 23,170. Theodore Heermans, of Mitchellville, Tenn., for an "Improvement in cultivators."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the screw tapped shoulder or flang C, and screw shank *b* of the cultivator teeth, in combination with the screw nut *d*, having a series of auxilliary screw tapped holes *e*, *e*, and with the separate auxilliary screw *f*, in the manner and for the purpose herein described. 2nd, in combination with the above, the specified arrangement of large and small cultivator teeth A, B, C, for the purposes herein described."

No. 23,171. John Henderson, of Bluff Springs, Miss., for an "Improvement in cotton scrapers."

"What I claim as my invention, and desire to secure by Letters Patent, is, the forked bar F and brace bar C in combination with the beam B and wings A of a double-winged cotton scraper, when constructed and arranged in the manner set forth."

No. 23,172. Richard M. Hoe, of New York, N. Y., for a "Machine for printing rail road and other tickets."

"First, I claim the peculiar mechanism, or its equivalent, for moving the registering disks on their axes at at the proper times, by which means the tickets are numbered consecutively, substantially as described. Second, I claim giving such a movement to the registering disks as will cause said disks to approach, press against, and travel with the impression cylinder, thus giving an impression to the roll of paper, then reced to change the figures of the disks, and allow the inking roller *c* 31 to perform, and then again to approach the impression cylinder, and so on as before, substantially as before described. Third, I claim the adjustment of any derangement of the registering disks, caused by slip jar of the machine or other cause, by means of the plates *c* 32 & *c* 33,

or any other means substantially the same. Fourth, I claim inking in a different color the registering figures, by means of a seperate inking apparatus, substantially as described. Fifth, I claim the printing the numbers on the tickets while the said tickets are continuously advancing, in the manner substantially as above described. Sixth, I claim the guide c 39 placed between the impression cylinder and the cutter Y, or its equivalent, for retaining the strip of continually advancing paper in its proper direction, while its lower end is stopped by the action of the cutter when seperating a ticket from the roll. Seventh, I claim the combination of the parts by which the tickets are deposited (after being cut) in a vertical position in contradistinction to flatwise in the trough c 43, destined to receive them. Eight, I claim the combination of the slide c 46, the spring catches c 44, c 44, and the sliding block c 45, by which the accumulating tickets are kept in a vertical position."

No. 23,173. Francis L. Kidder, of Williamsburgh, N. Y., for an "Improvement in attaching carriage thills to axles."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement and combination of the pivoted spring plate E, thill C, spring (*f*), hook D, and self-adjusting key (*d*), as and for the purpose herein shown and described."

No. 23,174. Joseph H. Kite, of Conrads Store, Va., for an "Improvement in corn harvesters."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination and arrangement of the horizontally revolving cutters *i*, *i*, vertically revolving bevels wheels *k*, *k*, having plain peripheries, endless apron V, V, V, axle G, hollow shaft H, and peculiar spring clutch arrangement N, N, P, S^1, *q*, *r*, substantially as and for the purposes set forth."

No. 23,175. Daniel H. Krauser, of Pottsville, Pa., for an "Improved machine for turning irregular forms."

"Having thus described my invention, what I claim as new therein, and desire to secure by Letters Patent, is, 1st, the manner of causing the carriage L, which supports the work, to traverse over the cutters by means of the pulleys E, F, *e*, and G, belts *c* and *k*, endless chain *m*, crank arms I, and connecting rods K, arranged and operating as before described, in combination with the means described for turning the work on its axis through the plates M, bent levers N, pawls S, and ratchet wheel O, substantially as set forth. I do not claim the reverse patern wheel W in itself as new; but what I do claim is, secondly, the arrangement of the pulley Q, belt *v*, spindle R, in fram S, with the reverse patern wheel W, arranged and operating as set forth and described."

No. 23,176. Edward L. Lamb and Samuel Wood, of Keokuk, Iowa, for an "Improvement in moulding female screws."

"What we claim, and desire to secure by Letters Patent, is, the match plate (*a*, a^1,) having both the exterior and interior of the pattern formed on it, when the same is divided vertically on a center line, and adapted to a suitable flask, and resting guides, on which the two halves of the plate can be withdrawn laterally in opposite directions from the core substantially as described, for the purpose of moulding female screws, or other articles which do not admit of having the pattern removed vertically from the core."

No. 23,177. Thomas Lavender, of Philadelphia, Pa., for an "Improved metallic lining for water coolers."

"What I claim as my invention, and desire to secure by Letters Patent, is, the lining or casing, or casing of an ordinary metallic vessel with tin prepared and applied in the manner and for the purpose substantially as above described."

No. 23,178. Lucius Leavenworth, of Trumansburg, N. Y., for an "Improved clothes fastener."

"What I claim as my invention, and desire to secure by Letters Patent, is, a clothes fastener made of a single piece or block, and having an open angular or curved groove therein to receive and hold the line and clothes upon it by diverging or kinking said line, substantially as herein described, and thus simplifying and cheapening the clasp, by dispensing with the button heretofore used."

No. 23,179. Jos. Leeds, of Philadelphia, Pa., for an "Improvement in chimneys."

"Having thus fully described the nature and object of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, in combination with an outer chimney or casing A, and an inner passage B, two or more ducts or passages between the two, for heat, ventilation, or draft, when said inner passages or flues are made by setting on top of each other iron sections with flanges upon them, substantially as herein described."

No. 23,180. Nathaniel I. Lilly, of Selma, Ala., for an "Improvement in cotton presses."

"What I claim, and desire to secure by Letters Patent, is, the combination of the boxes B, B^1, bar A, and followers F, F, with the shaft C, having the opposite ratchets thereon, and the swinging weighted catch *d* hung in the bar A, together with the rack R, and pinion P, the whole operating as set forth."

No. 23,181. James Little, of Evansville, Ind., for an "Improved machine for cutting staves from the block."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the hollow cylinder E, provided with the knives *h*, *h*, and gauge strips K, in connection with the bed B, and the feeding belts H, H, or their equivalents, the parts being arranged to operate, substantially as and for the purpose set forth."

No. 23,182. Daniel Markham, A. S. Markham, and David Eldred, of Monmouth, Ill., for an "Improvement in cultivators."

"Having thus described our invention, what we claim as new, and desire to secure by Letters, is, the frame A, formed of two parts *a*, *a*, connected by the traverse bars *b*, and provided with the sliding or adjustable frames C, C, with the bars E, and plows F, attached, substantially as and for the purpose set forth."

No. 23,183. Daniel Markham, A. S. Markham, and David Eldred, of Monmouth, Ill., for an "Improvement in seeding machines."

"Having thus described our invention, what we claim as new, and desire to secure by Letters Patent, is, the adjustable standards H^1, M, knife L, share K, wings or mould boards J, J, with or without the tube I, arranged for joint operation, substantially as and for the purpose set forth."

No. 23,184. H. L. McAvoy, of Baltimore, Md., for an "Improved refrigerator."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination of a rising and falling shelf frame with a non-conducting refrigerator casing, substantially as and for the purposes set forth."

No. 23,185. Josiah V. Meigs, of Nashville, Tenn., for an "Improvement in cooking stoves."

"Having thus described my improvements in cooking stoves, what I claim therein as new, and desire to secure by Letters Patent, is, the arrangement of the bottom plate of the oven in the same plane as the top plate of the fire pot, in connection with the arrangement of the flues leading from the side of the fire pot, directly beneath the bottom of the oven and around it, substantially as described, for the purpose set forth."

No. 23,186. Jeremiah Mitchell, of Gosport, N. Y., for an "Improved churn."

"Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is, the revolving box or churn, when constructed and operated substantially in the manner and for the purpose set forth."

No. 23,187. William F. Morgan, of Rochester, N. Y., for an "Improvement in machines for shearing sheep."

"What I claim as new, and desire to secure by Letters Patent, is, the arrangement of the cutting device, scroll spring *f*, and necessary gearing, substantially as described and for the purpose set forth. I further claim the pressure lever *t*, substantially as and for the purpose described."

No. 23,188. James Montgomery, of New York, N. Y., for an "Improvement in iron pavement."

"I claim as new and of my invention, and desire to secure by Letters Patent, 1st, a metallic pavement, con-

sisting of a series of ribs or laminæ in planes parallel or nearly so, connected at alternate or varying levels by webs of metal, substantially as and for the purpose set forth. 2nd, constructing metallic paving plates with ribs or arches of greater vertical depth in their intervening portion than at or near their sustained edges. 3rd, the described combination of a concave or other suitably formed rail E, with the projecting edge a^1 of the paving plate A, and the underlying edges of the plates A and A^1, for the purposes set forth. 4th, the described construction and application of the buttress plate B, in conection with the plate A and curbstone C, for the purpose explained. 5th, connecting the edges of ribbed or arched paving plates by tongue and grooved joints, as shown in Figs. 9 to 13, or in any mechanically equivalent form."

No. 23,189. James Montgomery, of New York, N. Y., for an "Improvement in iron pavement."

"I claim as new, and of my invention herein, a street paving, presenting on its upper surface a series of ribs corrugated or winding in a horizontal plane, substantially as and for the purposes set forth."

No. 23,190. James Willard Patterson and Levi Hanford Colborn, of Baltimore, Md., for an "Improvement in harvesters."

"Having thus fully described our improvements, what we claim as our invention, and desire to secure by Letters Patent, is, the combination of the cutting knife *b*, the bar *e*, and projections *o* upon the guards *i*, arranged substantially in the manner and for the purposes herein described."

No. 23,191. Richard Peterson, of Philadelphia, Pa., for an "Improvement in cooking stoves."

"I do not claim, broadly, introducing jets of air at the rear of the fire in cooking stoves, various devices for accomplishing this end having been herctofore used; but I claim, and desire to secure by Letters Patent, the protecting plate H, with its perforations *m*, when arranged in respect to the oven, the fireplace, and the flues of an elevated oven cooking stove, in the manner herein set forth, so that the products of combustion, after passing from the body of the fuel, and at the point where they impinge against and are dispersed by the said protecting plate prior to passing some over and others under the oven, may be met by and intermixed with jets of heated air for the purpose specified."

No. 23,192. William Powers, of Youngstown, Ohio, for an "Improvement in bee-hives."

"I do not claim, broadly, a hive constructed with double walls; but what I do claim as my invention, and desire to secure by Letters Patent, is, the cap or cover C of double walls, the inner one perforated as shown at *e*, *e*, and the space between filled with charcoal, in the manner and for the purpose specified."

No. 23,193. Andrew Ralston, of West Middletown, Pa., for an "Improvement in cleaning castings."

"Having thus described the nature, construction, and operation of my improvement, what I claim as of my invention, and desire to secure by Letters Patent of the United States, is, the combination of flexible pickers, brooms, or brushes, having a reciprocating, alternate, or oscillating movement, with an elevating and depressing table, the whole being arranged, combined, and operated as herein described and for the purpose set forth."

No. 23,194. Andrew Ralston, of West Middletown, Pa., for an "Improvement in harvesters."

"Having thus described the nature, construction, and operation of my improvement, what I claim as of my invention, and desire to secure by Letters Patent of the United States, is, first, the arrangement of the receiving apron (*d*), sheaf trough (*e*), compressing hook (*u*), and levers (*h*, *i*), and (*j*), when used in connection with the horizontal and inclined gathering aprons (w^1), as herein described and for the purpose set forth. Second, the use of the shocking carriage (*o*), furnished with a shock chamber, having a movable bottom in two parts (*p*) and (*q*), as herein described and for the purpose set forth."

No. 23,195. John L. Rowe, of New York, N.Y., for a "Pen-wiper and paper-weight."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the base or weight A with cup *j* attached, provided with the sponge *k*, in connection with the pressure pad or sponge *i*, connected with the base by means of the frame B, and arranged as shown and described, or in an equivalent way for the purpose set forth."

No. 23,196. Archibald G. Shaver, of Hartford, Conn., for an "Eraser and pencil-sharpener."

"What I claim as my invention, and desire to secure by Letters Patent, is, the curved blade eraser with the circular edge pencil-sharpener, and the groove for finishing the pencil point in combination, in the manner and for the purposes substantially as herein set forth and described."

No. 23,197. George Smith, of Brooklyn, N. Y., for an "Improved cradle wagon."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, as a new and improved article of manufacture, is, a cradle and wagon combined, when the several parts are constructed and operated substantially in the manner herein described."

No. 23,198. Horace W. Smith, of Hartford, Conn., for an "Improvement in cocks for water basins."

"What I claim as my invention, and desire to secure by Letters Patent, is, the intermediate spindle E, in combination with the vertical valve H, in the manner and for the purpose substantially as set forth."

No. 23,199. Simon P. Snyder and George W. Cook, of Minneapolis, Minn., for an "Improved propeller."

"What we claim as new, and desire to secure by Letters Patent, is, the arrangement and construction of a propeller substantially as shown and described; also inclining the shaft of a propeller in relation to the boat, in two directions as above set forth. Also the combination of a screw thread on the propeller shaft, with a screw thread in the brace plates forming the hub of the propeller, and with keys, for the purpose of adjusting and fastening the wheel on the shaft, the whole being arranged as above set forth."

No. 23,200. James H. Stimpson, of Baltimore, Md., for an "Improved ice pitcher."

"What I claim as my invention, and desire to secure by Letters Patent, is, a double or treble walled ice pitcher, having its inside wall or shell composed of iron or other metal lined or coated internally with porclain as herein described, the same constituting a new article of manufacture."

No. 23,201. Uriah F. Stuart and Calvin E. Stewart, of Fayette County, Tenn., for an "Improvement in cotton presses."

"We do not claim the invention of the rack bar and pinion used in this invention; but we do claim the combination of the rack and pinion with the rope and windlass for operating a press with two pressing boxes constructed substantially as described."

No. 23,202. Charles B. Tatham, of Brooklyn, N. Y., for an "Improvement in manufacture of shot."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination of the melting pot, the regulating valve, the conductor, and the set pan, substantially as herein described, for dropping shot, as set forth."

No. 23,203. Leopold Thomas and Joseph Thomas, of Brooklyn, N. Y., for an "Improvement in lamp lighters."

"Having thus described our invention, what we claim as new, and desire to secure by Letters Patent, is, the arrangement of a trigger I, or its equivalent, in such a relation to a serrated sector *k*, and to a ratchet wheel G, that by the motion of the trigger a piece of fuse from a roller D is fed up and lit, substantially in the manner and for the purpose herein specified. And we also claim the arrangement of a continuous fuse in combination with the lamp, substantially as and for the purpose set forth."

No. 23,204. John Van Riswick, of Washington, D. C., for an "Improvement in brick machines."

"Having thus fully described my invention, I do not claim the employment of two cams and plungers, or the disk provided with moulds; nor do I claim the hopper at or near the periphery of the disk for feeding the clay immediately to the moulds, as these devices are not new; but what I claim, and desire to secure by Letters Patent, as an improvement in the dry clay brick machine, is, the combination and arrangement of the curved or angular hopper C with the mould disk A, and vertically reciprocating plungers D, whereby the upper plungers are caused to pass the hopper without lateral movement, in the manner and for the purposes specified."

No. 23,205. Hugh Wallace and William Mellon, of North Sewickly, Pa., for an "Improvement in grain cleaning machines."

"We are aware that cylinders with shells or concaves have been used before, for the purpose of pulverizing, rubbing, or grinding substances, and wish it distinctly understood that we do not claim this; but what we do claim herein as new, and desire to secure by Letters Patent, is, the arrangement of the valve *b*, ducts D^{I} and D^{II}, and sieves *w* and *r*, substantially as described, and for the purpose set forth."

No. 23,206. George Watt, of Richmond, Va., for an "Improvement in seed planters."

"I claim the series of angular-faced rollers arranged relative to their shaft, as described, for opening the furrows, in combination with the seed tubes and covers, substantially as specified."

No. 23,207. Charles Wells, of Monroeton, and William Douglass, of Bradford County, Pa., for an "Improvement in water-wheels."

"Having described the construction and operation of our improved water-wheel, what we claim, and desire to secure by Letters Patent, is, the combination of the scrolls H, vertical buckets F, and lower buckets G, the whole constructed and arranged as described for the purpose set forth."

No. 23,208. Loren J. Wicks, of Racine, Wis., for an "Improved churn."

"Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement in a square churn A, which is provided with a ventillating top of the shaft G, inclined arms *j*, *j*, *j*, *j*, cross-pieces *i*, *i*, and funnels *k*, *k*, *k*, *k*, the same being combined and operated in the manner and for the purpose herein specified."

No. 23,209. C. S. Wheeler, of Flowerfield, Mich., for an "Improvement in apparatus for evaporating fluids."

"1st, Having thus fully described my improved apparatus for reducing sacharine, saline, and other fluids to a crystaline state, what I claim therein as new, and desire to secure by Letters Patent, is, combining the evaporating pan A with the steam boilers *a*, *a*, *a*, in such a manner as to cause the upper sides of said boilers to form highly efficient heating surfaces within said evaporating pan, substantially as herein set forth. 2nd, I also claim conducting the steam from the boilers *a*, *a*, *a*, to the engine, which may be combined therewith, through the medium of a series of pipes (*b*, *b*, *b*, *c*, *d*, *d*, *d*, & *e*) which are so located that their peripheries form portions of the heating surface of the evaporating pan, but this I only claim when the said evaporating pan is combined with a series of steam boilers, substantially as herein set forth. 3rd, I also claim combining the spaces between the double bottoms of the clarifying pans *h*, *h*, *h*, with the steam boilers *a*, *a*, *a*, when the said pans and boilers are arranged with each other, and with the evaporating pan A, substantially as herein set forth. 4th, I also claim the passing of the fluid to be reduced, through a coil of pipe *l*, located within the chimney or flue space, before discharging the same into the clarifying pans, but this I only claim when the said clarifying pans are arranged with the evaporating pan (A), and the series of steam boilers (*a*, *a*, a_2), substantially as herein set forth."

No. 23,210. William Wilber, of New York, N.Y., for an "Improvement in burning fluids."

"Having thus fully described my burning compound, and the manner of making and compounding the same, what I claim is, a fluid compound for burning in lamps, &c., made of coal tar, camphine, and alcohol, substantially in the proportions and manner herein set forth."

No. 23,211. Solomon Williams, jr., of Hume, N.Y., for an "Improvement in ploughs."

"What I claim as new, and desire to secure by Letters Patent, is, the arrangement of the adjustable wheel G, with the land side D of the plow, substantially as herein shown and described, for the purposes set forth."

No. 23,212. Chauncey D. Woodruff, of Toledo, Ohio, for "Firemen's protector."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the double walled sheet or plate metal house D^{I}, and mounted on wheels B, B, and provided with look-out holes *d*, and an adjustable plate *e* to receive the nozzle or butt *g*, the house being placed on rollers *i* in the platform, and secured by buttons *f*, or their equivalents, the whole being arranged substantially as and for the purpose set forth."

No. 23,213. E. O. Baxter, of Forreston, Ill., assignor to himself, E. H. Riley, and W. T. Sweet, of said Forreston, for an "Improvement in seeding machines."

"What I claim as new, and desire to secure by Letters Patent, is, 1st, the cam *n*, one or more attached to wheel C, in combination with the jointed pendant F, attached to the lever E, substantially as and for the purpose set forth. 2nd, the levers E, E, connected together and arranged relatively with each other and the driver's seat I, substantially as and for the purpose specified."

No. 23,214. William H. Burnap and John A. Bradshaw, of Lowell, Mass., assignor to W. H. Burnap aforesaid, for an "Improvement in electro-magnetic machines."

"What we claim as our invention, and desire to secure by Letters Patent, is, applying the oscillating balance wheel D with its shaft *j*, in line with but detached from a rock shaft *g* or its equivalent, carrying an arm *f*, which derives a positive oscillating movement from the train of gearing which drives the magneto-electric machine, and connecting the spring *k* which is attached to said balance wheel with the so-arranged positively moving arm, substantially as and for the purpose herein specified."

No. 23,215. Robert M. Campbell, of East Cambridge, Mass., assignor to William G. Crombie, of Boston, Mass., for a "Burglars' alarm."

"I do not claim a percussion alarm, a gimlet or any such means of fastening the same to a door casing; but what I do claim is, the application of the spring fastener G to the alarm or its case, so as to be capable of sliding and turning with reference to the same, substantially in manner as specified."

No. 23,216. Cancelled.

No. 23,217. Moses G. Farmer, of Salem, and William F. Channing, of Boston, Mass., assignor to William F. Channing aforesaid, for an "Improved electro-magnetic fire alarm apparatus."

"What we claim as our invention, and desire to secure by Letters Patent, is, the independent keys D, E, F, with their pins *d*, *e*, *f*, in combination with the rack A, and a means of liberating the rack for the purpose set forth. 2, we also claim the arrangement of the segments on the circuit wheel in combination with the springs or their equivalents, for throwing the electric current successively on to different circuits. 3rd, we claim the double circuit wheel or its equivalent for the purpose of completing and interrupting an electric circuit at both ends, essentially as set forth."

No. 23,218. R. Gleason, jr., of Dorchester, Mass., assignor to R. Gleason and Sons, of said Dorchester, for an "Improved table caster."

"I do not claim separately any of the parts herein shown and described when separately considered; but I desire to secure by Letters Patent a claim as a new and useful article of manufacture, a caster, egg stand, and table bell, arranged and combined as herein shown and described."

No. 23,219. Thomas Gray, of Philadelphia, Pa., assignor to himself and James M. Sankey, of said Philadelphia, for an "Improved extension table."

"I am aware that bars, so hinged together as to open and close, have been heretofore used in connection with extension tables; I do not, therefore, claim broadly such a device; but I claim, and desire to secure by Letters Patent, first, the method of constructing and of connecting together the two cross bars H and H^{1}, that is to say, constructing one bar H in two parts, and connecting the two parts together by the two plates *e* and e^{1}, which admit the bar H^{1}, and afford a means of joining it to the bar H^{1}, as herein set forth. Second, the combination of the screw I, block G, bars E and F, and cross bars H and H^{1}, with the two ends of the table, the whole being arranged for joint action, substantially as and for the purpose herein set forth."

No. 23,220. George W. Miles, of Michigan, City Ind., and Philander P. Lane, of Cincinnati, Ohio, assignors to Lane and Badley, of said Cincinnati, Ohio, for an "Improved machine for hewing out hubs."

"We claim as new, and of our invention herein, 1st, the described arrangement and combination of the axles C, C^{1},

stud shaft I, and rotating rest J, for hewing out cylindrical forms in the manner set forth. 2nd, in combination with the above, the ways D, D, carriage E, feed arm F, pawls G, and rack H, arranged and operating together, substantially as and for the purposes explained."

No. 23,221. JOHN NORTH, of Middletown, Conn., assignor to himself and D. Appleton and Co., of New York, N. Y., for a "Register for sheets of paper."

"Having thus fully described my mode and apparatus for making register point holes, what I claim as my invention, and desire to secure by Letters Patent, is,—first, the attaching to the feed table of the printing press of two or more register points in addition to those commonly used for printing, so as to make register point holes in the sheet to be printed at the exact points required for the purpose of feeding the sheet in register to folding machines to be folded. Second, I claim the application for that purpose of the above-described mechanism, or other suitable mechanism of the same general description, attached to the feed table, frame, and carriage of the printing press, and which will produce the intended effect."

No. 23,222. SAMUEL MCQUERNS and WILLIAM LYON, of the district of Abbeville, South Carolina, administrator of the estate of Benjamin M. Lyon, deceased, for an "Improved bedstead."

"What we claim, and desire to secure by Letters Patent, is, the use of the hinges in the middle of both the cross and longitudinal rails, in combination with the hinges between the rails and posts, substantially as and for the purposes specified."

RE-ISSUES.

JOSEPH W. GARDNER, of Shelburne Falls, Mass., for "Improved handles for table cutlery."—Patented 1st February, 1859.—Re-issued 8th March, 1859.

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, forming the handle of two parts (*a*), (*b*), which are encompassed at their junction by a ferrule (*d*), the tang A passing through both parts of the handle, and the parts being secured thereon by a nut or washer (*e*), or a rivet (e^1), substantially as described."

HENRY C. FOOTE, of Wallingford, Conn., for a "Design for table bells."

"Having thus fully described my invention or production, what I claim is, a design for a tea bell, composed of an ornamented base mounted by a ferrule figure, as herein represented."

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d.*

In course of Publication, by Order of the Commissioners.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.
BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 548. TUESDAY, APRIL 5, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

2678. FREDERICK HERBERT MABERLY, of Stowmarket, in the county of Suffolk, Master of Arts, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "Improvements in candlesticks."

2680. And FREDERICK LOOS, of Mercer Street, Long Acre, London, has given the like notice in respect of the invention of "Improvements in gas regulators."

As set forth in their respective petitions, both recorded in the said office on the 25th day of November, 1858.

2696. And JOHN RAMSBOTTOM, of Accrington, in the county of Lancaster, Engineer, has given the like notice in respect of the invention of "Improvements in machinery or apparatus applicable to water meters, and to indicating and regulating the flow and pressure of fluids generally, and in obtaining motive power from the same."

2702. And GEORGE BOWDEN SANDER, of High Holborn, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in jugs."

2704. And SQUIRE DIGGLE, of Radcliffe, in the county of Lancaster, Machine Maker, has given the like notice in respect of the invention of "Improvements in pattern chains or other such apparatus used in weaving."

As set forth in their respective petitions, all recorded in the said office on the 27th day of November, 1858.

2706. And LOUIS ANTOINE POSSOZ, Chemist, of Rue Neuve St. Augustine, No. 9, Paris, in the empire of France, has given the like notice in respect of the invention of "Manufacturing alkalies and obtaining simultaneously other chemical products."

2712. And GEORGE HADFIELD, of Carlisle, Varnish Manufacturer, has given the like notice in respect of the invention of "Improvements in the construction of carboys, barrels, and other vessels of capacity."

2716. And WILLIAM ARTHUR HENRY, of Sheffield, in the county of York, Engineer, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for attaching the soles and heels of boots and shoes to the upper leathers, and in the fastenings employed for that purpose."

2723. And DANIEL EVANS, of Chobham Cottages, New Town, Stratford, in the county of Essex, and GEORGE JONES, of Charlotte Place, Upper Kennington Lane, in the county of Surrey, Engineers, have given the like notice in respect of the invention of "Improvements in pumps and water guages."

As set forth in their respective petitions, all recorded in the said office on the 29th day of November, 1858.

2729. And JOHN THOW and THOMAS MITCHESON HALL, both of Preston, in the county of Lancaster, Engineers, have given the like notice in respect of the invention of "Preventing the fusion of the fire-bars in locomotive or other furnaces."

2731. And GOTTLIEB BOCCIUS, of Totnes, in the county of Devon, Gentleman, has given the like notice in respect of the invention of "Improvements in the construction of furnaces."

As set forth in their respective petitions, both recorded in the said office on the 30th day of November, 1858.

2742. And JAMES SAMUEL, of Great George Street, in the city of Westminster, Civil Engineer, and JOHN NICHOLSON, of Wellington Street, Bromley, in the county of Middlesex, Engineer, have given the like notice in respect of the invention of "Improvements in, and in connection with, marine and other steam engines."

2743. And EBENEZER VINEY, of the firm of John Viney and Son, of Cornhill, in the city of London, Portmanteau Manufacturers, has given the like notice in respect of the invention of "An improvement in the construction of portmanteaus, desks, dressing cases, despatch-boxes, and other like articles."

2752. And JOHN LEWIS, of Elizabeth, in the county of Essex, and State of New Jersey, United States of America, has given the like notice in respect of the invention of "Improvements in means for attaching sails to the yards of ships or vessels."

As set forth in their respective petitions, all recorded in the said office on the 1st day of December, 1858.

2758. And JACOBUS TYSSEN, of Rotterdam, in the kingdom of Holland, Mariner, has given the like notice in respect of the invention of "Improvements in obtaining and applying motive power."

As set forth in his petition, recorded in the said office on the 2nd day of December, 1858.

2770. And HENRY BEVAN, of Shrewsbury, in the county of Salop, Accountant, has given the like notice in respect of the invention of "New or improved machines for effecting or facilitating arithmetical operations."

As set forth in his petition, recorded in the said office on the 3rd day of December, 1858.

2773. And LAWRENCE WOOD FLETCHER, of Bleaklow, near Bury, in the county of Lancaster, Spinner and Manufacturer, has given the like notice in respect of the invention of "Improvements in the construction of electric telegraph cables."

2779. And JEAN BAPTISTE ANTOINE MONNIER, of Nemours (Seine et Marne), France, has giveu the like notice in respect of the invention of "Improvements in actuating railway brakes."

As set forth in their respective petitions, both recorded in the said office on the 4th day of December, 1858.

2790. And JAMES MUIR, of Glasgow, in the county of Lanark, North Britain, Pattern Designer, and FRANCIS MUIR, of Paisley, in the county of Renfrew, North Britain, Pattern Printer, has given the like notice in respect of the invention of "Improvements in ornamental or colour printing."

2795. And FREDERICK WILLIAM FLETCHER, of Erdington, near Birmingham, in the county of Warwick, Tube and Nail Manufacturer, has given the like notice in respect of the invention of "Improvements in bolts for securing doors, and for other similar purposes."

As set forth in their respective petitions, both recorded in the said office on the 6th day of December, 1858.

2830. And ETIENNE LÉON PENSUETE, of Dunkirk, in the empire of France, has given the like notice in respect of the invention of "Improvements in apparatus for driving or for drawing up piles by steam."

As set forth in his petition, recorded in the said office on the 9th day of December, 1858.

2874. And CHARLES FRÉDERIC VASSEROT, of No. 45, Essex Street, Strand, London, Patent Agent, has given the like notice in respect of the invention of "An improved pendulum governor for regulating the supply of steam to the cylinders of marine engines."—A communication from Mr. Billotet, residing at Marseilles, in the empire of France.

As set forth in his petition, recorded in the said office on the 15th day of December, 1858.

---

18. And ISAAC WOOD, of Charing Cross, has given the like notice in respect of the invention of "Improvements in cutting and finishing corks, and in machinery used for such purposes."—A communication from abroad by Henry F. Cox and Alexander Millar, of New York.

As set forth in his petition, recorded in the said office on the 1st day of January, 1859.

---

86. And ROBERT HAWTHORN and WILLIAM HAWTHORN, both of the town and county of Newcastle-upon-Tyne, Engineers, have given the like notice in respect of the invention of "Improvements in apparatus for promoting combustion, and preventing smoke in coal burning locomotives, and other steam-boiler furnaces."

As set forth in their petition, recorded in the said office on the 11th day of January, 1859.

---

284. And RICHARD NEEDHAM, of Dukinfield, in the county of Chester, Engineer, has given the like notice in respect of the invention of "An improved water-gauge for steam boilers."

289. And RICHARD ARCHIBALD BROOMAN, of No. 166, Fleet Street, in the city of London, E.C., Patent Agent, has given the like notice in respect of the invention of "Improvements in sewing machines."—A communication by J. P. Pirsson, residing in New York.

As set forth in their respective petitions, both recorded in the said office on the 1st day of February, 1859.

---

446. And THOMAS CATTELL, of No. 30, Euston Square, in the county of Middlesex, M.D., has given the like notice in respect of the invention of "Improvements in treating and purifying gutta percha."

As set forth in his petition, recorded in the said office on the 17th day of February, 1859.

---

491. And WILLIAM ASHTON, of Heaton Norris, in the county of Lancaster, Manager, has given the like notice in respect of the invention of "Improvements in gas regulators."

As set forth in his petition, recorded in the said office on the 23rd day of February, 1859.

---

546. And JOHN THOMSON CARTER, of Belfast, in the county of Antrim, Flax Spinner, has given the like notice in respect of the invention of "Improvements in machinery for crushing, bruising, and preparing flax, hemp, and other fibrous materials requiring such treatment."

As set forth in his petition, recorded in the said office on the 2nd day of March, 1859.

---

577. And CHARLES ROPER MEAD, of 176, Great Dover Street, in the borough of Southwark, Gas Engineer, has given the like notice in respect of the invention of "Improvements in water gas meters."

As set forth in his petition, recorded in the said office on the 4th day of March, 1859.

592. And WILLIAM PALMER, of Long Eaton, in the county of Derby, Station Master, has given the like notice in respect of the invention of "An improved railway carriage break and coupling apparatus connected therewith."

As set forth in his petition, recorded in the said office on the 7th day of March, 1859.

613. And JOHN ERWOOD, of 132, Goswell Street, Clerkenwell, in the county of Middlesex, Paper Stainer, and JOSEPH SKERTCHLY, of Ashby-de-la-Zouch, in the county of Leicester, Engineer, have given the like notice in respect of the invention of "Improvements in the manufacture of glass, sand, and emery papers and cloths, and other similar articles used for like purposes."

615. And JOHN SCOTT RUSSELL, of Great George Street, Westminster, has given the like notice in respect of the invention of "Improvements in building ships and other vessels."

As set forth in their respective petitions, both recorded in the said office on the 9th day of March, 1859.

630. And ALFRED VINCENT NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "An improved construction of steam engine, applicable also to the raising of water."—A communication from abroad, by Samuel Huse, of the United States of America.

As set forth in his petition, recorded in the said office on the 11th day of March, 1859.

639. And JAMES MACNAB, of the town and county of Linlithgow, North Britain, Designer, has given the like notice in respect of the invention of "Improvements in telegraphing or signalling apparatus."

As set forth in his petition, recorded in the said office on the 12th day of March, 1859.

642. And ALFRED TYLOR, of Warwick Lane, Newgate Street, has given the like notice in respect of the invention of "Improvements in apparatus for regulating the supply of water to water-closets and other vessels."

As set forth in his petition, recorded in the said office on the 14th day of March, 1859.

705. And ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "Improvements in propelling vessels."—A communication from abroad, by Theodore W. Phinney, of Newport, Rhode Island.

As set forth in his petition, recorded in the said office on the 19th day of March, 1859.

729. And Sir PETER FAIRBAIRN, of Leeds, in the county of York, Knight, and ROBERT NEWTON, of Leeds aforesaid, Commercial Traveller, have given the like notice in respect of the invention of "Straightening and separating the fibres of silk waste, and laying them in parallel lengths preparatory to combing or dressing."

As set forth in their petition, recorded in the said office on the 22nd day of March, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

List of LETTERS PATENT which passed the Great Seal on the

5th April, 1859.

2137. ALFRED FAUVIN JALOUREAU, of Paris, in the French empire, Manufacturer, for an invention of "Improvements in the manufacture of pipes."—Dated 23rd September, 1858.

2212. GEORGE HAMILTON, of St. Martin's-le-Grand, and WILLIAM HENRY NASH, of Poplar, Engineer, for an invention of "Improvements in locks."—Dated 5th October, 1858.

2217. JOZÉ LUIS, Patent Agent, of No. 1 B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, for an invention of "A new method of joining sheet iron, cast iron, gutta percha, and other tubes by means of muffles."—A communication from a Foreigner residing abroad.—Dated 6th October, 1858.

2226. DONALD NICOLL, of the firm of H. J. and D. Nicoll, 114, Regent Street, and 22, Cornhill, London, for an invention of "Improvements in the manufacture of cloaks and other garments, and for their application to purposes to which they have not hitherto been applied."—Dated 7th October, 1858.

2229. JEAN CLAUDE NOUVEAU, of 2, Rue Sainte Appoline, Paris, in the empire of France, and of 45, Essex Street, Strand, London, for an invention of "Improvements in stopping or stoppering bottles and other vessels containing non-gaseous liquids."—Dated 7th October, 1858.

2234. JOZÉ LUIS, of No. 1 B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for an invention of "A new cutting and stamping press."—A communication from a Foreigner now residing abroad.—Dated 8th October, 1858.

2243. CHARLES WILLIAM LANCASTER, of New Bond Street, in the city of Westminster, Gun Maker, for an invention of "A metal or metallic alloy especially adapted to the manufacture of fire arms and ordnance."—Dated 8th October, 1858.

2252. WILLIAM CROFTS, of Lenton Terrace, Park Side, Nottingham, Manufacturer, for an invention of "Improvements in the manufacture of fabrics by bobbin net or twist lace machinery."—Dated 9th October, 1858.

2301. WILLIAM BACON, of Prestwich, in the county of Lancaster, Engineer, for an invention of "Improvements in the mode of constructing valves, valve cocks, gates, and stop cocks, which may be used in steam engineering, and for other purposes."—A communication from J. R. and H. S. Robinson, of Clinton, in the United States of America.—Dated 15th October, 1858.

2337. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Editor of the Mechanic's Magazine and Patent Agent,

for an invention of "Improvements in propelling vessels."—A communication from J. C. Meunier, of Paris, residing abroad.—Dated 19th October, 1858.

2398. Thomas Almond, of 22, Pickering Place, Paddington, in the county of Middlesex, Engineer, for an invention of "Improvements in furnaces for the better combustion of smoke."—Dated 27th October, 1858.

333. Robert Tinkler, of Penrith, in the county of Cumberland, Churn Manufacturer, for an invention of "Improvements in churns."—Dated 5th February, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 2nd April, 1859, inclusive.*)

1st April.

801. James Samuel, of Great George Street, in the city of Westminster, Civil Engineer, and John Nicholson, of Bow, in the county of Middlesex, Engineer, for an invention of "Improvements in steam and other vapour engines."—Dated 2nd April, 1856.

818. Charles William Ramié, of 73, Denbigh Street, Pimlico, in the county of Middlesex, for an invention of "Improvements in constructing the permanent ways of railways."—Dated 4th April, 1856.

833. Frederick George Underhay, of 13, Wells-Street, Gray's Inn Road, in the county of Middlesex, for an invention of "Improvements in apparatus for drawing off water."—Dated 5th April, 1856.

2nd April.

820. Joseph Gilbert Martien, of Newark, New Jersey, in the United States of America, but now residing at 32, Essex Street, Strand, London, for an invention of "Improvements in the manufacture of iron."—Dated 4th April, 1856.

827. Julian Bernard, of the Albany, Piccadilly, in the county of Middlesex, Gentleman, for an invention of "Improvements in machinery or apparatus employed for manufacturing or making boots and shoes or other coverings for the feet."—Dated 5th April, 1856.

838. John Leigh, of the city of Manchester, in the county of Lancaster, Surgeon, for an invention of "The use or application of a certain substance or substances in the sizing, stiffening, or otherwise preparing cotton, linen, or other yarns and woven fabrics."—Dated 7th April, 1856.

915. Henry Young Darracott Scott, of Brompton Barracks, Chatham, in the county of Kent, Captain in the Royal Engineers, for an invention of "An improved mode of manufacturing cement."—Dated 17th April, 1856.

989. Frank William Blacket, of West Smithfield, in the city of London, Draper, for an invention of "An improvement in the construction of keys and locks, and in the fitting of locks to afford increased safety."—Dated 24th April, 1856.

Errata in Journal of 1st April.

681. For "county of Southwark" read "county of Surrey."

731. For "apparatus" read "apparatuses."

780. For "materials" read "material."

FOREIGN PATENTS.

UNITED STATES OF AMERICA.

(*Communicated by the Commissioner of Patents.*)

List of Patents, with Claims annexed, issued from the United States Patent Office, for the week ending 15th March, 1859, and each bearing that date.

No. 23,223. Geo. E. Baldwin, of West Meriden, Conn., for an "Improvement in adjustable wormer for ramrods."

"Having thus fully described the nature and object of my invention, what I claim as a new article of manufacture, is, a wormer that can be run out of or into a ferule on the end of a ramrod, so that the ramrod can be practically shortened or lengthened at pleasure, as herein represented."

No. 23,224. Joseph Barber and P. C. Reinfried, of Bridesburgh, Pa., for an "Improvement in breech-loading fire-arms."

"What we claim as our invention, and desire to secure by Letters Patent, is, the arrangement and combination of the spring trigger guard E, pin (*g*), toggles (*k*, *k*), sliding bolt (*j*), and catch (*c*), substantially as and for the purpose herein shown and described."

No. 23,225. Zebulon B. Bellows, of Cortlandville, N. Y., for "Improved chair bottoms."

"What I claim as my invention, and desire to secure by Letters Patent, is, the application to chairs of a bent, stamped, or pressed board for a seat."

No. 23,226. Paul Boynton, of Canton, N. Y., for an "Improvement in magazine fire-arm."

"I do not claim, broadly, the arrangement of a powder magazine in the breech of a gun or of a ball-magazine under and parallel with the barrel, nor yet the use of the slide H to load the bullets; but what I claim as my invention, and desire to secure by Letters Patent, is,—1st, combining the powder magazine in the stock with the barrel of a fire-arm by means of the faucet-like chambered breech, applied and operating as described, to measure its own charge. 2nd, combining the bullet-loading slide H with the faucet-like chambered breech by means of the ears on the slide and the horns *m*, *n*, attached to the breech that the slide may be operated in combination with the breech, in the manner herein specified. 3rd, the combination with the faucet-like breech of the priming box J and its perforated collar *q*, operated by a connection with the hammer, substantially as herein described."

No. 23,227. Geo. A. Brown, of Newfane, N. Y., for an "Improved machine for bending wood for felloes."

"Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement of the platform E, screws *d* and *i*, and spring *c*, with the mould block D, the several parts being constructed and operating substantially in the manner and for the purpose specified."

No. 23,228. Saml. S. Campbell, of Montreal, Canada, for an "Improved machine for grinding and polishing saws."

"What I claim as my invention, and desire to secure by Letters Patent, is, the specified arrangement of the longi-

tudinal carriage ways D on supports E, G, so that they with the carriage D¹ and all attachments, may be inclined laterally and caused to stand obliquely to the horizon or the circumference of the lap or grinding stone, for the purposes set forth. 2nd, arranging one of the supports of the machine on a pivot *e* and the other on a truck H which reciprocates on a circular railway, so that the carriage ways and carriage, with all attachments thereof, may be adjusted in the path of a circle, so as to stand oblique to the shaft of the lap or grindstone, substantially as and for the purposes set forth. 3rd, providing the longitudinal reciprocating carriage with a stationary stop K and a capping or holding-down plate L, which is adjustable up and down but stationary longitudinally, substantially as and for the purposes set forth."

No. 23,229. I. L. Colman, of Vincennes, Ind., for an "Improved apparatus for regulating the supply of water to steam boilers."

"I do not claim the float in boiler cranks, levers, water chest, valve, or detector; but I do claim the combined arrangement of these to effect the object desired, to regulate the water in a steam boiler to any desired point from which it cannot materially change."

No. 23,230. Saml. Colt, of Hartford, Conn., for an "Improvement in packing cartridges."

"I do not wish to limit my invention to the use of the string, though I have shown it and found it to work well in practice, for a wire or other equivalent might be made to answer the purpose; neither do I confine myself to the exact arrangement shown of the string, or its equivalent, in the package; but claim as my invention, and desire to secure by Letters Patent, the application of a string, wire, or other equivalent, to a cartridge package, or box, by which the package or box may be opened."

No. 23,231. Alexr. Dean, of Jerusalem, N. Y., for an "Improvement in grinding apples."

"Having thus fully described my machine, what I claim as my invention, and desire to secure by Letters Patent, is, 1st claim, the crushing lever H, and horizontal wheel I, constructed as described, and for the purpose set forth. 2d claim, I claim the eccentric wheel B and carriage D in combination with the crusher H and wheel I, when constructed and operated in the manner and for the purpose herein-before described."

No. 23,232. Abram Dehuff, of York, Pa., for an "Improvement in preventing collisions on railroads."

"I am aware that the shoe or boot running under the wheel is not new, it has been made by others, and I do not claim it; but what I claim as my invention, and desire to secure by Letters Patent, is, the spring carrier A, hung on two inclined staples B, B, beneath the car or truck to hug or embrace the wheels, cross bar C, long bar E, lever F, rod G, lever H, rod I, levers I, I, and lever K, when arranged for joint operation with each other, substantially as and for the purpose herein described."

No. 23,233. Saml. F. Dexter, of Paris, N. Y., for an "Improvement in hanging well buckets."

"What I claim as new, and desire to secure by Letters Patent, is, first, I claim the iron strap C, with the levers D, and notch E, to receive the spring stretcher E¹, in combination with the chain B, Fig. 1, and the manner of detaching the same by coming in contact with the rod J. 2d, I claim the springs G, G, Fig. 3, and G, Fig. 4, when operated as described. 3d, I claim hanging the buckets at or below the bottom, as described, in combination with the spring or springs, and levers, as above described, or in any equivalent manner."

No. 23,234. Randolph D. M. Edwards, of Franklin, Mich., for an "Improvement in machines for folding wool."

"I do not claim to be the original inventor of machines for folding wool; but what I claim as my improvement, and desire to secure by Letters Patent, is, the above-described machine for folding wool, consisting of the table rim D, the folding lids Q, R, S, T, operated by katches, levers, and springs riser H, and platform Z, the whole arranged, constructed, and operating substantially as and for the purposes set forth."

No. 23,235. Stephen Elliott, of Washington, Ind., for an "Improvement in corn planters."

"Claim.—What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of the wheel F and pins L and K, the spiral springs C, C, the boxes A, A, blocks B, B, the rod E, indicator G, and leveling plow H, the whole being arranged, constructed, and operated as above described, and for the purpose set forth."

No. 23,236. Wm. H. Elliott, of Plattsburgh, N. Y., for an "Improved mode of obtaining curved printing surfaces."

"I do not claim casting stereotypes, by immersion, in moulds, formed upon and adhering to metallic plates, nor do I claim a compound flexible matrix, for casting curved stereotypes, as that is the subject of an English Patent, granted to Brunel in 1829; but what I have invented, and wish to have secured to me by Letters Patent, is, first, the combination of screws *k*, with the concave cylindrical form *a*, when these devices are used for bringing the compound flexible matrix or impression sheet to the required shape, or for holding it there, while metal is being deposited or cast upon it, for the purpose of constructing electrotypes or stereotypes, as specified. Second, the employment of bars *d*, in combination with the flexible sheet *c*, for holding the matrix in a cylindrical form, when said bars are so applied to the ends of said sheet that they shall prevent its being displaced, or springing up from the concave face of the outer shell *a*, as set forth, whether said bars are attached to or rest against the edge of said sheet. Third, the grooves *m*, *m*, in the inner shell *b*, for casting upon the back of cylindrical type plates, lugs, or flanges, by which said plates may be fastened upon a cylinder, as and for the purpose set forth."

No. 23,237. Ralph Emerson, jr., of Rockford, Ill., for an "Improvement in sugar mills."

"What I claim as my invention is, the combination of parts in the machine in such manner as to subject the cane, first, to a lighter pressure, and afterwards to a heavier pressure, and to deliver the respective juices expressed by said lighter and heavier pressures into separate receptacles, for the purpose specified. I also claim the combination of the gauge fillets with the pressure rolls, whereby any unskilled operator is enabled to adjust and work the machine, substantially as herein set forth."

No. 23,238. Ralph Emerson, jr., of Rockford, Ill., for an "Improvement in process for extracting and assorting vegetable juices by pressure."

"As I have procured a separate Patent for the said mill I refer to that Patent for a more full description of it. In this Patent I do not mean to limit myself to any special means for the extraction and separation of the pith and rind juices; but what I here claim as my invention is, first, the process of expressing and collecting the juice of the pith, separately from that of the rind, for the purpose set forth. I also claim as one of the methods (and the best to me known), whereby the process of extracting the juices separately may be beneficially carried into effect, the subjection of the cane to a light pressure, to express the juice of the pith, previously to the employment of a heavier pressure, to express the juice of the rind, whether the said pressures be successively performed in the same or in different machines."

No. 23,239. Henry Epstein, of New York, N.Y., for an "Improvement in watch chains, &c."

"What I claim as new, and desire to secure by Letters Patent, is, constructing a watch chain which may be made stiff, or inflexible, at pleasure, by the turning of part of the tubular casing, to which an interior chain is attached, substantially in the manner and for the purpose as described."

No. 23,240. Benaiah Fitts, of Worcester, Mass., for an "Improved method of operating feed rollers for planing machines."

"Having thus fully described the construction and operation of my machine, what I claim as new, and desire to secure by Letters Patent, is, the arrangement of the gears H and I, in combination with the eccentric S, when constructed, and operating in the manner and for the purposes set forth."

No. 23,241. G. W. B. Gedney, of New York, N.Y., for an "Improvement in self-priming fire-arm."

"Having thus fully described my improvement in apparatus for priming fire-arms, what I claim therein as new is, the pivoted chamber or magazine within a recess in the hammer head, substantially as herein set forth, and operated by a link pivoted to the lock plate or some other stationary part of the pistol or other arm. I also claim cutting off the priming at the edge of the hammer face, as specified, and carrying the same into the proper position for exploding upon the nipple or cone, as described."

No. 23,242. Elias B. Gleason, of Boston, Mass., for a "Combined letter and envelope."

"What I claim is, the combination therewith (that is, the letter sheet of the envelope B, composed of the superscription and post mark portion *d* and the single flap *e*, or the same and the two flaps *c* and *f*, arranged together and with respect to the letter or billet portion A, substantially as described."

No. 23,243. Wm. H. Glasgow, of New York, N. Y., for an "Improvement in barrel packer."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, 1st, the rotary cam C, with barrel J attached, in connection with the vibrating hammer H, arranged to operate as described. 2nd, the plate E, having a rotary and a vertical reciprocating movement, for the purpose specified; and, 3rd, the cam C, plate E, and hammer H, arranged for joint operation, substantially as and for the purpose set forth."

No. 23,244. Jacob Guhmann, of Rochester, N.Y., for an "Improved apparatus for heating and purifying the feed-water of steam boilers."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination and arrangement of the bent syphon shaped tube D, constructed as described, having the induction and eduction openings at the highest parts thereof, with low receiving portion D^1, whereby the water is made to pass a considerable space of vertical pipe, the more effectually to deposit its impurities in D^1, both while descending and ascending, together with the waste cock G and conjoint cocks I, H, lever K, and connecting rods and cranks, as described, for simultaneously opening and closing the same, the whole constructed and operating substantially as and for the purposes herein set forth."

No. 23,245. Horatio Guild and Luther Hall, of Boston, Mass., for an "Improvement in machines for dressing heels of boots and shoes."

"What we claim is, the combination of the adjustable hub jaws and pattern thereof, with their curved supporting rack, and the self-adjusting knife or knife frame applied together, and to a bed or table, or the equivalent thereof, and made to operate substantially as herein-before specified."

No. 23,246. Albert W. Hale, of New Britain, Conn., for an "Improved meat mincer."

"What I claim as my invention, and desire to secure by Letters Patent, is, a cutting or mincing machine operating by means of a cylinder or cylinders, having tapering grooves extending from end to end, in combination with and revolving in fluted or ribbed cases A and B, and acting against a stationary knife or knives placed in a plane parallel with the axes of the cylinders, the whole arranged substantially as and for the purposes set forth."

No. 23,247. Enoch Hidden, of New York, N.Y., for an "Improved ships' lights."

"What I claim, and desire to secure Letters Patent, is, 1st, the swivel wrench of the button, and supporting the shaft or spindle thereof by the brace piece *o* above the frame, substantially as and for the purpose set forth. 2nd, the inclined surfaced button as described, with swivel wrench in combination with the slotted lug of the main frame as set forth. 3rd, in combination with the aforesaid construction, the attachment of the light frame *b* to the main frame *a*, by means of the hook and pin as before described."

No. 23,248. John Hobrecker, of Quincy, Ill., for an "Improvement in compositions for roofing."

"I do not confine myself to the precise proportions above named; what I claim as my invention, and desire to secure by Letters Patent, is, the process above described of preparing plastic material of the composition stated, without the aid of external heat, for the purposes set forth."

No. 23,249. P. C. Ingersoll, of Green Point, N. Y., for an "Improvement in hoop lock for securing the ends of metallic bands."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the loop A and key B, fitted together and applied to the hoop, substantially as and for the purpose set forth."

No. 23,250. H. C. Ingraham, of Guilford, and H. S. Ingraham, of Granger, O., for an "Improved rotary planing machine."

"What we claim as our invention, and desire to secure by Letters Patent, is, the arrangement of the cylinder F, with the two upper feed rollers and the matching burs, in combination with the vertical sliding frame I, for the purpose of preserving the same thickness of timber between the face of the board and the tongue and groove, as set forth. We further claim the sliding gripe V, in combination with the ways W, W^1, lever X, and ratchet X^1, all arranged and operating in the manner and for the purpose set forth."

No. 23,251. Douglas B. Jordan, of Woonsocket, R. I., for an "Improvement in mode of oiling journals."

"I do not claim the invention of the hanger B, or the dripper D, or the girder A; what I claim as my invention, and desire to secure by Letters Patent, is, the combination and arrangement of the shafts C and 2, the dish G, the sliding valve H, and the spout marked 6, constructed and operating substantially as and for the purpose described."

No. 23,252. James Keniston, of Cincinnati, O., for an "Improved spark extinguisher."

"What I claim as my invention, and desire to secure by Letters Patent, is, a tank arranged beneath the boilers of furnaces in such manner as to receive the sparks and cinders therefrom, and extinguish and discharge them by means of a current of water passing through the tank, substantially as described for the purposes set forth."

No. 23,253. W. M. Kimball and K. Hartmann, of Cleveland, Ohio, for an "Improvement in lanterns."

"What we claim as our invention, and desire to secure by Letters Patent, is, the segmets D and E, the spring G, and arm H, or their mechanical equivalents, in combination with the hooks L and L^1, arranged and operating in the manner and for the purpose specified."

No. 23,254. Wm. S. Kirkham, of Brandford, Conn., for an "Improvement in locks and latches."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the combination of the nosing D, provided with the double-inclined flanch E, with the bolt or latch C, having its outer end rounded and beveled in a vertical plane to operate in and for the purpose set forth."

No. 23,255. John C. Kuhn, of Boonville, Ark., for an "Improvement in peach-cutting and stoning apparatus."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the knives E, E, curved and crossing each other, as shown, and attached to the elastic bars D, D, in combination with the lever F, provided with the pin *i*. I further claim the above parts when placed on the box A, provided with a tube B, and the several parts arranged relatively with each other, so that the stones H will be separated frem the pulp or flesh, substantially as described."

No. 23,256. Shields Liggett, of Staunton, Va., for an "Improvement in railroad gates."

"I do not claim the movement produced by the action of cars upon projecting levers, as such movement has been heretofore produced; but what I do claim, and desire to secure by Letters Patent, is, the opposite sliding sectional gate in combination with the levers F, F^1, rods *g*, g^1, and *h*, h^1, levers G, G^1, sliding bars I, I^1, and springs *i*, i^1, arranged and operating as set forth."

No. 23,257. Wm. Loyd, of Philadelphia, Pa., for an "Improvement in stereoscopes."

"Having thus fully described my invention, what I claim and desire to secure by Letters Patent, is, a stereoscopic instrument, having eye glasses at opposite sides, and double reflectors in combination with a revolving picture holder, arranged substantially as described. I also claim the grooves *e*, *e*, on opposite sides of the frames *b*, for the purpose of holding two pictures in contact with each frame, as specified."

No. 23,258. Willis E. Moore, of Crawfordsville, Ind., for an "Improvement in loading ordnance."

"What I claim as my invention, and desire to secure by Letters Patent is, 1st, the combination with a cannon or other piece of ordnance of a system of mechanism which will receive the charge, carry it opposite the bore of the cannon, force the same up to the breech of the cannon, and then be capable of being moved out of line with the bore of the same, substantially as and for the purposes set forth. 2nd, combining with the above system of mechanism a needle for

pricking the cartridge after it has been forced up to the breech, said needle coming into action simultaneously with the retreat out of line with the bore of the cannon of the mechanism employed for introducing the charge, and then retreated out of the way, ready for the application and explosion of the cap, substantially as and for the purposes set forth. 3rd, the combination of a cap charger and exploding hammer with the first and second systems of mechanism above claimed, whereby simultaneously with the retreat of the needle a cap is brought over the touch-hole and exploded, substantially as and for the purposes set forth. 4th, a cartridge box, which has a yielding spring stop, in combination with the first system of mechanism above mentioned, substantially as and for the purposes set forth."

No. 23,259. Willis E. Moore, of Crawfordsville, Ind., for an "Improvement in car brakes."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, making the windlass chain shaft in two parts F, K, and uniting said parts by a universal joint L, and arranging the main friction roller J on one section of the shaft F, K, and the windlass drum on the other, substantially as and for the purposes set forth. 2nd, the employment of an auxiliary friction roller O, in combination with the main roller J, and locomotive driving wheel B, when said auxiliary roller O is arranged to rise between the main friction roller J, and the locomotive wheel B, through the peculiar scale beam or weighing arrangement G, G^1, N, *i*, *s*, k^1, *d*, *e*, F, substantially as and for the purposes forth. 3rd, the employment of a pivoted pawl H, in combination with a ratchet drum G^2, having two circles of reverse set teeth *f*, f^1, which incline on their deepest faces toward the center of the drum, substantially as and for the purposes set forth."

No. 23,260. Geo. W. Morgan, of Prattsburgh, N. Y., for an "Improvement in mode of applying springs as a motive power."

"I do not claim the use of wheels and pinions, operated by springs, nor two or more springs on one shaft, nor the duplication of wheels, nor the application of springs on both sides of the motor wheels, for all these are known devices; but what I do claim as my invention, is, the arrangement of the springs B, B, &c., wheels D, D, &c., with lugs *a*, *a*, *a*, pinions E, E, &c., concentrating the power on the pinions H, H, on each side of the wheel I, and the pinions, N, N, and shafts R, R, for winding up at the same time all the springs on either side of the wheel I, when the whole are constructed and operated for joint action as described."

No. 23,261. David S. Neal, of Lynn, Mass., for an "Improved speaking tube for ships."

"Having fully described my invention, I wish it distinctly understood that I do not claim inventing a tube, or an iron, copper, or brass-bound keg; but what I claim and desire to secure by Letters Patent, is, the arrangement of the speaking tube with a cask, or equivalent float, substantially as and for the purpose specified."

No. 23,262. John G. Perry, of Kingston, R.I., for an "Improved meat cutter."

"Having described my machine, what I claim as my invention, and desire to secure by Letters Patent, is, first, I claim placing the knives on or across the shaft, and holding them by their ends to prevent them from turning, substantially as described. Second, I claim the manner of constructing the shaft and stud plates, substantially as and for the purpose herein set forth."

No. 23,263. Henry W. Putnam, of Cleveland, Ohio, for an "Improvement in bottle stopper fastenings."

"What I claim as my improvement, and desire to secure by Letters Patent, is, the bottle stopper fastening, formed of two pieces of wire, the same being united by means of the points B, B, passing through the loops E, E, constructed and having the wire (A) adapted to them as herein described, thus forming a hinge, and securing the same to the neck of the bottle by looping together the ends of the wire D, the several parts being constructed in the manner and operating as herein set forth."

No. 23,264. E. L. Roberts, of Brooklyn, N. Y., for an "Improved fastening for folding-doors."

"I do not claim broadly the employment or use of sliding bolts D, D, attached to a knob spindle, so that they may be moved in and out from a door by turning the same, for such device is quite old and in common use; but having thus described my invention, what I do claim as new, and desire to secure by Letters Patent, is, the combination of the sliding bolts D, D, and H, applied to folding-doors, to operate substantially as and for the purpose set forth."

No. 23,265. Geo. W. Robinson, of Boston, Mass., for an "Improved steering apparatus."

"What I claim as my invention, and desire to secure by Letters Patent, is, the segment M, having teeth on the interior vertical face of the curve, in combination with the gears D, E, and F, and shaft G, connected with the tiller and moving therewith, and arranged and operating in the manner substantially as above set forth."

No. 23,266. Archelaus S. Rollins, of Albany, N. Y., for an "Improvement in preparing hop liquor for brewers."

"I claim as new, and of my invention, and desire to secure by Letters Patent, the preparation of hop liquor, for the purposes of distilling and brewing, by the process set forth."

No. 23,267. P. H. Roots, of Connersville, Ind., for an "Improved water wheel."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the wheel A, and rotating breast or abutment E, moving with different degrees of velocity, in combination with the apron or concave D, the whole being arranged to operate as and for the purpose set forth."

No. 23,268. James L. Rowley, of Angola, Ind., for an "Improved washing machine."

"Having thus fully described my improved washing machine, what I claim as new, and desire to secure by Letters Patent, is, I claim constructing the bottom of the box with three sides of an octagon, the two outer sides to have ribs of an octagonal shape, set at an angle of 45° with the sides of the box, and the bottom to be horizontal, with two rows of rubbing pins or knuckles set alternately with the valleys between the ribs D, D, in combination with the vibrating rubber, having the rubbing surface octagonal, and the rubbing knuckles set so as to work alternately with the spaces between the pins in the bottom of the box, and diagonally with the ribs on outer sides of the bottom B, B, in the manner and for the purposes set forth."

No. 23,269. James E. Russell, of Brooklyn, N.Y., for an "Improvement in cast-iron rails for railways."

"Having described my invention, I claim, and desire to secure by Letters Patent, as an improved article of manufacture, a cast-iron railroad rail, having its neck vertically corrugated as herein shown and described."

No. 23,270. James Smart, of Mansfield, Ohio, for an "Improvement in apparatus for evaporating sugar juices."

"What I claim as my invention, and desire to secure by Letters Patent, is, in the construction of pans, 1st, the combination the inclined bottom A with the inclined zigzag partition C, D, substantially as and for the purposes set forth. 2nd, the combination of two pans B, B^1, and two of flame chambers G, G^1, of the peculiar construction described, substantially as and for the purposes set forth. 3rd, supporting the pans at or near the centre of their length by pivots *a*, *a*, and at their ends by spiral springs *b*, *b*, substantially as and for the purposes set forth."

No. 23,271. Stephen Wm. Smith, of Brooklyn, N. Y., for an "Improvement in machines for freezing cream, &c."

"I claim, first, as my invention, the cylinders D, E, in combination with the scrapers H, H, and reservoir K, constructed in the manner substantially as described, and for the purpose specified. Second, combining with the cylinders a perforated distributing reservoir for the purpose of furnishing the material in the desired quantities to the cylinders, and operating in the manner substantially as set forth."

No. 23,272. Heinrich Soltmann, of New York, N. Y., for an "Improved electro-magnetic medical apparatus."

"I do not claim the vibrating armature, neither do I claim the glass cylinder in itself as a regulator of electrical currents; but what I claim, and desire to secure by Letters Patent, is, the arrangement of the vibrating spring armature and the connections therefrom, in combination with the key S, arranged and acting as specified, to throw the shock off the person or repeat the same, as set forth. I also claim the regulating cylinder *t*, constructed as specified, in combination with the medical electrical machine, fitted and acting in the manner and for the purposes set forth."

No. 23,273. Frederick Stamm, of Lampter, Pa., for an "Improvement in lever jacks."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination and arrangement of the lever and link rod, hinged together with the block and link seats, as herein described, and for the purposes set forth."

No. 23,274. Geo. Starkweather, of Hartford, Conn., for an "Improved rotary stave machine."

"1st, what I claim, therefore, and desire to secure by Letters Patent, is, the horizontal revolving cutting rims D, C, for dressing staves on the two opposite sides at the same time, arranged and operating substantially as described. 2d, the arrangement of one or more feed boxes *x* upon the plate *u*, over the cutters G, with the feeder produced from the worm *a*, for the purpose described."

No. 23,275. Daniel E. Teal, of Norwich, N. Y., for an "Improvement in devices for raising water."

"Having thus set out my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement of means herein recited, the same consisting of the rope or chains, the hooks (K), bail (F), of the cast-iron box, adjustable flanges, collars on the windlass, and the windlass, whereby the bucket can be lowered, filled with water, raised, and emptied, by merely turning the windlass, as described."

No. 23,276. Geo. W. Tolhurst, of Liverpool, Ohio, for an "Improved washing machine."

"Having described my improved washing machine, what I claim as new, and desire to secure by Letters Patent, is, the shaft F, blocks H, H, and wedges G, G, or their equivalents, in combination with the oscillating rubber C, slatted bottom B, dirt chamber A^1, and box A, the whole being arranged and operating in the manner and for the purpose as set forth."

No. 23,277. Wm. Thomas, of Benton County, Arkansas, for an "Improvement in sail wagon."

"I do not claim the application of sails and steering apparatus to vehicles for transportation by land; neither do I claim the splayed spokes and suspension rods used in the strengthening of the wheel; they are well known; but I claim, first, the combination of the spars and cargo box on the rocking shaft *a*, thus lowering the center of gravity and increasing the stability of the fabric, not only in this way, but by also and as another effect thereof, allowing the sails to yield to violent gusts of thwart wind, receiving their force gradually, and spilling it more and more, as they decline. Second, I claim the invention of the hollow wheel hub, which I have called the barrel-hub, to be used for purposes of freight, thereby relieving the axle, avoiding friction, and adding to the power of the vehicle to stand up safely against strong cross winds, the various parts being arranged in the manner and for the purposes substantially as set forth and described."

No. 23,278. Wm. R. Thomas, of Catasauqua, Pa., for an "Improvement in locomotive fire-boxes."

"I do not claim, broadly, the employment of a movable lining in a fire-box, but what I claim as my invention, and desire to secure by Letters Patent, is, the removable lining B fitting within the shell and under the permanent water spaces *a*, *a*, of the fire box, having inwardly projecting inclined sides, and combined with the water spaces of the boiler, by means of two rows of vertical tubes *c*, *c*, entering the crown sheet, and a pipe *e* connecting with the body of the boiler, all substantially as herein described."

No. 23,279. Philip Umholtz, of Tremont, Pa., for an "Improvement in R. R. car journal boxes."

"What I claim, and desire to secure by Letters Patent, is, the spring yoke bolt *c* in combination with the follower *b* and packing *g*, operating in mortise D of box A, in the manner described and for the purposes set forth."

No. 23,280. James S. Upton, of Battle Creek, Mich., for an "Improvement in horse power."

"I do not claim as my invention any mere arrangement of external with internal gear to produce accelerated motion, by wheels toothed merely on one side or face, as such combinations are seen every day in endless variety; but what I do claim as my invention and desire to secure by Letters Patent, is, the arrangement of the driving wheel G, with the pinions E, E, E, and wheels F, F, F, in combination with the annular wheel O, with toothed gear on its internal edge and on one of its faces, for the purpose and in the manner substantially as herein described and set forth."

No. 23,281. Chapman Warner, of New York, N. Y., for an "Improvement in clasps for the ends of bands of iron."

"What I claim as my invention, and desire to secure by Letters Patent, is, the construction of a clasp of any material or dimensions, substantially of the form described, and illustrated by the accompanying drawings, with two wedged shaped projecting tongues placed in the position, fitted with sleeves, and protected by sides, as above-mentioned."

No. 23,282. Noah H. Wentworth and Martin L. Ames, of Somersworth, N.H., for an "Improvement in R. R. car coupling."

"Having thus set out our invention, what we claim as new and desire to secure by Letters Patent, is, combining with each latch or catch a lever, as herein described, and providing the latch and lever, when thus combined with the cams and their shafts, and crank arms for actuating them, as and for the purposes set forth."

No. 23,283. Wm. K. Wyckoff, of Ripon, Wis., for an "Improved bread making table."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination and arrangment of the flour chest A, the table or moulding board B, the mixing tray C, and the closet D, substantially as described and for the purpose specified."

No. 23,284. C. T. E. Blaich and Peter A. Bishop, of Elyria, Ohio, assignors to Peter A. Bishop, aforesaid, for an "Improved steering wheel."

"What we claim as our invention, and desire to secure by Letters Patent, is, the vertically sliding dog being secured in suitable brackets, and provided with a foot piece, pawl, and joint, as described, in combination with the spiral spring and ratchet, the whole being described and operated as set forth."

No. 23,285. Edwd. S. Boynton, of New York, N. Y., assignor to Peter R. Roach, of Elizabeth City, N. J., for an "Improvement in sewing machines."

"Having now described my invention, I will proceed to set forth what I claim, and desire to secure by Letters Patent of the United States, what I claim is, the use of the adjustable fulcra for controlling the feed of the needle, in combination with an annular or ring-shaped shanked wire needle as attached directly to the crank shaft without the intervention of a needle bar, substantially as herein-before set forth."

No. 23,286. Addison Crosby, of Fredonia, N. Y., assignor to H. S. Stephens, of said Fredonia, for an "Improved method of hanging reciprocating saws."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the two jaws or plates B, B^1, applied to the saw A connected together and suspended within the swinging or pivoted adjustable frame C which is attached to the plates *g*, *g*, the whole being arranged as and for the purpose set forth."

No. 23,287. Thos. E. Hunt, of Indianapolis, Ind., assignor to himself and Nathan T. Hunt, of said Indianapolis, for an "Improvement in sugar mills."

"What I claim, and desire to secure by Letters Patent, is, first, the combination and arrangement of the frame B, rollers C, C, C, C, and gearing E, E, E, E, with the cone D, gearing F, bolt G, and spring J, when constructed and operated substantially as and for the purposes set forth. Second, the trough N with aperture O, when constructed as and for the purposes set forth."

Re-issues.

William Gardner, of New York, N. Y., for an "Improvement in machinery for preparing oval picture frames."—Patented 17th August, 1858.—Re-issued 15th March, 1859.

"I claim as a means of preparing oval picture frames, and desire to secure by Letters Patent, a lathe with a face plate revolving in an oval path in combination with a scraper adapted to the form of the desired molding of the oval frame

when the said scraper is so arranged as to be self-adjusting laterally with the said molding, substantially as and for the purpose herein set forth."

WILLIAM A. KIRBY, of Buffalo, N. Y., for an "Improvement in harvesting machines."— Patented 2nd September, 1856.— Re-issued 15th March, 1859.

"Having thus fully described the nature and object of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, first, the combination of the single plate H and main wheel, substantially as described. I also claim the combination of the main wheel K, single plate H, and rim L, when connected together and operating in the manner and for the purpose set forth. I also claim placing the vibrating wheel on the outside of the frame, or so that the outside of the frame does not bear on the outside of the wheel, in combination with the triangular-shaped frame on the inside of the wheel, substantially as described. I also claim hanging the seat to the plate H and to the standard S, in the manner and for the purpose set forth. I also claim a hinged lever seat and outside stirrup or supporter in combination with a wheel having no outside frame or support, substantially as herein represented."

ROBERT MARCHER, of Cornwall, N. Y., for an "Improvement in machinery for enameling mouldings, &c."—Patented 21st October, 1858.—Re-issued 15th March, 1859.

"What I claim as my invention, and desire to secure by Letters Patent in coating or enameling the surface of mouldings is, the employment of a plate whose lower edge is formed the reverse of the transverse form of the moulding to which it is applied, when such plate is made self-adapting to the surface of the moulding during the longitudinal movement, substantially as herein described, and for the purpose set forth. I also claim the employment of a hopper to contain the composition for enameling when the lower edges of the end plates thereof are formed the reverse of the transverse form of the moulding, and the moulding to be enameled is employed as the bottom of such hopper, substantially as described, and for the purpose set forth."

LEWIS SOLOMON, of New York, N. Y., for an "Improved amalgamator."—Patented 7th December, 1858.—Re-issued 15th March, 1859.

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, first, the use of elongated amalgamating chambers (I), when arranged to operate in the manner and for the purposes specified. Second, the arrangement of the amalgamating chambers (I), within a heated chamber (A), for the purposes specified."

THOMAS STUBBLEFIELD, of Columbus, Ga., for an "Improvement in steam gauges."—Patented 18th July, 1854.—Re-issued 15th March, 1859.

"What I claim therein as new, and desire to secure by Letters Patent, is, the combination of a case perforated at both ends with a spring valve, the spring forming the sides of the valve being arranged so as to cut off communications between the perforations in the opposite ends of the case and perform the duty of a manometer spring, as described."

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

LIST OF SPECIFICATIONS, &c. published during the week ending 1st April, 1859.

No.	Price.	SUBJECT-MATTER.
1925	3*d.*	Manufacture of caps.
1927	8*d.*	Machinery for punching and shearing metals.
1931	7*d.*	Bellows.
1932	3*d.*	Manufacture of starch.
1935	7*d.*	Apparatus for regulating gas.
1937	3*d.*	Locomotive and other steam engines.
1938	6*d.*	Hair pins.
1941	6*d.*	Reefing or furling sails.
1943	5*d.*	Application of gas to chandeliers.
1945	8*d.*	Machinery for sorting silk or thread.
1947	3*d.*	Apparatus for winding woollen or other fabrics.
1948	10*d.*	Locomotive and other carriages.
1949	1*s.*	Apparatus for aërating liquids.
1951	1*s.* 5*d.*	Ambulatory furniture for apartments.
1953	3*d.*	Hose for distributing liquid manure, &c.
1954	6*d.*	Giving motion to screw and other propellers.
1955	7*d.*	Knife and fork cleaning machine, &c.
1956	5*d.*	Apparatus for the disinfection and rectification of bad-tasted alcohols.
1957	3*d.*	Machinery for preparing and spinning cotton, &c.
1958	7*d.*	Ships' logs.
1959	3*d.*	Indigo blue dyeing.
1960	7*d.*	Billiard tables and cues.
1963	7*d.*	Baths.
1964	5*d.*	Securing the joints of slate ridge roll.
1965	6*d.*	Telegraph cables.
1966	7*d.*	Breech-loading fire-arms and ordnance, &c.
1967	5*d.*	Generating steam, &c.
1968	3*d.*	Manufacture of combs for flax, wool, &c.
1969	7*d.*	Governors or regulators for steam engines.
1970	7*d.*	Fumigators.
1971	6*d.*	Supports for railways.
1972	5*d.*	Apparatus for the elevation of liquids.
1974	3*d.*	Beds, &c.
1976	10*d.*	Looms for weaving.
1977	6*d.*	Prevention of steam boiler explosions.
1978	5*d.*	Gas burners.
1979	3*d.*	Piling metals for the manufacture of arms, cutlery, &c.
1980	9*d.*	Air engines.
1981	3*d.*	Treating sugar canes, &c.
1982	3*d.*	Manufacture of percussion caps.
1983	3*d.*	Wet gas meters.
1986	3*d.*	Manufacture of artificial parchment, &c.
1987	6*d.*	Elastic pavements and linings for walls, &c.
2004	3*d.*	Mills.
2016	9*d.*	Printing words or figures on papers, parcels, books, &c.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

A FREE LIBRARY and READING ROOM, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

NOTE.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities :—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Liverpool (*Free Public Library, Duke Street*).
Macclesfield (*Useful Knowledge Society*).
Manchester (*Chetham Hospital*).
———— (*Camp Field*).
Newark, Nottingham (*Mechanics' Institute, Middle Gate*).
Newcastle-upon-Tyne (*Literary and Philosophical Society*).
Newport, Monmouth (*Commercial Room, Town Hall*).
Northampton.
Norwich (*Free Library, St. John's, Maddermarket*).
Nottingham (*Corporation Rooms, St. Peter's Church side*).
Oxford (*Public Free Library, Town Hall*).
Paisley (*Government School of Designs, Gilmour Street*).
Plymouth (*Mechanics' Institute, Princess Square*).
Preston (*Dr. Shepherd's Library, the Institution, Avenham*).
Reading (*Literary, Scientific and Mechanics' Institution, London Street*).
Rochdale (*Commissioners Room, Smith Street*).
Rotherham (*Board of Health Offices, Howard Street*).
Salford (*Peel Park*).
Sheffield (*Free Library, Surrey Street*).
Shrewsbury (*The Public Museum, College Street*).
Society of Arts (*John Street, Adelphi*).
Southampton (*Corporation Library, Audit House*).
Stirling (*Burgh Library, Town House, Broad Street*).
Stockport (*Court House, Vernon Street, Warren Street*).
Sunderland (*Corporation Museum, Athenæum, Fawcett Street*).
Wakefield (*Mechanics' Institution, Barston Square*).
Warrington (*The Museum and Library*).
Waterford (*Town Hall, The Mall*).
Wednesbury (*Board of Health Offices*).
Wexford (*Mechanics' Institute, Crescent Quay*).
Wigan.
Wolverhampton (*School of Practical Art, Darlington Street*).
Wolverton (*Railway Station*).
Yarmouth, Norfolk (*Public Library, South Quay*).
York (*Lower Council Chamber, Guildhall*).

The Commissioners' publications have also been presented to the following Public Offices, Seats of Learning, British Colonies, and Foreign States :—

Public Offices.

Admiralty, Steam Department.
———— Surveyor of Navy.
———— Deptford Dockyard.
———— Woolwich ditto.
———— Sheerness ditto.
———— Devonport ditto.
———— Portsmouth ditto.
———— Chatham ditto.
———— Pembroke ditto.
Artillery Institute, Woolwich.
Board of Trade, Whitehall.
Small Arms Factory, Enfield.
Ordnance, Pall Mall.
War Office, Pall Mall.
School of Mines, Jermyn Street, Piccadilly.
Dublin Castle, Dublin.
Rolls Office, Chancery (Four Courts), Dublin.
Office of Chancery, Edinburgh.
East India House, Leadenhall Street.

Seats of Learning.

Cambridge University.
Trinity College, Dublin.
Queen's College, Galway.
University College, London.

British Colonies.

Malta.
Cape of Good Hope.
Mauritius.
India:—
Bengal; Agra; Madras; Bombay.
Ceylon.
Victoria.
New South Wales.
South Australia.
Tasmania.
New Zealand.
Newfoundland.
Canada—Quebec; Toronto
New Brunswick.
Prince Edward Island.
Antigua.
Barbados.
Jamaica.
Trinidad.
British Guiana.

Foreign States.

Austria—Handels Ministerium, Vienna.
Bavaria—Königliche Bibliothek, Munich.
Belgium—Ministère de l'Intérieur, Brussels.
France—Bibliothèque Impériale, Conservatoire des Arts et Métiers, Hôtel de Ville, } Paris.
Hanover—Ministerium des Innern, Hanover.
Netherlands—Ministère de l'Intérieur, The Hague.
Prussia—Handels Ministerium, Berlin.
Russia—Bibliothèque Impériale, St. Petersburg.
Sardinia—Ufficio delle Privative, Turin
Saxony—Polytechnische Schule, Dresden.
Sweden—Stockholm.
United States—The Patent Office, Washington.
The Astor Library, New York.
The State Library, Albany.
The Franklin Institute, Philadelphia.
The Free Library, Boston.
Philadelphia Library Company.
Wurtemberg—Bibliothek des Musterlagers, Stuttgart.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d.*

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE REFERENCE INDEX of PATENTS pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il più gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

Free Patent Museum and Library, South Kensington.

NUMBERS of VISITORS for the Week ending 2nd April 1859.

Day of Month.	Day of Week.	Morning.	Evening.	Total.
Mar. 28	Monday -	277	711	988—Fine.
„ 29	Tuesday -	233	434	667— „
„ 30	Wednesday	28	18	46— Snowy and dirty.
„ 31	Thursday*	127	—	127—Fine.
April 1	Friday -	109	—	109— „
„ 2	Saturday -	163	—	163— „
	Total -	937	1163	2100

* The Museum closes at 5 o'clock.

Total number of visitors since the period of free daily admission (12th May, 1858) to 2nd April, 1859, —82,338.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS. —This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price 21*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

In course of Publication, by Order of the Commissioners.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.
BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 549. FRIDAY, APRIL 8, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

536. To EDWARD JOSEPH HUGHES, of the firm of Hughes and Son, Patent Agents, 123, Chancery Lane, London, for the invention of "Improvements in preserving animal food, poultry, game, fish, fruit, and other similar substances."—A communication from abroad by Edouard Gorges, of Paris.

On his petition, recorded in the Office of the Commissioners on the 1st day of March, 1859.

634. To JAMES PALMER, of Sutton Coldfield, in the county of Warwick, Edge Tool Maker, for the invention of "A new or improved trap for catching animals, birds, and fishes."

On his petition, recorded in the Office of the Commissioners on the 12th day of March, 1859.

660. To ISAIAH ASH, of No. 17, Great Bridport Street, Blandford Square, in the county of Middlesex, Locksmith, for the invention of "Improvements in the construction of locks and latches."

664. To WILLIAM AVERY, of Birmingham, in the county of Warwick, Engineer, for the invention of "Improvements in machinery for the manufacture of screws."

668. To JAMES CLARK, of Newton Heath, near Manchester, for the invention of "Improvements in the manufacture of fabrics in which compounds containing india rubber are used."

670. And to HENRY BESSEMER, of Queen Street Place, New Cannon Street, in the city of London, for the invention of "Improvements in the manufacture of crank axles."

On their several petitions, recorded in the Offie of the Commissioners on the 16th day of March, 1859.

672. To COLEMAN DEFRIES, of the firm of Jonas Defries and Sons, Houndsditch, for the invention of "Improvements in lamps."

674. To JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in machinery or apparatus for folding and stitching sheets of paper."—A communication from abroad by Messrs. Sulzberger and Graf, of Fraunfeld, Switzerland.

678. And to ANDREW GEORGE HUTCHINSON, of West Derby, in the county of Lancaster, Builder, for the invention of "Improvements for counteracting damp in buildings."

On their several petitions, recorded in the Office of the Commissioners on the 17th day of March, 1859.

684. To WILLIAM BOWERS TAYLOR, of Ballymena, in the county of Antrim, Ireland, Gentleman, for the invention of "Certain improvements in or applicable to looms for weaving."

690. To ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, for the invention of "A new or improved metallic alloy."

692. To ALBERT LOUIS THIRION, Pastor, of Asche en Refail, province de Namur, kingdom of Belgium, for the invention of "Improvements in water, wind, steam, and hand mills."

694. And to JOHN WALLACE DUNCAN, of Grove End Road, St. John's Wood, and JAMES EGLINTON ANDERSON GWYNNE, of Hanover Terrace, Regents Park, both in the county of Middlesex, Gentlemen, for the invention of "Improvements in, or connected with, apparatus for the generation, application, and condensation of steam, part of which apparatus or arrangements is applicable to other purposes."

On their several petitions, recorded in the Office of the Commissioners on the 18th day of March, 1859.

696. To WILLIAM BRUCE GINGELL, of 37, Corn Street, in the city of Bristol, Architect, for the inven-

tion of "Improvements in the form of metal bars used for the stiles, rails, heads, and sills of window sashes, casements, and other lights."

698. To SAMUEL STEIN, of Chapel Place, Poultry, in the city of London, for the invention of "Manufacturing a resinous carton or pasteboard from vegetable matter, an improvement for roofing, ship sheathing, lining walls to prevent dampness, and other uses."—A communication from abroad, by Auguste Marie Chevalier, of Avignon, in France.

702. To JAMES HOWDEN and ALEXANDER MORTON, of Glasgow, in the county of Lanark, North Britain, Engineers, for the invention of "Improvements in apparatus for obtaining and regulating motive power."

704. To WILLIAM and SAMUEL PICKSTONE, of Radcliff Bridge, near Manchester, Cotton Spinners, Manufacturers and Dyers, for the invention of "An improvement in stiffening, sizing, filling, or weighting textile fabrics."

706. And to WILLIAM COLBORNE CAMBRIDGE, of Bristol, Agricultural Implement Maker, for the invention of "An improved construction of chain harrow."

On their several petitions, recorded in the Office of the Commissioners on the 19th day of March, 1859.

---

708. To ARNOULD BAUCQ, Sugar Manufacturer, of Marchiennes, department of the Nord, empire of France, for the invention of "Maintaining graters mechanically."

710. To ROBERT WHITTAKER, of Lennox Mill, in the county of Stirling, North Britain, Millwright, for the invention of "Improvements in the manufacture or construction of metallic rollers or cylinders and mandrills for printing."

712. To JOSEPH ROBERTS, of Staley Bridge, in the county of Chester, Engineer, for the invention of "Improvements in packings for pistons."

714. To JOSEPH BICKERTON, of Oldham, in the county of Lancaster, Machinist, for the invention of "Improvements in opening and securing window sashes."

716. And to WILLIAM WARNE, JOHN AMERICUS FANSHAWE, JAMES ARCHIBALD JAQUES, and THOMAS GALPIN, all of Tottenham, in the county of Middlesex, India-rubber Manufacturers, for the invention of "An improved compound or preparation of materials for, and mode of covering and insulating wires or conductors used for telegraphic or electrical purposes."

On their several petitions, recorded in the Office of the Commissioners on the 21st day of March, 1859.

---

718. To GEORGE PIERRE ANTOINE LUTZ, of Rue Ménars, Paris, in the empire of France, Manufacturer, for the invention of "An improvement in veils."

720. To PACIFICO TAGLIACOZZO, of 27, Broad Street Buildings, in the city of London, for the invention of "An improvement in metallic pens."

724. To JOHN TALBOT PITMAN, of the American and European Patent Offices, No. 67, Gracechurch Street, London, for the invention of "Improvements in springs for railroad cars, and for other purposes."—A communication from abroad by John I. Fields, of Brooklyn, in the state of New York, one of the United States of America.

726. To SAMUEL NEWINGTON, of Ridgway, Ticehurst, in the county of Sussex, M.D., for the invention of "Improvements in apparatus for distributing seeds and manure."

728. To WILLIAM PICKFORD WILKINS, of Ipswich, in the county of Suffold, Engineer, for the invention of "Improvements in the arrangements of valves, and in their application to steam engines."

732. And to JACOBUS TYSSEN, of Rotterdam, in the kingdom of Holland, Mariner, for the invention of "An improved apparatus for indicating the speed of ships and other vessels."

On their several petitions recorded in the Office of the Commissioners on the 22nd day of March, 1859.

---

735. To SAMUEL ORAM, of No. 137, Fleet Street, in the city of London, for the invention of "Improvements in pipes or tubes for generating and superheating steam."

736. To WILLIAM ADAMSON, of the Patent Slip, Wellington Quay, Newcastle-on-Tyne, for the invention of "Improvements in apparatus for propelling vessels."

737. To SAMUEL CLARKE, of Albany Street, Regent's Park, in the county of Middlesex, for the invention of "Improvements in the manufacture of candles."

738. To WILLIAM MIDDLESHIP, of Grove Terrace, South Grove, Mile End, in the county of Middlesex, Officer of Her Majesty's Customs, for the invention of "Improvements in propelling vessels."

739. To JOHN EVANS, of Nash Mills, in the parish of King's Langley, in the county of Hertford, Paper Maker, for the invention of "Improvements in the manufacture of paper."

741. To JEAN VANDEN HIELAKKER, of the city of Brussels, in the kingdom of Belgium, Civil Engineer, for the invention of "Improved apparatus for pressing or moulding artificial or patent fuel, fire-bricks, and similar articles."

742. To GEORGE NEAL, Gas Chandelier and Fitting Manufacturer, of Great Charles Street, Birmingham, in the county of Warwick, for the invention of "Certain improvements in apparatus or fittings connected with the burning of gas for regulating and economising its consumption."

743. To WILLIAM DELANY, of Norfolk Street, Strand, in the county of Middlesex, Gentleman, for the invention of "Improvements in ploughs for tilling land."—A communication from abroad, by Lodner D. Phillips, of Chicago, in the United States of America.

744. To JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in machinery or apparatus for the manufacture of sheet tin."—A communication from abroad, by Monsieur Masson, of Paris, in the empire of France.

745. To Pierre Paul Boll, of Paris, in the French empire, Gentleman, and Hermann Reger, of Cologne, Gentleman, for the invention of "Improvements in steam boiler and other furnaces."—A communication from Antoine Speich, residing at Strasbourg.

746. And to Frederic Tillett, of Banner Street, in the parish of St. Luke's, in the county of Middlesex, Splint Cutter, for the invention of "Improvements in machinery for cutting splints for matches."

On their several petitions, recorded in the Office of the Commissioners on the 23rd day of March, 1859.

747. To William Garforth and James Garforth, both of Dukinfield, in the county of Chester, Engineers, for the invention of "A certain improvement in metallic pistons."

748. To William Edward Wiley, of No. 34, Great Hampton, Birmingham, in the county of Warwick, Gold Pen and Pencil Case Manufacturer, for the invention of "Improvements in the manufacture of boxes or cases used for holding needles, pens, matches, pencils, and for other like purposes."

749. To William Edward Wiley, of No. 34, Great Hampton Street, Birmingham, in the county of Warwick, Gold Pen and Pencil Case Manufacture, for the invention of "New or improved instruments to be used in burning and supporting candles."

750. To Frederick Edward Sharp, of No. 3, Gloucester Terrace, Blackheath, in the county of Kent, for the invention of "Improvements in machinery for corking bottles."

751. To Edward Squire Tebbutt, of the firm of W. J. Windram and Co., of Leicester, Elastic Web Manufacturers, for the invention of "Improvements in the manufacture of elastic fabrics."

752. To Charles Sanderson, of Sheffield, in the county of York, Merchant, for the invention of "Improvements in preparing, tempering, and covering, or coating thin strips or sheets of steel."

753. And to William Clark, of No. 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for the invention of "A machine for separating oats from their husks or chaff."—A communication from abroad by Léon Jean Emile Dupont, of Paris.

On their several petitions, recorded in the Office of the Commissioners on the 24th day of March, 1859.

754. To Hugh Rigby, of Salford, in the county of Lancaster, Engineer, for the invention of "Improvements in machinery or apparatus for obtaining motive power, applicable to hoists, and all other purposes to which motive power can be applied."

755. To Charles Cowper, of No. 20, Southampton Buildings, Chancery Lane, in the county of Middlesex, Patent Agent, for the invention of "Improvements in telegraphic cables."—A communication from abroad by Robert Jefferson Bingham, of Rue de la Rochefoucauld, Paris, in France.

756. To Richard Baker, of Liverpool, in the county of Lancaster, Watch Maker, for the invention of "Improvements in chronometers, watches, and other time-keepers."

757. To John Henry Johnson, of No. 47, Lincoln's Inn Fields, in the county of Middlesex, and of No. 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in fire-arms."—A communication from abroad, by Francis H. Bell, of the city and county of Washington, in the district of Columbia, in the United States of America.

758. To William Edward Newton, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in ovens for baking bread, and other substances."—A communication from abroad by Thomas Russell, of New York.

759. To Christopher Hill, of the Chippenham Station, Great Western Railway, for the invention of "Improvements in the permanent way of railways."

760. And to Humphrey Humphreys, the elder, of Buckingham, in the county of Buckingham, Gentleman, for the invention of "An improvement in unhairing hides and skins, and in the manufacture of leather."

On their several petitions, recorded in the Office of the Commissioners on the 25th day of March, 1859.

761. To George Haseltine, Gentleman, of Washington, in the district of Columbia, United States of America, now of No. 37, King Street, in the city of London, for the invention of "Improvements in the manufacture of small metallic chains."—A communication from Edwin H. Perry, of Rhode Island, United States.

763. To Elizabeth Steane, of Manor Rise, Brixton, in the county of Surrey, Widow, for the invention of "An improved means or apparatus for preventing candles dropping or guttering."

765. To Mark Firth, of the firm of Thomas Firth and Sons, of Sheffield, in the county of York, Steel Manufacturers and Merchants, for the invention of "Improvements in machinery for grinding saws and flat plates of steel."—A communication from E. T. Jones, residing in Montreal.

766. To George Naylor, of No. 7, Durnford Street, East Stonehouse, in the county of Devon, a Lieutenant in the Royal Marines Light Infantry, for the invention of "An apparatus for measuring and indicating the distance passed over or travelled by the same."

767. To John Campbell Evans and Peter Soames, of the Morden Iron Works, East Greenwich, in the county of Kent, Engineers, for the invention of "Improvements in apparatus for superheating steam."

768. To Matthew Andrew Muir, of Glasgow, in the county of Lanark, North Britain, Machinist, and James McIlwham, of the same place, Machinist, for the invention of "Improvements in moulding or shaping metals."

769. To Edward Dowling, of Little Queen Street, Holborn, in the county of Middlesex, Scale Maker, for the invention of "Improvements in weights."

770. To Benjamin Smith and Charles Lavers Smith, both of Corbet's Court, Spitalfields, in the county of Middlesex, Manufacturing Chemist, for the invention of "Improvements in the preparation of certain colouring matter, applicable for dyeing and printing."

771. And to JOSEPH BUCKLEY, of Horwick, in the county of Lancaster, Calico Printer, ORLANDO GREENHALGH, of the same place, Manager, and ROBERT HUTCHINSON, of the same place, Mechanic, for the invention of "Improvements in machinery or apparatus for printing woven fabrics."

On their several petitions, recorded in the Office of the Commissioners on the 26th day of March, 1859.

772. To CHARLES JAMES RICHARDSON, of No. 34, Kensington Square, and No. 9 A, King Street, Whitehall, both in the county of Middlesex, Architect, for the invention of "Improvements in apparatus to be applied to chimnies or flues of buildings, for preventing downdraught or return smoke, for their insuring upward ventilation, and for reducing the quantity of smoke or the blacks from the smoke passing into the atmosphere."

773. To CHARLES FRÉDERIC VASSEROT, of No. 45, Essex Street, Strand, London, Patent Agent, for the invention of "An improved diving apparatus."—A communication from Philippe Bigard, residing in Lyons, in the empire of France.

774. To JAMES BUCKINGHAM, of Westmoreland House, Walworth Common, in the county of Surrey, Civil Engineer, for the invention of "Improvements in machinery or apparatus employed in drawing fibrous substances."

775. To ALFRED VINCENT NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "An improved construction of furnace for reheating steel preparatory to the hardening, tempering, or annealing process."—A communication from abroad by Perry Green Gardiner, of New York.

776. To ARCHIBALD TURNER, of Leicester, Elastic Web Manufacturer, for the invention of "Improvements in the manufacture of elastic fabrics."

777. And to ALFRED VINCENT NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "Improved apparatus for retaining the oil or other fluid used for annealing, tempering, and hardening steel at an equable low temperature."—A communication from abroad by Perry Green Gardiner, of New York.

On their several petitions, recorded in the Office of the Commissioners on the 28th day of March, 1859.

Invention protected for Six Months by the Deposit of a Complete Specification.

NOTICE is hereby given, that the petition of

814. FREDERIC PHILIPPE AUGUSTE AUBURTIN, of Paris, in the empire of France, at present residing at No. 32, Gerard Street, Islington, in the county of Middlesex, praying for Letters Patent for the invention of "An improved preparation of food for herbivorous animals," was deposited and recorded in the Office of the Commissioners on the 1st day of April, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

8th April, 1859.

2236. EDWARD VILLIERS RIPPINGILLE, of the parish of Chorlton-upon-Medlock, Greenheys, Manchester, Artist, for an invention of "The improvement of fire-arms and artillery."—Dated 8th October, 1858.

2238. JOSEPH MITCHELL, Worsted Spinner, HIRAM MITCHELL, Manager, and THOMAS ENGLAND, Mechanic, all of Bradford, in the county of York, for an invention of "Improvements in means, machinery, or apparatus employed in spinning wool, mohair, alpaca, silk, and other fibrous substances."—Dated 8th October, 1858.

2240. ALFRED NICHOLLS, of Manchester, in the county of Lancaster, Merchant, and THOMAS WALKER, of Birmingham, in the county of Warwick, Clerk, for an invention of "An improved spring hook, catch, or fastening."—Dated 8th October, 1858.

2247. FREDERICK WILLIAM GERHARD, of Tichborne Street, Haymarket, in the county of Middlesex, Mineral Surveyor, for an invention of "Improvements in the manufacture of aluminium and sodium."—Dated 8th October, 1858.

2256. JAMES HOLROYD, of Leeds, in the county of York, Cloth Dresser, for an invention of "An improvement in the knives used for shearing woollen cloths and cloths made of wool and other materials."—Dated 11th October, 1858.

2257. CHARLES FRÉDERIC VASSEROT, of 45, Essex Street, Strand, London, Patent Agent, for an invention of "Improvements in constructing reflectors."—A communication from Antoine Marie Balencie, residing in Paris, in the empire of France.—Dated 11th October, 1858.

2259. JOSEPH BEATTIE, of Lawn Place, South Lambeth, in the county of Surrey, Engineer, for an invention of "Improvements in locomotive and other steam-engines."—Dated 11th October, 1858.

2260. ROBERT COWEN, the younger, of the town and county of the town of Nottingham, Mechanical Draughtsman, for an invention of "Improvements in dressing lace or other fabrics made of silk, cotton, or other material, and in apparatus employed therein."—Dated 11th October, 1858.

2261. JAMES LAMB HANCOCK and FREDERICK LAMB HANCOCK, both of Pentonville, in the county of Middlesex, Manufacturers, for an invention of "Improvements in implements for tilling, breaking up, or pulverizing land, for sowing seeds, and for thinning out turnips and other crops."—Dated 11th October, 1858.

2266. THOMAS RIDDELL, of Carracou Terrace, Old Ford, Bow, in the county of Middlesex, Gentleman, for an invention of "An improved arrangement for sustaining window sashes and sliding pannels."—Dated 11th October, 1858.

2270. Leonard Wray, of No. 5, Devonshire Street, Portland Place, London, Gentleman, for an invention of "New and improved compounds for the coating or insulating of submarine electric telegraph wires; and which are also applicable to the coating or insulating of electric telegraph wires laid underground."—Dated 12th October, 1858.

87. Lambert Cowell, of Adelphi, in the county of Middlesex, Gentleman, for an invention of "Improvements in apparel affording the means for preserving life at sea, and to prevent accidents to persons casually immersed in water."—Dated 14th October, 1858.

89. Alexander Gordon, Member of the Institution of Civil Engineers in London, and residing at Little Fife House, Whitehall, in the city of Westminster, for an invention of "Improvements for manufacturing cast iron, steel, and wrought iron."—A communication from Antoine Galy Cazalat, of Paris, and residing abroad.—Dated 14th October, 1858.

2294. Henry Martin, of Old Kent Road, in the county of Surrey, and of 8, Scott's Yard, in the city of London, for an invention of "Improvements in separating starch from gluten in apparatus used therein, and also in preparing cement from gluten."—Dated 14th October, 1858.

2312. Joseph Pierre Gillard, of Paris (France), Civil Engineer, for an invention of "Improvements in generating hydrogen, and in the means of and apparatus for applying the same to lighting and heating purposes."—Dated 16th October, 1858.

2335. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in the hanging and arranging of cylindrical, conical, or spiral steel railroad springs for railway carriages."—Dated 19th October, 1858.

2369. Rudolph Bodmer, of 2, Thavies Inn, Holborn, in the city of London, for an invention of "An improved toy or plaything for children."—A communication from Charles Thévenot, of Paris, in the empire of France.—Dated 23rd October, 1858.

2377. Francis Fowke, of Park House, South Kensington, in the county of Middlesex, Captain in the Royal Engineers, for an invention of "Improvements in umbrellas and parasols."—Dated 25th October, 1858.

2404. Charles Pooley, of the city of Manchester, Cotton Spinner, for an invention of "Certain improvements in and applicable to carding engines and other machines for preparing cotton and other fibrous materials."—Dated 28th October, 1858.

2533. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improved apparatus for securing doors of safes, closets, and apartments."—Dated 11th November, 1858.

2717. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in locomotive engines."—A communication from Foreigners residing abroad.—Dated 29th November, 1858.

2978. Hiram Hutchinson, of the city of Paris, France, for an invention of "Improvements in the manufacture of india-rubber goods."—Dated 29th December, 1858.

2980. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improvements in machinery for reaping and mowing."—Dated 29th December, 1858.

230. Henry Brecknell, of the city of Bristol, Brassfounder, and John Dyer, of the same place, Gentleman, for an invention of "Improvements in cocks and valves."—Dated 25th January, 1859.

355. John Aspinall, of Great Tower Street, in the city of London, Civil Engineer, for an invention of "An improvement in the refining of sugar."—Dated 8th February, 1859.

406. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in breech-loading fire-arms."—A communication from abroad, by James H. Merrill, of the United States of America.—Dated 12th February, 1859.

422. John Thomas Jones, of Glasgow, in the county of Lanark, North Britain, Machinist, for an invention of "Improvements in sewing machines."—Dated 15th February, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 6th April*, 1859, *inclusive*.)

4th April.

814. Robert Halliwell, of Bolton-le-Moors, in the county of Lancaster, Manager to Messieurs Benjamin Dobson and Edward Barlow, of the same place, Machine Makers, for an invention of "Certain improvements in the machines for spinning called self-acting mules."—A communication.—Dated 4th April, 1856.

830. Arnold Morton, of Wakefield, in the county of York, for an invention of "Improvements in the manufacture of paints and pigments."—Dated 5th April, 1856.

842. Arnold Morton, of Wakefield, in the county of York, for an invention of "Improvements in the manufacture of paper hangings for decorative purposes."—Dated 7th April, 1856.

852. William Joseph Curtis, of 1, Sebbon Street, Islington, for an invention of "Improvements in lubricating the axles of locomotive engines and of carriages on railways."—Dated 8th April, 1856.

860. George Frederick Morrell, of Fleet Street, in the city of London, for an invention of "Improvements in the manufacture of railway chairs."—Dated 9th April, 1856.

5th April.

874. James Mash, of the city of Manchester, in the county of Lancaster, Engineer, for an invention of "Improvements in the fusible plugs and furnaces of steam-boilers."—Dated 12th April, 1856.

6th April.

843. William Terry, of Birmingham, in the county of Warwick, Gun Maker, for an invention of "Improvements in breech-loading fire-arms."—Dated 7th April, 1856.

LIST of all the APPLICATIONS which have been made to the JUDICIAL COMMITTEE of the PRIVY COUNCIL for the CONFIRMATION or EXTENSION of LETTERS PATENT for INVENTIONS, noting those Cases in which the Confirmation or Extension has been granted.

Year and No. of Application.	Name of Petitioner.	Nature of Invention, and No. and Date of Patent.	Object and Stages of Petition.	Names of Solicitors.	Observations.
1835. No. 1	JOSEPH WELLS, of 161, Regent's Street, London, assignee of William Gibbins and Thomas Westrup, original Patentees.	For improvements in an apparatus for converting sea water or otherwise impure water into fresh or pure water. (6117), 24th May, 1831.	Confirmation. *Lodged*, 28th Sept. 1835. *Referred*, 30th Sept. 1835.	Petitioner: Petitioner in person. Opponents: E. Richardson, 2, Adelphi Terrace, on behalf of Winton Harris, of Amelia Place, Brompton.	This petition was returned, and the petitioner was directed to make his application in conformity with the Rules of the 18th Nov. 1835. Second petition received 15th Dec. 1835.—Vide No. 5 of this year.
„ 2	SAMUEL HALL, of Basford, co. Nottingham, Civil Engineer.	For an improved piston and valve for steam, gas, and other engines, and also for an improved method of lubricating the pistons, &c. For England (6204), 22nd December, 1831; Scotland, 25th March, 1833; Ireland, 3rd May, 1832. For an improved method of lubricating pistons, &c. England (6359), 9th January, 1833; Scotland: 25th March, 1833; Ireland, 5th July, 1833. For improvements in steam engines. England (6556), 13th February, 1834; Scotland, 25th, 1834; Ireland, 19th June, 1834.	Prolongation. *Lodged*, 25th Nov. 1835. *Referred*, 4th Dec. 1835.	Petitioner: Archibald R. F. Rosser, New Boswell Court. Opponents: Newton and Berry, Patent Agents, 66, Chancery Lane, 1st Dec. 1835, for Van Wart and Goddard, of Birmingham, 14th Jan. 1836.	Application abandoned.
„ 3	ORPHEUS commonly called PIERRE ERARD, of No. 18, Great Marlborough St., co. Middlesex.	For certain improvements in pianofortes and other keyed musical instruments. For England, (4631), 22nd December, 1821; Ireland, 14th December, 1822; Scotland, 6th April, 1822. For certain improvements in pianofortes. For England, (5065), 5th January, 1825.	Prolongation. *Lodged*, 28th Nov. 1835. *Referred*, 4th Dec. 1835. *Reported*, 15th Dec. 1835. *Approved*, 21st Dec. 1835.	Petitioner: Chas. K. Freshfield, New Bank Buildings.	Granted for 7 years.

Year and No. of Application.	Name of Petitioner.	Nature of Invention, and No. and Date of Patent.	Object and Stages of Petition.	Names of Solicitors.	Observations.
1835. No. 4	Charles Louis Stanislas, Baron Heurteloup, of Holles Street, Cavendish Square.	For improvements of certain parts of certain descriptions of fire-arms. (6611), 22nd May, 1834. Prolongation. *Lodged*, 29th May, 1857. *Referred*, 25th June, 1857. *Reported*, 1st Aug. 1857. *Approved*, 27th Aug. 1857.	Petitioner: Thomas Clark, 3, Dean's Court, Doctors' Commons. Opponents: Bennet and Stark, 4, Furnival's Inn.	Day of application, 20th June, 1857. Dismissed.
„ 3.	CHARLES GOODYEAR, of Bernard Hill, Norwood, Surrey, India Rubber Manufacturer, and WILLIAM JUDSON, of New York, United States. — (Newton's Patent.)	For improvements in the manufacture of caoutchouc or india-rubber, and in manufacturing various fabrics, of which caoutchouc forms a component part. For England (10,027), 30th January, 1844; Scotland, 12th March, 1844.	Prolongation. *Lodged*, 9th June, 1857. *Referred*, 25th June, 1857.	Petitioners: Wilson & Bristows, 1, Copthall Buildings. Opponents: 1. Karslake, Furnival's Inn. 2. Alfred Jones, 15, Size Lane, Bucklersbury.	Day of application, 1st July, 1857. Withdrawn.
„ 4	JOHN FIELDING EMPSON, of Birmingham, county Warwick Button Manufacturer. — (Empson's Patent.)	For certain improvements in the construction and manufacture of buttons and other fastenings for dress. For England (10,019), 16th January, 1844.	Prolongation. *Lodged*, 19th June, 1857. *Referred*, 25th June, 1857. *Reported*, 26th Nov. 1857. *Approved*, 2nd Dec. 1857.	Petitioner: R. A. Parker, 19, Coleman Street. Opponents: 1. Chilton and Burton, 7, Chancery Lane. 2. Ditto.	Day of application, 18th July, 1857. Dismissed.

Year and No. of Application.	Name of Petitioner.	Nature of Invention, and No. and Date of Patent.	Object and Stages of Petition.	Names of Solicitors.	Observations.
1857. No. 5	PETER ROTHWELL JACKSON, of Salford, in the county of Lancaster, Esq. Engineer.	For certain improvements in the construction and manufacture of wheels, cylinders, hoops, and rollers, and in the machinery or apparatus connected therewith, and also improvements in steam valves. For England (10,073), 24th February, 1844; Scotland, 17th September, 1844; Ireland, 23rd October, 1844.	Prolongation. *Lodged*, 24th Sept. 1857. *Referred*, 4th Nov. 1857. *Reported*, 2nd Feb. 1858. *Approved*, 3rd Feb. 1858.	Petitioner: Gregory and Co. Bedford Row.	Day of application, 22nd October, 1857. Granted for 6 years on entering a Disclaimer for certain part of Patent.
1858. No. 1	JOHN WHITEHEAD, jun., of Elton, near Bury, county of Lancaster, Dyer and Finisher.	For certain improvements in the process of finishing fustian or beaverteens, satin tops, and other similar cotton fabrics. For England, &c. (10,290), 15th August, 1844.	Prolongation. *Lodged*, 13th Feb. 1858. *Referred*, 26th Feb. 1858. *Reported*, 14th June, 1858. *Approved*, 31st July, 1858.	Petitioner: Plucknett and Adams, 17, Lincoln's Inn Fields. Opponents: Milne and Co. Temple. Withdrawn.	Day of application, 15th March, 1858. Dismissed.
„ 2	JOHN FISHER, of Carrington, in the county of Nottingham, Lace Manufacturer. — (Fisher and Gibbon's Patent.)	For certain improvements in the manufacture of figured or ornamental lace or net, and other fabrics. For England, &c. (10,424), 7th December, 1844.	Prolongation. *Lodged*, 5th June, 1858. *Referred*, 5th June, 1858. *Reported*, 29th Nov. 1858. *Approved*, 11th Jan. 1859.	Petitioner: Hodgson & Burton, Salisbury Street, Strand. Opponents: 1. J. H. Johnson, 47, Lincoln's Inn Fields. 2. Wilson and Bristow, 1, Copthall Buildings. 3. Sharp, 150, Leadenhall Street.	Day of application, 5th July, 1858. Dismissed.
	JOHN FISHER, &c. (as above), Scotch and Irish Patents.	Patent as above. Scotland, 4th March, 1845; Ireland, 22nd April, 1845.	Prolongation. *Lodged*, 27th July, 1858. *Referred*, 31st July, 1858.	Petitioner: Hodgson & Burton, Salisbury Street, Strand,	Day of application, 25th August, 1858. Not proceeded with.

FOREIGN PATENTS.

BELGIUM.*

List of Patents of Inventions and of Importation Delivered on the 17th March, 1859.†

(*Communicated by the Belgian Government.*)

(For previous List, see No. 543 of this Journal.)

1. J. Bianchi, represented by J. Moscardini, of Brussels, for "A system of mountings whereby gas is prevented from escaping from the breech of breech-loading guns."—Dated 6th March, 1859.
2. H. Mignard, represented by H. Biebuyck, of Brussels, for "A sector with a stop."—Dated 6th September, 1858.
3. A. Barclay, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in the means of obtaining and distributing electricity and magnetism."—Dated 5th February, 1859.—(English Patent, 28th January, 1859.)
4. G. Douha, of Brussels, for "Winter foot-coverings with double soles.'—Dated 21st February, 1859.
5. Hendrickx, of St. Josse-ten-Noode, for "A process for protecting stoves, fire-places, &c., from oxidation or wear and tear."—Dated 23rd February, 1859.
6. N. Hainaut, of Battignies, for "A piano with a phonographic apparatus."—Dated 24th February, 1859.
7. T. Restell, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "Additions to his breech-loading fire-arms and projectiles for the same."—Dated 24th February, 1859.—(Original Patent, 27th February, 1858.)
8. W. H. Bell, represented by H. Biebuyck, of Brussels, for an imported invention of "A self-acting system of capping fire-arms."—Dated 24th February, 1859.—(American Patent, 18th January, 1859.)
9. J. B. Falguière, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "Additions to his system of vertical millstones worked at a high speed."—Dated 24th February, 1859.—(Original Patent, 14th September, 1857.)
10. E. Roche, represented by H. Biebuyck, of Brussels, for an imported invention of "Hygienic cigaret-paper."—Dated 24th February, 1859.—(French Patent, 17th February, 1859.)
11. E. F. Evras, represented by H. Biebuyck, of Brussels, for an imported invention of "A system of ladies' pages for dresses."—Dated 24th February, 1859.—(French Patent, 19th February, 1859.)
12. C. T. Moulan, of Flavion, for "A compass saw for sawing marble and rocks."—Dated 25th February, 1859.
13. Ed. Beckman-Olosson, represented by H. Biebuyck, of Brussels, for "Manufacture of so-called 'Hermetic graphite-mastic.'"—Dated 26th February, 1859.
14. W. Craft and Th. Wilson, represented by J. Piddington, of Brussels, for an imported invention of "Improvements in drawers and breeches for rendering the same impervious."—Dated 26th February, 1859.—(English Patent, 14th January, 1859.)
15. W. Talbot, represented by J. Piddington, of Brussels, for an imported invention of "An improved apparatus for lowering boats from vessels."—Dated 26th February, 1859.
16. L. J. Vandecasteele, of Brussels, a Patent of Improvement for "Additions to his system of collars and harness."—Dated 26th February, 1859.
17. J. R. Bassete and A. E. Bateman, represented by Eng. Guillery, of Molenbeek St. Jean, for "Improvements in machines for making bolts and rivets."—Dated 28th February, 1859.
18. L. Le Chatelier, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "Manufacture of alumina."—Dated 28th February, 1859.
19. G. Smith, represented by O. Daillencourt, of Brussels, for an imported invention of "Improvements in breech-loading fire-arms and their cartridges.'—Dated 28th February, 1859.—(American Patent, 23rd June, 1857.)
20. L. Droissart, represented by O. Daillencourt, of Brussels, for an imported invention of "A manometer."—Dated 28th February, 1859.—(French Patent, 17th November, 1857.)
21. P. E. Fraissinet, represented by O. Daillencourt, of Brussels, for an imported invention of "A chambered tissue of iron ribbons."—Dated 28th February, 1859.—(French Patent, 1st February, 1859.)
22. L. Guérette, of Brussels, for "A system of bathing machines."—Dated 1st March, 1859.
23. A. A. Perier and Z. A. Possoz, represented by X. Raclot, of Brussels, for "Improvements in the manufacture of sugar."—Dated 1st March, 1859.
24. H. Henroz, represented by A. Servais, of Floreffe, for "Improvements in polishing and smoothing mirrors."—Dated 1st March, 1859.
25. M. Chatelain, represented by A. Vallée, of Ixelles, for an imported invention of "Improvements in brewing."—Dated 2nd March, 1859.
26. A. De Moor, of Koekelberg, for "Composing a kind of varnish."—Dated 3rd March, 1859.
27. A. De Moor, of Koekelberg, a Patent of Improvement for "Additions to his mode of composing

* For the Belgian Patent Law, see Nos. 292 and 348 of this Journal.

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

a kind of siccative."—Dated 3rd March, 1859.—(Original Patent, 26th May, 1858.)

28. L. Le Chatelier, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "Applying acids obtained from fluor to the manufacture of soda and potash."—Dated 3rd March, 1859.—(Original Patent, 4th March, 1858.)

29, F. J. Imbs, represented by J. Piddington, of Brussels, for an imported invention of "Preparing and applying a kind of soles to boots and foot coverings in general."—Dated 3rd March, 1859.—(French Patent, 21st February, 1859.)

30. Mrs. J. E. S. Achet, represented by J. Piddington, of Brussels, for an imported invention of "A system of stopping horses."—Dated 3rd March, 1859.—(French Patent, 25th February, 1859.)

31. J. F. P. Hugonneng, represented by P. Bourson, of Brussels, for an imported invention of "An economical system of dyeing all kinds of fabrics with blue colours."—Dated 3rd March, 1859.

32. F. A. J. Jossart, of St. Josse-ten-Noode, for "A system of twilled gauze wire with a compensated resistance."—Dated 3rd March, 1859.

33. M. N. Colleye, of Hoignée, a Patent of Improvement for "Modifications in his system of fire-arms."—Dated 3rd March, 1859.—(Original Patent, 11th March, 1857.)

34. H. Henry Godart, of Châtelet, for "A machine for cutting tobacco."—Dated 3rd March, 1859.

35. M. J. Motte, of Marchienne-au-Pont, for "An economical system of building houses by means of vaults, without using timber."—Dated 5th March, 1859.

36. J. C. J. Lhôte, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "An apparatus for dosing Seltzer water and other gaseous beverages."—Dated 4th March, 1859.—(Original Patent, 8th September, 1858.)

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

List of Patents, with Claims annexed, issued from the United States Patent Office, for the week ending 22nd March, 1859, and each bearing that date.

No. 23,288. S. B. Batchelder, of Lowville, N.Y., for an "Improvement in scythe snaths."

"What I claim as new, and desire to secure by Letters Patent, is, the arrangement of the hooks D, D, screw E, ring C, and plate B, with slot F and sliding block G, the whole being constructed for joint operation, in the manner herein set forth and described."

No. 23,289. Wm. Bray, of Folkstone, England, for an "Improvement in the wheels of traction engines."—Patented in England, 31st December, 1856.

"Having now described the nature of my invention, and in what manner the same is to be performed, I wish it to be understood that what I claim, is, constructing traction engines with driving wheels, with blades or teeth, which are capable of being protruded and withdrawn, substantially as herein-before described."

No. 23,290. Francis J. Bridges, of New York, N. Y., for an "Improved submarine telegraph cable."

"What I claim as my invention and improvement, is, the braided or plaited coat, covering, or layer, for conductors, cords, or cables for electric telegraphic purposes, as herein above set forth"

No. 23,291. Geo. Brodie, of Little Rock, Ark., for an "Improvement in metallic bands for baling."

"Having thus pointed out the nature of my invention, and how the same may be used in various modes with success, I will state what I claim as my invention, and wish to secure by Letters Patent, is, preparing the hoops or bands for tying before they are passed around the bale; by bending one or both ends of the hoops or bands, and placing in the inside of each band at suitable prepared metallic pin, similar to those I have already described, around which pins the bent end of the hoops are securely pressed, for the purpose of keeping the pins in place, and also making the ends of the hoops wider or thicker, as the shape of the connecting links used may require. I also claim forming the connecting links like those shown in Figures 4, 5, and 6. I also claim bending one or both ends of the hoop or band, as shewn in Figures 11 and 12, around the outer ends of the connecting link, thereby strengthening the ends of the link, preventing it turning or getting out of place and the tie from untying. I also claim making metallic hoops for binding bales with a tie on each side of the bale, for the uses and purpose before expressed. I also claim using strips of cloth, paper, or other suitable material under the metallic hoops, as shown in Figures 16 and 17, for the purpose described, substantially as herein set forth."

No. 23,292. Barnes Clayton, of Philadelphia, Pa., for an "Improved fastening for shirt studs, &c."

"I am aware that a fastening for studs has been used before, consisting of two vertically moving levers, turning upon pivots in the back piece, and jointed to a sliding stem on the front piece, so that by simply pushing the latter inward or pulling it outward, the said levers are caused to open or shut together accordingly, as in Wilcox's Patent, of April 14th, 1857; therefore, I do not claim such a combination of devices; but what I claim as new, and desire to secure by Letters Patent, is, a stud fastening, consisting of the stem (*e*) rigidly fixed to the piece (*d*) of the back part (B), the vertically moving lever plate (*f*) and the screw stem (*h*) fixed to the front or ornamental part (A), the same being constructed and arranged to operate together, as set forth, and for the purpose of fastening the stud in place, so that it cannot be pulled out or removed therefrom without first rotating the screw (*h*), as described."

No. 23,293. Elijah H. Danforth, of Jamestown, N. Y., for an "Improvement in adjustable dental swages."

"I am aware that compound dies, or dies composed of several pieces of metal clamped together, have been used for swaging sheet metal into form; and I, therefore, do not claim the compound swaging die; but I am not aware, that in swaging sheet metal for any purposes, the grooves of sheet metal have been filled with maleable metal, and then the sheet subjected to complete or final swaging; and what I therefore claim, is, forming the labial and the lingual curve of dental plates, for the inferior maxillary alveolar ridge by swaging it into form with the compound die and maleable plates in the curve of the plate, as herein set forth."

No. 23,294. Brutus de Villeroi, of Philadelphia, Pa., for an "Improved instrument for ascertaining the distance between itself and the target, without chaining."

"What I claim as my invention, and desire to secure by Letters Patent, is, the addition by means of a screw of a tube containing the lens, and is divided throughout its whole length by a vertical partition or diaphragm. At the extremity of this tube next the eye piece is placed a ring containing a bisected lens D, E, G, K, the two halves of which

are equally inclined on opposite sides of the vertical plane perpendicular to the axis of the telescope."

No. 23,295. HERMAN A. DOSTER, of Bethlehem, Pa., for an "Improvement in corn huskers."

"Having described my invention, I claim as new, and desire to secure by Letters Patent, the arrangement and combination of the lever D, with the adjustable roller A^1, so that when the roller A^1 is adjusted, the distance between the cam (*i*) and the fulcrum of the lever D, will be correspondently changed, as and for the purpose herein shown and described."

No. 23,296. JOHN L. FABER, senr., of South Hadley, Mass., for an "Improvement in weather strips."

"Having fully described my invention in its different modifications, what I claim therein as new, and desire to secure by Letters Patent, is, 1st, the bar G, in combination with the parallel vibrating links *a*, *a*, when said bar is so arranged as to fall by its own weight, and be forced against the door by the closing of the latter, as herein-before set forth. 2nd, the combined arrangement of the several strips and their attachments, to close up the frame sides of the door, as herein described."

No. 23,297. JOHN FITCH, of Seneca Falls, N.Y., for an "Improvement in filters."

"I do not claim the ordinary cask or tub filters with pot or reservoir, filled with charcoal or other filtering material, the same having been known and used. What I claim as my invention, and desire to secure by Letters Patent, is, the combination of the cylinder B, constructed and partly filled, as described, with the outside case A, having the perforated plates and the filtering material disposed and arranged as described, by means of which the fluid to be filtered is made to pass through the filtering material for a greater distance, and a more perfect purification effected. I als obtain by the same combination, a convenient mode of cooling the fluid, and also of cleansing the filter, without deranging its parts, by means of reversing its action in the manner described, the whole constructed and operating in the manner and for the purposes above mentioned."

No. 23,298. R. B. FITTS, of Philadelphia, Pa., for an "Improvement in coffee-mills."

"Having thus fully described my invention, and pointed out its utility, I proceed to state, that I am aware that a single crushing cylinder has been employed before, in combination with a horizontal grinding cylinder, fitted with an adjustable shell or concave, the said crushing cylinder rotating at a slower speed than the grinding cylinder, for the purpose of crushing or grinding coffee; therefore I do not claim such a combination; but what I claim as new, and desire to secure by Letters Patent, is, the cylinders B, B, in combination with the grooved cylinder C, and its adjustable concave (D), the whole being constructed and arranged together beneath the hopper (A), so as to operate in the manner and for the purpose set forth and described."

No. 23,299. JACOB GEYSER, of Alleghany, Pa., for an "Improvement in fly wheels for rolling mill machinery."

"I do not claim any particular shape, or form, or material, for the construction of the rim of a fly wheel, great variations can be made in this respect; but I claim constructing the rim of a fly wheel hollow, with partitions, in such a manner that when the heavy materials are piled in, laid in concrete, it may be held stiff and steady, as described. I claim using any heavy and hard materials along with suitable cement, to fill up such a rim, when constructed and operating as and for the purpose described."

No. 23,300. EMANUEL HARMON, of Washington, D. C., for an "Improvement in letter envelopes."

"What I claim as my invention, and desire to secure by Letters Patent, is, the method or process of preparing letter envelopes, ready ruled in the process of manufacture, substantially in the manner and for the purpose herein-before set forth."

No. 23,301. JOHN HECKER and WM. HOTINE, of New York, N. Y., for an "Improved dough-rolling machine."

"We do not wish to be understood as making claim to the use of cylinders for rolling dough, as these have long since been applied to the rolling of dough; but what we do claim as our invention, and desire to secure by Letters Patent, is, the combination of an inclined endless apron for receiving and returning the dough, substantially as described, in combination with the cylinders for rolling the dough, substantially as described. We also claim, in the above combination, the curving in of the apron around the upper roller, or the equivalent thereof, substantially as described, for the purpose of returning the dough to the feed table, substantially as described, in combination with the cylinders for rolling the dough, as described. And we also claim the rotating screen, as described, in combination with the arrangement of cylinders for rolling and working the dough, substantially as and for the purposes described. And, finally, we claim, in combination with the rotating screen, as described, the hopper and apparatus therein, for insuring a regular supply of flour, as set forth."

No. 23,302. A. JAMINET, of St. Louis, Mo., for an "Improvement in filters."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, circulating the water to be filtered through tiers or courses of pipes arranged within a drum having a current of waste steam passing through it, and then passing said water into separators for further circulation, and for depriving it of mud and other foreign matters. 2nd, arranging the separators C, C^1, C^2, C^3, C^4, C^5, within the steam drum B. 3rd, making the apparatus self-cleansing at intervals by operating the valves at the bottom of the separators and filters by levers acted on by toothed discs, ratchet wheel, and pawl, or their equivalents, actuated by the automatic movement of the clear water trough in tipping or tilting to discharge, essentially as set forth. 4th, controlling the automatic discharging action of the clear-water trough by means of a flutterer or float arranged therein, and serving by connection with an unlocking lever a stop piece and catch or hook to hold the trough from prematurely tilting."

No. 23,303. JAMES LANCELOTT, of Cranston, R. I., for an "Improvement in making ornamental chains."

"I claim the method described of weaving a chain from sheet metal by forming the base of each link into a geometrical figure, and by bending each arm longitudinally at the same angle as one of the outer angles of the base, so that a cross bar on the extremity of the next preceding link shall, when bent down, bear against the angular side of two of the arms of the next succeeding link, and thereby enable the chain to withstand a strain nearly equal to the cohesive strength of the metal of which the links are formed."

No. 23,304. THOS. MACKENZIE and ALBERT TROCHSLER, of Boston, Mass., for a "Mode of marking and ornamenting paper."

"Having thus described our invention, we claim, and desire to secure by Letters Patent, as an improved article of manufacture, paper for writing, printing, and other purposes, having indelible marks or designs stamped thereon by condensing the fibers thereof by pressure, as herein shewn and described."

No. 23,305. CHAS. MANS, of Danville, Pa., for an "Improvement in motive power."

"I do not claim the use of wheels and pinions driven by weights, nor two wheels gearing into the opposite sides of a pinion or third wheel, in order to distribute the strain on the teeth, for these devices are known; but what I do claim as my invention is, the arrangement of the drums D, &c., wheels E, &c., pinions P, &c., fly wheel R, and sectional weights *w*, when the whole are combined and operated as described."

No. 23,306. JAMES H. MERRILL, of Baltimore, Md., for an "Improvement in breech-loading cannon."

"Having thus fully described the nature and object of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, first, the combination of the breech piece and frame, so that the former may move back and forth, and have its bore raised up and lowered on the latter automatically, and fastened or locked, substantially as herein described. I also claim, in combination with the screw for running the breech piece forward and back, the mechanism for lowering and raising the rear of said breech piece, substantially as described."

No. 23,307. EZRA MILLER, of Janesville, Wis., for a "Post office hammer stamp."

"What I claim as my invention, and desire to secure by Letters Patent, is, a post office marking stamp, which has its handle running parallel, or nearly so, with its marking face or faces, substantially as and for the purposes set forth."

No. 23,308. J. J. PARKER, of Marietta, O., for an "Improved device for equalizing the tension of watch springs."

"What I claim as new, and desire to secure by Letters Patent, is, making and constructing a barreled cog-wheel

or drum, for time-pieces, or for other purposes, so as to equalise and regulate the power of a spring, in manner and form, as substantially set forth."

No. 23,309. S. E. Pettee, of Philadelphia, Pa., assignor to the North American Paper Bag and Envelope Manufacturing Company, of said Philadelphia, for an "Envelope."

"I am aware that an envelope has been made with a narrow fold at the side; but in that case the fold is carried down the sides of the back and flap, as well of the body of the envelope, and the fold of the back is pasted to that of the body, leaving a stiff projecting piece in the interior of the envelope, very inconvenient and objectionable, and totally useless and unnecessary, such a form I distinctly disclaim; but what I do claim, is, the form of envelope blank, herein described and represented, whether cut from a continuous roll of paper, or from separate sheets."

No. 23,310. James Powell, of Cincinnati, Ohio, for an "Improvement in faucets."

"I claim as new, and of my invention, and desire to secure by Letters Patent, the described arrangement of the cam F, flanges J and J^1, longitudinal slot *i*, and spurs K, combined and operating in the manner and for the purposes set forth."

No. 23,311. Treat T. Prosser, of Fon du Lac, Wis., for an "Improved rotary engine."

"What I claim as my invention, and desire to secure by Letters Patent, is, a wheel with a spiral passage diminishing, in size, from the centre to the periphery, in the manner and for the purpose substantially as described."

No. 23,312. Joseph Read, of Philadelphia, Pa.' for an "Improvement in heels for boots and shoes."

"I am aware that composition heels have been made and used before, but their construction and mode of application heretofore involved either an increase of weight over leather heels, or an objectionable difficulty in securing them properly in position on the boot or shoe, which has prevented their adoption by the trade. I therefore, do not claim, broadly, making composition heels for boots and shoes, nor do I claim the described mode of securing them to the soles; but having fully described their construction and the best mode of producing and applying them, what I claim as new, and desire to secure by Letters Patent, is, a composition heel for boots and shoes, consisting of the composition (A), molded into the form of a heel, with the concavity (*m*), in the upper side of the same, as described, and the leather 'lift' or bottom piece (B or B^1), in combination with the leather edge piece (*c*), applied and secured thereto, substantially as set forth, the said heel being adapted for subsequent application to a boot or shoe, as described, and for the purposes specified."

No. 23,313. Horace P. Russ, of San Francisco, Cal., for an "Improved amalgamator."

"What I claim as my invention, and desire to secure by Letters Patent, are, portable or movable cups or cones of copper, galvanized or amalgamated with quicksilver inside, or manufactured of other materials, such as wood, cast iron, &c. to be placed in holes in sluice boxes, or other apparatus used in mining for the precious metals, substantially as and for the purposes specified."

No. 23,314. L. B. Schäfer, of Baltimore, Md., for an "Improvement in pumps."

"I am aware that shear levers have been used in different machines, and I therefore do not claim any part of my ship pump separately and for itself. I claim the arrangement for operation together of the pump barrel A, shear C, link D, hand brake E, and piston rod I, substantially as and for the purpose herein set forth."

No. 23,315. John T. Schuffenecker, of Keokuk, Iowa, for an "Improvement in brick machines."

"I make no claim to the hopper of the machine, nor to the manner of grinding and working the clay; but what I do claim as my invention, and desire to secure by Letters Patent, is, 1st, I claim the safety openings D, in combination with the quadrant C, arranged and operating in the manner and for the purpose specified. 2nd, I claim the shutter B, operated by the fork R, spring S^1, and bar L, in the manner above represented. 3rd, I claim the manner of leveling the mortar in the moulds by means of the two scrapers A and A, A, as shown in the foregoing specification."

No. 23,316. David Shive, of Philadelphia, Pa., for an "Instrument for enlarging photographs."

"I do not claim broadly the use of an illuminating lens, in connection with a camera; but what I claim as new, and desire to secure by Letters Patent, is, the arrangement of the illuminating lens (F), in the usually open end of a photographic camera, supported in connection with the adjustable paper holder (C) upon a stand (D), substantially as described, so as to operate in the manner and for the purposes specified."

No. 23,317. Wm. H. Smith, of Philadelphia, Pa., for an "Improvement in casting and annealing articles made of scoria."

"Having now described the nature of my invention, and shown the modes of carrying the same practically into effect, I wish it to be understood that I do not confine myself to the precise details herein described and represented, as various modifications can be made in the process and apparatus, without affecting, substantially, the principle of my invention; nor do I claim any of the processes and apparatus separately, except as stated below; what I claim, and desire to secure by Letters Patent, is, first, the construction and use of the horizontally revolving casting wheel B, for facilitating the casting of slug and similar mineral products. Second, the construction of an annealing chamber, having various modes of retaining and regulating the heat therein, viz., by a series of dampers, by the construction of grooves and troughs in the walls in connection with the flanges and dippers of the bed D, with or without the use of sand, by the devices at the ends of the wagons, and by the use of the ante-chambers, substantially as above described. Third, the use and combination of a series of rollers, with a traversing bed, substantially as described, for imprinting an entire pattern of different colored figures. Fourth, the construction and employment of segmental sliding moulds, as shewn, or of similar character, and the mode of arranging and working the same, substantially as described."

No. 23,318. James Spear, of Philadelphia, Pa., for an 'Improvement in gas burning stoves.

"What I claim, and wish to secure by Letters Patent, is, the combination of the sled E in the door frame F with the ring M and the cylinder B and the body of the stove A, as constructed in the manner and for the purpose set forth."

No. 23,319. Chas. F. Spencer, of Rochester, N. Y., for an "Improved carpet fastener."

"What I claim as my invention, and desire to secure by Letters Patent, is, a carpet fastener made of a single piece of plate metal of triangular or three-pointed form, one point *b* serving as the shank to be driven into the floor, another poit *d* as the hook for receiving the carpet, and the third point *a* as a head so shaped as to enable the fastener to be driven with facility into the floor, all substantially as herein specified."

No. 23,320. A. M. Sprague, of Mobile, Ala., for an "Improved apparatus for skimming the surface of the water in steam boilers."

"What I claim, and desire to secure by Letters Patent, is, the surface skimmer B, constructed, arranged, and operating substantially as and for the purpose of removing the sedimentary water from the upper water surface of steam boilers."

No. 23,321. Chas. E. Stevens, of New York, N. Y., for an "Improvement in car couplers."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination of the yielding support within the mouth of the aperture of railway car boxes, with one or more blocks inside, and the annular flange outside the said boxes, when said parts are arranged in relation to each other, substantially as described, to effect the coupling of the boxes automatically by the action of straight links and locking bolts, in the manner specified herein, and for the purposes set forth."

No. 23,322. Edwin L. Swartwout, of Utica, N.Y., for an "Improved mode of fastening sheets of paper together."

"I am aware that metal plates have been used for fastening in various ways, in the construction of book clasps, carpet bags, harness, &c. I do not therefore claim, irrespective of construction, any such devices. But what I claim as my invention, and desire to secure by Letters Patent, is, the new and improved article of manufacture, the metallic clasp A, in combination with the perforated metal plate B, for fastening together legal and other documents, constructed as de-

scribed, in the manner and for the purpose, substantially as specified."

No. 23,323. Chas. Taylor, of Little Falls, N. Y., for an "Improvement in cheese press."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1, attaching the one end of the press bars (l, l,) to the bottom of the box (K) and the other end to the crank pin on the wheel (L), as herein set forth, whereby I am enabled to shorten the movements of the follower, and have an eccentrically operating press compactly arranged, as herein described. 2nd, I claim the spring bed piece (q) and the springs (P, P,) acting upon the wheel (L) on the extreme upward movement of the follower, and thus upholding the follower, as herein described."

No. 23,324. Nathan Thompson, of Bridgeport, Conn., for an "Improved paddle wheel."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement and combination, in the manner herein shown and described, of the triangular floats D, with the arms C, to prevent the formation of the vacuum, the lifting of backwater, &c., as set forth."

No. 23,325. Louis Tilliers, of West Morrisania, N. Y., for an "Improved filter."

"Claim.—I am fully aware of the existence of what is known as the 'Phelpses Patent,' granted in 1855, in which the claim is for the use of discs for filtering purposes, formed of rolled wire gauze. I am also aware that charcoal and other materials I employ, are not new, for the same purposes; but I am not aware that an apparatus constructed in the peculiar manner mine is, has ever been known or used prior to my invention of the same. I therefore claim, and desire to secure by Letters Patent, a Hygienic purifier, constructed in the manner herein described, operated as described, and for the purpose set forth."

No. 23,326. Wm. Tucker, of Blackstone, Mass.' for an "Improved method of securing bits in the stock."

"I claim the application or arrangement of the screws d, e, and the segmental button g, with respect to the bit or boring tool socket, and to operate with or on the tool, substantially as specified."

No. 23,327. Wm. P. Valentine, of Fon du Lac, Wis., for an "Improved shingle machine."

"I do not intend to limit myself to the especia mechanical devices employed in my machine, as these may be somewhat varied and yet accomplish the same result. I am aware that small chisels have been placed upon the convex side of a thick saw flange, for the purpose of cutting away splinters, to prevent the latter from catching behind the spreader. I am also aware that shingle machines have been fed by hand at a varying rate of feed. Having thus fully described my invention, what I claim, and desire to secure by Letters Patent of the United States, is,—1. Varying the rate of feed by the mechanical means set forth, so as to feed the lumber to the saw more rapidly during the first half of a cut, when the saw has the highest velocity, and slower during the latter half of a cut, in order to keep the saw constantly at a uniform velocity. 2. I claim the use of the two carriages P and P^1, operating in the particular manner described, for the purpose of cutting alternately on both sides of the saw, thus keeping the saw constantly at work, and preventing the loss of time or power whilst the lumber is returning with the carriage to be ready for the next cut. 3. I do not claim the concavo-convex saw or the planes upon its surface, as separate mechanical devices; but I claim the concave saw and the planes, in combination with the saw carriage for giving rake to the saw, and for sawing and planing shingles at a single operation substantially as described. 4. I claim the arrangement of springs S, S, and S^1, S^1, the head blocks R, R, and R^1, R^1, and the spreaders C, C, and C^1, C^1, for alternately holding and dropping the shingle block, substantially as set forth."

No. 23,328. Benjn. C. Vanduzen, of Cincinnati, Ohio, for an "Improved machine for heading bolts."

"I am aware that toggles have been used for operating punches, dies, &c., and arranged in various ways, and I therefore do not claim broadly, the use of toggles for operating the heading die F and die J; but having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement and combination of the adjustable spring fork rod G, lever H, upper lever (b), and heading die F, substantially as herein shown and described, for the purpose of regulating the movements of the lever H, and die F, and controlling the size given to the head of the bolt."

No. 23,329. Haskel Walker, of Hartford, Vermont, assignor to himself and Benjn. Driggs, of Fairlle, Vermont, for an "Improved odometer."

"Having thus fully described my improved odometer, what I claim therein as new, and desire to secure by Letters Patent, is, the peculiar arrangement of the parts thereof, by which an actuating tooth upon the hub of one of the wheels of a carriage, will cause each revolution of said wheel to unerringly impart a small portion of a revolution to the shaft K of the odometer, whilst the spring l by its action against the faces of the angular portion of said shaft, will accurately govern and control the movements thereof, substantially as herein set forth."

No. 23,330. Wm. A. Wilson, of Berlin Falls, N.H., for an "Improved construction of saw teeth."

"Having thus described my improvements, I claim combining the planing with the sawing tooth, so that the cutting edge of the former shall be in rear of, and at about right angles to the back of the latter having the throat between, as set forth and shown herein-before."

No. 23,331. Wm. Wood, of Hartford, Conn., for an "Improvement in brick machines."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arms B, B, in combination with the slides A, A, provided with the lever C^1, and tappet c, for operating the molds M^1 as described."

No. 23,332. Lewis E. Clow, of Albany, N. Y., assignor to S. H. Ransom and Co., of same place, for an "Improvement in pot-hole covers for cooking stoves."

"I claim a cover or division plate, constructed of two perforated plates, and the unperforated rim or ring, as herein set forth."

No. 23,333. Joseph Davenport, of Masillon, Ohio, assignor to himself and C. M. Russell, of said Masillon, for an "Improvement in iron railroad cars."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination with the platform or bottom of a railroad car, of a laterally and longitudinally supporting truss brace, when said brace consists of a four-sided frame s, s, t, t, a series of transverse ties B, and transverse diagonal braces C, C, a central longitudinal skeleton or diagonally braced girder A, c, d, b, b, and bearing plates or shoes D, D, g, g, substantially as and for the purposes set forth."

No. 23,334. W. P. Goolman, of Dublin, Ind., assignor to himself, Saml. B. Morris, and W. Hollingsworth, of same place, for an "Improvement in mole plough."

"I claim as new, and of my invention, and desire to secure by Letters Patent, the arrangement substantially as set forth, of devices for producing or preventing lateral curves in a drain, by adjusting the presentation of the mole, independently of the point of draft."

No. 23,335. Darius Wellington, of Boston, Mass., assignor to Chas. A. Wellington, of same place, for an "Improved water closet."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement and combination of the hollow valve rod F, perforated at (d, d), cap G, basin B, pipe H, tube H^1, and reservoir I, as and for the purpose herein shown and described."

Designs.

David Hathaway, of Troy, N. Y., assignor to Fuller, Warren, and Co., of said Troy, for a "Design for parlor cook's stove"

"What I claim as my invention or production, and desire to secure by Letters Patent, is, the ornamental design for a parlor cook stove herein described and represented in the annexed photographic drawing."

A. C. Barstow, of Providence, R. I., for a "Design for cook's stove."

"What I claim as my invention or production, and desire to have secured to me by Letters Patent, is, the new design for the side plate of a cooking stove, consisting of the orna-

mental configurations herein described and represented in the drawings."

Additional Improvements.

Oliver Robinson, of Rochester, N. Y., for an "Improved bedstead fastening."—Patented 28th December, 1858.—Additional Improvement, dated 22nd March, 1859.

"What I claim as new, and desire to secure by Letters Patent, is, constructing the locking bolt A, of a flat or rectangular form, so as to work against the surface of the side board C, to obviate the reducing of the bearing surface of the recess of the wrench B, and hold the parts to the required position without the usual guide pin, substantially as described. I also claim elevating the hook *j*, above a right line through the center of the bolt A, substantially as and for the purpose set forth. I also claim uniting the point *i* of the circular wedge with the stock of the wrench, whereby greater strength and a better adaptation to the recess or seat of the same is secured, substantially as described. I further claim adapting the cam *l*, or raised part of the wrench lever to pushing and holding forward the bolt for ready connection with the pin *f*, substantially in the manner herein described."

James Spear, of Philadelphia, Pa., for an "Improved rail road car stoves."—Patented 1st June, 1858. — Additional improvement, dated 22nd March, 1859.

"What I claim, and wish to secure by Letters Patent, is, the combination of the openings A in the side plate F, with the back fire plate B in connecting tube C, with the center plates D and E, constructed and combined in the manner and for the purpose set forth. Second, I claim the openings f, f^1, in side plate F, with the center plate E^1, constructed in the manner and for the purpose set forth. Third, I claim the flue or opening L, L_2 from the front plate H to the top plate I, constructed in the manner and for the purpose set forth."

James Spear, of Philadelphia, Pa., for an "Improvement in cooking stoves." — Patented 7th July, 1857.—Additional improvement, dated 22nd March, 1859.

"What I claim, and wish to secure by Letters Patent, in addition to my former Patent, is, 1st, I claim the combination of the cone damper J, with the smoke pipe H, and the top plate D, constructed in the manner and for the purpose set forth. 2d, I claim the combination of the head or deck collar L, with the cold air pipe G and the smoke pipe H, constructed in the manner and for the purpose set forth."

Jonas Simmons, of Cohoes, N. Y., for an "Improved machine for making axes."—Patented 1st March, 1853.—Additional improvement, dated 22nd March, 1859.

"What I claim, and desire to secure by Letters Patent, is, the groove G, the arm X, with the tongs T or T^2, in combination with each other, substantially in the manner and form, and for the purposes set forth in the within specification."

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

A Free Library and Reading Room, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

Note.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution. Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Liverpool (*Free Public Library, Duke Street*).
Macclesfield (*Useful Knowledge Society*).
Manchester (*Chetham Hospital*).
——— (*Camp Field*).

Wigan.
Wolverhampton (*School of Practical Art, Darlington Street*).
Wolverton (*Railway Station*).
Yarmouth, Norfolk (*Public Library, South Quay*).
York (*Lower Council Chamber, Guildhall*).

The Commissioners' publications have also been presented to the following Public Offices, Seats of Learning, British Colonies, and Foreign States:—

Public Offices.

Admiralty, Steam Department.
——— Surveyor of Navy.
——— Deptford Dockyard.
——— Woolwich ditto.
——— Sheerness ditto.
——— Devonport ditto.
——— Portsmouth ditto.
——— Chatham ditto.
——— Pembroke ditto.
Artillery Institute, Woolwich.
Board of Trade, Whitehall.
Small Arms Factory, Enfield.
Ordnance, Pall Mall.
War Office, Pall Mall.
School of Mines, Jermyn Street, Piccadilly.
Dublin Castle, Dublin.
Rolls Office, Chancery (Four Courts), Dublin.
Office of Chancery, Edinburgh.
East India House, Leadenhall Street.

Seats of Learning.

Cambridge University.
Trinity College, Dublin.
Queen's College, Galway.
University College, London.

British Colonies.

Malta.
Cape of Good Hope.
Mauritius.
India:—
Bengal; Agra; Madras; Bombay.
Ceylon.
Victoria.
New South Wales.
South Australia.
Tasmania.
New Zealand.
Newfoundland.
Canada—Quebec: Toronto
New Brunswick.
Prince Edward Island.
Antigua.
Barbados.
Jamaica.
Trinidad.
British Guiana.

Foreign States.

Austria—Handels Ministerium, Vienna.
Bavaria—Königliche Bibliothek, Munich.
Belgium—Ministère de l'Intérieur, Brussels.
France—Bibliothèque Impériale, Conservatoire des Arts et Métiers, Hôtel de Ville, } Paris.
Hanover—Ministerium des Innern, Hanover.
Netherlands—Ministère de l'Intérieur, The Hague.
Prussia—Handels Ministerium, Berlin.
Russia—Bibliothèque Impériale, St. Petersburg.
Sardinia—Ufficio delle Privative, Turin
Saxony—Polytechnische Schule, Dresden.
Sweden—Stockholm.
United States—The Patent Office, Washington.

The State Library, Albany.
The Franklin Institute, Philadelphia.
The Free Library, Boston.
Philadelphia Library Company.
Wurtemberg—Bibliothek des Musterlagers, Stuttgart.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d.*

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE REFERENCE INDEX of PATENTS pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. Woodcroft.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

Sommaire de toutes les Inventions brevetées en Angleterre depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux Inventions et Découvertes décrites dans les ouvrages scientifiques de différentes nations, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

Verzeichniss aller in England von 1617—1854 incl. patentirten Erfindungen, unter vielfältige Titel gebracht mit Hinweisungen auf Erfindungen und Entdeckungen die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken verschiedener Nationen beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

Repertorio di tutte le Invenzioni munite di Lettere Patenti in Inghilterra dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle Invenzioni e Scoperti descritti nelle opere scientifiche di diverse nazioni, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. Woodcroft,
Superintendent of Specifications, &c.

In course of Publication, by Order of the Commissioners.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. Drain Tiles and Pipes, price 6*d.*
2. Sewing and Embroidering, price 6*d.*
3. Manure, price 6*d.*
4. Preservation of Food, price 6*d.*
5. Marine Propulsion, price 4*s.*
6. Manufacture of Iron and Steel, price 5*s.*
7. Aids to Locomotion, price 1*s.*
8. Steam Culture, price 2*s.*
9. Watches, Clocks, and other Timekeepers, price 1*s.* 6*d.*
10. Fire-arms and other Weapons, Ammunition, and Accoutrements, price 6*s.* 6*d.*
11. Paper.—Part I. Manufacture of Paper, Pasteboard, and Papier Mâché, price 3*s.*

The following are in the press:—

Paper.—Part II. Cutting, Folding, and Ornamenting; including Envelopes, Cards, Paper-hangings, &c.
Electricity and Magnetism: their Generation and Applications.
Typographic, Lithographic, and Plate Printing.
Bleaching, Dyeing, and Printing Yarns and Fabrics.
Preparation of Fuel, and Apparatus for its Combustion.
Manufacture and Applications of India Rubber, Gutta Percha, &c.; including Air, Fire, and Water Proofing.
Production and Applications of Gas.
Steam Engines.

B. Woodcroft.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

LONDON:
Printed by George E. Eyre and William Spottiswoode, Printers to the Queen's most Excellent Majesty.
Published at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 550. TUESDAY, APRIL 12, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

2707. GEORGE OATES, of Gatefield Works, Sheffield, in the county of York, Scissors Manufacturer, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "Improvements in the manufacture of scissors."—A communication.

As set forth in his petition, recorded in the said office on the 29th day of November, 1858.

2725. And JOZÉ LUIS, of the British and Foreign Office for Patents, No. 1 B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, has given the like notice in respect of the invention of "A new rail-road with continued supports splintered together without any wood being used."—A communication from Leon Barroux.

2733. And JOSEPH COLVER, of Leman Street, in the county of Middlesex, Cooper and Back Maker, has given the like notice in respect of the invention of "Improvements in machinery and apparatus for cutting and shaping staves and other parts of casks."

As set forth in their respective petitions, both recorded in the said office on the 30th day of November, 1858.

2744. And HENRY ADCOCK, of the City Road, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in furnaces and apparatus for annealing wire."

2745. And FREDERICK WARNER, of Jewin Street, in the city of London, JOHN DERBYSHIRE, of Longton, in the county of Stafford, and ALEXANDER MANN, of Little Britain, in the city of London, have given the like notice in respect of the invention of "An improvement in the manufacture of cocks or taps."

2747. And HENRY BESSEMER, of 4, Queen Street Place, New Cannon Street, in the city of London, has given the like notice in respect of the invention of "Improvements in railway and other wheels and wheel tyres."

2748. And SAMUEL NEWINGTON, of Ticehurst, in the county of Sussex, has given the like notice in respect of the invention of "Improvements in agricultural implements."

2749. And ANN ELIZABETH DAVIS, of 1, Pulboro' Place, Harleyford Road, Vauxhall, and RICHARD WRIGHT, of 28, Grosvenor Park, Camberwell, both in the county of Surrey, have given the like notice in respect of the invention of "Improvements in the manufacture of colouring matter for spirits and other liquids."

As set forth in their respective petitions, all recorded in the said office on the 1st day of December, 1858.

2759. And JOHN BAILLIE, of Vienna, in the empire of Austria, Engineer, has given the like notice in respect of the invention of "Improvements in the construction of railway wheels."

As set forth in his petition, recorded in the said office on the 2nd day of December, 1858.

2765. And SAMUEL PETERS, of No. 12, Rue de la Briche, St. Denis, near Paris, Mechanic, has given the like notice in respect of the invention of "Improvements in the manufacture of pipes and tubes, and in the apparatus employed therein."

As set forth in his petition, recorded in the said office on the 3rd day of December, 1858.

2771. And JOHN CAMERON, of Glasgow, in the county of Lanark, North Britain, Engineer, has given the like notice in respect of the invention of "Improvements in apparatus for the manufacture of sugar."

2772. And Robert Legg, Millwright and Engineer, of No. 11, Ashby Street, Clerkenwell, in the county of Middlesex, has given the like notice in respect of the invention of "A machine for combining the operation of compressing and cutting tobacco during the process of manufacture."

As set forth in their respective petitions, both recorded in the said office on the 4th day of December, 1858.

2794. And Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, has given the like notice in respect of the invention of "Improvements in the manufacture of gloves."—A communication from Messrs. A. and L. Fontaine, residing at Paris.

2796. And Edward Watkin Scale, of Merthyr Tydvil, in the county of Glamorganshire, South Wales, Agent and Contractor, has given the like notice in respect of the invention of "Improvements in railway and other breaks."

As set forth in their respective petitions, both recorded in the said office on the 6th day of December, 1858.

2807. And Stephen Williams Pugh, of Nelson Square, Commercial Road, New Peckham, in the county of Surrey, has given the like notice in respect of the invention of "Improvements in obtaining and purifying naphtha paraffine and other oils, and also spirits."

As set forth in his petition, recorded in the said office on the 7th day of December, 1858.

2820. And John Barrow, jun., of the city of Manchester, in the county of Lancaster, Manufacturing Chemist, has given the like notice in respect of the invention of "Improvements in the treatment of coal gas tar, and of the oils obtained by the distillation of the same, and for the application of substances obtained thereby."

2822. And Joseph Eccles, of Blackburn, in the county of Lancaster, Cotton Manufacturer, has given the like notice in respect of the invention of "Improvements in arrangements and machinery for preparing for manufacture, and for manufacturing clay and other plastic earths into bricks, tiles, pipes, and other articles, formed of such materials."

2827. And Thomas Allen, of Clifton, Bristol, Ironmonger, has given the like notice in respect of the invention of "Improvements in folding bedsteads."

2828. And John Wilson, of Wansford, Northamptonshire, has given the like notice in respect of the invention of "Improvements in machinery for tilling and cultivating land."

As set forth in their respective petitions, all recorded in the said office on the 9th day of December, 1858.

2849. And Alexander Rollason, of Birmingham, in the county of Warwick, Chemist, has given the like notice in respect of the invention of "Improvements in the manufacture of waterproof tissues, and in applying such waterproof material to woven fabrics and manufactured fibrous goods."

As set forth in his petition, recorded in the said office on the 11th day of December, 1858.

2855. And Richard Archibald Brooman, of No. 166, Fleet Street, in the city of London, E.C., Patent Agent, has given the like notice in respect of the invention of "Improvements in twisting and otherwise operating upon threads, twine, or cords, and in apparatus for performing the same."—A communication from Messrs. Edmond Empis and Co., residing at Wazemines, near Lille, France.

As set forth in his petition, recorded in the said office on the 13th day of December, 1858.

2863. And George Williams Baker, of Park Farm, Woburn, in the county of Bedford, Farm Steward, has given the like notice in respect of the invention of "An improved construction of manger fastening."

2864. And Richard Archibald Brooman, of No. 166, Fleet Street, in the city of London, E.C., Editor of the Mechanics' Magazine and Patent Agent, has given the like notice in respect of the invention of "An improvement in transmitting electric telegraph signals."—A communication from T. A. M. Sortais, residing at Lisieux, France.

As set forth in their respective petitions, both recorded in the said office on the 14th day of December, 1858.

2869. And Henry Bridges, of Bridgewater, in the county of Somerset, Railway Carriage Builder, has given the like notice in respect of the invention of "Improvements in the means of working breaks on carriages on railways."

2872. And Alfred Vincent Newton, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "An improved arrangement of condensing apparatus."—A communication.

2873. And John Bullough, of Blackburn, in the county of Lancaster, Manager, has given the like notice in respect of the invention of "Improvements in looms."

As set forth in their respective petitions, all recorded in the said office on the 15th day of December, 1858.

2880. And Robert Wilson, senior, and Robert Wilson, junior, of Livesey Street, Manchester, in the county of Lancaster, have given the like notice in respect of the invention of "Certain improvements in the preparation of leather, in combination with india rubber and other materials, for the manufacturing of hose pipes, and and other purposes where leather is required to be impervious to water, steam, or frost."

As set forth in their petition, recorded in the said office on the 16th day of December, 1858.

2961. And Claude Mamès Augustin Marion, of Paris, in the empire of France, Manufacturer, has given the like notice in respect of the invention of "An improved box or case for containing and preserving sensitive photographic paper, called 'Marion's Box.'"
As set forth in his petition, recorded in the said office on the 27th day of December, 1858.

2972. And William Haworth, of the firm of Firth and Haworth, Cotton Spinners and Manufacturers, of that part of Todmorden which is in the county of York, and William Barker, of the same place, Overlooker, have given the like notice in respect of the invention of "Improvements in the top clearers of machines for spinning."

2977. And Thomas Pickford, of No. 15, Mark Lane, in the city of London, Merchant, has given the like notice in respect of the invention of "Improvements in the preparation and manufacture of manure."
As set forth in their respective petitions, both recorded in the said office on the 29th day of December, 1858.

55. And George Kennedy Geyelin, Civil Engineer, of London, has given the like notice in respect of the invention of "Regulating gas burners, which he calls the Universal Gas Burners Regulator."
As set forth in his petition, recorded in the said office on the 7th day of January, 1859.

64. And Frederick Versmann and Alphons Oppenheim, of Bury Court, St. Mary Axe, in the city of London Analytical Chemists, have given the like notice in respect of the invention of "Improvements in the treatment of various substances by which to render the same uninflammable."
As set forth in their petition, recorded in the said office on the 8th day of January, 1859.

80. And Charles Middleton Kernot, of Gloucester House, West Cowes, Isle of Wight, in the county of Southampton, Doctor of Medicine, Doctor of Laws and Logic, Doctor of Philosophy, and Member of the Royal College of Surgeons, England, etc., has given the like notice in respect of the invention of "Improvements in purifying and decolorising paraffine, and rendering the same white, hard, and sweet."

88. And Frederick Versmann and Alphons Oppenheim, of Bury Court, St. Mary-Axe, in the city of London, Analytical Chemists, have given the like notice in respect of the invention of "Improvements in rendering fabrics and substances non-inflammable."
As set forth in their respective petitions, both recorded in the said office on the 11th day of January, 1859.

222. And Henry Owen, of Portswood, Southampton, in the county of Hampshire, has given the like notice in respect of the invention of "Improvements in stockings."
As set forth in his petition, recorded in the said office on the 24th day of January, 1859.

518. And Frederick Weekes, of Bolney, in the county of Sussex, has given the like notice in respect of the invention of "The treatment of certain alcoholic products."
As set forth in his petition, recorded in the said office on the 26th day of February, 1859.

644. And David Joy, of Leeds, in the county of York, Engineer, has given the like notice in respect of the invention of "Improvements in hydraulic engines and meters."

645. And Charles Henry Hurst, of Victoria Terrace, Royal Road, Kennington Park, in the county of Surrey, has given the like notice in respect of the invention of "An improved wrench or spanner."
As set forth in their respective petitions, both recorded in the said office on the 14th day of March, 1859.

694. And John Wallace Duncan, of Grove End Road, St. John's Wood, and James Eglinton Anderson Gwynne, of Hanover Terrace, Regent's Park, both in the county of Middlesex, Gentlemen, have given the like notice in respect of the invention of "Improvements in, or connected with, apparatus for the generation, application, and condensation of steam, part of which apparatus or arrangements is applicable to other purposes."
As set forth in their petition, recorded in the said office on the 18th day of March, 1859.

707. And William Haggett, of Sherborne, in the county of Dorset, Architect and Surveyor, has given the like notice in respect of the invention of "An improved method of treating metals and other materials to increase their strength."

710. And Robert Whittaker, of Lennox Mill, in the county of Stirling, North Britain, Millwright, has given the like notice in respect of the invention of "Improvements in the manufacture or construction of metallic rollers or cylinders and mandrills for printing."

716. And William Warne, John Americus Fanshawe, James Archibald Jaques, and Thomas Galpin, all of Tottenham, in the county of Middlesex, India Rubber Manufacturers, have given the like notice in respect of the invention of "An improved compound or preparation of materials for, and mode of covering and insulating wires or conductors used for telegraphic or electrical purposes."
As set forth in their respective petitions, all recorded in the said office on the 21st day of March, 1859.

737. And Samuel Clarke, of Albany Street, Regent's Park, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in the manufacture of candles."
As set forth in his petition, recorded in the said office on the 23rd day of March, 1859.

747. And William Garforth and James Garforth, both of Dukinfield, in the county of Chester, Engineers, have given the like notice in

respect of the invention of "A certain improvement in metallic pistons."

As set forth in their petition, recorded in the said office on the 24th day of March, 1859.

761. And GEORGE HASELTINE, Gentleman, of Washington, in the District of Columbia, United States of America, now of No. 37, King Street, in the city of London, has given the like notice in respect of the invention of "Improvements in the manufacture of small metallic chains."—A communication from Edwin H. Perry, of Rhode Island, United States.

As set forth in his petition, recorded in the said office on the 26th day of March, 1859.

780. And WILLIAM MOSSMAN, of No. 50, Cumming Street, Pentonville, in the parish of Clerkenwell, in the county of Middlesex, Manufacturing Stationer, has given the like notice in respect of the invention of "Improvements in machinery applied to embossing or cutting presses, for the better and more expeditious manner of manufacturing ornamental cut out and embossed work, in paper, leather, parchment, cloth, foil, and other material."

As set forth in his petition, recorded in the said office on the 29th day of March, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

List of LETTERS PATENT which passed the Great Seal on the

12*th April*, 1859.

2274. GEORGE BEADON, of Bathpool, in the county of Somerset, Captain in the Royal Navy, for an invention of "Improvements in the construction of ships, boats, rafts, and vessels for passing through water or through the atmosphere, or partly through the water and partly through the atmosphere."—Dated 12th October, 1858.

2275. JEAN ALEXANDRE GASSE, of Paris, in the empire of France, Merchant, for an invention of "Improvements in railway breaks and in apparatus for working the same."—Dated 12th October, 1858.

2283. ANTON BENDA, of 79, Basinghall Street, in the city of London, Importer of Foreign Goods, for an invention of "Improvements in the manufacture of models of the human and other figures to be used as toys for tuition and for other purposes."—A communication from a Foreigner residing abroad.—Dated 13th October, 1858.

2285. JOHN CHARLES OLLERENSHAW, of Manchester, in the county of Lancaster, Merchant, for an invention of "An improvement in cotton gins."—A communication from Lewis S. Chichester, of New York, U.S.A.—Dated 14th October, 1858.

2288. CHARLES COWPER, of No. 20, Southampton Buildings, Chancery Lane, in the county of Middlesex, Patent Agent, for an invention of "Improvements in the manufacture of articles of hard vulcanized india rubber and gutta percha and similar gums."—A communication from Gustavus Cuppers, residing at College Point in Long Island, in the state of New York, in the United States of America.—Dated 14th October, 1858.

2293. SAMUEL PERKES, of Clapham, for an invention of "Improvements in machinery for extracting oil from the cocoa nut and other vegetable matters."—Dated 14th October, 1858.

2295. GEORGE BAXTER, of Northampton Square, in the county of Middlesex, for an invention of "Improvements in colouring photographic pictures."—Dated 14th October, 1858.

2297. SQUIRE DIGGLE, of Radcliffe, in the county of Lancaster, Machine Maker, for an invention of "Improvements in looms for weaving."—Dated 14th October, 1858.

2300. ROBERT RAYNSFORD JACKSON, of Blackburn, in the county of Lancaster, Cotton Spinner, for an invention of "Certain improvements in machinery or apparatus for sizeing yarn."—Dated 15th October, 1858.

2302. GEORGE DAVIES, of No. 1, Serle Street, Lincoln's Inn, in the county of Middlesex, and No. 28, St. Enoch Square, in the city of Glasgow, Civil Engineer and Patent Agent, for an invention of "Improvements in the manufacture of gloves, and in the apparatus employed therein."—A communication from a Foreigner residing abroad.—Dated 15th October, 1858.

2309. FIRMIN JOSEPH COULON and SIMON GODEFROID GIRAUD, of 2, Rue Sainte Appoline, Paris (empire of France), and of 45, Essex Street, Strand, London, for an invention of "Improvements in the process of ornamenting skin and leather."—Dated 16th October, 1858.

2316. ARTHUR DUNN, of 1, Dalston Terrace, East, in the county of Middlesex, Fancy Soap Maker, for an invention of "An improvement in preparing marking compounds to be used on linen and other fabrics."—Dated 16th October, 1858.

2378. JOHN ROBB, of Aberdeen, in the county of Aberdeen, North Britain, Merchant, for an invention of "Improvements in propellers for ships and boats."—Dated 25th October, 1858.

2385. ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improved machinery for pulverizing, kneading, pressing, and moulding clay and other plastic materials."—Dated 26th October, 1858.

2750. FREDERIC FINCHAM, of Ravenhead, in the county of Lancaster, Esquire, for an invention of "Improvements in the construction of annealing kilns or ovens."—Dated 1st December, 1858.

95. Joseph Gibbons, of No. 345, Oxford Street, in the county of Middlesex, for an invention of "Improvements in fixing door and other knobs." —Dated 12th January, 1859.

280. Joseph Grimond, of the city of Manchester, in the county of Lancaster, Manufacturer, for an invention of "Improvements in the manufacture of hearth rugs."—Dated 1st February, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 9th April*, 1859, *inclusive.*)

7th April.

884. Robert Richardson, of Great George Street, Westminster, in the county of Middlesex, for an invention of "Improvements in railway switches." —Dated 14th April, 1856.

8th April.

888. Joseph Barrans, of New Cross, Deptford, in the county of Kent, for an invention of "Improvements in constructing steam-engines." — Dated 14th April, 1856.

948. James Nasmyth, of Patricroft, near Manchester, in the county of Lancaster, Engineer, and Herbert Minton, of Stoke-upon-Trent, in the county of Stafford, China Manufacturer, for an invention of "Certain improvements in machinery or apparatus employed in manufacturing tiles, bricks, and other articles, from pulverized clay."—Dated 21st April, 1856.

973. William Peacock Savage, of Roxham, in the county of Norfolk, Farmer, for an invention of "A machine for drilling and rolling land."—Dated 23rd April, 1856.

9th April.

892. Leonard Kaberry, of Rochdale, in the county of Lancaster, Manager, and Aaron Horsefield, of the same place, Moulder, for an invention of "Improvements in moulding for casting certain parts of machinery used in the preparation and spinning of cotton and other fibrous materials."—Dated 14th April, 1856.

Errata in Journal of 8th April.

720. For "in metallic pens" read "on metallic pens."

748. For "Great Hampton" read "Great Hampton Street."

FOREIGN PATENTS.

BELGIUM.*

List of Patents of Inventions and of Importation Delivered on the 24th and 31st March, 1859.†

(*Communicated by the Belgian Government.*)

(For previous List, see No. 549 of this Journal.)

1. C. Robardet, represented by H. Biebuyck, of Brussels, for an imported invention of "A system of iron Venetian blinds." — Dated 4th March, 1859.—(French Patent, 22nd June, 1858.)

2. J. Perier, represented by H. Biebuyck, of Brussels, for an imported invention of "A system of tie-pieces of fire-places of locomotives." — Dated 4th March, 1859.—(French Patent, 11th January, 1859.)

3. P. J. Richir, of Gilly, for "An apparatus for stopping carriages on inclined planes of railways in mines, &c."—Dated 7th March, 1859.

4. Ph. D. Margesson, represented by V. Sainthill, of Brussels, for an imported invention of "Improvements in the treatment of sugar canes."— Dated 5th March, 1859.—(English Patent, 31st August, 1858.)

5. Ed. Pesier, represented by D. de Vos-Verraert, of Brussels, for an imported invention of "Using alcohol for removing extraneous substances in the manufacture of sugar."—Dated 5th March, 1859.— (French Patent, 27th February, 1859.)

6. H. S. Lansing, H. Savage-North, and Ed. Savage, represented by J. Piddington, of Brussels, for an imported invention of "Improvements in fire-arms."—Dated 5th March, 1859.—(French Patent, 3rd August, 1857.)

7. C. A. Dandraut, represented by C. Lahaye, of St. Josse-ten-Noode, a Patent of Improvement for "Additions to his process of preserving alimentary substances and organic matter in general."—Dated 5th March, 1859.

8. L. J. Ficheroulle, of Farciennes, for "A parachute of mines."—Dated 7th March, 1859.

9. L. J. Bernard, of Huy, for "An apparatus for extracting oil and water from the steam issuing from engines."—Dated 7th March, 1859,

* For the Belgian Patent Law, see Nos. 292 and 348 of this Journal.

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

10. J. Bessens, of Herstal, for "A system of fastenings for lever or spring guns."—Dated 7th March, 1859.

11. Leclercq Brothers and Lardinois, of Liége, for "A system of guns with moveable barrels."—Dated 7th March, 1859.

12. P. J. Malherbe, of Tilleur, for "An apparatus for ventilating mines."—Dated 7th March, 1859.

13. H. Dandoy, A. Dandoy, and G. Lavallée-Poussin, of Namur, for "A mode of distilling gas at a high pressure."—Dated 5th March, 1859.

14. J. D. Brabazon, represented by A. Anoul, of Ixelles, for an imported invention of "Using sails as a motor for screws and other propellers of ships."—Dated 7th March, 1859.—(English Patent, 28th August, 1858.)

15. W. Ralston, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in goffering and finishing tissues, and also in machines and apparatuses used thereat."—Dated 8th March, 1859.—(English Patent, 24th November, 1858.)

16. V. Oudinot and A. Delarbre, represented by H. Biebuyck, of Brussels, for "Manure."—Dated 8th March, 1859.

17. J. Eason, represented by J. Piddington, of Brussels, for an imported invention of "Improvements in apparatus for tanning and dyeing."—Dated 8th March, 1859.—(English Patent, 16th February, 1859.)

18. A. Boillot, represented by A. Picard, of Brussels, for "A composition, called 'Japanese wax.'"—Dated 8th March, 1859.

19. A. Jumelais, represented by A. Picard, of Brussels, for an imported invention of "A motor of illimited power, obtained from the permanent pressure of air."—Dated 8th March, 1859.—(French Patent, 16th October, 1857.)

20. Paignon and J. Vandaux, represented by A. Picard, of Brussels, for an imported invention of "A motor worked by air, which is alternately heated and cooled."—Dated 8th March, 1859.—(French Patent, 3rd March, 1859.)

21. J. Rival, represented by J. N. Herremans, of Brussels, a Patent of Improvement for "A modification of his manometer."—Dated 10th March, 1859.—(Original Patent, 17th December, 1857.)

22. A. Quidde and H. Von Langen, represented by De de Vos-Verraert, of Brussels, for "A means of preventing incrustations of steam boilers."—Dated 9th March, 1859.

23. P. E. Aimont, of Brussels, for "An apparatus for preventing the breakage of syphons or bottles in the manufacture of Seltzer water or other liquids."—Dated 9th March, 1859.

24. P. E. Aimont, of Brussels, for "An arrangement in cutters and punches with beams."—Dated 9th March, 1859.

25. P. E. Aimont, of Brussels, for "A system of carriages or vehicles with independent wheels and rails attached thereto."—Dated 9th March, 1859.

26. P. E. Aimont, of Brussels, for "A safety indicator on railways."—Dated 9th March, 1859.

27. V. Delperdange, of Schaerbeek, for "A system of reflectors for lanterns or street lamps."—Dated 9th March, 1859.

28. P. Vandervoorde, of Lokeren, for "An apparatus for feeding boilers with chemical substances."—Dated 8th March, 1859.

29. L. Leprince, represented by X. Raclot, of Brussels, for an imported invention of "A kind of transparent shoes and half-boots for ladies."—Dated 11th March, 1859.—(English Patent, 21st January, 1859.)

30. A. Jouan, represented by H. Biebuyck, of Brussels, for an imported invention of "An apparatus for manufacturing sugar, and for other chemical purposes."—Dated 11th March, 1859.—(American Patent, 25th January, 1859.)

31. L. de Dax, represented by H. Bieubyck, of Brussels, for an imported invention of "Improvements in the manufacture of fire-arms."—Dated 11th March, 1859.—(French Patent, 8th January, 1859.)

32. J. Romiguière, represented by O. Daillencourt, of Brussels, for an imported invention of "A process for preserving young tobacco plants."—Dated 11th March, 1859.—(French Patent, 2nd January, 1858.)

33. E. C. Martin, represented by O. Daillencourt, of Brussels, a Patent of Improvement for "Additions to his processes for purifying natural phosphate of lime."—Dated 11th March, 1859.—(Original Patent, 2nd December, 1858.)

34. Ph. Leblanc, of Mons, for "A smoke-consuming apparatus."—Dated 12th March, 1859.

35. P. Dernoncourt, of Mons, for an imported invention of "A system of safety lamps with toothed disks."—Dated 12th March, 1859.—(French Patent, 7th March, 1859.)

36. Ed. Bauthière-Paquet, of Montigny-sur-Sambre, for "A circular glass bench, with an alternate movement for glass furnaces."—Dated 12th March, 1859.

37. H. de Bach and A. Laurent, of Jemmapes, for "A system of pistons with clack valves for propelling steam-boats, and for a system of india-rubber calking."—Dated 14th March, 1859.

List of Patents Delivered on the 31st March, 1859.

1. M. Colson, of Haim St. Pierre, for "New arrangements in machines for raising and lowering workmen in coal pits."—Dated 7th March, 1859.

2. J. B. Brubé, represented by H. Biebuyck, of Brussels, for an imported invention of "A kind of button buckles."—Dated 8th March, 1859.—(French Patent, 5th March, 1859.)

3. P. E. Aimont, of Brussels, for "A mode of lubricating railway carriages, &c."—Dated 9th March, 1859.)

4. B. Bejot-Gandel, represented by D. de Vos-Verraert, of Brussels, for an imported invention of "An hydraulic cesspool, called 'fulling cesspool.'"—Dated 11th March, 1859.—(French Patent, 18th January, 1859.)

5. F. Hignet and Co., of Chatelineau, for "An apparatus for casting pipes in an upright position."—Dated 14th March, 1859.

6. F. Deboubers, of Ghent, for "A system of paddle wheels."—Dated 10th March, 1859.

7. F. Vouillon and F. R. Tavernier, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in the treatment of filamentous substances." — Dated 12th March, 1859.—(French Patent, 31st December, 1858.)

8. V. A. Prou, represented by X. Raclot, of Brussels, for "An hydro-atmospheric weighing machine, with three pitches."—Dated 12th March, 1859.

9. J. Vandenhielakker, of St. Josse-ten-Noode, for "A machine for compressing coal and moulding bricks."—Dated 12th March, 1859.

10. Ch. Madiou, represented by Th. Boutillier, of Schaerbeek, for an imported invention of "A system of horse-gins combined with a railway."—Dated 12th March, 1859.—(French Patent; 11th May, 1858.)

11. J. Dumas, represented by Th. Boutillier, of Schaerbeek, for an imported invention of "A system for obtaining natural fountains."—Dated 12th March, 1859.—(French Patent, 14th January, 1859.)

12. L. A. Deflassieux Brothers and Pellion, represented by A. Crooy, of Brussels, for an imported invention of "A process for manufacturing wheels of locomotives, railway carriages, &c."—Dated 14th March, 1859.—(French Patent, 12th March, 1859.)

13. A. Couvreux and L. Combe, represented by H. Biebuyck, of Brussels, for an imported invention of "A dredging machine with inclined strops."—Dated 14th March, 1859.—(French Patent, 12th March, 1859.)

14. A. Couvreux and L. Combe, represented by H. Biebuyck, of Brussels, for an imported invention of "A crane with a moveable mast."—Dated 14th March, 1859.—(French Patent, 12th March, 1859.)

15. A. F. P. Bas, represented by X. Raclot, of Brussels, for an imported invention of "A system of fire-places."—Dated 14th March, 1859.—(French Patent, 10th March, 1859.)

16. F. Bonnardot, L. J. Vasner, and F. Létrillard, represented by X. Raclot, of Brussels, for an imported invention of "A thrashing machine."—Dated 14th March, 1859.

17. H. Tilkin-Mention, of La Boverie-lez-Liége, for "A piston with a variable tension, worked outside the cylinder without unmounting any part of the machinery."—Dated 17th March, 1859.

18. Ch. E. Devendeuvre, represented by O. Daillencourt, of Brussels, for an imported invention of "A drying kiln, and kiln for drying and baking bricks, tiles, drain pipes, and other ceramic products."—Dated 15th March, 1859.—(French Patent, 25th November, 1858.)

19. H. J. Rigaux, represented by H. Biebuyck, of Brussels, for "Improvements in the manufacture of tiles for vaults."—Dated 15th March, 1859.

20. L. Hanssens, of Vilvorde, for "A new fabric imitating hair stuffs."—Dated 15th March, 1859.

21. J. P. Piedboeuf, of Jupille, for "A mode of assembling sheet iron in the fire-places of steam boilers."—Dated 16th March, 1859.

22. A. Dessart, of Dolhain (Limburg), for "An apparatus for superheating steam."—Dated 16th March, 1859.

23. C. Martin, of Pepinster, for "Improvements in machines for carding and combing filamentous substances."—Dated 15th March, 1859.

24. T. Steppe, of Brussels, for "Manufacture of lace, called 'Brussels application,' from silk, thread, or common coloured thread."—Dated 16th March, 1859.

25. J. Emes, represented by L. N. Meckenheim, of Ixelles, for an imported invention of "A portable bed, which may be converted into a sofa, chair, or arm-chair."—Dated 16th March, 1859.—(English Patent, 27th July, 1858.)

26. F. Segers, of Brussels, for "A flexible hat with rims, made of American cloth." — Dated 16th March, 1859.

27. V. Tiphagne and M. Lepetit, of Brussels, for "A new mode of advertising, called 'album advertisements.'"—Dated 16th March, 1859.

28. Ch. Launay, of Brussels, for "A magnet-manometer or gas pressure gauge."—Dated 16th March, 1859.

29. M. N. Nicolle, represented by Ch. Launay, of Brussels, for "A gas-carburator."—Dated 16th March, 1859.

30. H. de Langen and A. Quidde, represented by D. de Vos-Verraert, of Brussels, for "An improved oven for baking bread." — Dated 16th March, 1859.

31. J. V. Florence, of Verviers, for "Improvements in Jacquard machines."—Dated 17th March, 1859.

32. H. Bayet, of Liége, for "A galvanic process for tinning metals."—Dated 18th March, 1859.

33. A. Dewitte, of Tamise, for "A churn." — Dated 18th March, 1859.

34. A. Hoelscher, of Verviers, for "Objects of art and ornaments, lacquered, bronzed, or galvanized, applicable to ornaments of silk, ribbons, embroideries, &c."—Dated 19th March, 1859.

35. J. B. Fondu, of Lodelinsart, a Patent of Improvements for "Improvements in machines for manufacturing bolts, rivets, and wood screws, by the cold or hot process."— Dated 19th March, 1859.—(Original Patent, 29th September, 1857.)

36. A. Scholberg, of Liége, for "Modifications in the manufacture of fire-arms with barrels placed one above the other."—Dated 18th March, 1859.

37. A. Lefebvre, of Alost, for "Treating and preparing halpha, reeds, hemp, flax, &c."—Dated 17th March, 1859.

38. J. Wetherhill, represented by J. Piddington, of Brussels, for an imported invention of "Improvements in locks."—Dated 17th March, 1859. —(French Patent, 1st March, 1859.)

39. S. Léoni, represented by A. Crooy, of Brussels, for an imported invention of "Manufacture of certain ceramic products."—Dated 17th March, 1859.—(French Patent, 24th November, 1858.)

40. V. L. M. Serrin, represented by O. Daillencourt, of Brussels, for an imported invention of "A regulator of electric lights with a self-acting digression."—Dated 17th March, 1859.—(French Patent, 23rd October, 1858.)

41. F. Damême, J. Chrzanowski, and C. Brillaux, represented by Ch. Bika Dubois, of Schaerbeek, for an imported invention of "A continuous safety signal."—Dated 17th March, 1859.—(French Patent, 28th June, 1858.)

42. G. Leach, represented by A. Anoul, of Ixelles, for an imported invention of "An apparatus for winding off yarns from reels."—Dated 18th March, 1859.—(English Patent, 2nd February, 1859.)

43. N. Lelarge and D. Bodet, of Liége, for "A machine for polishing gun barrels."—Dated 19th March, 1859.

44. A. F. Ménard, represented by O. Dardenne, of Liége, a Patent of Improvement for "Improvement in apparatus for making bread."—(Lesobre's Original Patent, 20th November, 1851.)

45. R. Cochors, represented by A. Depuichault, of Schaerbeek, for an imported invention of "A colouring substance extracted from ochre."—Dated 21st March, 1859.—(French Patent, 11th January, 1859.)

46. Ch. Rochat, represented by H. Biebuyck, of Brussels, for an imported invention of "A new system of breech-loading fire-arms."—Dated 21st March, 1859.—(French Patent, 16th March, 1859.)

47. P. Marmay, represented by H. Biebuyck, of Brussels, for an imported invention of "A process for preparing a new alimentary substance." — Dated 21st March, 1859.—(French Patent, 14th March, 1859.)

48. E. Fielding, represented by H. Biebuyck, of Brussels, for an imported invention of "An improved method of preserving the form of cops of yarn by using adhesive substances."—Dated 21st March, 1859.—(English Patent, 4th November, 1858.)

49. J. Aspinall, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in refining sugar." — Dated 21st March, 1859.—(French Patent, 16th March, 1859.)

50. Ch. Jacquot and E. Foulon, of Lokeren, for an imported invention of "A regulator with a variable movement applicable to all looms."—Dated 23rd March, 1859.

51. H. Rigaux and W. Olivier, represented by H. Biebuyck, of Brussels, for "Manufacture of bricks, flag-stones for pavements, &c."—Dated 22nd March, 1859.

List of Specifications, &c. published during the week ending 8th April, 1859.

No.	Price.	Subject-Matter.
1984	1s. 10d.	Ordnance and projectiles.
1985	7d.	Indelibly crossing or marking bankers, cheques, &c.
1988	5d.	Manufacture of alumina.
1989	11d.	Locks for doors, safes, &c.
1990	5d.	Springs for carriages, &c.
1991	3d.	Apparatus for the manufacture of gas.
1992	3d.	Blankets and lappings for machine and block printing, &c.
1993	1s. 8d.	Steam engines, steam boilers, &c.
1994	7d.	Apparatus for communicating railway signals.
1995	10d.	Pneumatic condensing apparatus, &c.
1996	3d.	Copying and writing inks.
1997	5d.	Goloshes.
1998	2s.	Driving belts and springs.
1999	6d.	Plough and pulverizer.
2000	10d.	Machinery for spinning, twisting, or doubling cotton, &c.
2001	2s. 8d.	Knitting machinery.
2002	5d.	Apparatus for supporting the skirts of ladies' dresses.
2003	7d.	Escapement for chronometers and watches.
2005	6d.	Apparatus for receiving, containing, and delivering liquids.
2006	9d.	Hair and skin brushes.
2008	7d.	Apparatus for obtaining motive power.
2009	3d.	Fire-arms.
2010	10d.	Carriage springs.
2011	3d.	Bankers' cheques.
2012	3d.	Machinery for the preparation of cotton, &c.
2014	7d.	Construction or building cops, &c.
2015	5d.	Machinery for weaving.
2017	10d.	Cornets, &c.
2018	3d.	Manufacture of chlorine.
2019	5d.	Syringes.
2020	6d.	Stopcocks or valves.
2021	3d.	Manufacture of cements.
2023	5d.	Variable boring bit.
2024	10d.	Sewing machines.
2027	7d.	Apparatus for repairing and fitting dock gates, &c.
2029	3d.	Weighing cranes.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5s. must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

A Free Library and Reading Room, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

Note.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d.*

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE REFERENCE INDEX of PATENTS pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. I.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in that Series. Edited by BENNET WOODCROFT, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions, &c. By SIMON STURTEVANT. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By JOHN ROVINSON (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether NICHOLAS PAGE or Sir NICHOLAS HALSE was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent Nos.* 33 *and* 85, *respectively dated* 8*th April*, 1626, *and* 23*rd July*, 1635.) Price 2*d.*
4. DUD DUDLEY'S Metallum Martis; or iron made with pitcoale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated* 22*nd February*, 1620, *and* 2*nd May*, 1638. Price 8*d.*
5. Description of the nature and working of the patent Water-scoop Wheels invented by WILLIAM WHELER, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated* 24*th June*, 1642.) Price 2*s.*
6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) EDWARD SOMERSET, Lord Marquis of WORCESTER, &c. &c. (*Stat.* 15 *Car. II c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By THOMAS SAVERY. (*Letters Patent, No.* 347, *dated* 10*th January*, 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By THOMAS SAVERY. (*Letters Patent, No.* 356, *dated* 25*th July*, 1698, *and Stat.* 10 *&* 11 *Will, III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By JOHN ALLEN, M.D. (*Letters Patent, No.* 513, *dated* 7*th August*, 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By JONATHAN HULLS. (*Letters Patent, No.* 556, *dated* 21*st December*, 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By SAMUEL SUTTON, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated* 16*th March*, 1744.) Price 1*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, as translated or transcribed from Official Communications, may be found in the following Numbers of this Journal, published at 2*d.* each, or 3*d.* free by post:—

Austria, No. 291.
Bavaria, No. 262.
Belgium, Nos. 292 and 348.
Baden, and Petty States of Germany, No. 325.
Canada, No. 279.
Cuba, No. 498.
Dutch West Indies, No. 322.
France, No. 228.
Greece, No. 325.
Germany, No. 435.
Hanover, No. 231.
India, Nos. 240 and 348.
Mexico, No. 496.
Netherlands, No. 289.
New South Wales, No. 386.
Prussia, Nos. 313 and 329.
Parma, Piacenza, and Guastalla, No. 321.
Portugal, No. 325.
Poland, No. 335.
Roman States, No. 319.
Russia, Nos. 334 and 508.
Sardinia, Nos. 233 and 235.
Saxony, No. 236.
Sicilies (the Two), No. 316.
Spain, No. 323.
Sweden, Nos. 327 and 354.
Victoria, Nos. 186 and 359.
Wurtemberg, No. 314.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price 21*s.*

Free Patent Museum and Library, South Kensington.

NUMBERS of VISITORS for the Week ending 9th April 1859.

Day of Month.	Day of Week.	Morning.	Evening.	Total.
April 4	Monday -	335	578	913—Fine.
„ 5	Tuesday -	223	504	727— „
„ 6	Wednesday	125	81	206—Very hot.
„ 7	Thursday*	92	—	92— „
„ 8	Friday -	77	—	77—Showery.
„ 9	Saturday -	138	—	138—Fine.
	Total -	990	1163	2153

* The Museum closes at 5 o'clock.

Total number of visitors since the period of free daily admission (12th May, 1858) to 9th April, 1859, —84,491.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS. —This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

In course of Publication, by Order of the Commissioners.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.
BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

LONDON:
Printed by GEORGE E. EYRE and WILLIAM SPOTTISWOODE, Printers to the Queen's most Excellent Majesty.
Published at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 551. FRIDAY, APRIL 15, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

636. To JAMES THORNTON, of Liverpool, in the county of Lancaster, for the invention of "Improvements in machinery for the manufacture of bricks, tiles, and other similar articles."

On his petition, recorded in the Office of the Commissioners on the 12th day of March, 1859.

658. To CHARLES PARKER, of Dundee, in the county of Forfar, North Britain, Engineer, for the invention of "Improvements in looms for weaving."

666. And to EDMUND ANSCOMBE, of No. 95, Westbourn Street, Pimlico, in the county of Middlesex, Joiner, for the invention of "An apparatus for taking an accurate delineation of any view or object in open air or otherwise."

On both their petitions, recorded in the Office of the Commissioners on the 16th day of March, 1859.

676. To RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Treating barley so as to obtain new alimentary substances therefrom."—A communication from Pierre Marmay, residing at Riom, France.

682. And to JULIEN DONAT, of 6, Rue Paradis Marais, Paris, in the empire of France, for the invention of "Improvements in apparatus used with matches for obtaining instantaneous light."

On their petitions, both recorded in the Office of the Commissioners on the 17th day of March, 1859.

700. To JOHN WALTER HART, of 60, St. Mary-Axe, in the city of London, Gentleman, for the invention of "An apparatus for the destruction of flies and other insects."—A communication from abroad by Frederick Barnett, residing at Paris, in the empire of France.

On his petition, recorded in the Office of the Commissioners on the 19th day of March, 1859.

722. To WILLIAM WEILD, of the city of Manchester, in the county of Lancaster, Machinist, for the invention of "Improvements in machinery and arrangements for coating slips, sheets, rods, and bars of metal, and laths, rods, and boards of wood, and similar articles formed of other substances, with paints, varnishes, and other like preparations, and drying the same."

727. To DANIEL LANCASTER BANKS, of Kennington, in the county of Surrey, Engineer, for the invention of "Improvements in suspension rail or road ways, and in machinery or apparatus connected therewith."

731. And to JOHN MACINTOSH, of North Bank, Regent's Park, Gentleman, and GODFREY RHODES, of Regent Street, Major in Her Majesty's Army, for the invention of "Improvements in tents and such like coverings for shelter against the weather."

On their several petitions, recorded in the Office of the Commissioners on the 22nd day of March, 1859.

778. To THOMAS CARR, of Bebington, in the county of Chester, Artificial Manure Manufacturer, for the invention of "Improvements in machinery for disintegrating artificial manures, and various other substances."

779. To CHARLES LEWIS ROBERTS, of Clerkenwell, in the county of Middlesex, for the invention of "Improvements in cigars."

781. To JOHN WILLIAM KELLY, Civil Engineer, of the town of Ennis, in the county of Clare, Ireland, for the invention of "Improvements in gas burners."

782. To Ernest de Caranza, of No. 97, Rue des Petits Champs, in the city of Paris, in the empire of France, Engineer, for the invention of "A new system of gas lighting through new apparatuses and matters richer in gas than pit-coal."

783. To Edwin Napoleon Norminton, of 19, High Street, Camden Town, in the county of Middlesex, for the invention of "The cleansing and remanufacturing of old used dirty railway grease for the manufacturing of new railway grease, for the cleansing and remanufacturing of old used cotton waste, tow, or any textile fabrics, and for the purifying of oils or any fatty matter."

785. To Richard Searle, of Woodford Wells, in the county of Essex, Gentleman, for the invention of "Improvements in apparatus used for transmitting signals by electricity for telegraphic purposes, and in the construction of telegraphic cables."

786. To Isaac Spight, of Glandford Briggs, in the county of Lincoln, Ironfounder and Agricultural Machine Maker, for the invention of "Improvements in horse hoes."

787. To Thomas Taylor, of Vere Street, in the county of Middlesex, Chemist, for the invention of "Improved means of giving increased strength to paper."

788. To Henry Potter Burt, of Charlotte Row, Mansion House, in the city of London, for the invention of "Improvements in apparatus for preparing and preserving timber."

789. And to Henry Moss, of 62, Brill Row, Somers Town, in the county of Middlesex, Boot and Shoe Manufacturer, and Thomas West, of 5, Jewin Street, in the city of London, Machinist, for the invention of "A machine for the cutting of leather for every purpose, and cutting cloths, linen, and other fabrics and materials."

On their several petitions, recorded in the Office of the Commissioners on the 29th day of March, 1859.

---

791. To John Henry Linsey, of No. 103, Cheapside, in the city of London, for the invention of "Certain improvements in binding or covering books."

793. To William Vaughan Edwards, of Swindon, in the county of Wilts, Ironfounder, for the invention of "Improvements in the construction of ways and apparatus to facilitate the conveyance of mails, goods, and passengers."

794. To George Tomlinson Bousfield, of Loughborough Park, Brixton, in the county of Surrey, for the invention of "Improvements in preventing explosions in steam boilers."—A communication from abroad by François Marchal, of Clermond-Ferand, in the empire of France, Engineer of the Paris and Lyons Railway.

795. To Thomas Downs Shipman, of Toronto, Canada West, North America, for the invention of "Improvements in apparatus for stamping and printing."—Partly a communication when abroad by Mr. Kendell, of Canada aforesaid.

796. To Humphrey Jefferies, of Birmingham, in the county of Warwick, Button Maker, for the invention of "Improvements in castors for furniture."

797. To John Cartwright, of Shrewsbury, in the county of Salop, Agricultural Implement Manufacturer, for the invention of "An improved implement for crushing clods and pulverizing the surface soil, also convertible into a press wheel roller."

798. To Cowper Phipps Coles, of Southsea, in the county of Hants, Captain R.N., for the invention of "An apparatus for defending guns and gunners in ships of war, gun boats, and land batteries."

799. To William Gossage, of Widnes, in the county of Lancaster, Chemist, for the invention of "Improvements in the manufacture of certain alkaline silicates and in the production therefrom of liquor silicis or liquid flint."

800. To Alfred Vincent Newton, of the Office of Patents, No. 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "An improved governor for marine and other steam engines."—A communication from abroad by H. C. Sergeant, of the United States of America.

801. And to William Smith, of King Street, Smithfield, in the city of London, and Edmund Smith, of Hamburgh, Gas Meter Manufacturers, for the invention of "Improvements in means or apparatus for the purpose of regulating the flow or passage of fluids."

On their several petitions, recorded in the Office of the Commissioners on the 30th day of March, 1859.

---

802. To John Lacy, Cotton Spinner, and Samuel Simpson, and Henry Smith, Managers, all of Travis Holme Mill, Walsden, near Todmorden, in the county of Lancaster, for the invention of "Certain improvements in machinery for preparing and spinning cotton and other fibrous materials."

803. To Charles Pickering, of Tonbridge, in the county of Kent, for the invention of "Improved apparatus for brewing."

804. To Robert Craib Ross, of Glasgow, in the county of Lanark, North Britain, Engineer, for the invention of "Improved apparatus for cultivating land."

805. To Thomas Ivory, of Edinburgh, Advocate for the invention of "Improvements in rotary engines."

807. To Alexander Morton, of Morton Place, Kilmarnock, for the invention of "Improvements in sextants or quadrants for nautical purposes, and which are also adapted to the measuring of altitudes or angular distances."

809. To James Stephen Bateson, of No. 17, Bolton Street, Mayfair, in the county of Middlesex, Barrister-at-Law, for the invention of "Improvements in generating steam and in the apparatus employed therein."

810. To Francis Morton, of James Street, Liverpool, in the county of Lancaster, Engineer, for the invention of "Improvements in the construction of fences and the post or pillars for the same, parts of which improvements are also applicable to the construction of gate posts or poles for telegraph purposes or for signal posts."

811. To William Edward Newton, of the Office for Patents, No. 66, Chancery Lane, in the county of

Middlesex, Civil Engineer, for the invention of "Improvements in mills for cleaning rice."—A communication from abroad by Peter McKinley, of Charleston, in the United States of America.

812. And to Alfred Vincent Newton, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for for the invention of "Improvements in the construction of steam boiler and other furnaces."—A communication from abroad by Jonathan Amory, of Boston, in the United States of America.

On their several petitions, recorded in the Office of the Commissioners on the 31*st day of March*, 1859.

---

813. To Daniel Kinnear Clark, of No. 11, Adam Street, Adelphi, in the county of Middlesex, Civil Engineer, for the invention of "Feed water heating apparatus."

815. To Isidor Sigismund, of Hull, in the county of York, Dentist, for the invention of "Certain improvements in the manufacture of artificial teeth, and in the apparatus connected therewith."—Partly a communication from Simon Baron Sigesmond, of New York, U. S.

816. To Richard Archibald Brooman, of No. 166, Fleet Street, in the city of London, E.C., Editor of the Mechanics' Magazine and Patent Agent, for the invention of "Improvements in solidifying, pressing, and moulding."—A communication from Felix Dehaynin, residing at Paris.

817. To Richard Archibald Brooman, of No. 166, Fleet Street, in the city of London, E.C., Editor of the Mechanics' Magazine and Patent Agent, for the invention of "A new preparation of indigo for dyeing."—A communication from Messrs. Depoully Frères, residing at Paris.

819. To William Edward Newton, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "An improved process of manufacturing sulphate of lead, carbonate of lead, nitrate of potash, and sulphate of soda."—A communication from Samuel Cooper, of Boston, in the United States of America.

820. To John James Davis, of Percival Street, Clerkenwell, in the county of Middlesex, Die Sinker and Press Manufacturer, for the invention of "An improved pad, applicable for inking, damping, and other like purposes by hand."

821. To William Tod, of Glasgow, in the county of Lanark, North Britain, Marine Engineer, for the invention of "Improvements in marine steam engines."

822. And to Yves-Marie Thomas, of No. 2, Rue Sainte-Appoline, Paris, empire of France, and of No. 45, Essex Street, Strand, London, for the invention of "An improved propeller for ships, vessels, boats, and water wheels."

On their several petitions, recorded in the Office of the Commissioners on the 1*st day of April*, 1859.

---

823. To Joseph Desmet-Séaut, of Mons, in the kingdom of Belgium, and No. 4, South Street, Finsbury, London, Mechanician, for the invention of "An improved gas burning and lighting apparatus."

825. To John Hall, of Queen's Road, Chelsea, Engineer, and John Say Sparkes, of St. John's Wood, Gentlemen, both in the county of Middlesex, for the invention of "An improved application of machinery for the purpose of hoisting, lowering, pulling, or drawing weights."

827. To Spendlove Desborough, of No. 24, Noble Street, in the city of London, Agent, for the invention of "Improvements in making up needles, steel pens, and other small articles for sale."

829. To William Mather, of the city of Manchester, in the county of Lancaster, Wholesale Druggist, for the invention of "An improved apparatus for catching and destroying flies and other insects."

831. To Michael Scott, of No. 26, Parliament Street, Westminster, for the invention of "Improvements in diving apparatus."

833. And to Thomas Richardson, of Hartlepool, in the county of Durham, Engineer, and George William Jaffrey, of the same place, Engineer, for the invention of "Improvements in the arrangements and construction of harbours of refuge, breakwaters, sea walls, or barriers, and other like structures."

On their several petitions, recorded in the Office of the Commissioners on the 2nd day of April, 1859.

---

835. To Ferdinand Potts, of the firm of F. Potts and Company, Tube Manufacturers, and Robert Brough, Engineer, both of Birmingham, in the county of Warwick, for the invention of "Certain improvements in the manufacture of calico printing rollers or cylinders, also in the machinery and apparatus for performing certain parts of the same, and which said apparatus are also applicable, seperately or conjointly, to the manufacture of parallel and other metallic tubes, end the rolling of the metal for the same or other purposes."

837. To Charles Felton Kirkman, of Argyl Street, Regent Street, London, Gentleman, for the invention of "Protecting telegraphic wires, and in using them for subterranean and submarine purposes."

839. To William Brown and Charles Neale May, both of Devizes, in the county of Wilts, Engineers, for the invention of "Improvements in hay-making machines."

841. To William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "An improvement in ladies' hooped skirts."—A communication from abroad by George Mallory, of Watertown, Newhaven, United States of America.

843. To Champion Russell, of Stubbers, near Romford, in the county of Essex, Esquire, for the invention of "An improvement in the working of marine engines."

845. To DAVID BLAIR WHITE, of Newcastle-on-Tyne, M.D., for the invention of "Improvements in arranging ships' and other pumps."

847. And to DAVID SOWDEN, of Bradford, in the county of York, Jacquard Machine Maker, for the invention of "Improvements in jacquard machines employed for weaving figured goods or fabrics."

On their several petitions, recorded in the Office of the Commissioners on the 4th day of April, 1859.

---

849. To GEORGE HASELTINE, of the United States of America, now of No. 4, Southampton Buildings, Holborn, in the county of Middlesex, for the invention of "Improvements in sewing machines."

851. To LEONARD BRIERLEY, of Birmingham, in the county of Warwick, Manufacturer, and HENRY GEERING, of Birmingham aforesaid, Manufacturer, for the invention of "A new or improved method of ornamenting metallic bedsteads and other articles of metallic furniture."

853. To GEORGE FREDERIC CHANTRELL, of Liverpool, in the county of Lancaster, Furnace Engineer, and EDWARD DUTCH, of the same place, Commercial Traveller, for the invention of "Improvements in the apparatus for regulating the quantity of water to be used for the flushing of waterclosets and other purposes."

855. To JOHN HETHERINGTON, of Manchester, in the county of Lancaster, Machinist, and THOMAS WEBB and JAMES CRAIG, of Tutbury, in the county of Derby, Cotton Spinners, for the invention of "Improvements in machinery or apparatus for spinning and doubling cotton and other fibrous materials."

857. And to NICOLAS LIBOTTE, Mechanician, of 33, Boulevart St. Martin, Paris, empire of France, for the invention of "An improved safety appparatus to be applied to cages in the drawing of coals."

On their several petitions, recorded in the Office of the Commissioners on the 5th day of April, 1859.

---

859. To THOMAS PURNELL LUFF, of Shepton Mallet, in the county of Somerset, Estate Agent, for the invention of "Improvements in cheese vats."

861. To JEAN AUGUSTE HILARION BALLANDE, of Paris, in the empire of France, Gentleman, for the invention of "An improvement in the preparation of writing paper, and ink to be used thereon."

863. And to JOSEPH ROGERS, of 9, Queen Square, Bartholomew Close, in the city of London, Rope Maker, and EDWARD JOHNSON TWEED, of 22, Castle Street, Falcon Square, also in the city of London, for the invention of "Improvements in coating conducting wires used for electric telegraphic purposes."

On their several petitions recorded in the Office of the Commissioners on the 6th day of April, 1859.

Invention protected for Six Months by the Deposit of a Complete Specification.

Notice is hereby given that the petition of

860. ISAAC ADAMS, of the state of Massachusetts, of the United States of America, praying for Letters Patent for the invention of "An improved tubular chain cable guide for vessels' bulwarks," —a communication from Alfred S. Phillips, a resident of Boston, of the said state of Massachusetts,—was deposited and recorded in the Office of the Commissioners on the 6th day of April, 1859, and a complete Specification accompanying such petition was at the same time filed in the said Office.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 12th April,* 1859, *inclusive.*)

11th April.

879. ROBERT BAIRD LINDSAY, of Mill Wall Brewery, Poplar, in the county of Middlesex, for an invention of "An improvement in removing the scale or deposit from tubular flues of steam-boilers."—Dated 12th April, 1856.

963. CHRISTOPHER NICKELS, of the Albany Road, Camberwell, in the county of Surrey, and JAMES HOBSON, of Leicester, for an invention of "An improvement in machinery for weaving carpets and terry fabrics."—Dated 22nd April, 1856.

12th April.

876. ROBERT STIRLING NEWALL, of Gateshead-upon-Tyne, in the county of Durham, Telegraph Engineer, for an invention of "Improvements in telegraph insulators."—Dated 12th April, 1856.

882. PATRICK ROBERTSON, of Shawlands Hill, in the county of Renfrew, Manufacturer, for an invention of "Improvements in power-loom weaving." —Dated 14th April, 1856.

889. SAMUEL CUNLIFFE LISTER, of Bradford, county of York, for an invention of "Improvements in spinning."—Dated 14th April, 1856.

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

FOREIGN PATENTS.

AUSTRIA.*

List of Patents for Inventions which were Granted, Prolonged, or became Void during the Month of January, 1859.†

(Communicated by the Austrian Government.)

1. Patents Granted.

1. Friedrich Wilhelm Mowbray and Jacob Broadley, of Bradford, England, represented by Robert Galbraith, Vienna, for "Improvements in weaving and in looms." — 3 years. — (Secret.)—Dated 1st January, 1859.—(English Patent, 8th April, 1858.)

2. Friedrich Oerle, of Venice, for "An improved machine for hulling rice."—5 years. — (Secret.)—Dated 3rd January, 1859.

3. Johann Nesweibik, of Ofen, for "Protecting hats from perspiration without using linings or leather."—2 years.—(Secret.)—Dated 3d January, 1859.

4. Enoch and Philemon Sykes, of Huddersfield, and Reuben Sykes, of Brussels, represented by August Lenz, Vienna, for "Improvements in continuous machines for spinning and preparing wool and partly other fibrous substances."—3 years.—(Public.)—Dated 3rd January, 1859.—(English Patent, 29th May, 1858.)

5. Friedrich Paget, of Vienna, for "Improvements in the manufacture of steel."—1 year.—(Secret.)—Dated 4th January, 1859.

6. Theophil Weisse, Joseph Kretschmer, and Anton Weisse, of Prague, for "A peculiar construction of hermetic cocks for steam, connection, and fluids, which are protected from freezing, which do not require repairing, which may be regulated with the greatest precision, and which are applicable to machines as well as to domestic purposes." — 1 year. — (Secret.) — Dated 4th January, 1859.

7. Joseph Dobsch, of Heiligenstadt, near Vienna, for "Improvements in the manufacture of hats, whereby a greater portion of cotton may be mixed with the substances used in that manufacture." — 1 year.—(Secret.)—Dated 4th January, 1859.

8. Peter Arnhofer, of Leibnitz, Styria, for "Improvements in chaff-cutting machines." — 1 year.—(Public.)—Dated 4th January, 1859.

9. Dominik Boccasini, of Triest, for "Obtaining coke from lignites, said coke being applicable to smelting metals in blast furnaces."—5 years.—(Secret.)—Dated 4th January, 1859.

10. Hugo Fiedler, of Preran, Moravia, and Joh. Friedr. Gärtner, jun., of Vienna, for "A machine for wetting, hulling, and cleaning corn."—1 year.—(Secret.)—Dated 4th January, 1859.

11. Adolph Janernig, of Jägerndorf, for "A so-called 'safety-pipe.'"—1 year.—(Public.)—Dated 5th January, 1859.

12. Digney Brothers and Co., of Paris, represented by Georg Märkl, Vienna, for "Improvements in Morse's telegraphs."—1 year.—(Public.)—Dated 5th January, 1859.

13. J. Rudolph Brzorad, of Mogyoros, in the district of Gran, Hungary, for "Obtaining so-called 'moulded coal' by means of mineral coal dust and tar pressed together."—1 year.—(Secret.)—Dated 5th January, 1859.

14. Franz Poduschka, of Ischeitsch, Moravia, for "An expeditious mode of lighting moderator lamps and other lamps, lustres, stearine candles, &c. by means of blow pipes."—1 year.—(Public.)—Dated 5th January, 1859.

15. Peter Pfeffermann, of Vienna, for "A cooling and disinfecting liquid for the mouth."—1 year.—(Secret.)—Dated 5th January, 1859.

16. Johann Chadwick, of Manchester, Arthur Elliot, of Wist-Hongten, and Wilhelm Robertson, of Manchester, represented by Friedr. Paget, Vienna, for "Improvements in machines for spinning or twisting silk directly from cocoons, and for winding the same on bobbins."—3 years.—(Public.)—Dated 7th January, 1859.—(English Patent, 30th April, 1858.)

17. Candidus Antognazza, of Milan, for "Improvements in the construction of stoves." — 1 year.—(Public.)—Dated 9th January, 1859.

18. Benjamin Jani Rowits, of Abrudbanya, Transylvania, for "Improvements in extracting gold and silver from ores and slick."—1 year.—(Secret.)—Dated 9th January, 1859.

19. Alexander Bonzanini, of Milan, for "A process for obtaining lighting gas directly from peat and other tertiary fossils and vegetable detritus, and for conveying said gas, pressed or not, into private houses."—1 year.—(Secret.)—Dated 9th January, 1859.

20. August Hepner and Co., of St. Marie aux Minet, France, represented by Cornelius Kasper, Vienna, for "Improvements in circular looms for weaving plain and figured stuffs." — 1 year.—(Secret.)—Dated 9th January, 1859.

21. Johann Oetl, of Pest, for "Improvements in fire-proof iron safes."—1 year.—(Secret.)—Dated 9th January, 1859.

22. Simon Reiner, of Keskemit, Hungary, for "Improvements in fastening buttons to men's dresses." — 1 year.—(Secret.)—Dated 9th January, 1859.

* For the Austrian Patent Law, see No. 291 of this Journal.

† In the case of inventions patented in other states as well as in Austria, the Specifications (whether described as "public" or not) may in most cases be consulted, or translations of them be had, at the Library of the Commissioners' Office.

23. Wilhelm Kraust, of Vienna, for "A peculiar construction of water carts without water casks, which may be used as fire engines."—1 year.—(Secret.)—Dated 13th January, 1859.

24. Gregor Nasso, of Triest, for "A screw life boat.—1 year.—(Public.)—Dated 13th January, 1859.

25. Paul Ragaller, of Salzburg, for "A peculiar construction of smokeless malt-kilns."—1 year.—(Public.)—Dated 13th January, 1859.

26. Joseph Grundmann, of Vienna, for "Protecting trees, blossoms, fruit, and plants from insects, without injury to their growth."—1 year.—(Public.)—Dated 13th January, 1859.

27. Leopold Schostal, of Vienna, for "A peculiar process for manufacturing statuary pasteboard for roofings."—1 year.—(Secret.)—Dated 13th January, 1859.

28. Lorenz Remelka, of Fischamend, Lower Austria, for "Improvements in machines for cleaning fruit and rolling barley."—1 year.—(Secret.)—Dated 13th January, 1859.

29. Louis Gustav Scriba, of Paris, represented by Georg Märkl, Vienna, for "A cigar-case."—1 year.—(Public.)—Dated 14th January, 1859.

30. Jean André Cecil Nestor Delpech, senr., of Castres, France, represented by Georg Märkl, Vienna, for "A suction and forcing pump for fire-engines applicable to industrial and domestic purposes."—1 year.—(Public.)—Dated 14th January, 1859.

31. Johann Wagner, of Vienna, for "Manufacture of smoking-pipes and mouth-pieces for cigars from meerschaum waste and other meerschaum clay by means of steam."—1 year.—(Secret.)—Dated 14th January, 1859.

32. Lodovico Farant, of Turin, represented by Alexander Bonnefond, Milan, for "A saw with one or several different blades."—1 year.—(Secret.)—Dated 14th January, 1859.—(Sardinian Patent, 30th September, 1858.)

33. Friedrich Huth, of Hagen, Westphalia, represented by Dr. Leopold von Mayer, Vienna, for "Converting iron wheel-tyres of railway carriages, axles, and rails into steel, and for rolling the same."—5 years.—(Secret.)—Dated 16th January, 1859.

34. Franz von Mack, of Vienna, for "A mechanical apparatus called 'expeditious reckoner,' for converting Austrian convention money into Wahrung money, and vice versâ."—1 year.—(Secret.) Dated 16th January, 1859.

35. Moriz Preyss, of Pest, for "Constructing gas burners so as to obtain more air than by the common butterfly burners."—1 year.—(Pubic.)—Dated 16th January, 1859.

36. Friedrich Paget, of Vienna, for "Improvements in machines for the treatment of flax, hemp, and other vegetable fibres."—2 years.—(Secret.)—Dated 16th January, 1859.

37. Johann Christoph Endris, of Vienna, for "Improvements in machines for cleaning and purifying flax, hemp, and other fibrous substances."—2 years.—(Secret.)—Dated 16th January, 1859.

38. Hyacinth Barran, of Barcelona, Spain, represented by Georg Märkl, Vienna, for "Improvements in looms for weaving velvet and other cloth fabrics."—1 year.—(Public.)—Dated 16th January, 1859.

39. Johann Nejedly, of Vienna, for "Improvements in the manufacture of all kinds of playing cards."—2 years.—(Secret.)—Dated 16th January, 1859.

40. Robert Franz Loges, of Vienna, for "Improvements in fastenings of bracelets."—1 year.—(Public.)—Dated 16th January, 1859.

41. Raimond Smolka, of Vienna, for "Improvements in Morse's telegraphs, whereby they are worked in two different ways by using electro-magnetic power instead of weights."—1 year.—(Secret.)—Dated 16th January, 1859.

42. Joseph Friedmann, of Miskolcz, now at Vienna, for "Improvements in tongs for marking sheep."—1 year.—(Public.)—Dated 16th January, 1859.

43. Leopold Mechlovits, of Ofen, for "Improvements in fastening pockets of men's dresses."—1 year.—(Secret.)—Dated 17th January, 1859.

44. Adam Priljeva, of the 46th Regiment of the Line, for "A motor for conveying weights worked by a combination of spring or other power, with the power of a lever or elasticity, being applicable to all kinds of machines."—1 year.—(Secret.)—Dated 17th January, 1859.

45. Florentin Joseph Van den Vinne, of Brussels, represented by Peter August Kruss, Vienna, for "A brick-machine."—5 years.—(Secret.)—Dated 21st January, 1859.

46. Heinrich Wallfisch, of Gran, Hungary, for "Improvements in men's dresses, whereby they are made more durable."—1 year.—(Secret.)—Dated 21st January, 1859.

47. Anton Okenfuss, of Pest, for "Pressing metal semi-relief objects and letters for inscriptions without using punches."—2 years.—(Secret.)—Dated 21st January, 1859.

48. Joseph Heinrich Sopuch, of Vienna, for "A process for smelting tallow with the addition of substances not used hitherto for that purpose."—3 years.—(Secret.)—Dated 23rd January, 1859.

49. Eduard Engelmann, of Hernals, near Vienna, for "Manufacture of lake bonnets and hats for children, and also caps resembling cloth."—1 year.—(Secret.)—Dated 23rd January, 1859.

50. Leopold Kraft, of Fünfhans, near Vienna, for "Improvements in felt and silk hats, whereby they are made lighter and more durable."—1 year.—(Secret.)—Dated 23rd January, 1859.

51. Prince Sergius Dolgoruki, of Berlin, represented by Georg Märkl, Vienna, for "A peculiar cylinder press, called 'Sergiana.'"—1 year.—(Public.)—Dated 23rd January, 1859.

52. Joseph Rocca and Joseph and Vincenz Lancia, of Turin, represented by Evarista Medea, Milan, for "Preserving food by means of steam."—2 years.—(Secret.)—Dated 23rd January, 1859.—(Sardinian Patent, expires 30th September, 1861.)

53. Adam Koiterer, of Vienna, for "An apparatus for separating fecal matter, for collecting the solid matter in hermetic moveable vessels, and for removing the draught of air."—1 year.—(Public.)—Dated 23rd January, 1859.

54. Johann Schatzl, of Pfaffstätten, Lower Austria, for "Removing the tension in manufacturing cast-iron wheels of railway-carriages, &c."—1 year.—(Secret.)—Dated 23rd January, 1859.

55. Cornelius Kasper, of Vienna, for "An improved gas-burner."—2 years.—(Secret.)—Dated 23rd January, 1859.

56. Gustav Starke, of Vienna, for "A peculiar construction of surveyors' tables, whereby they are made lighter, more durable, and steady."—1 year.—(Public.)—Dated 23rd January, 1859.

57. Franz Daina, of Bergamo, for "A peculiar method of condensing steam in steam engines."—2 years.—(Secret.)—Dated 23rd January, 1859.

58. Dr. Heinrich Meidinger, of Heidelberg, represented by Friedrich Aschermann, Vienna, for "Improvements in the construction of continuous galvanic batteries, especially for telegraphs, which may be worked for two years without requiring repairs."—1 year.—(Secret.)—Dated 23rd January, 1859.

59. George Taylor Yull, of Pest, represented by Dr. Finger, Vienna, for "A peculiar construction of ploughs."—3 years.—(Public.)—Dated 23rd January, 1859.

60. Clemens Eduard Sonneborn, of Berlin, represented by Georg Märkl, Vienna, for "A peculiar process for manufacturing cement from any kind of stones, marl, or sand."—5 years.—(Secret.)—Dated 24th January, 1859.

61. Eduard Schmid, of Vienna, for "Constructing and protecting telegraphic cables."—1 year.—(Secret.)—Dated 24th January, 1859.

62. Andreas Weber, of Vienna, for "A peculiar construction of Venetian blinds, which may be lowered and raised without opening the windows."—3 years.—(Secret.)—Dated 24th January, 1859.

63. Franz Rödiger, of Vienna, for "A dial apparatus for registering the distance travelled over by carriages, their fares, the revolutions of machines, and for other similar purposes."—1 year.—(Public.)—Dated 25th January, 1859.

64. Carl Schleicher, of Schönthal, Rhenish Prussia, represented by M. P. Crachi, Vienna, for "A machine for grinding the points of needles, pins, heckle bars, &c. of any metal."—5 years.—(Secret.)—Dated 25th January, 1859.

65. Anton Guttin, of Milan, for "A cylindrical wheel of a single piece of solid steel, of any size and dimension, for the manufacture of metal sheets."—3 years.—(Secret.)—Dated 25th January, 1859.

66. Franz. Stiehler, of Vienna, for "An apparatus for consuming smoke or gas in boilers of locomotives and vessels."—1 year.—(Public.)—Dated 25th January, 1859.

67. Carl Austerlitz, of Vienna, for "So-called solar gas oil."—1 year.—(Secret.)—Dated 25th January, 1859.

68. Conrad Schember, of Vienna, for "A mode of converting the usual proportion of 1—10 in moveable decimal weighing machines into the proportion of 1 to 50 or 1 to 100, whereby a saving of 5/10 or 5/100 in the usual weights is obtained."—1 year.—(Public.)—Dated 25th January, 1859.

69. Simon Deutsch, of Pest, for "Improvements in the manufacture of furniture."—1 year.—(Secret.)—Dated 29th January, 1859.

70. Anton Hausner, of Krapina, Croatia, for "Manufacture of paper for documents in vats and by common machines, said paper being more uniform, durable, and insensitive to chemical agents."—1 year.—(Secret.)—Dated 29th January, 1859.

71. Adolph Hammer, of Vienna, for "A peculiar process for transferring prints on stone and for multiplying the same on lithographic presses."—1 year.—(Secret.)—Dated 29th January, 1859.

72. Joseph Pizzocheri, of Monza, Lombardy, for "Improvements in his patent clocks, whereby the time is easily ascertained at night."—1 year.—(Public).—Dated 29th January, 1859.

73. Pasquale Fioravanti and Michelangelo Latini, of Turin, represented by Luigi Dumolard, Milan, for "A peculiar process for hardening and colouring plaster stones without destroying their structure and for imitating thereby marble and other hard stones."—1 year.—(Secret.)—Dated 31st January, 1859.—(Sardinian Patent, 31st December, 1858.)

74. Wilhelm Schmidt and Co., of Heidelberg, represented by Friedrich Aschermann, Vienna, for "Improvements in the construction of hydraulic spiral blasts for forges and smelting furnaces, being also applicable to preserving the carbonic acid contained in beer."—1 year.—(Public.)—Dated 31st January, 1859.

---

2. Prolonged Patents.

1. Joseph Storefs, for "A method of applying lithographic printing on paper by other means than used hitherto."—6th year.—(Secret).—Dated 9th January, 1854.

2. Joseph Bauch (Wenzel Konvalinka, assignee), for "Improvements in preparing all kinds of cotton fabrics for dyeing and printing."—3rd and 4th years.—(Secret.)—Dated 27th May, 1857.

3. Joseph Löftner, for "Improvements in the manufacture of wooden pins."—2nd year.—(Secret.)—Dated 30th September, 1857.

4. Franz de Paula Schürer, for "Improvements in vine-scissors."—5th year.—(Secret.)—Dated 26th January, 1855.

5. Napoleon Gaillard, for "Manufacture of gutta percha shoes or boots."—3rd year.—(Secret.)—Dated 4th January, 1857.

6. Wilhelm Nedwied and junr., for "Improvements in moveable cast-iron machines for roasting coffee."—3rd and 4th years.—(Secret.)—Dated 17th January, 1857.

7. Alexis Vavin and Eugen Grenet, for "An electric battery."—2nd year.—(Secret.)—Dated 27th December, 1857.

8. Peter Joseph Guyet, for "A mode of assembling pipes for conveying water, gas, air, and steam."—2nd year.—(Public.)—Dated 28th December, 1857.

9. Samuel Frankfurter, for "Manufacture of durable furniture."—2nd year.—(Secret.)—Dated 28th January, 1858.

10. Marie Louise Croezier de Ronzieres (Mrs. Prost), for "A process for preparing and preserving hides, fur, wool, &c."—2nd year.—(Secret.)—Dated 8th March, 1858.

11. Joseph Tobias Goldberger, for "Vegetable soap."—8th and 12th years.—(Secret.)—Dated 22nd March, 1852.

12. Cornelius Kasper, for "An apparatus for covering bottles and other objects with straw, reeds, leaves, &c."—3rd year.—(Secret.)—Dated 25th December, 1856.

13. Johann Hermann, for "An improved mode of fixing cross-ties in tin-sheet bridges."—2nd year.—(Public.)—Dated 24th December, 1857.

14. Arnold Berliner, Arnold Berlyn, and Franz Durand, for "A continuous self-acting spindle for spinning fibrous substances."—2nd year.—(Public.)—Dated 9th March, 1858.

15. Carl Philipp Haussoullier and Carl Cogniet, for "A process for manufacturing and purifying paraffine."—2nd year.—(Secret.)—Dated 15th March, 1858.

16. Claude Bernard Adrien Chenot, for "Improvements in smelting, welding, and casting steel."—5th year.—(Secret.)—Dated 18th March, 1855.

17. Johann Baptist Pascal, for "A machine, by means of which the expansive power of a mixture of water-steam, air, and the gases obtained by combustion is utilized as motive power."—5th year.—(Secret.)—Dated 24th March, 1855.

18. Jean Baptist Pascal, for "Improvements in machines for obtaining motive power by means of a mixture of steam and hot air or gases of combustion.—4th year.—(Public.)—Dated 7th January, 1856.

19. Joachim Jellinek, for "An apparatus for pressing devices on paper."—4th year.—(Secret.)—Dated 21st January, 1856.

20. Arsenias August Olivier, for "Improvements in reeling silk."—4th year.—(Secret.)—Dated 11th May, 1856.

21. Carl Dritzler, for "A peculiar objective glass for the camera obscura."—2nd year.—(Public.)—Dated 28th December, 1857.

22. Franz Roch, for "So-called 'Vienna patent starch.'"—2nd year.—(Secret.)—Dated 1st January, 1858.

23. Joseph Beer, for "Improvements in his construction of economical kitchen-ranges."—2nd year.—(Secret.)—Dated 10th January, 1858.

24. Friedrich Kuhlmann, for "A peculiar process for obtaining chloride of barium."—2nd year.—(Secret.)—Dated 15th May, 1858.

25. Prosper Pimont, for "Improvements in his composition for coating walls, timber, iron, &c."—3rd year.—(Secret.)—Dated 5th January, 1857.

26. Heinrich Bougleux, for "Boiling fluids by applying balls to the boilers."—3rd year.—(Secret.)—Dated 5th January, 1857.

27. Louis Jacquemier, for "A process for hardening plaster-stones in imitation of marble."—3rd year.—(Secret.)—Dated 15th February, 1857.

28. Ulysse Puech, for "A French stocking-frame."—3rd year.—(Secret.)—Dated 18th February, 1857.

29. Johann Backhausen, for "Manufacture of gauze, lawn, tulle, &c., with designs on both sides."—3rd and 4th year.—(Secret.)—Dated 15th March, 1857.

30. Joh. Rixinger, for "Improvements in the manufacture of gilt rods, which may be washed."—2nd year.—(Secret.)—Dated 31st December, 1857.

31. Johann Maria Joseph Degabriel, for "An electric danger signal for railways."—2nd year.—(Public.)—Dated 24th February, 1858.

32. Joseph Reichwein, for "Size for silk and felt hats."—2nd year.—(Secret.)—Dated 18th January, 1858.

33. Joseph Klotz, for "Improvements in safety-valves for steam-boilers and similar vessels."—3rd and 4th year.—(Secret.)—Dated 5th January, 1857.

34. Gustav Temesvary, for "A composition for waterproofing, smoothing, strengthening leather, and rendering the same warmer to the feet."—2nd year.—(Secret.)—Dated 17th March, 1858.

35. Johann Weber (Anton Freundt, assignee), for "A washing powder for cleaning linen."—2nd year.—(Secret.)—Dated 29th March, 1858.

36. Stanislaus Chodzko, for "A cheap and strong manure."—3rd year.—(Public.)—Dated 28th March, 1857.

37. Julius Peters, for "A spindle for continuously spinning wool into short-stapled wool."—2nd year.—(Secret.)—Dated 5th January, 1858.

38. Franz and Eligius Schmitz, for "Treatment of peat."—2nd year.—(Public.)—Dated 6th January, 1858.

39. Franz Schmitz, for "An hydraulic press."—2nd year.—(Public.)—Dated 7th January, 1858.

40. Friedrich Rödiger, for "An apparatus for manufacturing all kinds of figured stuffs."—2nd year.—(Public.)—Dated 14th January, 1858.

41. Charles Arsène Anciot, for "A so-called universal loom."—2nd year.—(Public.)—Dated 24th February, 1858.

42. Felix Alexander Testut de Beauregard, for "A peculiar photographic process, called photochromy."—2nd year.—(Secret.)—Dated 16th March, 1858.

43. Jacob Weiner (Franz Wertheim and Friedrich Wiese, assignees), for "Improved fastenings of fire-proof safes and chests."—3rd year.—(Secret.)—Dated 6th December, 1856.

44. Gertrand Wanner, for "So-called vegetable oil for the hair."—3rd year.—(Secret.)—Dated 11th January, 1857.

45. Joseph Guth, for "A file-cutting machine."—3rd year.—(Secret.)—Dated 28th January, 1857.

46. Carl Tichaczek, for "Improvements in the manufacture of ceruse."—2nd year.—(Secret.—)—Dated 13th January, 1858.

47. Franziska Wolf (May Klein, assignee), for "Protecting men's dresses from the effect of perspiration."—2nd year.—(Secret.)—Dated 24th February, 1858.

48. Franz Wilhelm and Julius Bittner, for "So-called aricin-pomatum."—2nd year.—(Secret.)—Dated 14th January, 1858.

49. Ernst Werner Siemens and Johann Georg Halske, for "Improvements in Morse's telegraphs."—5th year.—(Secret.)—Dated 14th February, 1855.

50. Daniel Hooibrenk, for "A process for obtaining a greater circulation of air in the soil."—3rd year.—(Public.)—Dated 19th January, 1857.

3. Patents which have become Void.*

1. Joseph Neuhold, for "Improvements in fly-wheels."—Dated 16th December, 1857; expired 16th December, 1858.

2. Joseph Neuhold, for "Improvements in razors."—Dated 16th December, 1857; expired 16th December, 1858.

3. Franz Leopold, for "Improvements in Jacquard machines."—Dated 13th October, 1856; expired 13th October, 1858.

4. Emil Dupont, for "Manufacture of Portland cement."—Dated 17th September, 1856; expired 17th September, 1858.

5. Joseph Slavik (Carl Lüftner, assignee), for "Manufacture of wooden pegs."—Dated 29th October, 1856; expired 29th October, 1858.

6. Alfred Charles Hervier, for "Applying centrifugal power to propelling vessels."—Dated 12th July, 1853; expired 12th July, 1858.

7. Andreas Töpper, for "Manufacture of kitchen vessels from rolled Styrian sheet iron."—Dated 16th July, 1853; expired 16th July, 1858.

8. Alphons Jobard, for "Improvements in lamps."—Dated 25th July, 1853; expired 25th July, 1858.

9. Wilhelm Schmidt and Philipp Arend, for "A harvesting machine moved by horse power."—Dated 26th July, 1853; expired 26th July, 1858.

10. Peter Rittinger, for "A new system of evaporation."—Dated 27th July, 1853; expired 27th July, 1858.

11. Eduard Heinrich Jackson, for "Improvements in apparatus for obtaining electric light."—Dated 27th July, 1853; expired 27th July, 1858.

12. Wenzel Günther, for "Improvements in the construction of locomotives."—Dated 8th July, 1854; expired 8th July, 1858.

13. Heinrich Arend, for "A harvesting machine."—Dated 20th July, 1854; expired 20th July, 1858.

14. Thomas John, for "An apparatus for writing telegraphs."—Dated 25th July, 1854; expired 25th July, 1858.

15. Gaetano Bonelli, for "Improvements in electric telegraphs"—Dated 10th July, 1855; expired 10th July, 1858.

16. Conrad Puchelt, for "Applying graduated grates to locomotives and moveable steam boilers."—Dated 12th July, 1855; expired 12th July, 1858.

17. Louis Michel Franç. Doyère, for "A process for preserving corn and grain."—Dated 19th July, 1855; expired 19th July, 1858.

18. Stephan Desiré Noyon, for "A new system of machines for earthworks."—Dated 23rd July, 1855; expired 23rd July, 1858.

19. Hermann Ehrenfeld, for "Improvements in pressed yeast."—Dated 2nd July, 1856; expired 2nd July, 1858.

20. Anton von Sibrik, for "Improvements in his sewing machine, as patented 25th March, 1856."—Dated 8th July, 1856; expired 8th July, 1858.

21. Richard Ischeligi and Co., for "An improved machine for grinding chemically pure or dry oxide of lead (massicot) for the manufacture of minium."—Dated 11th July, 1856; expired 11th July, 1858.

22. Friedrich Georg Wieck, for "A machine for drying woollen and downy fabrics."—Dated 14th July, 1856; expired 14th July, 1858.

23. Carl Jurmann, for "Manufacture of side weapons from cast-steel."—Dated 18th July, 1856; expired 18th July, 1858.

24. Ignaz Fuchs and Abraham Reach, for "An expeditious sealing machine."—Dated 27th July, 1856; expired 27th July, 1858.

25. Leprince Brothers, for "Improvements in the manufacture of gas."—Dated 27th July, 1856; expired 27th July, 1858.

26. Antoine Beanfumé, for "An apparatus for distributing water in steam-boilers."—Dated 31st July, 1856; expired 31st July, 1858.

27. Johann Kienzle, for "Improvements in smut-mills."—Dated 1st July, 1857; expired 1st July, 1858.

28. Gustav Romanow Ruczicki, for "An apparatus in pianos for enabling performers to write down at once the music they play."—Dated 2nd July, 1857; expired 2nd July, 1858.

29. Franz Horski, for "A peculiar machine for sowing corn."—Dated 2nd July, 1857; expired 2nd July, 1858.

30. Franz Horski, for "A machine for distributing artificial manure."—Dated 2nd July, 1857; expired 2nd July, 1858.

31. Andreas Glätzle, for "Manufacture of brilliant blacking for leather."—Dated 1st July, 1857; expired 1st July, 1858.

32. Julius Hippmann, for "Improvements in thrashing machines."—Dated 2nd July, 1857; expired 2nd July, 1858.

33. Hermann Gotthard Möhring, for "A peculiar sawing machine, called compass sawmachine."—Dated 13th July, 1857; expired 13th July, 1858.

34. Hermann Gotthard Möhring, for "Improvements in chaff-cutting machines."—Dated 13th July, 1857; expired 13th July, 1858.

* The Specifications of these Patents may be consulted in the original language, or translations be had at the Public Free Library.

35. Carl Omboni, for "An apparatus in hydraulic oil-presses."—Dated 17th July, 1857; expired 17th July, 1858.

36. Friedrich Haller, for "A composition for rendering pasteboard for roofings fire and waterproof, and for rendering wood, cloth, and paper fire-proof."—Dated 19th July, 1857; expired 19th July, 1858.

37. Joseph Bertinetti, for "An hydraulic suction pump with hollow pistons."—Dated 19th July, 1857; expired 19th July, 1858.

38. Lorenz Mohrherr, for "Manufacture of chests for protecting their contents from fire, water, and robbers."—Dated 19th July, 1857; expired 19th July, 1858.

39. Franz and Anton Suske, for "A marble composition which cannot be injured by the action of fire or the atmosphere."—Dated 19th July, 1857; expired 19th July, 1858.

40. Friedrich Kühnel, for "Improvements in cast-iron wheels and wheel-tyres of railway carriages."—Dated 19th July, 1857: expired 19th July, 1858.

41. Jacob Lindemann, for "Moveable steam and shower bath apparatus."—Dated 25th July, 1857; expired 25th July, 1858.

42. Johann Littloch, for "Improvements in machine spurs."—Dated 27th November, 1856; expired 27th November, 1558.

43. Dr. Ferdinand Jansen (Dr. Ludw. Hoffmann, assignee), for "A cosmetic substance, or washing liquid."—Dated 16th September, 1852; expired 16th September, 1858.

44. Carl Jedatschek and Eugen Hammermüller, for "Manufacturing leather within four weeks by means of tannine and an air-pump."—Dated 15th April, 1858; annulled 13th January, 1859, for want of novelty.

45. Friedrich Paget and Joseph Choczenski, for "A peculiar process for treating bituminous mineral substances in order to obtain paraffine oil and paraffine."—Dated 12th July, 1855; annulled 12th July, 1858, in consequence of its not having been worked.

46. Julius Galecki (A. M. Kuiper, assignee), for "Improvements in the manufacture of furniture from hollow wrought-iron."—Dated 16th August, 1856; expired 16th August, 1858.

47. Joseph Haba, for "A metal cylinder matchbox."—Dated 3rd November, 1857; expired 3rd November, 1858.

48. Anton Mayer, for "Improvements in smelting and hammering iron."—Dated 15th August, 1851; expired 15th August, 1858.

49. S. Edler and A. Wolf, for "Improvements in the manufacture of matches."—Dated 31st August, 1851; expired 31st August, 1858.

THE NETHERLANDS.

List of Patents for Inventions and Importations Delivered since the 6th November, 1858.*

(For previous List, see No. 514 of this Journal.)

(*Communicated by His Excellency the Minister of the Interior.*)

1. Moreau, senr. and junr., of Paris, represented by L. J. Vonk, of Gravenhage, for an imported invention of "Carbonizing peat, wood, pit-coal, &c."—10 years, to begin from 26th August, 1857.—Dated 30th January, 1858.

2. J. C. Meunier, of Paris, represented by L. J. Vonk, of Gravenhage, for an imported invention of "A new arrangement in machines used for propelling vessels on rivers and canals."—15 years, to begin from 19th April, 1858.—Dated 29th October, 1858.

3. E. Bremer, of Brussels, represented by J. H. Gaade, of Gravenhage, for an imported invention of "An improved mould for clay articles of porcelain works."—15 years.—Dated 29th October, 1858.

4. J. H. Schober, of Utrecht, for "A new mode and apparatus for drying flour."—5 years.—Dated 4th December, 1858.

5. K. Meynema, of Amsterdam, for "An improved system of diagonal yard-sails."—5 years.—Dated 13th December, 1858.

6. Baron H. M. Mollerus, of Brussels, represented by Schmolck, of Gravenhage, for "Improvements in machines for cutting matches and other improvements relating thereto."—5 years.—Dated 14th February, 1859.

7. Baron C. M. F. Serrurier, of Paris, represented by L. J. Vonk, of Gravenhage, for an imported invention of "Further improvements in his galvanic battery, as patented for 15 years on the 10th December, 1857."—10 years.—Dated 22nd February, 1859.

* For the Dutch Patent Law, see No 289 of this Journal.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

LIST of PATENTS, with Claims annexed, issued from the United States Patent Office, for the week ending 29th March, 1859, and each bearing that date.

No. 23,336. T. F. ALLEN, of Dyersville, Iowa, for an "Improvement in R. R. car trucks."

"What I claim as my invention, and desire to secure by Letters Patent, is, a car truck sustaining the weight of the car body upon the centre, in a manner to balance, or keep it in equilibrium, and free from contact with the side timbers of the truck frame, whatever be the motion imparted to it, and yet provide but the one common central axis or bearing, for it to turn upon, substantially as described and for the purposes set forth."

No. 23,337. LUTHER ATWOOD, of Brooklyn, N. Y., for an "Improvement in apparatus for destructive distillation."

"What I claim as my invention, and desire to secure by Letters Patent of the United States, is, the combination of the vertical distilling tower A, and appurtenances, with the condenser *h*, and the adjustable draft passage *c*, or their substantial equivalents in combination; when arranged and combined substantially as herein-before described, so as to use the current of heated products of combustion, in its upward or natural direction."

No. 23,338. THOS. D. AYLSWORTH, of Ilion, N.Y., for an "Improvement in hop frames."

"Having thus fully described the nature and object of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, so hanging the main wire B, upon the supports F, as that said supports will prevent the wire from slipping through them, should it accidentally become loose, or broken, substantially as herein described. And I also claim, in combination with the main wire, suspended as herein represented, the uniting thereto of the training wires *d*, by spriug hooks, substantially as described and shown."

No. 23,339. GEO. W. BAKER, of Neponset, Ill., for an "Improved farm gate."

"I claim the slide D, and levers C, C, in combination with the rods *f*, *f*, levers *l*, *l*, rods *c*, *c*, and bars *b*, *b*, arranged for joint operation in connection with the gate sections, substantially as set forth."

No. 23,340. ABRAHAM BASSFORD, of New York, N. Y., for an "Improved cushion for billiard tables."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, constructing the cushion of a billiard table, of a metal plate B, the edge of which is protected by a thin strip of india rubber, or other suitable substance, substantially as and for the purpose set forth."

No. 23,341. ABRAHAM BASSFORD, of New York, N. Y., for an "Improved cushion rail for billiard tables."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the arrangement of the cushion rail of a billiard table, in such a manner that a space is left between the bed and the rail, by securing the same to the bed by means of studs C, and bolts *a*, substantially as and for the purpose specified. 2d, the arrangement of the pocket bows D, which are made of one piece, with the rail, and secured together by a lap-joint *f*, and which are beveled down at their lower edge, substantially as and for the purpose set forth."

No. 23,342. ALEN BECKERS, of New York, N. Y., for a "Ilinge for the reflectors of stereoscopes, &c."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement of the ears *a*, *a*, one on each side of the reflector of a stereoscopic case, or attached, in a corresponding manner, and for the same purpose, to any like part of another similar instrument, in combination with the screws *c*, substantially as and for the purpose described."

No. 23,343. HUBBARD BEEBE, of Newhaven, Conn., for a "Mode of preparing and mounting slates."

"I do not claim the vulcanized india rubber, or gutta percha, or any right to use the same without the license of the patentee thereof. What I claim as my invention, and desire to secure by Letters Patent, is, the combination of a metallic band or rim, and vulcanized india-rubber frame, or mounting, with or without a lining of cloth to the school slate, whether of stone, or slated paper, or wood, substantially in the manner and for the purposes herein specified and set forth. I also claim as my invention, the application of the vulcanized india-rubber or gutta-percha frame, or mounting, substantially in the manner herein described, without the metallic rim to slates of stone or other material of sufficient strength and stiffness, to warrant its disuse in any case; but I deem it preferable in all cases, to combine the two, where durability as well as noiselessness is deemed important."

No, 23,344. EDWARD BEHR, of New York, N.Y., for a "Mode of fastening skates."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement of the screws *b* and the screws *i*, or their equivalent, in combination with the toe cap B and with the heel strap C, substantially as and for the purpose described."

No. 23,345. FREDERIC B. BETTS, of Brownhelm, Ohio, for an "Improved method of opening and closing gates, by weight of vehicle."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination of the roller B, and its appurtenances, with the levers F, F, and connecting rods D, and with the gate, for the purpose specified, and substantially as set forth."

No. 23,346. LYMAN W. BLANCHARD, of Whitingham, Vt., for an "Improved construction of mallets."

"What I claim as my invention, and desire to secure by Letters Patent is, the mode of constructing mallets with wooden head blocks and iron flanges, and a tapering screw, arranged substantially in the manner and for the purpose set forth."

No. 23,347. PARDON BOYDEN, of Sandy Creek, N.Y., for an "Improvement in carriage tops."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement and combination of the bows E, bars D, D, bars H, H, and seat rail (a^*), substantially as and for the purpose herein shown and described."

No. 23,348. JOEL CARRINGTON, of Avoca, N.Y., for an "Improvement in mole plough."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination and arrangement of a replaceable pointed colter, with a continuous plate or solid standard, carrying the mole and a brace in the rear, connecting the said mole to the beam, and also to the handles, in the manner substantially as herein described."

No. 23,349. JOHN CHARLTON, of Newark, N.J., for a "Mode of fastening skates."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement of the self-adjusting toe cap D, which is attached to the stock of a skate, substantially as and for the purpose specified."

No. 23,350. Hugh W. Collender, of New York, N.Y., for an "Improvement in billiard table cushions.

"What I claim as my invention, and desire to secure by Letters Patent, is, making cushions for billiard tables, of what is known as the soft compound of vulcanizable india rubber, faced with what is known as the hard compound of vulcanizable india rubber, or al'ied gum, united in the green or plastic state, and together subjected to the heating process for vulcanization, substantially as described."

No. 23,351. James M. Connel, of Newark, Ohio, for an "Improved submarine telegraph cable."

"I claim the introduction of the smooth-surfaced wrapping between the coil and the insulating covering, and the employment of this last covering as a core for other wires, substantially as described."

No. 23,352. Saml. Cope, of Enterprise, Ill., for an "Improvement in cheese presses."

"I do not claim a hydrostatic press, as that has been used for many purposes; but what I claim is, graduating the force of a hydrostatic cheese press by drawing the water slowly through the stop cock S, as above described, for the purpose set forth."

No. 23,353. Joseph Corduan, of Brooklyn, N.Y., for an "Improved apparatus for sounding house bells, &c."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of the three separate springs in combination with the two tubes and escapement bolt, as herein described."

No. 23,354. Waldo P. Craig, of Newport, Ky., for an "Improvement in pile driver."

"I claim as new and of my invention, and desire to secure by Letters Patent, 1st, the described application and arrangement of the guides K and K^1, attached at their upper ends by universal joints to the frame, and at their lower ends sliding in apertures e^1 and e^{11} in a collar L, adapted to fit over the end of a pile and follow the same in its descent. 2nd, in combination with the above, the turntable J, constructed and operating substantially as and for the purpose set forth."

No. 23,355. Wm. H. Crittenden, of Grafton, Ohio, for an "Improved sawing machine."

"Having thus described my improved saw mill, what I claim as new, and desire to secure by Letters Patent, is, the manner of arranging the compensating levers K, K, and rods N, N, in combination with the straining levers H, H, straining rod I, adjustable slotted holder P, saw J, the whole being arranged and operating in the manner and for the purpose as set forth."

No. 23,356. A. H. Crozier and Cyrus Carrier, of Oswego, N. Y., for an "Improved chopping block for stave machines."

"Having thus fully described our invention, what we claim as new therein, and desire to secure by Letters Patent, is, what I claim is, the grooved metallic chopping block, constructed and operating as described."

No. 23,357. F. M. Davis, of Footville, Wis., for an "Improvement in seeding machines."

"I am aware that reciprocating seed slides J have been previously used, and also that slides *k* with oblique slots *l* have been used for operating seed slides; I, therefore, do not claim the reciprocating seed slides, nor the slides *k*; but, having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement and combination of the caster wheel C, lever D, spring rack bar E, pinion bar F, pinion G, rod H, slide (*k*), and share L, as herein shown and described, so that when the bar E is thrown back and lever D is depressed the bar F will carry the pinion out of gear with wheel M, and thus render the seed slides (*k*) inoperative while the front part of the machine will be lifted on the caster wheel, and the share L raised out of the ground, all as set forth."

No. 23,358. James E. Emerson, of Sacramento, Cal., for an "Improved pick handle."

"What I claim as my invention, and desire to secure by Letters Patent, is, the iron heading of a handle fitted to the under side of a pick or other instrument, by means of a pin and hole, on corresponding plane surfaces, or a swelling and hollow corresponding to each other, and securely fastened thereto, by means of a stirrup extending over the pick or other instrument, and secured to the handle by means of a key and wedge, which will by such combination form a durable and permanent mode of fastening handles on picks or other instruments, without eyes therein."

No. 23,359. Elisha E. Everitt, of Philadelphia, Pa., for an "Improved bedstead fastening."

"What I claim as new, and desire to secure by Letters Patent, is, a plug fastening, consisting of the two plug pieces (A and A^1,) constructed as set forth and described, the same being applied and arranged, in combination with the post and rail of a bedstead, in the manner and for the purposes specified."

No. 23,360. Thos. T. Furgusson, of New York N. Y., for an "Improvement in tanning hides and skins."—Patented in France 10th August, 1858.

"What I claim as my invention, and desire to secure by Letters Patent, is, the method herein described of impregnating hides or skins with the required liquid, by subjecting them to the action of a current of the liquid, under a sustained and regulated pressure after they have been deprived of air, by a preliminary exhaustion."

No. 23,361. Alpheus C. Gallahue, of North East Centre, N. Y., for an "Improvement in machines for pegging boots and shoes."

"I do not claim a rack block E arranged so as to feed the shoe with a continuous motion underneath the awl and peg driver, for such device has been previously used; but having thus described my invention, what I do claim as new, and desire to secure by Letters Patent, is, 1st, forming the rack bar E of two parts *e*, *f*, arranged as shown, so as to admit of being lengthened and shortened, to compensate for different length of shoes. 2nd, the adjustable or swinging plate G, in connection with the inclined planes *i*, *i*, or an equivalent device, for actuating the plate G, for the purpose set forth. 3rd, the inclined peg gauge y^1 in connection with the peg or feed box S, so as to gauge the pegs from their lower ends, as described. 4th, the vibrating socket e^1, in connection with the plunger rods *u*, *v*, arranged in the same slide bar *t*, to operate as set forth. 5th, the bar R, provided with the shoulder or bearing s^1, and rendered capable of being operated when necessary by the yoke o^1 and cam p^1, for the purpose of duplicating the row of pegs when required. 6th, the combination of the swinging bed plate D with a rack E, arranged to operate substantially as and for the purpose set forth."

No. 23,362. James Gillespie, of Freeport, Pa., for an "Improvement in revolving retorts for distilling coal oil."

"What I claim as my invention, and desire to secure by Letters Patent, is, securing the hopper like cup I in position, by means of the pins *o*, *o*, or their equivalents, surrounding the exit journal *h*, of each retort, the square headed shaft J, passing through a hollow journal at the opposite end of the retort and the external plate *p*, the whole applied and operating substantially as herein specified."

No. 23,363. Francis Gilliland, of Port Jackson, N. Y., for an "Improvement in stoves."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, in combination with the lining E, and sheet metal case B, the cylinder F placed within the body of the stove, and provided at its top with the register or sliding band *h*, and a register or slide *f* on its flanch *d*, for the purpose set forth."

No. 23,364. L. F. Goodyear, of New Haven, Conn., for an "Improved tool for cutting metal."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement and combination of the adjustable wedges D, cutters C, and ring A, substantially as and for the purpose herein shown and described."

No. 23,365. Chas. Gordon, of Washington, D.C., for an "Improved protractor."

"I do not claim any of the devices separately, which are herein referred to, as they have been long known and used; but what I do claim, and desire to secure by Letters Patent, is, my improved protractor, as herein described, consisting of the base, the meridian limb, the vernier, the arc, and rulers with the clamping screw, the whole arranged and operated as specified."

No. 23,366. Albert Granger, of New York, N. Y., for a "Metallic penholder."

"What I claim as my invention, and desire to secure by Letters Patent, is, the holding of a pen on the outside of a metallic tube (commonly called a penholder), in such a manner by reason of pierces, cracks, and indentations as to leave the entire length of a pen when inserted in proper writing position, uncovered."

No. 23,367. Wm. A. Greene and John G. Treadwell, of Albany, N. Y., for an "Improvement in gridirons."

"Claim.—The check plate I attached to a stove gridiron B, when the same are constructed and arranged in the manner and for the purpose herein-before set forth."

No. 23,368. Smith Groom, of Troy, N. Y., for an "Improved hose coupling."

"I do not claim as my invention the arrangement of notched lugs and wedge-shaped flanges upon the collars of hose, in the manner shown in No. 9,768 of United States Patents; nor the arrangement of wedge-shaped flanges upon the outside of the female part, and inside of the movable ring or nut of the two halves of the coupling, as represented in the rejected application of B. F. Joslyn, May 14, 1857. Having thus set forth the construction and use of my improved hose coupling, what I claim thereof as new, and desire to secure by Letters Patent, is, the arrangement of the notched lugs *h*, *h*, and wedge-shaped flanges *e*, *e*, for conjoint operation upon the outside of the fixed part C, and movable ring B, of the two halves of the coupling, as and for the purpose herein described. And in combination with the lugs *h*, *h*, and flanges *e*, *e*, constructed and arranged upon the coupling for conjoint operation, as herein described. I also claim the ratchet teeth *j* and catch *k*, when arranged upon the two halves of the coupling, as herein described, for the purpose specified."

No. 23,369. Wm. J. Griffies, of Marietta, Geo., for an "Improvement in ploughs."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of the stock 'A,' forked and slotted foot 'B, B,, screw 'E,' shovel 'F,' brace 'G,' wedge 'C,' beam 'H,' and handles 'I, I,' the whole being constructed as and for the purposes set forth."

No. 23,370. Elijah Harris, of Princeton, Ill., for an "Improvement in watchmaker's lathes."

"I do not claim the base bar, the fixed or slide heads with slide mandrels; nor the rest, as they have heretofore been known and used; nor do I claim broadly the extra slide head E; but what I do claim as my invention, and desire to secure by Letters Patent, is, the standard F, with rimmer *b*, the standard shown at Fig. 3, and the standard shown at Fig. 4, with dove-tail slide *d*, the extra slide head E, in combination with the standards F, Figs. 3 and 4, and the slide tongs, shown at Fig. 8, substantially as shown and described."

No. 23,371. Jacob Haynes, of Cameron, Ill., for an "Improvement in corn planters."

"Having thus fully described the nature of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, the hinged shoe T formed with a serrated plate, and with the wings V and W, substantially in the manner and for the purpose described. I also claim the combination of the movable seat A^1, with and supported by the hinged radius bars B^1, and by the sliding bars C^1, for the purpose of enabling the driver to raise or lower the front end of the machine, substantially in the manner and for the purpose described."

No. 23,372. Francis M. Hemphill, of Newport, Ky., for an "Improvement in grinding mills."

"I claim herein as new, and of my invention, 1st, in the described combination with an adjustable bridge tree, the spindle E, confined below to the tree, and hinged above to the cup-formed driving and feeding ryne N, *n*, n^1, having a hinged attachment to the runner, and enabling a discretionary increase of the stress of the runner on the grain, by the lighter screw operating wholly from below, as set forth. 2nd, the described arrangement of the cup-formed driving and feeding ryne N, *n*, n^1, gudgeons P, P^1, bolts Q, Q, sleeves *q*, q^1, and metallic eye R, having the described or equivalent connection with a runner and spindle respectively, for the purposes set forth. 3rd, the cup-formed driving and feeding ryne N, *n*, n^1, having the described or equivalent hinged attachments to the spindle and to the runner respectively, and operating as set forth. 4th, the frame A, B, C, constructed substantially as and for the purpose set forth."

No. 23,373. Russel Hickok, of Fort Edward, N.Y., for an "Improved insulator for lightning rods."

"Having thus described the construction of my improved insulator for lightning rods, what I claim as new, and desire to secure by Letters Patent, is, a lightning rod insulator, made in one piece so as to support and insulate the rod, and also leave open spaces for water to pass through it, and for air, when suddenly expanded, to escape from within it, as herein set forth."

No. 23,374. Gardner P. Hopkins, of Cabot, Vt., for an "Improved churn."

"What I claim as my invention, and desire to secure by Letters Patent, is, the construction of the churn in the manner herein-before described, so as to combine the rotary motion of the barrel with the up and down and rotary motion of the dashers, and so as to prevent the cream from acquiring a circular motion in the process of churning."

No. 23,375. Robt. Jobson, of Wordsley, England, for an "Improvement in making moulds for casting."—Patented in England 31st May, 1856.

"Having thus described the nature of my invention, and the manner of performing the same, I would have it understood that I make no claim to the mechanical parts separately; but what I do claim is constructing the table platform or bed *b*, so that it may turn on or about necks, or axes, substantia'ly as herein described."

No. 23,376. Henry R. Keese, of Bridport, Vt., for an "Improvement in harvesters."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, 1st, the employment of a hinged supplemental frame D, in combination with the main frame A and driving wheel B, when the said frame D is provided with an adjustable bearing wheel E, or its equivalent, all substantially as and for the purpose herein shown and described. 2d, the combination of a driver's seat G with the supplemental frame D and driving wheel B, as set forth, so that by lateral change of his position the driver may elevate or depress the cutters or diminish the traction, and otherwise balance and govern the machine all as herein shown and described. 3rd, hinging the supplemental frame D to the main frame A, substantially as and for the purpose set forth."

No. 23,377. Rufus S. Lee and Wm. D. Leavitt, of Cincinnati, O., for an "Improvement in rocker boxes for saw shafts."

"Having thus fully described the nature and object of our invention, what we claim therein as new, and desire to secure by Letters Patent, is, so connecting the inner to the outer box, through the medium of a spring, as that said inner box or bearing may have end motion in the outer one against the action of said spring, substantially as described and for the purpose set forth. And we also claim, in combination with the elastic or spring connection between the inner and outer box, the rollers *h*, *h*, for the inner box to move on, substantially as set forth and described."

No. 23,378. Edwd. Lindner, of New York, N. Y., for an "Improvement in breech-loading fire-arms."

"Having thus described my improvements in fire-arms, what I claim as new, and desire to secure by Letters Patent, is, firstly, the method herein described for operating or closing the breech, and forming a tight joint at the junction of the barrel with the breech, by the employment of a screw ferrule or sleeve fitting an outer screw thread on the barrel, and provided with a projecting annular flange for grasping and releasing the breech, and for drawing the same backwards and forwards in the direction of the barrel to or from the rear end thereof, upon said screw-threaded sleeve being operated substantially as herein described. 2nd, I claim, in combination with a movable box within the breech, constructed and operating as described, the packing thereof, by means of asbestos or its equivalent, substantially in the manner and for the purposes described. Thirdly, locking the screw-threaded sleeve that operates the breech by forming the pivoted lever which serves to turn said sleeve with an eccentric or cam, arranged to act upon a locking pin by pressing down said lever after the breech is drawn tight, as herein set forth."

No. 23,379. Wm. H. Lochman, of York, Pa., for "Improved portable writing desks."

"What I claim as my invention, and desire to secure by Letters Patent, is, the mode and manner of uniting the different parts of a writing desk by hinges, or their equiva-

lents, so as to admit of its being folded up into a comparatively small place, in the manner substantially as herein set forth."

No. 23,380. MATTHIAS LUDLUM, of Fair Haven, Vermont, for an "Improved life boat."

"What is here claimed as new and useful is, providing the exterior of the boat with adjustable side floats, constructed and hung, or arranged to operate in or at different fixed positions or distances to or from the sides of the boat, substantially as herein set forth. Also, providing either float, arranged along the outsides of a boat, with an open or trellis-work railing made to project below the float, essentially as specified."

No. 23,381. CHAS. MEYER, of Fonddu Lac, Wis., for an "Improved expanding auger."

"I am well aware that expanding augers have been before constructed in which the sections are moved in and out concentrically, but not in the same manner, nor by the same means; and I also know that the dies of universal chucks have been operated heretofore in a manner similar to that in which I operate my cutters, but this is for an entirely different purpose, and I do not claim, therefore, the expanding cutters, neither do I claim, separately, the manner of expanding the sections; but having thus described my invention, what I claim as new, and desire to secure by Letters Patent, as a new article of manufacture, is, an expanding augur constructed and operated substantially as herein described."

No. 23,382. JOHN G. MITCHELL, of Collington, Md., for an "Improvemeut in corn planters."

"What I claim, and desire to secure by Letters Patent, is, the combination of the swinging hopper H, constructed and arranged as described, with the adjustable coverer and dropping tubes, the whole arranged for joint operation, in the manner set forth."

No. 23,383. J. A. MOORE and A. H. PATCH, of Louisville, Ky., for an "Improvement in harvesters."

"What we claim as our invention, and desire to secure by Letters Patent, is, 1st, the enlargement, as at z, of the curved slots f, of the standards G, substantially as and for the purposes set forth. 2nd, the arrangement, relatively to each other, of the vertically perforated curved stop bar H, slide d, constructed as described, and lever F, for the purpose set forth."

No. 23,384. SAML. MORRETT, of West Pennsboro', Pa., for an "Improvement in preserve cans."

"What I claim as my invention, and desire to secure by Letters Patent, is, the covering of fruit cans by means of the concave cover B, when the same is constructed and applied as herein-before described and retained in place solely by atmospheric pressure."

No. 23,385. HENRY W. MOSHER and JOSEPH A. CONBOIE, of New York, N.Y., for an "Improved apparatus for cleansing bristles."

"We do not confine ourselves to any particular number of clamps on the shaft D, nor to any particular arrangement thereof, for various modifications of the same may be used. Having thus described our invention, what we claim as new, and desire to secure by Letters Patent, is, the rotating bristle clamps E, placed within a cylindrical box or case A, provided with diagonal plates c, and used with or without the brush C and soap bar, or other cleansing substance h^1, substantially as and for the purpose set forth."

No. 23,386. JOHN PACKER, of Philadelphia, Pa., for an "Improvement in hay mangers."

"Having thus fully described the nature and object of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, in combining with a hay manger a falling rack B to prevent the horses from pulling out and unnecessarily wasting the hay therein, and as herein described and represented."

No. 23,387. JOHN PATRICK, of New York, N.Y., for an "Improvement in ventilating vault cover."

"What I claim as my invention, and desire to secure by Letters Patent, is, the perforated plate and gutter, in combination with the metallic roof, ceiling, or walk for forming a ventilating space, and catching any water of condensation, in the manner and for the purposes specified. And in combination therewith, I claim the ventilating-pipe d, as and for the purposes specified."

No. 23,388. WM. PATTERSON, of Constantine, Mich., for an "Improved machine for bending tire."

"Having fully described the nature of my improvements, I do not claim the method of bending tire by means of the segment lever and clevis, neither the combination of these elements as they exist in the Patent to Aaron Whitcomb; but I claim connecting the clevis to the lever and segment in such manner that the lever will cause the clevis to grasp and release its hold on the bar to be bent, independently of and before said segment commences to move, as illustrated by the red lines in figs. 2 and 3 of the drawings. 2nd, providing the outer end of the clevis with an arm L, l, so arranged in relation to the circumference of the segment as to bear against the outer side of the tire, and support it (while being bent) above the end of the segment, as represented in figs. 2 and 3, thereby preserving the circle of the tire, by preventing it from springing back during the descent of the lever. 3rd, making the clevis adjustable for the purpose of adapting it to the use of different sized segments in the same machine as described."

No. 23,389. HENRY C. PEIRSON, of Philadelphia, Pa., for an "Improved hoop machine."

"Having thus fully described my improved hoop making machine, I proceed to state that what I claim as new, and desire to secure by Letters Patent, is, the arrangement of the series of bending rollers (D, D^1, D^{11},) or their equivalents in rear of the cutter (B) or its equivalent, so as to operate upon the hoops, substantially in the manner and for the purpose specified, as the said hoops pass between them directly from the said cutters."

No. 23,390. RANSOM S. POTTER, of Chicago, Ill., for an "Improvement in railroad coupling chair."

"I do not claim as my invention, a chair with one key or wedge running its entire length; nor do I claim a chair with a cavity for one key or wedge only; nor do I claim broadly, the use of two wedges or keys in combination with a railroad chair; but what I do claim, is the use of two wedges or keys, in combination with a railroad chair, when the outer lip of said chair is overhung, in the manner described and shown, and its inner surface is of a canoidal form, as specified."

No. 23,391. DANIEL R. PRINDLE, of Bethany, N.Y., for an "Improvement in seed-planters."

"Having thus fully described the nature and object of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, first, hinging the frame that carries the seeding devices, and the beams that carry the furrow opener and coverer to the axle, substantially as and for the purpose set forth. I also claim, in combination with the axle and hinged frame and beams, the tongue and lever, for raising, lowering, or controlling the planting and covering devices, substantially as described. I also claim the adjustable hinged clevis irons, made, arranged, and operating as herein set forth. I also claim the combination of the curved spring plates g and springs i, as applied to the seeding wheels, or cylinders, for the purpose explained."

No. 23,392. DANIEL READ, of Hamilton, N. Y., for an "Improved clothes frame."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination and arrangement of the standard with the arms A, B, C, D, the standard i, i, and braces E, F, G, substantially as and for the purposes specified."

No. 23,393. LEWIS L. REYNOLDS, of Manchester, N. H., for an "Improvement in machinery for filling loom harness needles."

"I do not claim the mere passing of the twine over the tongue of the needle, as it is old, having been done some twenty years since, by a Mr. Wilson, of Lowell, Mass.; but I claim the hooks F, or the equivalent thereof, for depositing the twine or cord upon the outer sides of the score of the needle, when combined with a device for delivering the twine or cord to said hooks. 2nd, I claim the combination of the intermittent rotating oval-shaped pin O with the cam N, or their equivalents, for depositing the twine or cord evenly around the end P of the needle."

No. 23,394. L. SIMPSON REYNOLDS, of Indianopolis, Ind., for an "Improvement in friction bolt for flour mills."

"What I claim and desire to secure by Letters Patent, is, first, the sliding knockers D, D, D, D, D, D, in combination with the shaft K, ribs H, H, H, H, H, H, and rods E, E, E, E, E when constructed and operated substantially as and for the

purposes set forth. Second, the springs G, G, G, G, G, G, in combination with the knockers D, &c. when operated substantially as and for the purposes set forth. Third, the elastic bridge tree I, when used substantially as and for the purposes set forth."

No. 23,395. Thos. A. Robertson, of Washington, D. C., for an "Improvement in cultivators."

"What I claim as my improvement in weeding plows, is, the wing A, extending obliquely from the rear standard E to a point *d*, from which point projects a straight portion, or divider B, in combination with the oblique cutting bar G, as described."

No. 23,396. H. R. Robbins, of Baltimore, Md., for an "Improvement in stoves."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination of the fire chamber A with the inclined front encircling transparent face-plate E, heat pot B, pedestal F, with its doors *b*, *b*, upper back encircling chamber H, with its doors *f*, and divided horizontally as described; smoke and heat pipes I and *g*, *g*, *i*, and back case or reflecting bonnet K, having a conduit *m* arranged to conduct air to the one perforated passage of the upper back encircling chamber H, as described, the whole being arranged for operation substantially as specified."

No. 23,397. I. G. Roux, of Raymond, Miss., for an "Improvement in cotton presses."

"I am aware that cams and levers have been arranged in various ways for operating the followers of cotton presses, and I do not claim, separately or irrespective of the arrangement shown, any of the parts herein described; but, having thus described my invention, what I do claim as new, and desire to secure by Letters Patent, is, the rotating platform B, provided with helical ledges or rails F, F, in combination with the blocks E, E, placed on the ledges or rails, the levers J, J, attached to the follower I, and the stationary press box G, the whole being arranged to operate as and for the purpose set forth."

No. 23,398. James L. Rowley, of Angola, Ind., for an "Improvement in railroad cattle guard."

"Having thus fully described my improved cattle guard, what I claim as new, and desire to secure by Letters Patent, is, I claim the springs C, C, and bar D, in combination with the chain fender F, E, and post J, when constructed and operated in the manner and for the purposes above described."

No. 23,399. Isaac S. Russell and Henry R. Russell, of New Market, Md., for an "Improvement in harvesters."

"What we claim as our invention, and desire to secure by Letters Patent, is, the peculiar arrangement of mechanism consisting of two segment bevel wheels G, H, two spur wheels K, K, an independently turning hub E having a slotted plate F attached to it, and a crank arm I having a turning crank pin J for giving motion to the rake round the reel in the path of a vertical circle, and over the platform in the path of a horizontal circle, substantially as set forth."

No. 23,400. Erhard Schlanker, of Buffalo, N.Y., for an "Improved forging machine."

"I am aware of D. Noyes', of Abington, revolving forging machine of mass, and of attaching the hammer or hammers each by a pivot to a revolving disk or crank, so as to revolve therewith, and controlling the position thereof by stops attached to the face of the disk or crank, and of drawing the hammer or hammers lengthwise off the anvil, which I disclaim as being original in principle, but defective in operation, by the use of the stops affixed to the disks or imaginary crank. What I claim as my improvements, and desire to secure by Letters Patent, are, viz., that portion of the hammer shafts Q, Q, from the center pins *v*, *v*, extending towards the driving shaft W, to be used as a lever in controlling the hammers D, D, the center pins *v*, *v*, being the fulcrums in connection with the wrists and friction rollers *y*, *y*, and *x*, *x*, the location and position of the spring cams *s*, *s*, upon the duplicate face plates F*a*, F*b*. The sections E, E, and the independent operating crank cams R, R, guide plate *a*, cranks *h*, *h*, levers *c* and *f*, connecting rods *d* and *d*, *u*, as described in the foregoing specification."

No. 23,401. Isaac C. Shuler, of Amsterdam, N.Y., for an "Improvement in coffins."

"Having thus described my invention, I claim, 1st, the manner of forming a recess in the sheet metal all around the base inside of a metal coffin; also the arrangement of placing an iron frame, or its equivalent, into the recess described, fastening it firmly to the sheet metal all around the body of the coffin, for the purpose of stiffening the lower edges of the same. Claim 2. I do not claim the ribs (X) separately, as I do not consider them patentable, but the ribs being peculiarly arranged by being placed under the flange which supports the rim (E) and fastened to the frame (D) in the recess at the bottom. I claim this peculiar arrangement for the purpose of stiffening the sides and end, so as to sustain a heavy weight of earth; also for the purpose of preventing the sides from bilging out when the handles are placed about an equal distance between the upper and lower edges of a sheet metal coffin, substantially as set forth. Claim 3d. The arrangement of pressing or rolling around the outer edge of the cover of a sheet-metal coffin an inverted bead, which forms a tongue on the bottom side of the cover, so arranged as to fill the groove in the upper surface of the rim E, for the purposes of soldering or cementing the joints, as described and set forth. Claim 4th. The arrangement of placing a galvanized iron rim, or its equivalent, on the outside and over the upper edge of the walls of a sheet-metal coffin, fastening the same permanently to a flange formed all around the upper edge of the walls, for the purpose of shaping and strengthening the upper part of the coffin, at the same time furnishing a means of securing the coffin top at the joints. Claim 5th, I am aware that I have claimed in a former Patent an iron frame as a cover over the soldered joints on the top of a sheet-metal coffin, I, therefore, disclaim it as an entire frame; but I claim the bisection of the frame (H), and its re-connection by means of spring ketches at the widest part or break of the coffin, substantially as set forth."

No. 23,402. John Smalley, of Bound Brook, N. J., for an "Improvement in cultivators."

"I do not claim broadly hanging the main wheels of a cultivator to cranked axles for the purpose of deciding the depth to which the teeth shall penetrate the ground, as such a device has been heretofore used in cultivators; nor do I claim a central lever for operating the cranked axle, or the plow-formed teeth, or any other part of the machine separately; what I claim, and desire to secure by Letters Patent, the frame, its adjustable pole, its teeth *m*, *m*^{1}, *n*, *n*^{1}, and detachable teeth *p*, *p*^{1}, the cranked shaft C, its central lever E, and driver's seat G, when the said seat is so situated as regards the handle that the driver can operate the latter without moving from the seat, and when the whole of the parts are arranged in respect to each other substantially as set forth."

No. 23,403. Michael Simmons, of Ira., Ill., for an "Improvement in seeding machines."

"What I claim is, first, the use of the eccentrically cut gear wheel D so as to enable me to get my pinion *a* and pinion shaft *b* on top of the frame and above the centre of the wheel that drives it, substantially as described. I also claim the arrangement of the beams H with their skewed shovels and adjustable connections, so that they may be transposed from side to side of the machine at pleasure, in the manner and for the purpose herein set forth and explained."

No. 23,404. Chas. F. Spencer, of Rochester, N.Y., for an "Improved spring bedstead."

"I am aware that wooden slats with metallic springs have been used, and that a Patent was granted November 16th, 1858, in which the slats are permanently attached at one end with wooden springs attached at the middle of each resting against a transverse bar, but differing in arrangement and effect from mine; therefore I do not claim broadly the use of spring slats; but I claim the combination and arrangement of the spring slats E, F, with the bars A, A, and fulcra B, B, the latter arranged to increase or diminish the effect and horizontal slats G resting at once on the free ends of each reverse series, substantially in the manner and for the purpose herein described."

No. 23,405. Geo. H. Starbuck and L. D. Gilman, of Troy, N. Y., for an "Improvement in smut mills."

"Having thus described our machine, what we claim as new, and desire to secure by Letters Patent, is, 1st, the combination of the two scouring plates *a*, *a*, *a*, placed one above the other, with their roughened or burred surfaces towards each other, in combination with the funneling plates E, for depositing the grain at the centre of the scourers, between which it is passed, forming a double scourer attached to and revolving with the shaft K, operated in the manner and for the purpose set forth; we do not confine ourselves to any number of scourers for a machine. 2d, the vertical cylindrical opening, as shown at I, in combination with the outer case K, screen *f*, and fans *h*, for the purpose of giving free discharge to all light impurities and foreign matter, and preventing the discharge of grain."

No. 23,406. R. H. St. John, of Bellefontaine, Ohio, for an "Improvement in watchmaker's lathe."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination and arrangement of the

steel ring (D), springs (*d*, *d*,) set screws (*a*, *a*,) and centering plate E, substantially as herein described for the purpose set forth. I also claim the employment of the screw cap (G) for clamping the article to be centered in the manner herein specified."

No. 23,407. J. C. Stoddard, of Worcester, Mass., for an "Improvement in cultivators."

"I do not claim separately, the share A, with adjustable or expanding wings or blades C, C, attached, for that has been previously used; neither do I claim the shares *m*, for they also have previously used; but having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, 1st, the share A and wings or blades C, C, arranged relatively with the wheel or wheels H, H, that is to say, placing the wheel or wheels behind the share A, and between the wings or blades C, C, substantially as and for the purpose set forth. 2nd, the adjustable rotating scrapers J, applied to the wings or blades C, and arranged to operate as and for the purpose set forth. 3rd, the combination of the lateral adjustable hoes *m*, share A, adjustable wings or blades C, C, rotating scrapers J, wheels H, one or more, arranged for joint operation, substantially as and for the purpose set forth."

No. 23,407. J. C. Stoddard, of Worcester, Mass., for an "Improvement in machines for digging potatoes."

"I do not claim an inclined screen with a share attached to its lower end, for the purpose of digging potatoes, for such device has been previously used; nor do I claim a receptacle attached to the machine, for the purpose of receiving the potatoes; but having thus described my invention, what I do claim as new, and desire to secure by Letters Patent, is, 1st, the weed eradicator, formed of the vibrating plate g^1, with serrated flanches h^1 attached, and arranged to operate as and for the purpose set forth. 2nd, the inclined adjustable screen box D, provided with a share E and spur $j\times$ at its lower end, in combination with the endless chain of carriers F, arranged to operate in grooves *o*, *o*, substantially as and for the purpose set forth. 3rd, the combination of the weed eradicator, leveling share N, inclined adjustable screen box D, with share E attached, and endless chain of carriers F, with or without the receptacle C, arranged for joint operation, substantially as and for the purpose set forth. 4th, the adjustable or movable roller shaft L, applied to the machine, and arranged to operate as and for the purpose set forth."

No. 23,409. N. G. Thom, of Cincinnati, Ohio, for an "Improved manufacture of wood screws."

"I do not confine myself to any particular form of construction, as to size, shape, &c., as these may be varied indefinitely, and the same construction is applicable to coach or lag screws, or any other screw, in which wood or other yielding substance constitute the material into which the screw is driven. I am aware that a tapering screw point has been long used upon augers, gimblets, &c., and I therefore do not claim that feature as any part of my present invention; but what I do claim as my invention, and desire to secure by Letters Patent as a new manufacture, is, the within described wood screw, the characteristic feature of which consists in its having two or more parallel threads that terminate at or near the point of a tapering core, substantially as described."

No. 23,410. John S. Thompson and Marvin J. Seymour, of Glenn's Falls, N. Y., for an "Improvement in cresset for heading barrels."

"Having thus described our invention, what we claim as new, and desire to secure by Letters Patent, is, the arrangement of an annular bed D at the base of the apparatus, and above these cape flue C, to receive and support the barrel, as and for the purpose herein shown and described."

No. 23,411. Saml. E. Tompkins, of Newark, N. J., for an "Improvement in saddles."

"I am aware that cast metal saddle trees have been previously used, and also, that safety guards or bridges have been attached to trees, to keep the back band from the back of the horse. I therefore do not claim, broadly, the above; but having thus described my invention, what I do claim as new, and desire to secure by Letters Patent, is, the bow pieces *b*, *e*, connected with the sides *a*, *a*, and provided, respectively, with the head *c*, and cantel *f*, in connection with the central bow piece or 'safety guard' *g*, when the parts are placed relatively with each other, so as to admit of being cast in one piece, to form a new and improved saddle tree, as herein set forth. I further claim, in connection with the saddle tree formed as above, the crupper loop *j*, attached to the cantel bow piece *e*, by means of the plate *i*, substantially as and for the purpose specified."

No. 23,412. Freeman E. Tupper, of Nashua, N. H., for an "Improvement in stoves."

"Having described my improved coal and gas stove, what I claim therein as new, and desire to secure by Letters Patent, is, the arrangement of the air chamber C, with its air passages or tubes G, and apertures *d*, and openings *i*, *i*, *i*, with the casing A, and supporting and deflecting collar F, substantially in the manner and for the purposes above set forth."

No. 23,413. Saml. W. Tyler, of Greenwich, N. Y., for an "Improvement in harvesters."

"Having thus fully described my improvements in the cutting apparatus of harvesting machines, what I claim therein, as new, and desire to secure by Letters Patent, is, giving such a shape to the portions *a* and *h*, of the finger bar, and to the flanged portions or heads of the fingers *d*, *d*, that the same set of rivets will unite all the said parts with each other, into a fingered bar of unusual stiffness, strength, and narrowness, and at the same time form a dovetail groove for the reception and guidance of the cutter bar, substantially as herein set forth."

No. 23,414. Nathan Washburn, of Worcester, Mass., for an "Improved machine for rolling wheel tire."

"What I claim, is, the combination of a set of reducing rollers A, B, a series of adjustable carrying rollers *d*, *d*, *d*, &c. (or their equivalents), and a frame or holder G, supported so as to be capable of rising upward within the wheel tire in proportion as the diameter of the inner periphery of the said tire may increase, during the process of rolling the tire, and having the said carrying rollers arranged and made adjustable with respect to it and the reducing rollers in manner substantially as herein before specified."

No. 23,415. E. B. Way, of Jerseyville, Ill., for an "Improvement in clod crushers."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the employment of the oblique sided double tapered slats (*f*) in combination with rims (d^1, d^1, *e*,) so that the clods that wedge between the slats, will be carried up, and then dropped, and then broken within the wheel, as herein shown and described."

No. 23,416. John Wagner, of Pittsburgh, Pa., for an "Improved sausage stuffer."

"Having thus fully described my improved sausage stuffer I wish it distinctly understood, that I do not claim the endless screw, or 'worm and wheel' this being a well known mechanical device, though the same has to my knowledge, not been used before in sausage stuffers, nor do I claim any other part of wheel gear arrangement, when considered by itself; but what I do claim as new, and desire to secure by Letters Patent, is, the arrangement of using, in addition to the operating crank *c*, for the forward motion, another operating crank *s*, or its equivalent, for the backward motion, when applied to the wheel gear arrangement of 'worm and wheel,' in the manner as herein described, viz., when set on the spindle *a*, of the screw wheel F, substantially as and for the purpose herein set forth."

No. 23,417. Wm. Webber, jr., and John Webber, of Rockton, Ill., for an "Improvement in harvesting machines."

"What we claim as our invention, and desire to secure by Letters Patent, is, operating the rake of a harvester by means of the horizontally oscillating arms *c* and *h*, the rod *g*, and the latch *i*, when the said parts are arranged relatively to each other and to the other parts of the machine, in the manner herein set forth."

No. 23,418. T. J. Whitehead, of South Paris, Me., for an "Improvement in stoves."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination with the fire chamber described, and with an oven having hollow walls filled in with non-conducting material of a removable fire chamber casing, which has hollow walls filled in with a non-conducting material, and is in shape, externally, nearly the counterpart of the fire chamber, and serves for encasing the whole of the exposed portion of the fire chamber, and at the same time allows access to the holes in the top of the fire chamber, and to the fuel door thereof, substantially as and for the purposes set forth."

No. 23,419. W. L. Williams, of New York, N. Y., for an "Improved foot scraper."

"I am aware that brushes have been applied to and used in connection with scrapers, but not, so far as I am aware, arranged as herein described, therefore I do not claim, irrespective of arrangement, the employment or use of brushes and a scraper; what I do claim as new, and desire to secure by Letters Patent, is, the employment or use of the scraper B, and the brushes F, G, either with or without the brush J, combined and arranged to operate, substantially as and for the purpose set forth."

No. 23,420. John Wood, of Brooklyn, N. Y., for an "Improved method of operating the knife in riving shingles."

"I do not claim the rhomboidal reciprocating gate O with knife P attached, for this has been previously used, but having thus described my invention, what I do claim as new, and desire to secure by Letters Patent, is, giving the frame C, in which the reciprocating knife gate O is placed an intermittingly vibrating movement simultaneous with the feed movement of the bolt, substantially as and for the purpose herein set forth."

No. 23,421. Nathan Ames, of Saugus, Mass., assignor to himself and Nathl. Evans, jr., of Boston, Mass., for a "Self-feeding press for printing cards and bill heads."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the little cams or projections *a*, *b*, arranged in reference to the ink rollers and operating in connection with them and the vibrating type bed, substantially as and for the objects described. 2, the combination and arrangement of the spring P, hinged piece H, type bed E, and spring L, substantially in the manner and for the purposes set forth. 3rd, attaching the type bed E (as shown in Fig. 4) at one of its sides only to the arm D, so that the inking rollers N, N^1, may pass over and under it, substantially as described. 4th, the pitman r^1, screw *r*, top piece X, slot *j*, and slides *e*, e^1, when combined, arranged, and operating substantially as set forth. 5th, attaching the feeding plate *f*, as described, to the slide *e*, and causing the latter to move in the groove *g*, so that while the upper side of *f* bears on the surface of X, the thickness of *e* extending below it prevents the card from ever getting between the surfaces of *f* and X. 6th, the adjustable guide *l*, constructed and arranged substantially as and for the purpose described. 7th, the adjustable lateral guides *m*, *m*, arranged as set forth and for the purpose described. 8th, the card pusher Z^1, provided with the slots P, P, and 8, substantially in the manner and for the purposes described."

No. 23,422. Elisha D. Blakeman, of New Lebenon, N. Y., assignor to Jacob J. Auchampaugh and Levi Auchampaugh, of same place, for a "Fly-trap."

"The particular improvement which constitutes my said invention, and which I claim as having been originally and first invented by me, is, the combination and arrangement of the poison cups *m* and *n* with the conical chamber B, and bed-plate A, substantially as and for the purpose set for th."

No. 23,423. James W. Carrier, of Springfield, Mass., assignor to himself and Abel B. Howe, of same place, for an "Improvement in car coupling."

"What I claim as my invention, and desire to secure by Letters Patent, is, the sliding bunter A, connection pin *d*, pin *p*, springs *r* and *l*, straps *m*, sliding pin B, springs *k*, *k*, rack *f*, pinion *g*, ratchet *s*, pawl *t*, and pin *v*, when combined and arranged substantially as herein described."

No. 23,424. Chas. W. Carter, of Westville, Ind., assignor to Lester L. Bond and Geo. Coatsworth, of Chicago, Ill., for an "Improvement in corn shellers."

"What I claim as my invention, and desire to secure by Letters Patent, is, the sectional truncated cone P, constructed as described, with the pintle S, guide spring U, and hinge R, and arranged to operate in combination with the outer cone O, in the manner and for the purposes specified."

No. 23,425. Henry B. Comer, of Temperanceville, Pa., assignor to himself and Joseph S. Lewis, of same place, for an "Improved machine for rolling iron."

"I wish it to be clearly understood, that I do not claim the use of guides in general. Having thus described the nature, construction, and operation of my improvement what I claim as of my invention, and desire to secure by Letters Patent of the United States, is, furnishing rolls, which are placed in front of each other and on parallel lines with guides placed between each set of rolls, said guides being so constructed that they will guide and change the position of the iron as it passes from one set of rolls into another set, as herein described and set forth."

No. 23,426. Eleazar S. Gardner, of New York, N. Y., assignor to Gardner and Decker, of same place, for an "Improved machine for preparing mouldings for picture frames."

"What I claim, and desire to secure by Letters Patent, the revolving rollers, arranged and operating substantially as described, in combination with the scraper *n*, for the purpose specified."

No. 23,427. Joseph E. Holmes, of Newark, Ohio, assignor to himself and Joseph Palmer, of New York City, for an "Improvement in retorts for distilling coal oil."

"I do not claim the invention of a revolving retort, that being specified in the French Patent of Mr. Ajasson de Grandsague, dated Octr. 9th, 1839; neither do I claim the introduction of steam into the retort during the distilling process; but what I claim as my invention, and desire to secure by Letters Patent, is, 1st, the combination with the internal vapor pipe E, F, of a leg E^1, so applied as to keep the mouth of the said pipe in the upper part of the retort either by the direct action upon it of the force of gravitation or by its dragging in the coal or other matter in the lower part of the retort. 2nd, the arrangement of the steam pipe *a* to communicate through the hollow journal, with a passage in the leg E of the vapor pipe E, F, for the admission of steam directly into and among the charge, substantially as herein specified."

No. 23,428. Henry J. Lewis, of Brooklyn, N. Y., assignor to himself and Richd. A. Lewis, of New York City, for an "Improvement in camera stands."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination of the braces (*f*, *f*, *f*), and screw clamping blocks (*i*, *i*, *i*), or their equivalents, with the legs (*a*), in substantially the manner and for the purposes specified."

No. 23,429. E. L. Pratt, of Philadelphia, Pa., assignor to himself and R. B. Fitts, of same place, for an "Improved milk pan."

"I claim, and desire to secure by Letters Patent, as a new manufacture, a pan with a detachable or hinged cover, forming, when combined, a vessel closed, with the exception of a series of minute perforations below for the access of cold air, and a suitable distance above the latter, another series of perforations for the exit of warm air and gases, and otherwise constructed, substantially as herein set forth, and for the purpose specified."

No. 23,430. Alonzo R. Root, of Keokuk, Iowa, assignor to Rufus S. Rickey, of same place, for an "Improvement in seeding machines."

"I do not claim the invention of the 'revolving head' of Mr. Ring; nor the application of the centrifugal force to the purpose of seed sowing; nor any other principle secured to A. Ring, Esq., by Letters Patent; but what I do claim as my invention, and desire to secure by Letters Patent, is, first, in combination with the hopper I, and the revolving tubes or arms, the regulator B, constructed and operating therewith, substantially as described. I also claim, in combination with the regulator and revolving tubes or arms, the vertical and inclined partitions C, C, and lip D, for the purpose of directing the seed to be sown from the hopper to the openings in the arms or tubes, and to prevent the seed from escaping unduly through the arm or tube, for the time being, immediately under the lip, substantially as herein described."

No. 23,431. Geo. Selser, of Philadelphia, Pa., assignor to himself, J. Cook, and W. Cook, of same place, for an "Improvement in grinding mills."

"I claim, and desire to secure by Letters Patent, attaching the hollow steel burr to the spindle D, by screwing or otherwise securing the end of the latter to a plate I, which is fitted snugly to the inside of the burr *a*, shoulder *e*, on the spindle bearing on the top of the burr, as herein set forth."

No. 23,432. JOHN TAGGART, of Roxbury, Mass., assignor to himself and Geo. R. Sampson, of Brookline, Mass., for an "Improved marine propeller."

"But what I do claim is, my improved mode of propelling a navigable vessel through the water, viz., by the conjoint action of two separate rotary or screw propellers E and F, respectively operating or screwing into the water and air, arranged and combined, substantially as described, and propelled by a steam engine or motor within or carried by the vessel. I also claim arranging the air screw propeller F, or its axis, at an inclination upward from the keel or plane of floatation of the vessel, substantially as shown in Figure 2, in order that the said propeller, while being rotated, may operate, not only to draw the vessel ahead, but to lift her bow, more or less, out of water."

No. 23,433. DAVIS L. WEATHERHEAD, of Philadelphia, Pa., assignor to himself and S. E. Southland, of same place, for an "Improvement in gas retorts."

"I claim, and desire to secure by Letters Patent, the cap E, with its box or reservoir F, when arranged in respect to the lower chamber A, the upper chamber B, and exit pipe D of the retort, substantially as and for the purpose herein set forth."

No. 23,434. OLIVE ANN BROOKS, of Great Falls, N. Y., Administrix of the estate of Lebbeus Brooks, deceased, late of Great Falls aforesaid, for an "Improved saw set."

"What is herein claimed as the invention of the said Lebbeus Brooks, is, the arrangement and application of the benders and bending screw together, and with respect to the two handles, substantially as set forth, whereby the center of motion of the benders is at the place of contact, or the vertex of the angle of their upper surfaces, and no fulcrum pin is employed for the support and connection of the levers."

RE-ISSUES.

CHARLES C. ALGER, of Newburgh, N. Y., for an "Improved smelting furnace."—Patented 30th June, 1857.—Re-issued 29th March, 1859.

"What I claim as my invention, and desire to secure by Letters Patent, is, constructing furnaces with the hearth and boshes of an eliptical or elongated form, substantially as described in combination with the application of the blast at the sides, so arranged as to introduce the blast in the direction of the breadth and for the purposes specified. I also claim, in combination with the hearth and boshes made of an eliptical or elongated form substantially as described, the construction of such furnaces with two mouths, one at each end, for working and tapping, substantially as and for the purpose specified."

ISAAC L. DEVOE, of Staten Island, N. Y., assignee through mesne assignment of Samuel M. Perry, of New York, N.Y., for an "Improvement in reclining chairs for railroad cars and other uses."—Patented 27th July, 1852.—Re-issued 29th March, 1859.

"Having thus described this improved reclining chair, what I claim as the invention of Saml. M. Perry, is,—First, to so combine the back D with the two end frames B, C, by means of bars E, F, jointed to it one or two studs (*a*), and one or two series of notches (*d*, *d*,) or equivalents therefor, that the said back when not a reversable one may be raised and inclined in various positions, so as to not only support the back but the head of a person at the same time. Second, making the back reversable by means of two series of notches *d*, *d*, and *e*, *e*, &c., and two sets of studs *b*, or equivalents, the same being arranged on opposite sides of the chair and made to operate as specified. Third, the improvement of making each arm or bar E, F, with a rack or racks of teeth, or succession of notches (or equivalents therefor), for the purpose of adjusting and securing the back in the desired position, whereby the occupant can alter or vary said position without rising from the seat, substantially as set forth."

DESIGN.

EDWARD REYNOLDS, of Boston, Mass,, assignor to Thomas W. Brown, of said Boston, for "Design for hat racks.

"I claim the new ornamental design of hat rack, as represented and described."

A FREE LIBRARY and READING ROOM, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

NOTE.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d.*

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE REFERENCE INDEX of PATENTS pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s*.

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s*.

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. Woodcroft.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

Sommaire de toutes les Inventions brevetées en Angleterre depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux Inventions et Découvertes décrites dans les ouvrages scientifiques de différentes nations, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

Verzeichniss aller in England von 1617—1854 incl. patentirten Erfindungen, unter vielfältige Titel gebracht, mit Hinweisungen auf Erfindungen und Entdeckungen die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken verschiedener Nationen beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

Repertorio di tutte le Invenzioni munite di Lettere Patenti in Inghilterra dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle Invenzioni e Scoperti descritti nelle opere scientifiche di diverse nazioni, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. Woodcroft,
Superintendent of Specifications, &c.

In course of Publication, by Order of the Commissioners.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. Drain Tiles and Pipes, price 6*d*.
2. Sewing and Embroidering, price 6*d*.
3. Manure, price 6*d*.
4. Preservation of Food, price 6*d*.
5. Marine Propulsion, price 4*s*.
6. Manufacture of Iron and Steel, price 5*s*.
7. Aids to Locomotion, price 1*s*.
8. Steam Culture, price 2*s*.
9. Watches, Clocks, and other Time-keepers, price 1*s*. 6*d*.
10. Fire-arms and other Weapons, Ammunition, and Accoutrements, price 6*s*. 6*d*.
11. Paper.—Part I. Manufacture of Paper, Pasteboard, and Papier Mâché, price 3*s*.

The following are in the press:—

Paper.—Part II. Cutting, Folding, and Ornamenting; including Envelopes, Cards, Paper-hangings, &c.
Electricity and Magnetism: their Generation and Applications.
Typographic, Lithographic, and Plate Printing.
Bleaching, Dyeing, and Printing Yarns and Fabrics.
Preparation of Fuel, and Apparatus for its Combustion.
Manufacture and Applications of India Rubber, Gutta Percha, &c.; including Air, Fire, and Water Proofing.
Production and Applications of Gas.
Steam Engines.

B. Woodcroft.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

LONDON:
Printed by George E. Eyre and William Spottiswoode, Printers to the Queen's most Excellent Majesty.
Published at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 552. TUESDAY, APRIL 19, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

2793. DAVID BLAIR WHITE, of Newcastle-upon-Tyne, in the county of Northumberland, Doctor of Medicine, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "Improvements in indicating gauges."

As set forth in his petition, recorded in the said office on the 6th day of December, 1858.

2797. And JAMES EDWARD BOYD, of Hither Green, Lewisham, in the county of Kent, Gentleman, has given the like notice in respect of the invention of "Improvements in the construction of taps, valves, cocks, spiggotts, or other apparatus or instruments for guaging or for drawing off the liquid or fluid contents of any cask, butt, vat, barrel, or other vessel."

2800. And JOHN WHITELEY, of Halifax, in the county of York, Machine Maker, and THOMAS KITCHENMAN, of the same place, Stuff Presser, have given the like notice in respect of the invention of "Improvements in press plates or apparatus employed in hot pressing woven fabrics."

2803. And JOSEPH G. E. LARNED, of the city of Brooklyn, in the state of New York, United States of America, has given the like notice in respect of the invention of "Improvements in the construction and arrangement of the boilers and working parts of steam fire engines, part of which is applicable to engines for other purposes."

2806. And WILLIAM BURNESS, of 2, Prospect Terrace, Brixton, in the county of Surrey, has given the like notice in respect of the invention of "Improvements in pumping and forcing liquids."

2808. And JAMES FERRABEE, of the Phœnix Iron Works, Stroud, in the county of Gloucester, Engineer, and FREDERICK HENRY ENGLAND, Manager of Foomhall Mills, Stroud, have given the like notice in respect of the invention of "Improvements applicable to machinery for carding, scribbling, and condensing wool and other fibrous substances."

As set forth in their respective petitions, all recorded in the said office on the 7th day of December, 1858.

2810. And GEORGE FREDERIC CHANTRELL, of Liverpool, in the county of Lancaster, Furnace Engineer, has given the like notice in respect of the invention of "Improvements in apparatus applicable to the manufacture and revivification of animal or vegetable charcoal."

2811. And CHARLES DE CAPPOT and ALEXANDER JARRIANT, of No. 10, Route de la Révolte, Neuilly-sur-Seine, in the empire of France, Civil Engineers, have given the like notice in respect of the invention of "A new hydraulic counter."

2817. And CHARLES MARTIN WESTMACOTT, of Arboretum Street, Litchurch, near Derby, in the county of Derby, has given the like notice in respect of the invention of "Improvements in the permanent way of railways."

2818. And HENRY MEIDINGER, of the University of Heidelberg, Germany, has given the like notice in respect of the invention of "Improvements in electric batteries."

As set forth in their respective petitions, all recorded in the said office on the 8th day of December, 1858.

2826. And JAMES STEWART, of 69, Tottenham Court Road, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in the construction of the action of pianofortes."

2831. And BERNARD LAUTH, late of Pittsburgh, state of Pennsylvania, U.S.A., but now residing at Morley's Hotel, Trafalgar Square, in the city of Westminster, Mechanician, has given the like notice

in respect of the invention of "An improved mode of manufacturing rods and shafts."

As set forth in their respective petitions, both recorded in the said office on the 9th day of December, 1858.

2833. And JOHN LIGHTFOOT, of Accrington, in the county of Lancaster, Calico Printer, has given the like notice in respect of the invention of "Improvements in printing or staining yarns, fabrics, or fibrous substances, and in the manufacture of certain compounds for that purpose."

2837. And CHARLES HODGSON, of Ballard Rathdrum, in the county of Wicklow, Ireland, Esquire, has given the like notice in respect of the invention of "Improvements in the manufacture of fuel from peat, and in apparatus employed therein, part of which is also applicable to the moulding of bricks, tiles, and other plastic materials."

2838. And WILLIAM BEARDMORE, of Deptford, in the county of Kent, Engineer, has given the like notice in respect of the invention of "Improvements in steam boilers."

2840. And GEORGE WILLIAM BRYANT KIALLMARK, of Bridgewater, in the county of Somerset, and WILLIAM THOMAS TIMEWELL, of North Wharf Road, Paddington, in the county of Middlesex, have given the like notice in respect of the invention of "Improvements in the manufacture of cements."

As set forth in their respective petitions, all recorded in the said office on the 10th day of December, 1858.

2842. And JOHN BONAR GUTHRIE, of Manchester, in the county of Lancaster, Warehouseman, has given the like notice in respect of the invention of "Improvements in the manufacture of india-rubber overshoes."

2843. And STEPHEN DUDGEON, of Sheffield, in the county of York, has given the like notice in respect of the invention of "An improved gas regulator."

As set forth in their respective petitions, both recorded in the said office on the 11th day of December, 1858.

2850. And JOHN ANDERTON CARRUTHERS, Reed Maker, and THOMAS BLACKBURN, Mechanic, both of Blackburn, in the county of Lancaster, have given the like notice in respect of the invention of "Improvements in apparatus for guiding and regulating the warp threads in the operations of warping, tape-sizing, looming, and weaving."

2852. And LOUIS CHARLES VICTOR YON, of the town of Lisieux, department of the Calvados, in the empire of France, Upholsterer, has given the like notice in respect of the invention of "Improved elastic beds."

2854. And JAMES EDWARD BOYD, of Hither Green, Lewisham, in the county of Kent, Gentleman, has given the like notice in respect of the invention of "Improvements in candlesticks, lamps, and lanthorns."

2858. And JAMES FERRABEE, of the Phœnix Iron Works, Stroud, in the county of Gloucester, Engineer, has given the like notice in respect of the invention of "Improvements in the construction of steam engines, and in the mode of working the same."

As set forth in their respective petitions, all recorded in the said office on the 13th day of December, 1858.

2860. And EBENEZER BOW, of Port Dundas, in the county of Lanark, North Britain, Coalmaster, has given the like notice in respect of the invention of "Improvements in pumps."

As set forth in his petition, recorded in the said office on the 14th day of December, 1858.

2870. And FRANÇOIS CHRISTOPHE NICOLAS JUVENAL VIELLARD-MIGEON, of Morvillars, departement du Haut Rhin, France, Manufacturer of Wood Screws, has given the like notice in respect of the invention of "Improvements in manufacturing screws, rivets, nails, spikes, and all similar articles made of metallic wire, and in the machines connected therewith."

As set forth in his petition, recorded in the said office on the 15th day of December, 1858.

2882. And ABEL STOKES, of Birmingham, in the county of Warwick, Manufacturer, and FREDERICK JOSEPH STOKES, of Birmingham aforesaid, Manufacturer, have given the like notice in respect of the invention of "New or improved machinery for the manufacture of screws."

2884. And JASPER HENRY SELWYN, of Woodland Crag, Grasmere, in the county of Westmoreland, Captain in the Royal Navy, has given the like notice in respect of the invention of "A novel apparatus for paying out or laying down submarine telegraph cables or wires, and for raising the same after they have been laid down."

As set forth in their respective petitions, both recorded in the said office on the 16th day of December, 1858.

2899. And JOHN AITKEN, of Irwell Vale Mill, Edenfield, near Bury, in the county of Lancaster, Manufacturer, and JOHN BROOKS, of the same place, Overlooker, have given the like notice in respect of the invention of "Improvements in looms."

2901. And ALEXANDER MITCHELL, of Glasgow, Machinist, has given the like notice in respect of the invention of "Improved apparatus for registering the speed of engines and other machinery."

2904. And EMILE WEBER, of Mulhouse, in the empire of France, Chemist, has given the like notice in respect of the invention of "Improvements in dyeing or colouring textile fabrics and materials, and in the machinery or apparatus connected therewith."

As set forth in their respective petitions, all recorded in the said office on the 18th day of December, 1858.

2916. And AUGUSTE STANISLAS BELIARD, of Bordeaux, in the empire of France, Hatter, has given the like notice in respect of the invention of "An improved machine for pumicing felts, tissues, and skins."

As set forth in his petition, recorded in the said office on the 21st day of December, 1858.

2925. And WILLIAM SPENCE, of No. 50, Chancery Lane, in the county of Middlesex, Patent Agent, has given the like notice in respect of the invention of "Improvements in granaries, or apparatus

for preserving grain."—A communication from Charles Joseph Emile Pavy, of Girardet, Indre et Loire, in the empire of France, Farmer and Land Owner."

2927. And Edward Green, of Wakefield, in the county of York, Engineer, has given the like notice in respect of the invention of "Improvements in tables."

As set forth in their respective petitions, both recorded in the said office on the 22nd day of December, 1858.

2939. And James Thomas Peter Newbon and Thomas Smith, of Fenchurch Street, Naval Architects, and James Brown, of Follit Street, Engineer, have given the like notice in respect of the invention of "Improvements in machinery or apparatus for raising and lowering, or otherwise moving heavy weights."

As set forth in their petition, recorded in the said office on the 24th day of December, 1858.

3007. And John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of No. 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in the manufacture or production and casting of steel, and in the apparatus employed therein."—A communication from Monsieur Sudre."

As set forth in his petition, recorded in the said office on the 31st day of December, 1858.

---

114. And François Jules Manceaux, of Paris, in the empire of France, Manufacturer, and Eugene Napoléon Vieillard, of the same place, Gunsmith, have given the like notice in respect of the invention of "Improvements in breech-loading fire-arms, and in cartridges."

As set forth in their petition, recorded in the said office on the 13th day of January, 1859.

---

317. And Alexander Allan, of Perth, in the county of Perth, Engineer, has given the like notice in respect of the invention of "Improvements in locomotive steam engines, in part applicable for retarding and stopping railway trains."

As set forth in his petition, recorded in the said office on the 4th day of February, 1859.

---

434. And William Horstmann, of the city of New York, in the county of New York, and the state of New York, U.S.A., has given the like notice in respect of the invention of "Telegraphic cables, and the mode of constructing the same and laying them down."

As set forth in his petition, recorded in the said office on the 16th day of February, 1859.

---

495. And Samuel Rodgers Samuels, of Nottingham, has given the like notice in respect of the invention of "Improvements in twist lace machines."

496. And Samuel Russell, of No. 12, Sheaf Gardens, Sheffield, in the county of York, Britannia Metal Manufacturer, has given the like notice in respect of the invention of "An improvement in the manufacture of handles for tea and coffee pots, jugs, kettles, knives, daggers, and forks, or any other description of article to which handles are applied."

As set forth in his petition, recorded in the said office on the 23rd day of February, 1859.

---

558. And Joseph Kershaw, of Allerton, near Bradford, in the county of York, Overlooker, has given the like notice in respect of the invention of "Improvements in means or apparatus employed in weaving."

As set forth in his petition, recorded in the said office on the 2nd day of March, 1859.

---

582. And Frederick William Parker, of Sheffield, in the county of York, Saw Maker, has given the like notice in respect of the invention of "Improvements in sewing machines."

As set forth in his petition, recorded in the said office on the 5th day of March, 1859.

---

654. And Benjamin Rider, of 61, Red Cross Street, Boro', in the county of Surrey, Leather Dresser and Hat Leather Manufacturer, has given the like notice in respect of the invention of "Improvements in hats, caps, and other coverings for the head, and in apparatus used in the manufacture of such articles."

As set forth in his petition, recorded in the said office on the 15th day of March, 1859.

---

670. And Henry Bessemer, of Queen Street Place, New Cannon Street, in the city of London, has given the like notice in respect of the invention of "Improvements in the manufacture of crank axles."

As set forth in his petition, recorded in the said office on the 16th day of March, 1859.

---

775. And Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "An improved construction of furnace for reheating steel preparatory to the hardening, tempering, or annealing process."—A communication from abroad, by Perry Green Gardiner, of New York.

777. And Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "Improved apparatus for retaining the oil or other fluid used for annealing, tempering, and hardening steel at an equable low temperature."—A communication from abroad, by Perry Green Gardiner, of New York.

As set forth in his respective petitions, both recorded in the said office on the 28th day of March, 1859.

---

809. And Samuel Stephen Bateson, of No. 17, Bolton Street, May Fair, in the county of Middlesex, Barrister-at-Law, has given the like notice in respect of the invention of "Improvements in generating steam and in the apparatus employed therein."

As set forth in his petition, recorded in the said office on the 31st day of March, 1859.

---

819. And William Edward Newton, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like

notice in respect of the invention of "An improved process of manufacturing sulphate of lead, carbonate of lead, nitrate of potash, and sulphate of soda." — A communication from Samuel Cooper, of Boston, in the United States of America.

821. And WILLIAM TOD, of Glasgow, in the county of Lanark, North Britain, Marine Engineer, has given the like notice in respect of the invention of "Improvements in marine steam engines."

As set forth in their respective petitions, both recorded in the said office on the 1st day of April, 1859.

839. And WILLIAM BROWN and CHARLES NEALE MAY, both of Devizes, in the county of Wilts, Engineers, have given the like notice in respect of the invention of "Improvements in hay-making machines."

As set forth in their petition, recorded in the said office on the 4th day of April, 1859.

849. And GEORGE HASELTINE, of the United States of America, now of No. 4, Southampton Buildings, Holborn, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in sewing machines."

As set forth in his petition, recorded in the said office on the 5th day of April, 1859.

860. And ISAAC ADAMS, of the state of Massachusetts, of the United States of America, has given the like notice in respect of the invention of "An improved tubular chain cable guide for vessels' bulwarks." — A communication from Alfred S. Phillips, a resident of Boston, of the said state of Massachusetts.

As set forth in his petition, recorded in the said office on the 6th day of April, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

List of LETTERS PATENT which passed the Great Seal on the

16th April, 1859.

2327. JOHN SMITH, of Newport, in the county of Salop, Engineer, for an invention of "Improvements in rough-shoeing beasts of draught and burden."—Dated 18th October, 1858.

2328. EDMUND WALKER, of London Street, in the city of London, for an invention of "An improved filter." — A communication from a Foreigner residing abroad.—Dated 19th October, 1858.

2329. JOSEPH WHITWORTH, of the city of Manchester, in the county of Lancaster, Engineer, for an invention of "Improvements in guns, gun carriages, and ammunition."—Dated 19th October, 1858.

2331. JOHN OWEN and HINDLE DUCKWORTH, both of Blackburn, in the county of Lancaster, Machinists, for an invention of "Improvements in looms."—Dated 19th October, 1858.

2332. ALEXANDER ALLAN, Engineer, THOMAS WHIMSTER, Gas Engineer, and ROBERT GRAY, Gas Inspector, all of Perth, in the county of Perth, North Britain, for an invention of "Improvements in steam boilers, also applicable in part to gas-meters, lamps, and lubricating and other apparatus requiring a constant liquid level, and in part to pressure-indicating apparatus." — Dated 19th October, 1858.

2405. TIMOTHY RAILTON, of the city of Manchester, Manufacturer, for an invention of "Improvements in the apparatus employed in the manufacture of cap or bonnet fronts."—Dated 28th October, 1858.

2435. CHARLES PERLEY, of the city and state of New York, United States of America, for an invention of "Certain improved means for disconnecting boats from the davit blocks, and effecting other like objects."—Dated 1st November, 1858.

2465. COLIN MATHER, of Salford, in the county of Lancaster, Machinist, for an invention of "Improvements in drying yarns while in the hank."—Dated 4th November, 1858.

2513. ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improved apparatus for obtaining extracts or decoctions."—Dated 9th November, 1858.

2629. ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improved apparatus for transmitting motive power."—Dated 19th November, 1858.

2685. EDWIN DIXON, of Wolverhampton, in the county of Stafford, Manufacturer, and JOHN FISHER, of Wolverhampton aforesaid, Tube Drawer, for an invention of "An improvement in the manufacture of welded iron tubes."—Dated 26th November, 1858.

2695. JAMES TANGYE, of Birmingham, in the county of Warwick, Machinist, for an invention of "An improvement in hydraulic presses."—Dated 27th November, 1858.

2907. THOMAS SWANN WOODCOCK, of Salford, in the county of Lancaster, for an invention of "An improved index or book and paper marker."—A communication from Josee Johnson, a foreigner residing abroad."—Dated 20th December, 1858.

267. JOSEPH MARINO, of the city of Stockholm, in the kingdom of Sweden, Mechanician, for an invention of "An inodorous closet or commode."—Dated 29th January, 1859.

459. ALPHONSE RENÉ LE MIRE DE NORMANDY, of 67, Judd Street, Brunswick Square, in the county of Middlesex, Analytical Chemist, for an invention of "Improvements in an apparatus for obtaining fresh water from salt water."—Dated 19th February, 1859.

18th April, 1859.

2339. WILLIAM RIDDLE, of 1, Westbourne Terrace, Barnsbury Park, in the county of Middlesex, for

an invention of "Improvements in packing or forming merchandize or goods into bales." —Dated 19th October, 1858.

2341. Robert Dawson Clegg, of Manchester, in the county of Lancaster, Gentleman, for an invention of "Improvements in screws."—Dated 20th October, 1858.

2344. Thomas Twells, of the town and county of the town of Nottingham, Mechanist, for an invention of "Improvements in machinery for embroidering or ornamenting woven looped or lace fabrics." —Dated 20th October, 1858.

2345. John Wainwright, of Birkenhead, in the county of Chester, Dental Surgeon, for an invention of "Improvements in ventilating houses and other places."—Dated 20th October, 1858.

2346. Samuel Thomas Clarke, of 30, Kildare Terrace, Westbourne Park, in the county of Middlesex, Gentleman, for an invention of "Improvements in apparatus for crossing bankers' cheques and drafts."—Dated 20th October, 1858.

2348. Jonas Marland, of Sun Vale Iron Works, Walsden, in the county of Lancaster, and Samuel Marland, also of Sun Vale Iron Works, Walsden, in the county of Lancaster, Machinists, for an invention of "Certain improvements in power looms."—Dated 21st October, 1858.

2351. James Murdoch Napier, of York Road, Lambeth, Engineer, for an invention of "Improvements in printing presses and printing machines." —Dated 21st October, 1858.

2361. James Bagnall and William Bagnall, of Westbromwich, in the county of Stafford, Ironmasters, for an invention of "An improvement in the manufacture of iron."—Dated 22nd October, 1858.

2362. Alexander Shaw, of The Earle's Field Works, Grantham, in the county of Lincoln, Leather Dresser and Fellmonger, and Glue and Parchment Manufacturer, for an invention of "A new method or mode of raising nap on the linings of sheep skins."—Dated 22nd October, 1858.

2363. Richard Waller, of No. 50, Baker Street, Portman Square, in the county of Middlesex, for an invention of "Improvements in obtaining motive power, and in apparatus connected therewith."—Dated 22nd October, 1858.

2366. Edwin Palmer, of Thetford, in the county of Suffolk, Engineer, and Edward Palmer, of Thetford aforesaid, Ironfounder, for an invention of "Improvements in machinery or apparatus for cutting hay, straw, or other similar substances."—Dated 23rd October, 1858.

2379. Thomas Ashworth and Joseph Ashworth, of Pendleton, in the county of Lancaster, Manufacturers, for an invention of "Certain improvements in power looms for weaving."—Dated 25th October, 1858.

2380. William Craddock and John White, both of Archer Street, St. James's, in the county of Middlesex, Harness Platers, for an invention of "Improvements in the connecting links of harness hames."—Dated 25th October, 1858.

2403. John Westerby, of Upper Aspley, Huddersfield, in the county of York, Engineer, for an invention of "An improved application of steam to vessels filled with oil, tallow, or other materials for lubricating the cylinders of steam engines of high or low pressure."—Dated 28th October, 1858.

2429. George Davies, of No. 1, Serle Street, Lincoln's Inn, in the county of Middlesex, and No. 28, St. Enoch Square, in the city of Glasgow, Civil Engineer and Patent Agent, for an invention of "Improvements in machinery for weaving velvets and other piled fabrics."—A communication from a Foreigner residing abroad. —Dated 1st November, 1858.

2434. Edward Maynard, of Brooklyn, in the county of Kings and state of New York, United States of America, for an invention of "Improvements in submarine telegraph cables."— Dated 1st November, 1858.

2442. Robert Creed Smith, of Birmingham, in the county of Warwick, Glass Mould Maker, for an invention of "A new or improved buoy or wreck intelligencer."—Dated 2nd November, 1858.

2461. John Oxley, of Camden Town, for an invention of "Improvements in carriages and wheel vehicles."—Dated 4th November, 1858.

2481. Herbert Newton Penrice, of Wilton House, near Norwich, for an invention of "Improvements in machinery for tunnelling and driving galleries through rock and other strata."— Dated 6th November, 1858.

2503. John Samuel Dawes, of Smethwick House, near Birmingham, Gentleman, for an invention of "A new or improved machine to be used for cultivating land, and which may be made applicable as a hoe, a skim, a turf or peat cutter; and a new or improved method of actuating the said machine, and other machines used for like operations."— Dated 9th November, 1858.

2529. James Lees, of Oldham, in the county of Lancaster, Tin Plate Worker, and William Lees, of the same place, Engineer, for an invention of "An improvement in the construction of oil cans." —Dated 11th November, 1858.

2532. Martin Benson, late of Cincinnati, in the United States of America, but now residing at Newcastle, Mechanical Engineer, for an invention of "An improved manufacture of rails for railways."—Dated 11th November, 1858.

2538. Thomas Fildes Cocker, of Sheffield, in the county of York, Steel File and Wire Manufacturer, for an invention of "Improvements in the manufacture of steel and iron wire, also of sheets and strips of steel." — Dated 12th November, 1858.

2540. Joseph Gilbert Martien, of Ampthill Square, in the county of Middlesex, Gentleman, for an invention of "Improvements in the manufacture of iron, and in the apparatus employed in such manufacture." — Dated 12th November, 1858.

2543. Mark Nield Mills and Nathan Sidebotham, both of Ashton-under-Lyne, in the county of Lancaster, Machinists, for an invention of "Certain improvements in looms for weaving." —Dated 13th November, 1858.

2561. Allan Dick, of Holywell, in the county of Flint, Metallurgist, for an invention of "A new or improved manufacture of a yellow pigment."—Dated 15th November, 1858.

27. Charles Bell Blyth, of Dundee, Mill Manager, for an invention of "Improvements in machinery for preparing and treating jute, hemp, flax, and other fibrous materials."—Dated 3rd January, 1859.

365. Joseph Crossley, of Halifax, for an invention of "Improvements in the means employed when steaming printed yarns."—Dated 9th February, 1859.

374. John Young, of Wolverhampton, in the county of Stafford, Manufacturer, for an invention of "An improvement or improvements in the construction of knobs, and the roses used for connecting knobs with doors, and with the cases of locks and latches, and other like fastenings."—Dated 10th February, 1859.

409. Thomas Hunt, of Crewe, in the county of Chester, Engineer, for an invention of "Improvements in steam boilers or generators, and in the prevention or combustion of smoke."—Dated 14th February, 1859.

413. James Copcutt, of 26, Kirby Street, Hatton Garden, in the county of Middlesex, for an invention of "Improvements in obtaining light from gases."—Dated 14th February, 1859.

439. Joseph Breeden, of Birmingham, in the county of Warwick, Manufacturer, for an invention of "New or improved machinery for the manufacture of taps or stopcocks and fittings for gas, steam, and water pipes."—Dated 16th February, 1859.

440. John Eason, of Oxford Street, in the county of Middlesex, for an invention of "Improvements in apparatus applicable to tanning, dyeing, and obtaining extracts from vegetable, animal, and mineral substances."—Dated 16th February, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 16th April, 1859, inclusive.*)

14th April.

895. Hugo Frederick Forbes, of Park Place, Regent's Park, London, in the county of Middlesex, for an invention of "Improvements in breech-loading fire-arms and ordnance, and in projectiles used therewith."—Dated 15th April, 1856.

916. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman, for an invention of "Improvements in the manufacture of tyres."—A communication from Messrs. Jackson Brothers, Petin, Gaudet and Company, of Rive de Gier.—Dated 17th April, 1856.

16th April.

959. Augustin Simeon Vimont, Practical Engineer, of Vire (Calvados), in the empire of France, for an invention of "A new system of machine for spinning wool and any other fibrous material."—Dated 22nd April, 1856.

FOREIGN PATENTS.

FRANCE.

Current List of Patents of Invention and Certificates of Addition.

1859.

(*Communicated by His Excellency the Minister of Agriculture, Commerce, and Public Works.*)

Note.—The duration of a Patent is fifteen years, except where determined by that of a previously existing foreign Patent.*

567. Andréas, Burdel, and Chicard, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to their Patent of 29th January, 1859, for "A composition for reviving cloth, &c."—Dated 3rd February, 1859.

568. Mrs. Cecile Dantan Sommelet, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Improvements in scissors of all sizes."—Dated 3rd February, 1859.

569. Claude Ferdinand Dieudonne Ribière, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A moveable sweeping machine."—Dated 3rd February, 1859.

570. Alphonse Alexandre George, of 59, Rue de Saintonge, Paris, a Certificate of Addition to his Patent of 14th February, 1856, for "A mechanical loom for the manufacture of bordered and proportional tricots."—Dated 4th February, 1859.

571. Jean Pierre Duvelleroy, of 17, Grande Gaterix, Passage des Panoramas, Paris, for "A bracelet carrying a fan."—Dated 4th February, 1859.

572. Hippolyte Hubert, of 69, Rue Blanchel, Paris, for "A moveable steam pump."—Dated 4th February, 1859.

573. Gustave Hippolyte Gapiaud, of 41, Rue Quincampoix, Paris, for "A machine for making cracknels and maccaroons."—Dated 4th February, 1859.

574. Gustave Hippolyte Gapiaud, of 40, Rue Quincampoix, Paris, for "Glazing biscuit, pastry, and sweetmeat, &c."—Dated 4th February, 1859.

* For the French Patent Law see No. 228 of this Journal.

575. Alfred René Dalifol, represented by Barrault, of 33, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 7th January, 1859, for "An annealing furnace with fixed crucibles."—Dated 4th February, 1859.

576. Anne Philibert Alexandre Coursot, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Improvements in rolling wooden horses used as toys."—Dated 4th February, 1859.

577. Barsanti and Mateucci, represented by Barreau, of 33, Boulevart St. Martin, Paris, for "Using the explosion of a mixture of air and accendible gas as motive power."—Dated 4th February, 1859.

578. Jean Alphonse Pichot, represented by Barrault, of 33, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 16th December, 1857, for "Safety bags."—Dated 4th February, 1859.

579. Antoine Edouard Brisbart-Gobert, of 56, Faubourg Poissonnière, Paris, for "A system of games."—Dated 4th February, 1859.

580. Jean Jacques Danduran, of 8, Rue Lamartine, Paris, for "A so-called 'hydro-calogenous system.'"—Dated 5th February, 1859.

581. Dugenne, and Co., of 81, Rue Rambuteau, Paris, for "A tissue for petticoats of one single breadth."—Dated 5th February, 1859.

582. Jean Baptiste Jourdan-Gozzarino, of 18, Impasse St. Pierre, Batignolles, for "A kind of regulator for steam engines."—Dated 5th February, 1859.

583. Marie Joseph Denis Farcot, of St. Ouen, a Certificate of Addition to his Patent of 26th March, 1853, for "A steam hammer."—Dated 5th February, 1859.

584. Jean Charles Antoine Lecour, of 29, Rue de l'Est, Paris, a Certificate of Addition to his Patent of 8th February, 1859, for "A scraping broom."—Dated 5th February, 1859.

585. Marie Barthélemy Julien Rabiot, of 55, Rue de la Harpe, Paris, a Certificate of Addition to his Patent of 3rd December, 1846, for "An elastic hoop called 'nosophore,' for suspending baths, &c."—Dated 5th February, 1852.

586. Pierre Noël Laudray, represented by Perpigna, of 42, Rue Neuve St. Augustin, Paris, a Certificate of Addition to his Patent of 15th November, 1856, for "A steam engine with a direct rotation."—Dated 5th February, 1859.

587. François Durand, represented by Barrault, of 33, Boulevart Montmartre, Paris, a Certificate of Addition to his Patent of 20th March, 1858, for "Improvements in looms for weaving plain and figured fabrics."—Dated 5th February, 1859.

588. Antoine Pagès, of 18, Rue St. Croix de la Bretonnerie, Paris, a Certificate of Addition to his Patent of 31st August, 1857, for "Silk hat bodies."—Dated 5th February, 1859.

589. Jean Alphonse Pichot, represented by Barrault, of 33, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 5th June, 1858, for "Improvements in fastening boxes, bags, trunks, &c."—Dated 5th February, 1859.

590. Henry Frédéric Sauvage, of 122, Faubourg St. Martin, Paris, for "A stick combined with a smoking pipe."—Dated 5th February, 1859.

591. Charles François Mongin, of 11, Rue des Juifs, Paris, a Certificate of Addition to his Patent of 8th January, 1859, for "Manufacture of saws."—Dated 5th February, 1859.

592. Constant François Chantier, of 24, Rue Basse du Rempart, Paris, for "Inlaid floors with metallic tongues, applicable to all shapes and arrangements."—Dated 5th February, 1859.

593. Charles Aimé de Saillet, of 22, Rue des Marais, Paris, for "A steam engine for using ether, chloroform, &c."—Dated 5th February, 1859.

594. Andrew Barclay, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Obtaining and distributing or applying electricity."—Dated 5th February, 1859.

595. Jean Baptiste Thomas, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in the manufacture of brushes."—Dated 5th February, 1859.

596. Couillard and Mazeline, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to their Patent of 29th April, 1858, for "Processes and apparatus for manufacturing coal cakes and conglomerated fuel."—Dated 5th February, 1859.

597. Gotsfried Pentzolds, represented by Bresson, of 57, Rue de Bretagne, Paris, a Certificate of Addition to his Patent of 20th June, 1857, for "A machine for pumping and raising water."—Dated 5th February, 1859.

598. Bernard Nébon, represented by Bresson, of 57, Rue de Bretagne, Paris, for "Counters and covers for card tables."—Dated 5th February, 1859

599. Auguste Léon Peltier, represented by Bresson, of 57, Rue de Bretagne, Paris, for "Improvements in looms for crotchet embroideries."—Dated 5th February, 1859.

600. Noël Pierre Hélène Fayet, represented by Bresson, of 57, Rue de Bretagne, Paris, for "A system of match boxes."—Dated 5th February, 1859.

601. Jules Séguin, of 4, Route de Grenelle, commune de St. Maurice, for "Converting the motion of tidal waters into currents and waterfalls, applicable to industrial and agricultural purposes, and for means and apparatus used therefor."—Dated 5th February, 1859.

602. Charles François Cattaert, represented by Ricordeau, of 33, Boulevart de Strasbourg, Paris, for "Metallic mountings on crystal buttons."—Dated 5th February, 1859.

603. Philippe Athanase Segrétin, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "An apparatus for moulding candles."—Dated 5th February, 1859.

604. Chantepie Brothers, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in elastic seamless tissues for foot coverings."—Dated 5th February, 1859.

605. Jean Louis Louis, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in trays for small glasses."—Dated 5th February, 1859.

606. Charles Maurice Paul Canouil, of 84, Faubourg St. Dénis, Paris, for "Manufacture of matches of amorphous phosphorus which cannot be extinguished."—Dated 7th February, 1859.

607. Alexandre Heroz, of 13, Rue St. Dominique, St. Germain, Paris, for "Jointed fastenings applicable to lasts of shoemakers."—Dated 7th February, 1859.

608. Louis Théodore Donnadieu Théodore, represented by Bresson, of 57, Rue de Bretagne, Paris, a Certificate of Addition to his Patent of 28th February, 1855, for "Buttons with safety bolts or levers."—Dated 7th February, 1859.

609. Charles Pierre Aubert, represented by Bresson, of 57, Rue de Bretagne, Paris, for "So-called 'Oriental paint.'"—Dated 7th February, 1859.

610. Miss Félicité Prophête, represented by Bresson, of 57, Rue de Bretagne, Paris, for "A liqueur case with a motor mechanism."—Dated 7th February, 1859.

611. Cyriaque Pierre-es-Liens Dubus, represented by Bresson, of 57, Rue de Bretagne, Paris, for "Driving in piles by means of rammers."—Dated 7th February, 1859.

612. Hercule Louis Alexandre Domingo, of 51, Chaussée Ménilmontant, Paris, for "Manufacture of forks and spoons and dinner service."—Dated 7th February, 1859.

613. Zépherin Louis Ernest Lachevre, domiciled with Chauvin, of 14, Rue de Buci, Paris, for "An insubmersive life-boat."—Dated 7th February, 1859.

614. Dreyfous and Richer, of 54, Rue de Bondy, Paris, for "Preserving eggs."—Dated 7th February, 1859.

615. Bernard Subra, of 60, Rue St. André des Arts, Paris, for "A direct gas carburator."—Dated 7th February, 1859.

616. Antoine Gabriel Nicolas Lingée, of 2, Avenue Victorie, Paris, for "Manufacture of hydraulic cement."—Dated 7th February, 1859.

617. François Louis Messener, of 10, Rue Lenoir, Paris, for "Printing stained paper."—Dated 7th February, 1859.

618. Reynaud and Peuchant, the former of 19, Rue du Bouloi, the latter of 107, Rue de Montreuil, Paris, for "Pressure buckles with a ratch."—Dated 7th February, 1859.

619. Charles Zentner, of 8, Rue Dumaire, Paris, for "A mechanical apparatus for mixing absinthe."—Dated 7th February, 1859.

620. Henri Sauvage North, represented by Desnos, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 3rd August, 1857, for "Improvements in fire arms."—Dated 7th February, 1859.

621. Léon Garcin, of 59, Rue des Petites-Ecuries, Paris, a Certificate of Addition to his Patent of 17th June, 1858, for "A system of railway switches."—Dated 8th February, 1859.

622. Alphonse Eloi Victorin Boucher, of 83, Boulevart Mazas, Paris, for "A revolving indicator."—Dated 8th February, 1859.

623. Léopold Edouard Royon, domiciled 2, Rue des Filles du Calvaire, Paris, for "Improvements in fire-arms."—Dated 8th February, 1859.

624. Alexandre François Royan, domiciled with Hurez, of 57, Rue Rochechouart, Paris, for "Improvements in the manufacture of tiles."—Dated 8th February, 1859.

625. Messrs. Darte, of 51, Rue des Vinaigriers, Paris, for "Inlaid pavements of baked clay."—Dated 8th February, 1859.

626. Pierre Hippolyte Gustave Bérard, 323, Rue St. Denis, Paris, a Certificate of Addition to his Patent of 11th February, 1858, for "Waterproofing tissues by means of concentrated collodium."—Dated 8th February, 1859.

627. François Victor Fournier, of 45, Rue Sedaine, Paris, for "A system of sockets."—Dated 8th February, 1859.

628. Edouard Schneckenburger, of 62, Rue St. Etienne, Batignolles, for "A composition of bones for reproducing objects of sculpture."—Dated 8th February, 1859.

629. Beltzung and Boin, of 24, Rue des Cendrievre, Belleville, for "A machine for grinding, bruising, and crushing."—Dated 8th February, 1859.

630. Pierre François Lesage, domiciled 11, Boulevart de Strasbourg, Hôtel du Chemin de Fer de Strasbourg, Paris, a Certificate of Addition to his Patent of 11th December, 1855, for "A system for emptying cesspools and conveying fecal matter."—Dated 8th February, 1859.

631. Auguste Théophile Rousseau, represented by Ricordeau, of 33, Boulevart de Strasbourg, Paris, for "Self-acting bellows for organs, harmoniums, and other similar instruments."—Dated 8th February, 1859.

632. Claude Joseph Thirault, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Colouring, preserving, and ornamenting iron and steel, and likewise gold, silver, steel, and other metals for industrial purposes."—Dated 8th February, 1859.

633. Clément Léon d'Assonvillez, of 11, Rue de l'Arcade, Paris, for "Tickets for carriages and omnibuses."—Dated 8th February, 1859.

634. Rose Anaïs Deleuil, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in applying wood to inlaid floors, &c."—Dated 8th February, 1859.

635. Everhard Angenscheidt, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in the mechanism of pianos."—Dated 8th February, 1859.

636. Antoine Michel, of 164, Rue de Faubourg Poissonnière, Paris, a Certificate of Addition to his Patent of 13th May, 1856, for "An apparatus for scalding linen, &c."—Dated 9th February, 1859.

637. Gaudin Ambroise Borderie, of 19, Rue Vanneau, Paris, for "A mechanism for driving carriages without horses."—Dated 9th February, 1859.

638. Jean Baptiste Théodore Philibert Oget, of 44, Rue des Vieux Augustins, Paris, a Certificate of Addition to his Patent of 15th September, 1858, for "A lathe for making wooden

heels for half boots and shoes."—Dated 9th February, 1859.

639. Léon Malzard, domiciled with Boucherot, of 309, Rue St. Denis, Paris, a Certificate of Addition to his Patent of 4th February, 1858, for "A printing machine."—Dated 9th February, 1859.

640. Jean Baptiste Brunet, of 10, Rue Castiglione, Paris, for "A system of planes representing rotary surfaces."—Dated 9th February, 1859.

641. Louis Perrin, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in revolvers."—Dated 9th February, 1859.

642. Alfred Nobel, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "A portable barometer with direct pressure and indicators."—Dated 9th February, 1859.

643. John Petrie, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in apparatus for drying warps, yarns, and textile tissues."—Dated 9th February, 1859.

644. George Adshead, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in steam boilers."—Dated 9th February, 1859.—(English Patent, expiring 30th June, 1872.)

645. Dameron and Noiretat, of 25, Rue du Dragon, Paris, for "A composition, being a substitute for ivory."—Dated 9th February, 1859.

646. Traxler and Steverlynck, of 49, Rue d'Amsterdam, Paris, for "A registering and controlling apparatus."—Dated 8th February, 1859.

647. Emile Revest, of 45, Rue des Petites-Ecuries, Paris, for "A machine for coating paper and pasteboard."—Dated 8th February, 1859.

648. Adolphe Félix Gentil-Descarrierève, of 27, Rue du Faubourg St. Martin, Paris, a Certificate of Addition to his Patent of 3rd January, 1857, for "Applying photographic roofs to stereoscopes and dioramas, in order to obtain dioramic effects."—Dated 8th February, 1859.

649. Hippolyte Henri Flamant, of 13, Rue Michael-le-Comte, Paris, for "A system of keys with catches."—Dated 9th February, 1859.

650. Henri Léon Cazal, of 25, Rue Bonaparté, Paris, for "Scales with hydraulic springs."—Dated 9th February, 1859.

651. Charles François Mongin, of 11, Rue des Juifs, Paris, a Certificate of Addition to his Patent of 8th January, 1859, for "Manufacture of saws."—Dated 10th February, 1859.

652. Charles Sardou, represented by Daubréville, of 60, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 6th February, 1858, for "Felt hats with adhesive rims."—Dated 10th February, 1859.

653. Jacques Etienne Daud, of 62, Rue Ménilmontant, Paris, a Certificate of Addition to his Patent of 24th September, 1858, for "Elastic footcoverings."—Dated 10th February, 1859.

654. Jean Baptiste Victor Grumel, of 20, Rue de la Ciseraie, Paris, for "Dyeing textile substances."—Dated 10th February, 1859.

655. Louis Dominique Girard, of 44, Rue d'Enghien, Paris, for "A crane worked by a turbine."—Dated 10th February, 1859.

656. Beers, of Sydney, represented by Tolhausen, of 35, Boulevart Bonne-Nouvelle, Paris, for "Improvements in the construction of American and other railways."—Dated 10th February, 1859.

657. Maximilien Cornely, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Means of protecting resin."—Dated 10th February, 1859.

658. Thomas Guinier, of 23, Rue de Grenelle St. Honoré, Paris, a Certificate of Addition to his Patent of 17th May, 1858, for "Improvements in taps, &c."—Dated 10th February, 1859.

659. Mathieu Moryollin, of 76, Route de Chatillon, commune de Vanves, for "A brick machine."—Dated 10th February, 1859.

660. Hedfonse Pierre Hénon, represented by Sautter, of 14, Boulevart Montmartre, Paris, for "A machine for breaking sugar."—Dated 11th February, 1859.

661. Jules Vuignier, of 11, Passage d'Angoulême, Paris, for "Improvements in air-holes."—Dated 11th February, 1859.

662. Dauzon and Rolland, the former of Layrac, the latter of Agen, département de Lot-et-Garrone, for "Manufacture of tobacco paper for cigarets."—Dated 12th February, 1859.

663. Désiré Nicolas Mauclère, of Osne le Val, département de la Haute Marne, for "Heating stoves and other drying rooms, by means of the gas of blast furnaces, radiated in metal pipes."—Dated 14th February, 1859.

664. Marie Charlemagne Dégon, of St. Quentin, département de l'Aisne, for "Reels for obtaining skeins of sized thread, applicable to all kinds of sizing machines."—Dated 14th February, 1859.

665. Balthazar Saurin, of Draguignan, département du Var, for "Improvements in mills with an alternate motion for sawing timber."—Dated 14th February, 1859.

666. Jean Adolphe Aubert, of 33, Chemin de Coudray, Nantes, département de la Loire Inférieure, a Certificate of Addition to his Patent of 17th August, 1858, for "A harvesting instrument."—Dated 14th February, 1859.

667. René Hervouet, of 16, Rue Crébillon, Nantes, département de la Loire Inférieure, for "A metronome for taking the measures of shirts."—Dated 14th February, 1859.

668. Oscar Lacroix, Laroche, and Lacroix, of La Couronne, département de la Charente, for "A metallic gauze-wire for making design paper."——Dated 9th February, 1859.

669. Alexandre Plaff, domiciled at the Hôtel de l'Ours Noir, Strasbourg, département du Bas Rhin, a Certificate of Addition to his Patent of 30th November, 1858, for "A so-called 'barometric motor.'"—Dated 11th February, 1859.

670. Louis and Anasthasie Engrand, of Jouy, at Josan, département de Seine et Oise, for "Impervious trousers."—Dated 14th February, 1859.

671. Prosper Guy, of Saint Maurice, near Larochelle, département de la Charente Inférieure, for "An alimentary preparation."—Dated 12th February, 1859.

672. Paris and Poidevin, of Amiens, département de la Somme, for "An hydraulic gauge or self-acting apparatus for registering the flow of liquids."—Dated 14th February, 1859.

673. Pierre Charles Patrouilleau, of 47, Rue Ste. Croix, Bordeaux, département de la Gironde, for "Manufacture of sea biscuit."—Dated 14th February, 1859.

674. Ferdinand Rouillon, of Grenoble, département de l'Isère, for "A peculiar mode of cutting gloves."—Dated 15th February, 1859.

675. L'Hermite, of Faubourg St. Maurice, Lille, département du Nord, for "A machine for crushing dry or carbonized substances, such as chicory, animal charcoal, &c."—Dated 15th January, 1859.

676. Gustave Marqfoy, of 110, Cours du Jardin Public, Bordeaux, département de la Gironde, a Certificate of Addition to his Patent of 20th July, 1854, for "Improvements in telegraphic apparatus."—Dated 15th February, 1859.

677. Courdouzy and Tanerer, of 11, Rue Pomme d'Or, Bordeaux, département de la Gironde, for "A steamer with a continuous screw."—Dated 16th February, 1859.

678. Jean François Lemercier, of La Ferté Macé, département de l'Orne, for "A process for rendering church windows solid."—Dated 16th February, 1859.

679. Louis Parisot, of Plancher les Mines, département de la Haute-Saône, for "A mode of fastening the square bits to watch keys."—Dated 16th February, 1859.

680. Joseph Wanson, of 41, Rue du Roi de Sicile, Paris, a Certificate of Addition to his Patent of 17th June, 1858, for "Fixing glass cocks.—Dated 11th February, 1859.

681. D'Anglars and Besand, the former of Batignolles, the latter of 38, Rue Bonaparte, Paris, for "Plastic mastic."—Dated 11th February, 1859.

682. Joseph Masbon, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Improvements in applying electricity to bells, indicators, and locks."—Dated 11th February, 1859.

683. Henri Picq, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 28th July, 1857, for "A registering weighing machine."—Dated 11th February, 1859.

684. Basile Deloni Demacon, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "A kind of scraper."—Dated 11th February, 1859.

685. Pierre Ernest Aimont, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A system of carriage with independent wheels and rails affixed thereto.—Dated 11th February, 1859.

686. Louis Monin, represented by Bresson, of 57, Rue de Bretagne, Paris, for "A belt for the private use of ladies."—Dated 12th February, 1859.

687. Jean Baptiste Perreur, represented by Bresson, of 57, Rue du Bretagne, Paris, a Certificate of Addition to his Patent of 15th January, 1856, for "Improvements in nail machines."—Dated 12th February, 1859.

688. Douvry and Ad. Breteau, represented by Bresson, of 57, Rue de Bretagne, Paris, a Certificate of Addition to their Patent of 24th June, 1858, for "Fastening purses, portemannaies, bags, &c."—Dated 12th February, 1859.

689. Alexandre Mina, represented by Bresson, of 57, Rue de Bretagne, Paris, a Certificate of Addition to his Patent of 9th June, 1858, for "Mechanism of large bells."—Dated 12th February, 1859.

690. De Clippèle d'Hem, represented by Fringart, of 10, Rue de Provence, Paris, for "Cutting leather for making straps and pipes."—Dated 12th February, 1859.

691. Pierre Godfroy, of 12, Rue Truffaut, Batignolles, a Certificate of Addition to his Patent of 4th January, 1859, for "Improvements in the manufacture of funeral garlands."—Dated 12th February, 1859.

692. Jean Jouffray, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Hydraulic springs for railway carriages."—Dated 12th Feruary, 1859.

693. Charles Auguste Legros, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "A system of heating and drying applicable to industrial purposes."—Dated 12th February, 1859.

694. Cavé and Chaparède, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to their Patent of 24th January, 1859, for "A system of apparatus for excavating canals and rivers, &c."—Dated 12th February, 1859.

695. Jean Antoine Frédéric Joubert, of 53, Rue de la Roquette, Paris, for "Convex iron, with ribs for iron framings, floors, &c."—Dated 12th February, 1859.

696. Marie Ange Victor Moreau, of 1, Rue Royale à La Villette, for "A strangling bridle for horses, &c."—Dated 12th February, 1859.

697. Alexandre Lebon, of 8, Rue des Noyers, Paris, a Certificate of Addition to his Patent of 20th February, 1856, for "Printing type and vignettes or typographic engravings on gelatine card with inks of various colours, &c."—Dated 12th February, 1859.

698. Joseph Lamour, of 15, Rue Tiquetonne, Paris, for "A roasting grate."—Dated 12th February, 1859.

699. Amand Xavier Soulas, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "A system of carriages."—Dated 12th February, 1859.

700. Michel Frenay, of 41, Rue Ste. Anne, Paris, for "Straw hats with cotton lace."—Dated 15th February, 1859.

701. Prudent Françoise Cochot, of 3, Passage du Jardin, Montrouge, for "Fancy arms."—Dated 15th February, 1859.

702. Julien Isidore Lefebure, of Rue de la Michodière, Hôtel de Gand, Paris, a Certificate of Addition to his Patent of 21st February, 1857, for "Retting flax and other textile substances."—Dated 15th February, 1859.

703. Edouard Wilkins, of 39, Rue de l'Echiquier, Paris, for "Improvements in the manufacture of drain pipes and other apparatus for conveying

manure to the subsoil."—Dated 15th February, 1859.—(English Patent, expiring 1st February, 1873.)

704. Aimable Philémond Marguier, of 13, Rue Duperré, Paris, for "A machine for making corks of various shapes, &c."—Dated 15th February, 1859.

705. André Georges Ardillon, of 11, Rue des Lions St. Paul, Paris, for "A portable coal-hole."—Dated 15th February, 1859.

706. Jean Paul Dordet, represented by Amouroux, of 333, Rue St. Martin, Paris, for "A portable machine for corking bottles."—Dated 15th February, 1859.

707. Victor Auguste Théophile Monbarqué, of 13, Rue des Vertus, Paris, for "Apparatus for the manufacture of pearls and other fancy articles."—Dated 15th February, 1859.

708. Nicolas Bienvenu, represented by Dreyfous, of 54, Rue de Bondy, Paris, for "So-called 'empire petticoats.'"—Dated 15th February, 1859.

709. François Ernest Breton, of 29, Rue Censier, Paris, for "A mechanical process for graining hides."—Dated 14th February, 1859.

710. Bozonet and Alvergniat, of 24, Chaussée de Clignancourt, Montmartre, for "A powder for cleaning copper."—Dated 15th February, 1859.

711. Etienne Juzel, of 18, Rue Pérelle, Vaugirard, for "A system of railway carriages."—Dated 15th February, 1859.

712. Jean Dominique Cazaubon, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Moveable water-closets with a separating apparatus."—Dated 15th February, 1859.

713. Pierre Emile Martin, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 11th June, 1858, for "An apparatus working by the reaction of water, air, &c."—Dated 15th February, 1859.

714. Jean Baptiste Falguière, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 10th September, 1857, "Mills with vertical millstones, &c."—Dated 15th February, 1859.

715. Louis Fleurus Gustave Petitpierre-Pellion, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "A pocket registering apparatus."—Dated 15th February, 1859.

716. Isaac Daniel, of 8, Rue Thevenot, Paris, for "A kind of petticoats."—Dated 15th February, 1859.

717. Guillaume Philippe Wünsch, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in the construction of collars and other harness."—Dated 15th February, 1859.

718. Amans de Chavagneus, of 58, Quai de la Mégisserie, Paris, a Certificate of Addition to his Patent of 2nd December, 1858, for "A system of wefts for fabrics."—Dated 16th February, 1859.

719. James Parkinson, represented by Perpigna, of 42, Rue Neuve Ste. Augustin, Paris, for "Improvements in the construction of coffins."—Dated 16th February, 1859.—(English Patent, expiring 11th February, 1873.)

720. Nicolas Clément Yot, of 37, Rue Phelippeaux, Paris, a Certificate of Addition to his Patent of 19th March, 1857, for "A pencil case."—Dated 16th February, 1859.

721. Robert Jofferson Bingham, represented by Yapp, of 6, Rue Montpensier, Paris, for "Improvements in telegraphic cables."—Dated 16th February, 1859.

722. Jacques Amédée Barrier, domiciled with Denouille, of 66, Rue Basse du Rempart, Paris, a Certificate of Addition to his Patent of 11th August, 1858, for "A lace loom."—Dated 16th February, 1859.

723. William Adolphe Covert, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Self-acting switches."—Dated 16th February, 1859.—(English Patent, expiring 10th February, 1873.)

724. Pierre Denis Dujat, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in travelling cases."—Dated 16th February, 1859.

725. Mamour and Schmitz, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in the manufacture of blinds, screens, &c."—Dated 16th February, 1859.

726. Henri Dominique Popot, of 48, Rue des Vignes, Vaugirard, for "Colouring coffee."—Dated 16th February, 1859.

727. Jules Joseph Félix Hanon, of 49, Avenue de Clichy, Batignolles, for "Vegetable glue of gluten."—Dated 16th February, 1859.

728. Adolphe Charles Guillemot, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A writing machine."—Dated 16th February, 1859.

729. C. Edouard Janicot, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A system of covering halls, market-places, military fields and encampments, public monuments, and other surfaces."—Dated 16th February, 1859.

730. Victor Lenoir, of 2, Rue de l'Annonciade, Lyon, département du Rhône, for "Chemical process for giving fancy articles the lustre of silk."—Dated 14th February, 1859.

731. Guérin Longet, represented by Michael Longet, of 10, Rue de Béarn, Lyon, département du Rhône, for "A reducible spring mattress with an horizontal action and lateral supports."—Dated 15th February, 1859.

732. Stehelin and Co., represented by Stehelin, of Bitschwiller, département du Haut Rhin, a Certificate of Addition to their Patent of 18th December, 1858, for "A self-cleaning circular top card."—Dated 15th February, 1859.

733. Desvosseaux and Rollet, of 28, Rue de Bourbon, Lyon, département du Rhône, for "A condensing and heating apparatus."—Dated 15th February, 1859.

734. Fabius Mainardi, of 21, Place Tholozan, Lyon, département du Rhône, a Certificate of Addition to his Patent of 17th January, 1859, for "A wheel for throwing and measuring thread."—Dated 17th February, 1859.

635. Jean Pouzade, of 41, Rue Montbernard, Lyon, département du Rhône, for "A system of pumps."—Dated 17th February, 1859.

736. Louis Fossier, of Autry, département des Ardennes, for "A system of mills."—Dated 18th February, 1859.

737. Jacques Désiré Delille, of Evreux, département de l'Eure, for "Improvements in his Patent economical kitchen range (N° 25,468)."—Dated 17th February, 1859.

738. Poron Brothers, of Troyes, département de l'Aube, for "Improvements in machines for manufacturing hosiery articles."—Dated 18th February, 1859.

739. Jacques Porlier, of 204, Cours St. Jean, Bordeaux, département de la Gironde, for "A double screw wheel for cleaning and sorting earth-nuts."—Dated 19th February, 1859.

740. François Gravier, of Valencienne, département du Nord, for "A patent lever axle."—Dated 19th February, 1859.

741. François Gravier, of Valencienne, département du Nord, for "A machines for making horse-shoes."—Dated 19th February, 1859.

742. François Gravier, of Valencienne, département du Nord, for "Tyres which are convex on both sides."—Dated 19th February, 1859.

743. François Gravier, of Valencienne, département du Nord, for "A patent jack axle."—Dated 19th February, 1859.

744. François Gravier, of Valencienne, département du Nord, for "Manufacture of wheels with one single felly of bent wood."—Dated 19th February, 1859.

745. Jacques Antoine Vouillon, of St. Racho, département de Saône-et-Loire, a Certificate of Addition to his Patent of 23rd November, 1857, for "A plough, &c."—Dated 19th February, 1859.

746. Adrien Renatry, of Vesoul, département de la Haute Saône, for "A machine for essaying and cleansing water pipes."—Dated 21st February, 1859.

747. Dubosc and Lefebvre, of 13, Route de Caen, Rouen, département de la Seine Inférieure, for "Improvements in French looms."—Dated 14th February, 1859.

748. Ambroise Alavoine, of 43, Rue de la Justice, Elbeuf sur Seine, a Certificate of Addition to his Patent of 27th December, 1856, for "A machine for weaving all kinds of stuffs."—Dated 16th February, 1859.

749. Claude Febvret, of 4, Rue de la Madeleine, Dijon, département de la Côte d'Or, a Certificate of Addition to his Patent of 10th December, 1858, for "Letter envelopes, &c."—Dated 19th February, 1859.

750. Charles Gentil, of 30, Quai Lamiral-Lalande, Mans, for "Closing digesters used especially for preserving alimentary substances."—Dated 19th February, 1859.

751. François Joseph Cuvillier, of Arras, département du Pas de Calais, for "A rasp with a pushing and peeling apparatus."—Dated 18th February, 1859.

752. Rénis and Monié, of 50, Boulevart St. Aubin, Toulouse, département de la Haute Garonne, a Certificate of Addition to his Patent of 19th February, 1858, for an "Aerometric regulator."—Dated 19th February, 1859.

753. Eugène Pasquier, of Rue Hinemar Prolongé, Reims, département de la Marne, for "A machine for washing wool and other objects."—Dated 21st February, 1859.

SWEDEN.*

List of Patents of Inventions and Improvements granted during the year 1858.†

(For preceding List, see No. 466 of this Journal.)

(*Communicated by the Swedish Government.*)

1. L. A. Larsson, for "An agricultural machine for breaking up reeds and stubbles."—7 years.—Dated 9th January, 1858.
2. F. Siemens, of London, for "A furnace."—8 years.—Dated 27th January, 1858.
3. A. Murtineddu, of Marseilles, for "Manufacturing and using a composition for blasting."—8 years.—Dated 11th February, 1858.
4. H. Bessemer, of London, for "A furnace for the manufacture of bar-iron and steel."—9 years.—Dated 26th February, 1858.
5. P. J. Ekman, for "A machine for planing and smoothing beams, boards, planks, and lists."—10 years.—Dated 2nd March, 1858.
6. L. D. Girard, of Paris, for "A turbine."—8 years.—Dated 18th March, 1858.
7. E. Grenet and A. Vavin, of France, for "An electrical battery."—8 years.—Dated 22nd March, 1858.
8. C. A. Angström, for "A nail-machine."—10 years.—Dated 29th March, 1858.
9. C. M. Th. Scharin, for "A machine for sawing and cutting wood."—10 years.—Dated 12th May, 1858.
10. T. Petit Jean, of Belgium, for "A mode of manufacturing aluminium and magnesium."—5 years.—Dated 12th May, 1858.

---

* For the Swedish Patent Law, see No. 354 of this Journal.

† The preceding Lists, from 1830 to 1856, may be consulted in the Library of the Great Seal Patent Office in the original and in an English translation.

11. C. Tollen, for "Manufacture of waterproof leather."—8 years.—Dated 27th May, 1858.

12. E. Cumenge, of France, for "A process for the manufacture of aluminium."—8 years.—Dated 4th June, 1858.

13. W. Miller, for "Improvements in the mode of making sugar, and in certain apparatus belonging thereto."—10 years.—Dated 19th June, 1858.

14. C. U. Lindblad, for "A mixture of colours for painting iron and wooden vessels, and other articles which are exposed to the action of the atmosphere or water."—3 years.—Dated 19th June, 1858.

15. Th. Boberg, for "A mode of screwing or fastening the boxes of valves, applicable to all machines."—6 years.—Dated 30th June, 1858.

16. C. A. Rettig, for "Improvements in iron works."—10 years.—Dated 30th June, 1858.

17. Hands Johnson, for "Improvements in drying and burning bricks."—8 years.—Dated 30th June, 1858.

18. N. Nordenskjold and B. G. Bredberg, for "Improvements in the manufacture of rich and poor sulphurous copper ore."—10 years.—Dated 14th July, 1858.

19. Th. Munktell, for "Moveable steam engines, or so-called 'locomotives,' with an apparatus for extinguishing sparks."—10 years.—Dated 6th August, 1858.

20. W. Bystrom, for "A lime-kiln worked by means of coal and peat."—5 years.—Dated 28th August, 1858.

21. V. Sjoberg, for "Improvements in so-called 'American chain pumps.'"—8 years.—Dated 2nd September, 1858.

22. J. P. Broberg, for "Improvements in naphtha or gas-oil lamps."—8 years.—Dated 13th September, 1858.

23. A. K. Hazelius and J. Ohlsson, for "Manufacture of tallow candles from certain fusible substances."—4 years.—Dated 13th September, 1858.

24. V. Merighi, for "Means of preventing or abating dust on railways."—6 years.—Dated 13th September, 1858.

25. G. Cavaggia and A. Spinelli, for "A new motor for machines used in industry."—10 years.—Dated 17th September, 1858.

26. L. F. Corbelli, of Florence, for "Improvements in separating aluminium from its component parts."—8 years.—Dated 27th September, 1858.

27. H. F. W. Wesch, for "A mode of fixing slates on roofs of a certain shape."—5 years.—Dated 27th September, 1858.

28. H. B. Nabstedt, for "Improvements in closets."—8 years.—Dated 30th September, 1858.

29. G. Rhodes, of England, for "Camp or field tents without centre support or pole."—8 years.—Dated 7th October, 1858.

30. A. Mörsch, for "Stoves of earthen panes and grates of fire-places."—7 years.—Dated 13th October, 1858.

31. J. and Ezra Harthan, for "Improvements in machines for obtaining motive power."—10 years. Dated 14th October, 1858.

32. J. Thermaenins, for "A horse-gin."—6 years. Dated 10th November, 1858.

33. F. Wedel Jarlsberg, for "A so-called 'control-compass.'"—10 years.—Dated 22nd November, 1858.

34. Ross and Thos. Winans, of Baltimore, for "Improvements in the form of the hull of steam vessels."—10 years.—Dated 27th November, 1858.

35. Ross and Th. Winans, of Baltimore, for "Improvements in the construction of steam vessels."—10 years.—Dated 27th November, 1858.

36. Ross and Th. Winans, of Baltimore, for "Improvements in ocean steamers."—10 years.—Dated 27th November, 1858.

37. Ross and Th. Winans, of Baltimore, for "Improvements in the mode of connecting the machinery of steam vessels with the shafts of screws."—10 years.—Dated 27th November, 1858.

38. G. H. Ozouf, of Paris, for "Apparatus for converting lime used for defecating the juice of beetroot and cane into carbonate, and applying said apparatus to sugar works."—8 years.—Dated 13th December, 1858.

39. A. Normann, for "An apparatus for distilling spirits."—10 years.—Dated 13th December, 1858.

40. A. Olzon, for "A turbine."—7 years.—Dated 20th December, 1858.

41. P. B. Sanderson, for "Manufacture of paper pulp from leaves of trees."—6 years.—Dated 20th December, 1858.

COLONIAL PATENT LAW.

INDIA.

AN ACT FOR GRANTING EXCLUSIVE PRIVILEGES TO INVENTORS.

Victoria R.

Whereas by the 26th section of the Act passed in the 16th and 17th years of Our reign, entitled "An "Act to provide for the Government of India," it is provided that "no law or regulation made by the Go- "vernor-General in Council shall be invalid by reason "only that the same affects any prerogative of the "Crown, provided such law or regulation shall have "received the previous sanction of the Crown, signi- "fied under the Royal Sign Manual of Her Majesty, "countersigned by the President of the Board of "Commissioners for the Affairs of India:"

And whereas by the 3rd section of an Act passed in the 21st and 22nd years of Our reign, entitled "An "Act for the better Government of India," it is enacted that "any warrant or writing under Her "Majesty's Royal Sign Manual, which, by the Act "of the Session holden in the 17th and 18th years "of Her Majesty, chapter 77, or otherwise, is required "to be countersigned by the President of the Com- "missioners for the Affairs of India, shall, in lieu of "being so countersigned, be countersigned by one "of Her Majesty's Principal Secretaries of State:"

And whereas it is intended to introduce into the Legislative Council of India the draft of a proposed

Act "for granting exclusive privileges to inventors," which is of the tenor and effect following; (that is to say),

Preamble.

Whereas Act VI. of 1856, entitled "An Act for "granting exclusive privileges to Inventors," was passed by the Legislative Council of India without the sanction of Her Majesty to the passing thereof having been previously obtained and signified in pursuance of the statute passed in the seventeenth year of the reign of Her Majesty, entitled "An Act to "provide for the Government of India:" And whereas Her Majesty's Law Officers having given it as their opinion that the Legislative Council of India was not competent to pass Act VI. of 1856, without previously obtaining the sanction of the Crown, and the Court of Directors of the East India Company having in pursuance of the power vested in them by law disallowed Act VI. of 1856, and having signified to the Governor General of India in Council their disallowance thereof, the said Act was repealed by Act IX. of 1857: And whereas it is expedient, for the encouragement of inventors of new manufactures, that certain exclusive privileges in their inventions should be granted to them in India, and that exclusive privileges obtained under the said Act should be protected: It is enacted as follows (the sanction of Her Majesty to the passing of this Act having been previously obtained and signified in pursuance of the said statute):—

Inventor may petition for Leave to file Specification.—Form, &c. of Petition.

I. The inventor of any new manufacture may petition the Governor General of India in Council for leave to file a specification thereof. Every such petition shall be in writing in the form or to the effect mentioned in the schedule hereunto annexed, and shall be signed by the petitioner or (in case the petitioner shall be absent from India), by an authorized agent, and shall state the name, addition, and place of residence of the petitioner, and the nature of the invention.

Order to file Specification.

II. Upon such petition the Governor General of India in Council may make an order authorizing the petitioner to file a specification of the invention.

Power to refer Petition for Enquiry and Report.

III. Before making such order the Governor General of India in Council may refer the petition to any person or persons for inquiry and report, and such person or persons shall be entitled to a reasonable fee for such enquiry and report, to be paid by the petitioner, the amount of such fee, in case of dispute, to be settled by a judge of one of Her Majesty's Courts of Judicature in a summary manner.

Petitioner entitled to exclusive Privilege for Fourteen Years from the time of filing Specification.—Extension of Term of exclusive Privilege.

IV. If, within the space of six calendar months from the date of such order the petitioner cause a specification of his invention to be filed in manner herein-after mentioned, the petitioner, his executors, administrators, or assigns, shall be entitled to the sole and exclusive privilege of making, selling, and using the said invention in India, and of authorizing others so to do, for the term of fourteen years from the time of filing such specification, and for such further term (if any) not exceeding fourteen years from the expiration of the first fourteen years, as the Governor General of India in Council may think fit to direct, upon petition to be presented by such inventor, at any period not more than one year, and not less than six calendar months, before the expiration of the exclusive privilege hereby granted.

Order to file Specification may be made subject to Conditions.

V. An order authorizing the filing of a specification, or for extending the term of such exclusive privilege as aforesaid, may be made subject to any such conditions and restrictions as the Governor General of India in Council may think expedient.

Specification to be in Writing, and to describe the Invention.

VI. Every specification of an invention filed under this Act shall be in writing, and shall be signed by the petitioner, and shall particularly describe and ascertain the nature of the said invention, and in what manner the same is to be performed.

Petition and Specification to be left with Secretary to Government.—Petition, &c. to be accompanied by Declaration.—Date of Delivery to be endorsed on Petition.

VII. Every petition for leave to file a specification and every specification filed under this Act shall be left with the Secretary to the Government of India in the Home Department, and every petition and specification shall be accompanied by a declaration in writing, signed by the petitioner in the form or to the effect mentioned in the Schedule hereunto annexed, marked A and B respectively; and if the inventor be absent from India, the petition and specification shall also be accompanied by a declaration signed by the agent who shall present or file the same, to the effect that he verily believes that the declaration, purporting to be the declaration of the inventor, was signed by him, and that the contents thereof are true, which declaration shall be in the form, or to the effect mentioned in the said Schedule. The date of the delivery of every such petition and specification shall be endorsed on the same respectively, and shall also be recorded at the office of the said secretary.

False Statement in Declaration punishable as Perjury.

VIII. If any person who shall make a declaration under this Act shall wilfully and corruptly make any false statement therein, he shall be deemed guilty of perjury, and shall be proceeded against, and upon conviction punished accordingly.

Specification not to be filed before Payment of Fees.

IX. No specification shall be filed until the petitioner shall have paid all fees payable under this Act, including the fees (if any) of the person or persons to whom the petition shall have been referred for enquiry and report.

Copies of Specification to be delivered and distributed.—To be open to Inspection.

X. At the time of delivering the specification for the purpose of being filed, the petitioner shall cause

to be delivered to the said secretary five copies thereof, of which,—

One shall be sent to and filed by one of the Secretaries to the Government of Bengal;

One shall be sent to and filed by one of the Secretaries to the Government of Fort St. George;

One shall be sent to and filed by one of the Secretaries to the Government of Bombay; and

One shall be sent to and filed by one of the Secretaries to the Government of the North-Western Provinces.

A copy of such specification shall be open at all reasonable times at the Office of each of the said Secretaries to public inspection upon payment of a fee of one Rupee.

Books for the Registry of Petitions, Specifications, &c.

XI. A book shall be kept in the office of the said secretary to the Government of India, wherein shall be entered and recorded every such petition and specification, and every order made upon such petition or relating to the invention therein mentioned. Every specification shall be numbered according to the order in which it is entered in such book; and a reference shall be made in such book, in the margin of the entry of each specification, to every order relating to the invention, and to every petition, memorandum, or amended specification, which shall be filed under the provisions of Section 14.

Inspection of Registry Book.—Certified Copy of Entry to be given.

XII. Such book, or a copy thereof, shall be open at all convenient times for the inspection of any person upon payment of a fee of one rupee; and the said Secretary shall cause a copy of any entry therein, certified under his hand, to be given to any person requiring the same on payment of the expense of copying.

Certified Copy to primâ facie Evidence.

XIII. Every such certified copy shall be primâ facia evidence of the document of which it purports to be a copy.

In what Cases Petitioner may apply for Leave to file amended Specification.—Effect of amended Specification.

XIV. If after the filing of the specification the petitioner shall have reason to believe that through mistake or inadvertence he has erroneously made any mis-statement in his petition or specification, or included therein something which at the date of his petition was not new or whereof he was not the inventor, or that such specification is in any particular defective or insufficient, he may petition the Governor General in Council for leave to file a memorandum, pointing out such error, defect, or insufficiency, and disclaiming any part of the alleged invention, or in case of any defect or insufficiency of the specification for leave to file an amended specification. The petition shall state how the error, defect, or insufficiency occurred, and that it was not fraudulently intended, and shall be accompanied by a declaration in writing signed by the petitioner, and if he be absent from India by his agent, stating that the contents of such petition are true, to the best of his knowledge and belief. Upon such petition the Governor General in Council may make an order allowing such memorandum or amended specification to be filed. All the provisions of sections X., XI., XII., and XIII., applicable to the specifications, shall be applicable to the petitions, orders, and memoranda or amended specifications referred to in this section. An amended specification filed under the provisions of this Act shall, except as to suits or proceedings relating to the exclusive privilege which shall be pending at the time of the filing of such amended specification, have the same effect as if it had been the specification first filed; provided that nothing contained in an amended specification shall extend or enlarge any exclusive privilege before acquired.

No Person entitled to exclusive Privilege in any of the following Cases:—If Invention is of no Utility, or—If Invention not new, or—If Petitioner is not Inventor, or—If Specification does not describe the Invention.—If Petition or Specification contain fraudulent Mis-statement.

XV. No person shall be entitled to any exclusive privilege under the provisions of this Act—

If the invention is of no utility, or

If the invention, at the time of presenting the petition for leave to file the specification, was not a new invention, or within the meaning of this Act, or

If the petitioner is not the inventor thereof, or

If the Specification filed or the amended specification (if any) does not particularly describe and ascertain the nature of the invention, and in what manner the same is to be performed, or

If the original or any subsequent petition relating to the invention or the original or any amended Specification contain a wilful or fraudulent mis-statement.

Exclusive Privilege to cease if Government declare it mischievous, &c. to public—Or, if Government, upon breach of Condition proved, declare that it shall cease.

XVI. Every exclusive privilege under this Act shall cease if the Governor General of India in Council shall declare that the same, or the mode in which it is exercised, is mischievous to the State, or generally prejudicial to the public; or if a breach of any special condition on which the petitioner shall be authorized to file a specification, or upon which the term of the exclusive privilege shall be extended, shall be proved to the satisfaction of any of Her Majesty's Courts of Judicature, and if the Governor General of India in Council shall thereupon declare that such exclusive privilege shall cease.

Importer of Invention, if not the actual Inventor, not to be deemed Inventor.

XVII. The importer into India of a new invention shall not be deemed an inventor within the meaning of this Act unless he be the actual inventor.

Foreign Inventor.

XVIII. A foreigner, whether resident abroad or not, may petition for leave to file a specification under this Act.

An Invention not publicly used or known in the United Kingdom or in India before the Application for Leave to file a Specification to be deemed a

new Invention within this Act.—Knowledge of Invention fraudulently acquired. — Proviso. — Public Use by actual Inventor.

XIX. An invention shall be deemed a new invention within the meaning of this Act if it shall not, before the time of applying for leave to file the specification, have been publicly used in India or in any part of the United Kingdom of Great Britain and Ireland, or been made publicly known in any part of India or of the United Kingdom by means of a publication, either printed or written, or partly printed and partly written. The public use or knowledge of an invention, prior to the application for leave to file a specification, shall not be deemed a public use or knowledge within the meaning of this section, if the knowledge shall have been obtained surreptitiously or in fraud of the inventor, or shall have been communicated to the public in fraud of the inventor or in breach of confidence: provided the inventor shall, within six calendar months after the commencement of such public use, apply for leave to file his specification, and shall not previously have acquiesced in such public use: provided also, that the use of an invention in public by the inventor thereof, or by his servants or agents, or by any other person by his licence in writing, for a period not exceeding one year prior to the date of his petition, shall not be deemed a public use thereof within the meaning of this Act.

Inventor having obtained English Letters Patent to petition within Twelve Months from the passing of this Act or from the Date of the Letters Patent. —Invention, if not publicly known or used in India at the Time of applying for such Letters Patent, to be deemed new.—What to be stated in such Petition.—Duration of exclusive Privilege.

XX. If an inventor who, prior to the time of applying for leave to file a specification of an invention under this Act, shall have obtained Her Majesty's Letters Patent for the exclusive use of such invention in the United Kingdom, or any part thereof, shall, within twelve calendar months from the passing of this Act, or within twelve calendar months from the date of such Letters Patent, petition the Governor General of India in Council for leave to file a specification of such invention (which petition shall be in writing, in the form or to the effect mentioned in the schedule), the invention shall be deemed a new invention within the meaning of this Act, if it was not publicly known or used in India at or before the date of the petition for such Letters Patent, notwithstanding it may have been publicly known or used in some part of the United Kingdom or in India before the time of his petitioning, under this Act, for leave to file the specification: Provided the petition for leave to file the specification shall state that such Letters Patent have been granted, and shall also state the date thereof and the term during which the same are to continue in force: Provided also, that an exclusive privilege obtained under the provisions of this Act by an inventor who has obtained Her Majesty's Letters Patent for the exclusive use of such invention, shall cease to have effect if such Letters Patent be revoked or cancelled; and that no such exclusive privilege shall extend beyond the term granted by such Letters Patent unless the same shall be renewed, in which case the exclusive privilege may be renewed under this Act for the extended term or any part thereof.

Saving of Rights of Persons who used Invention before 7th of July, 1855.

XXI. No exclusive privilege obtained under this Act shall entitle the owner of such privilege to exclude any person from using the invention, who, prior to the 7th day of July, 1855, used the same in India.

Action for Infringement.

XXII. An action may be maintained by an inventor against any person who, during the continuance of any exclusive privilege granted by this Act, shall, without the licence of the said inventor, make, use, sell, or put in practice the said invention, or who shall counterfeit or imitate the same. Provided that no such action shall be maintained in any court other than the principal court of original jurisdiction in civil cases within the local limits of whose jurisdiction the cause of action shall accrue or the defendant shall reside as a fixed inhabitant.

Defect in Specification or Petition, or want of Novelty in Invention, &c., no Defence to Action for Infringement.—The actual Use of an Invention in India or the United Kingdom before Date of Petition a Defence to such Action.

XXIII. No such action shall be defended upon the ground of any defect or insufficiency of the specification of the invention, nor upon the ground that the original or any subsequent petition relating to the invention, or the original or any amended specification, contains a wilful or fraudulent mis-statement; nor upon the ground that the invention is not useful; nor shall any such action be defended upon the ground that the plaintiff was not the inventor, unless the defendant shall show that he is the actual inventor, or has obtained a right from him to use the invention either wholly or in part. Any such action may be defended upon the ground that the invention was not new if the person making the defence, or some person through whom he claims, shall, before the date of the petition for leave to file the specification, have publicly or actually used, in India or in some part of the United Kingdom, the invention, or that part of it of which the infringement shall be proved, but not otherwise.

Application to Supreme Courts to declare exclusive Privilege not to have been acquired on following Grounds:—Invention of no Utility.—Invention not new.—Petitioner not the Inventor.—Invention not described in Specification.—Fraud in Petition or Specification.—Fraudulent Mis-statement in Petition or Specification.—Insufficient Description of Part of Invention in Specification.

XXIV. It shall be lawful for any person to apply by motion to any of Her Majesty's Courts of Judicature for a rule to show cause why the Court should not declare that an exclusive privilege in respect of an invention has not been acquired under the provisions of this Act by reason of all or any of the objections following (to be specified in the rule); that is to say:—

That the said invention is of no utility, or,

That the said invention was not, at the time of presenting the petition for leave to file the specification a new invention within the meaning of this Act, or,

That the petitioner was not the inventor thereof, or,

That the specification filed, or the amended specification (if any) does not particularly describe and ascertain the nature of the invention, or in what manner the same is to be performed, or,

That the petitioner has knowingly or fraudulently included in the petition or specification, or amended specification, as part of his invention, something which was not new or whereof he was not the inventor, or

That the original or any subsequent petition relating to the invention, or the original or any amended specification, contains a wilful or fraudulent mis-statement, or

That some part of the invention, or the manner in which that part is to be performed, as described in the specification filed, or the amended specification, is not thereby sufficiently described and ascertained, and that such defect or insufficiency was fraudulent and is injurious to the public.

Like Application as to Part of an Invention.

XXV. Any person may, in like manner, apply to any of Her Majesty's Courts of Judicature for a rule to show cause why the Court should not declare that an exclusive privilege has not been acquired under the provisions of this Act in respect of any part of the invention to be specified in the rule by reason of all or any of the objections following (to be specified in the rule), that is to say,—

That such part of the invention is wholly distinct from the other part thereof, and is of no utility, or

That such part of the invention was not, at the date of the petition for leave to file the specification, a new invention within the meaning of this Act, or

That the petitioner was not the inventor of that part of the invention, or

That that part of the invention, and the manner in which it is to be performed, is not sufficiently described and ascertained in the specification filed or the amended specification, and that such defect or insufficiency is injurious to the public.

Application by Advocate General on Breach of Special Condition.

XXVI. It shall be lawful for the Advocate General at any of the Presidencies of Fort William in Bengal, Fort St. George, and Bombay, or any other person, by order of the Governor General in Council, to apply to any of the said Courts of Judicature for a rule calling upon the petitioner, his executors, administrators, or assigns, to show cause why the question of the breach of any special condition upon which the leave to file a specification has been granted, or any other question of fact on which the revocation of the exclusive privilege by the Governor General in Council under the power herein-before reserved may, in the judgment of the said Governor General in Council, depend, should not be tried in the form of an issue directed by the said Court; and if the rule be made absolute, the Court, unless the breach or other matter of fact be admitted, may thereupon direct such issue to be tried, and certify the result of such trial to the Governor General in Council; the costs of such trial, and also the costs of any proceedings in any of the said courts of judicature under the provisions of this Act, shall be in the discretion of the Court.

Service of Proceedings on all Persons interested.

XXVII. Notice of any rule obtained or proceeding taken under either of the last three preceding Sections shall be served on all persons appearing to be proprietors or to have shares or interests in the exclusive privilege under the provisions of Section XXXV. of this Act, and it shall not be necessary to serve such notice on any other persons.

Supreme Court may direct Issue for Trial to other Courts.—New Trial.

XXVIII. Any of the said Courts of Judicature, if it think fit, may direct an issue for the trial, before the same Court or any other Court of Judicature, or any principal Court of original jurisdiction in Civil cases of any question of fact arising upon an application under Sections XXIV., XXV., or XXVI., of this Act, and such issue shall be tried accordingly in a summary manner, and if the issue be directed to another Court, the finding shall be certified by the Court before which the same was tried. to the Court directing the issue. If the issue be directed to any Courts of Judicature, the Court by which the issue is tried may, before the finding is certified, direct a new trial of such issue according to the usual course and practice of such Court. If the issue be directed to any Court other than a Court of Judicature, the finding shall not be subject to appeal, but the evidence taken upon the trial shall be recorded, and a copy thereof, certified by the Judge, shall be transmitted, together with any remarks he may think fit to make thereon, to the Court by which the issue was directed; and such Court may either act upon the decision of the Court which tried the issue, or direct a new trial if it should appear necessary.

Judgment.—Costs.

XXIX. If it shall appear to any of the said Courts of Judicature at the hearing of any application under the provisions of Sections XXIV. or XXV. of this Act that, by reason of any of the objections therein mentioned, the said exclusive privilege in the invention or in any part thereof has not been acquired, the Court shall give judgment accordingly, and shall make such order as to the costs of and consequent upon the application as it may think just; and there, upon the petitioner, his executors, administrators, and assigns shall, so long as the judgment continues in force, cease to be entitled to such exclusive privilege.

Amendment of Specification by Court.—Proviso.

XXX. If the Court, at the hearing of any such application as last aforesaid, shall think that the petitioner has, in the description of his invention in the petition or specification, or amended specification (if any) included something which at the date of the petition was not new or whereof he was not the inventor, or that the specification is in any particular defective or insufficient, but that the error, defect, or insufficiency was not fraudulently intended, the Court may adjudge the said exclusive privilege to have been acquired and to be valid, save as to part thereof affected by such error, defect, or insufficiency, or if the Court shall think that the error, defect, or insufficiency can be amended without injury to the public, they may adjudge the exclusive privilege in the whole of the invention to be valid, and may, upon such terms as shall appear reasonable, order the

specification to be amended in any of the said particulars; and thereupon the petitioner, his executors, administrators, or assigns shall, within the time limited by the said Court for the purpose, file a specification amended according to such order. Provided that no such amended specification shall have the effect of extending or enlarging the exclusive privilege before acquired.

Mis-statement in the Petition, if not fraudulent, not to defeat the Privilege.

XXXI. An exclusive privilege shall not be defeated upon the ground that the petition contains a mis-statement, unless such mis-statement was wilful or fraudulent.

Entry in Registry Book of Judgment, &c., declaring Privilege not to have been acquired.

XXXII. Whenever it shall be adjudged by any of the said Courts of Judicature that an exclusive privilege as to the whole or any part of an invention has not been acquired, the said Secretary to the Government of India shall, upon the production of the judgment or order, cause an entry thereof to be made in the said book hereinbefore directed to be kept, and shall cause a reference to such entry to be made in the margin of the entry of the specification contained in such book.

In what case actual Inventor entitled to Assignment of an exclusive Privilege fraudulently obtained.

XXXIII. If, upon proceedings instituted within two years from the date of a petition to file a specification, the actual inventor shall prove to the satisfaction of the principal Court having jurisdiction in Civil cases, within the local limits of whose jurisdiction the defendant shall reside as a fixed inhabitant, that the petitioner was not the actual inventor, and that at the time of the petition he knew or had good reason to believe that the knowledge of the invention was obtained by himself, or by some other person, surreptitiously or in fraud of the actual inventor, or by means of a communication made in confidence by the actual inventor to him, or to any person through whom he derived such knowledge, the Court may compel the petitioner to assign to the actual inventor any exclusive privilege obtained under this Act, and to account for and pay over the profits thereof.

Particulars to be delivered.

XXXIV. In any action for the infringement of such exclusive privilege the plaintiff shall deliver with his plaint particulars of the breaches complained of in the said action; and the defendant shall deliver a written statement of the particulars of the grounds (if any) upon which he means to contend that the plaintiff is not entitled to an exclusive privilege in the invention. In like manner, upon any application to any of the said Courts of Judicature under Sections XXIV., XXV., or XXVI. of this Act, the applicant shall deliver particulars of the objections on which he means to rely. At the trial of any such action or issue, no evidence shall be allowed to be given in support of any alleged infringement, or of any objection impeaching the validity of such exclusive privilege which shall not be contained in the particulars delivered as aforesaid. If it be alleged that the invention was publicly known or used prior to the date of the petition for leave to file such specification, the places where and the manner in which the invention was so publicly known or used shall be stated in such particulars. Provided always, that it shall be lawful for any Court in which the action or proceeding is pending or in which the issue is tried to allow the plaintiff or defendant respectively to amend the particulars delivered as aforesaid upon such terms as shall seem fit.

Service of Proceedings.

XXXV. A book shall be kept in the office of the Secretary to the Government of India in the Home Department (such book to be open to inspection without fee) wherein every person filing a specification under this Act, or any person to whom the exclusive privilege may be assigned, shall cause to be stated some place in India where service of any rule or proceedings for the purpose of cancelling or revoking his exclusive privilege may be made, and shall cause a reference to such entry to be made in the margin of the entry of the specification; and may from time to time cause any other place in India to be substituted by similar entry and reference. All such rules and proceedings as aforesaid shall be deemed sufficiently served if a copy thereof be left at the place entered in such book or (if any other place be substituted for the same by entry in the said book) at the place last substituted, by delivering the same to any person resident at, or in charge of, such place: or, if there be no person resident at, or in charge of, such place, or if such place be not within the local limits of the jurisdiction of the Court, by causing such rule or proceeding to be sent by post, by a registered letter, directed to such person, at such place; and if any such person shall neglect to make or cause to be made such entry, then service of such rule or proceeding may be effected by affixing a copy thereof to some conspicuous part of the Court House, or in such other manner as the Court may direct.

Act VI. of 1856 *to have Effect in respect of certain Specifications filed and Acts done.*

XXXVI. Act VI. of 1856 shall be of the same force and effect in respect to every petition and specification filed under the provisions thereof before the Act was repealed, and in regard to all proceedings consequent thereon or in relation thereto, and for the purpose of everything done under that Act while it continued in force, as if previously to the passing of the said Act the sanction of Her Majesty to the passing thereof had been obtained and signified in pursuance of the Statute passed in the seventeenth year of the reign of Her Majesty, entitled "An Act to provide for the Government of India," and as if the said Act had not been repealed, and the term of every exclusive privilege obtained under the said Act is hereby extended, and shall continue until the expiration of fourteen years from the time of the passing of this Act. No exclusive privilege obtained under the said Act by an importer, not being the actual inventor, shall cease to have effect by virtue of the provisions of Section XVI. of the said Act, if the invention be put in practice in India within the period of two years from the time of the passing of this Act.

Stamp on Petition.

XXXVII. Every petition for leave to file a specification under the provisions of this Act, or for the

extension of the term of an exclusive privilege, shall be written or printed on stamped paper of the value of one hundred rupees.

Interpretation.

XXXVIII. In the construction of this Act, the following words and expressions shall have the meanings hereby assigned to them, unless there be something in the subject or context repugnant to such construction.

Number.

Words importing the singular number shall include the plural number, and words importing the plural number shall include the singular number.

Gender.

Words importing the masculine gender shall include females.

"Invention."

The word "invention" shall include an improvement.

"Manufacture."

The word "manufacture" shall be deemed to include any art, process, or manner of producing, preparing, or making an article, and also any article prepared or produced by manufacture.

"Printed."

The word "printed" shall include "lithographed."

"Inventor" and "Actual Inventor."

The words "inventor" and "actual inventor" shall include the executors, administrators, or assigns of an inventor or actual inventor, as the case may be.

"Assigns."

The word "assigns" shall include grantees of the sole use or benefit in India of an invention, or of the sole use of an exclusive privilege for a limited time.

"India."

The word "India" shall mean the territories which are or may become vested in Her Majesty by the statute 21 and 22 Vict. c. 106, entitled "An "Act for the better Government of India."

"Governor General in Council."

The words "Governor General in Council" shall include the "President in Council."

"Secretary to the Government of India."

The words "Secretary to the Government of India" shall include any Under-Secretary to the said Government.

"Her Majesty's Courts of Judicature."—"Courts of Judicature."

The expressions "Her Majesty's Courts of Judicature" and "Courts of Judicature" shall mean the Courts established by Royal Charter.

SCHEDULE OF FORMS.

FORM of PETITION. (See Section 1.)

To the Governor General of India in Council.

The petition of [*here insert name, addition, and place of residence*] for leave to file a Specification under Act No.

Sheweth,

That your petitioner is in possession of an invention for [*state the title of the invention*], which invention he believes will be of public utility; that he is the inventor thereof [*or, as the case may be, the assignee or the executor or administrator of the inventor*]; and that the same is not publicly known or used in India or in any part of the United Kingdom of Great Britain and Ireland, to the best of his knowledge and belief.

The following is a description of the invention [*here describe it*].

Your petitioner therefore prays for leave to file a specification of the said invention pursuant to the provisions of Act No.

And your petitioner, &c.

The day of

(Signed) ———

FORM of DECLARATION to accompany Petition. (See Section 7.)

I [*here insert name, addition, and place of residence*] do solemnly and sincerely declare that I am in possession of an invention for [*state the title of the invention as in the petition*]; that I believe the said invention will be of public utility; that I am the inventor thereof [*or, as the case may be, the assignee or executor or administrator of the inventor*]; and that the same is not publicly known or used in India or in any part of the United Kingdom of Great Britain and Ireland to the best of my knowledge and belief; and that, to the best of my knowledge and belief, my said invention is truly described in my petition for leave to file a specification thereof.

The day of

(Signed) ———

FORM of DECLARATION to accompany Specification. (See Section 7.)

I [*here insert name, addition, and place of residence*] do solemnly and sincerely declare that I am in possession of an invention for [*state the nature of the invention*], which invention I believe will be of public utility; that I am the inventor thereof [*or, as the case may be, the assignee or executor or administrator of the inventor*]; and that the same is not publicly known or used in India or in any part of the United Kingdom of Great Britain and Ireland, to the best of my knowledge and belief; and that, to the best of my belief, the instrument in writing under my hand hereunto annexed particularly describes and ascertains the nature of the said invention and in what manner the same is to be performed.

The day of

(Signed) ———

FORM of DECLARATION by Agent where an Inventor is absent from India. (See Section 7.)

I of do solemnly and sincerely declare, that I have been appointed by the said

his agent for the purpose of ;
and I verily believe that the declaration purporting to be the declaration of the said
marked ( ) was signed by him, and that the contents thereof are true.
The day of
(Signed) ———

FORM of PETITION. (See Section 20.)

That your petitioner [*or as the case may be, that A.B. of whom your petitioner is the assignee or executor or administrator*] has obtained Her Majesty's Letters Patent, dated the day of
for [*state the title of the invention*], and that such Letters Patent are to continue in force for
years, that your petitioner believes that the said invention is not now and has not hitherto been publicly known or used in India.

The following is a description of the invention [*here describe it*].

Your petitioner therefore prays for leave to file a specification of the said invention, pursuant to the provisions of Act No.

And your petitioner, &c.
The day of
(Signed) ——

Now We, taking the same into Our Royal consideration, do hereby signify Our Royal sanction to the said proposed Act.

Given at Our Court at Osborne this nineteenth day of March, in the year of our Lord one thousand eight hundred and fifty-nine, and in the twenty-second year of our reign.

STANLEY.

List of Specifications, &c. published during the week ending 16th April, 1859.

No.	Price.	Subject-Matter.
2022	3*d.*	Holding and carrying cartridges.
2025	7*d.*	Block printing.
2026	7*d.*	Railway breaks.
2028	3*d.*	Screw press.
2030	3*d.*	Taps, cocks, valves, &c.
2031	10*d.*	Life boats.
2032	8*d.*	Apparatus for preventing the incrustation of steam boiler flues.
2033	3*d.*	Pistons and safety valve levers of steam and other engines.
2034	9*d.*	Safety valves of steam boilers.
2035	3*d.*	Treating silk.
2036	3*d.*	Preparing sulphate of quinine.
2037	11*d.*	Apparatus for regulating the flow of fluids.
2038	1*s.* 4*d.*	Machine for tapping nuts, bolts, and screws, &c.
2039	3*d.*	Buoyant mattresses.
2040	5*d.*	Advertising.
2041	3*d.*	Substitute for leather and leather cloth.
2042	6*d.*	Apparatus for propelling ships, &c.
2043	3*d.*	Manufacture of grease for lubricating purposes.
2044	6*d.*	Railway breaks.
2045	6*d.*	Bridle bits.
2046	2*s.* 6*d.*	Machinery and apparatus used for preparing fabrics or materials to receive eyelet holes or fastenings, &c.
2047	3*d.*	Weaving checks in power looms.
2048	3*d.*	Preparation of lubricating compounds.
2049	3*d.*	Materials for dyeing and printing.
2050	6*d.*	Self-priming apparatus for fire-arms.
2051	3*d.*	Steam boilers.
2052	1*s.* 1*d.*	Machinery for the preparation of cotton, &c.
2053	1*s.* 1*d.*	Pneumatic catheter.
2054	3*d.*	Jacquard machines.
2055	3*d.*	Communicating railway signals.
2056	7*d.*	Machines for decorticating and cleaning grain and seeds.
2057	7*d.*	Water wheels.
2058	1*s.* 4*d.*	Machinery for preparing and spinning cotton, wool, &c.
2059	10*d.*	Pile-driving machines.
2060	3*d.*	Toy.
2061	6*d.*	Apparatus for lowering or paying out ships' chains and anchors.
2062	3*d.*	Preparation of food.
2063	3*d.*	Manufacture of coke.
2064	6*d.*	Cleaning and preparing silk crapes, &c.
2065	3*d.*	Manufacture of crown and round glass.
2066	6*d.*	Tap or cock for drawing off and filtering liquids.
2067	3*d.*	Tonic medicine.
2069	10*d.*	Machinery for preparing and spinning cotton, wool, &c.
2070	3*d.*	Manufacture of soda and potash.
2071	3*d.*	Bleaching yarn, warps, or similar materials.
2072	6*d.*	Self-acting mules.
2073	3*d.*	Separating solids from liquids for the purpose of disinfection.
2074	10*d.*	Refrigerators, &c.
2075	6*d.*	Manufacture of metallic tubes.
2076	10*d.*	Apparatus for cleaning grain or seeds and bran.
2077	3*d.*	Manufacture of hats.
2078	3*d.*	Helmet.
2079	9*d.*	Ships' pumps, &c.
2080	1*s.*	Looms.
2081	7*d.*	Apparatus for measuring the pressure of fluids by the flexion of diaphragms.
2082	1*s.* 4*d.*	Coke and gas kilns.
2083	6*d.*	Moulding cog wheels.
2084	3*d.*	Signals.
2085	2*s.* 10*d.*	Fuses.
2086	11*d.*	Spinning mules, &c.
2087	10*d.*	Apparatus employed in the production of light.
2088	3*d.*	Stoves or fire-places.
2089	9*d.*	Fastenings of railways.
2090	6*d.*	Fire engines.
2092	3*d.*	Portable apparatus for creosoting hop poles, &c.
2093	3*d.*	Manufacture of gloves.
2096	3*d.*	Apparatus for boring and sinking.
2101	9*d.*	Tobacco press.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

Errata in Journal of 15th April.

816. For "Improvements in solidifying," read "Improvements in machinery for solidifying."

833. For "arrangements," read "arrangement."

A Free Library and Reading Room, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

Note.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d.*

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE REFERENCE INDEX of PATENTS pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. 1.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in each Series. Edited by BENNET WOODCROFT, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions, &c. By SIMON STURTEVANT. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By JOHN ROVINSON (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether NICHOLAS PAGE or Sir NICHOLAS HALSE was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent Nos.* 33 *and* 85, *respectively dated* 8*th April*, 1626, *and* 23*rd July*, 1635.) Price 2*d.*
4. DUD DUDLEY'S Metallum Martis; or iron made with pit-coale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated* 22*nd February*, 1620, *and* 2*nd May*, 1638. Price 8*d.*
5. Description of the nature and working of the patent Water-scoop Wheels invented by WILLIAM WHELER, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated* 24*th June*, 1642.) Price 2*s.*
6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) EDWARD SOMERSET, Lord Marquis of WORCESTER, &c. &c. (*Stat.* 15 *Car. II c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By THOMAS SAVERY. (*Letters Patent, No.* 347, *dated* 10*th January*, 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By THOMAS SAVERY. (*Letters Patent, No.* 356, *dated* 25*th July*, 1698, *and Stat.* 10 *&* 11 *Will, III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By JOHN ALLEN, M.D. (*Letters Patent, No.* 513, *dated* 7*th August*, 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By JONATHAN HULLS. (*Letters Patent, No.* 556, *dated* 21*st December*, 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By SAMUEL SUTTON, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated* 16*th March*, 1744.) Price 1*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2*d.* each, or 3*d.* free by post:—

Austria, No. 291.
Bavaria, No. 262.

Portugal, No. 325.
Poland, No. 335.
Roman States, No. 319.
Russia, Nos. 334 and 508.
Sardinia, Nos. 233 and 235.
Saxony, No. 236.
Sicilies (the Two), No. 316.
Spain, No. 323.
Sweden, Nos. 327 and 354.
Victoria, Nos. 186 and 359.
Wurtemberg, No. 314.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price 21*s.*

Free Patent Museum and Library, South Kensington.

Numbers of Visitors for the Week ending 16th April, 1859.

Day of Month.	Day of Week.	Morning.	Evening.	Total.
April 11	Monday -	216	361	577—Wet.
„ 12	Tuesday -	232	86	318—Fi.&Wet.
„ 13	Wednesday	110	89	199—Showery.
„ 14	Thursday*	92	—	92— „
„ 15	Friday -	91	—	91— „
„ 16	Saturday -	178	—	178— „
	Total -	919	536	1455

* The Museum closes at 5 o'clock.

Total number of visitors since the period of free daily admission (12th May, 1858) to 16th April, 1859, —85,946.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. Woodcroft.

Great Seal Patent Office,
Southampton Buildings.

Gallery of Portraits of Inventors, Discoverers, and Introducers of Useful Arts.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

In course of Publication, by Order of the Commissioners.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. Drain Tiles and Pipes, price 6*d.*
2. Sewing and Embroidering, price 6*d.*
3. Manure, price 6*d.*
4. Preservation of Food, price 6*d.*
5. Marine Propulsion, price 4*s.*
6. Manufacture of Iron and Steel, price 5*s.*
7. Aids to Locomotion, price 1*s.*
8. Steam Culture, price 2*s.*
9. Watches, Clocks, and other Time-keepers, price 1*s.* 6*d.*
10. Fire-arms and other Weapons, Ammunition, and Accoutrements, price 6*s.* 6*d.*
11. Paper.—Part I. Manufacture of Paper, Pasteboard, and Papier Mâché, price 3*s.*

The following are in the press:—

Paper.—Part II. Cutting, Folding, and Ornamenting; including Envelopes, Cards, Paper-hangings, &c.
Electricity and Magnetism: their Generation and Applications.
Typographic, Lithographic, and Plate Printing.
Bleaching, Dyeing, and Printing Yarns and Fabrics.
Preparation of Fuel, and Apparatus for its Combustion.
Manufacture and Applications of India Rubber, Gutta Percha, &c.; including Air, Fire, and Water Proofing.
Production and Applications of Gas.
Steam Engines.

B. Woodcroft.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

LONDON:
Printed by George E. Eyre and William Spottiswoode, Printers to the Queen's most Excellent Majesty.
Published at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 553. FRIDAY, APRIL 22, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

572. To WILLIAM MITCALFE, of the Coal Exchange, London, Gentleman, for the invention of "Improvements in discharging cargoes, and in raising and lowering bodies."
On his petition, recorded in the Office of the Co mmis sioners on the 3rd day of March, 1859.

588. To RICHARD LEAKE and MATTHEW SYKES, both of Barnsley, in the county of York, for the invention of "Improvements in furnaces for consuming smoke and generating heat, parts of which improvements are applicable to furnaces generally."
On their petition, recorded in the Office of the Commissioners on the 5th day of March, 1859.

616. To JOHN COOKE, of Cheltenham, in the county of Gloucester, for the invention of "Improvements in apparatus for giving signals on railways and vessels, and other such like uses."
On his petition, recorded in the Office of the Commissioners on the 9th day of March, 1859.

662. To HENRY AMBLER, of Halifax, in the county of York, for the invention of "Improvements in breech-loading ordnance, and in the means of producing part or parts thereof, which improvements are also applicable to what are called small arms."
On his petition, recorded in the Office of the Commissioners on the 16th day of March, 1859.

680. To ALEXANDER MEIN, Glass Bottle Maker, at Saint Rollox, Glasgow, in the county of Lanark, for the invention of "Improvements in making glass bottles, and in the apparatus connected therewith."
On his petition, recorded in the Office of the Commissioners on the 17th day of March, 1859.

740. To BENJAMIN BROWNE, of No. 52, King William Street, London Bridge, in the city of London and county of Middlesex, Civil Engineer, and Patent Agent, for the invention of "A new method of working or operating switches and signals on railways by improved apparatus for that purpose."—A communication from abroad by Victor Armand Prou, of Rue de Sèvres, Paris, in the empire of France.
On his petition, recorded in the Office of the Commissioners on the 23rd day of March, 1859.

762. To WILLIAM REDGRAVE, of Tavistock Street, in the county of Middlesex, Tailor, for the invention of "An improved pillow travelling cap."

764. And to SAMUEL DREYFOUS, GUY RICHER, Civil Engineers, and EDOUARD CORMIER, Merchant, all of Paris (France), for the invention of "Improvements in preserving eggs."
On both their petitions, recorded in the Office of the Commissioners on the 26th day of March, 1859.

792. To JOHN WILSON HADWEN, of Kebroyd Mills, in the parish of Halifax, and West Riding of the county of York, Cotton Spinner, for the invention of "A new art or manufacture for converting certain kinds of silk waste into yarns or threads."
On his petition, recorded in the Office of the Commissioners on the 30th day of March, 1859.

806. To THOMAS IVORY, of Edinburgh, Advocate, for the invention of "Improvements in steam boilers and furnaces for the same."
On his petition, recorded in the Office of the Commissioners on the 31st day of March, 1859.

824. To ABRAHAM RIPLEY, of 21, Bridge Street, Blackfriars, London, county of Middlesex, Engineer, and JOHN ROBERTS, of Nelson Square, Bermondsey, county of Surrey, Engineer, for the invention of "Improvements in machinery for striking or scraping leather and tanned or untanned hides."

826. To Anthony Bessemer, of Tavistock Terrace, Upper Holloway, in the county of Middlesex, Gentleman, for the invention of "Improvements in furnaces to be employed in the manufacture of iron and steel."

828. To Joseph Skertchly, of Ashby-de-la-Zouch, in the county of Leicester, Engineer, for the invention of "Improvements in apparatus for regulating the pressure of gas."

830. To Arthur Paget, of Loughborough, in the county of Leicester, Manufacturer, for the invention of "Improvements in machinery or apparatus for the manufacture of looped fabrics, and in the manner of constructing the same."

832. And to Michael Coupland, of Haggerstone, in the county of Middlesex, Engineer, for the invention of "Improvements in furnaces."

On their several petitions, recorded in the Office of the Commissioners on the 2nd day of April, 1859.

836. To Joseph Eccles, of Blackburn, in the county of Lancaster, Cotton Manufacturer, for the invention of "Improvements in machinery for making bricks, tiles, and other articles formed of plastic materials."

840. To James Henry Burton, of Enfield Lock, in the county of Middlesex, for the invention of "Improvement in the manufacture of barrels for small fire arms."

842. To Alfred Vincent Newton, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "An improved construction of retarding apparatus or break for railway carriages." — A communication from abroad by Mr. Augustin Castellir, of Saragossa, in the kingdom of Spain.

844. To Matthew Augustus Crooker, of New York, United States of America, Engineer, for the invention of "Improvements in paddle wheels for steamers."

846. And to Edmund Morewood, of Endfield, in the county of Middlesex, for the invention of "Improvements in coating metals."

On their several petitions, recorded in the Office of the Commissioners on the 4th day of April, 1859.

850. To Edward Fairburn, of Kirklees Mills, Mirfield, in the county of York, Card Manufacturer, for the invention of "Improvements in machinery for carding wool and other fibrous substances."

854. To Benjamin Browne, of No. 52, King William Street, London Bridge, in the city of London, and county of Middlesex, Civil Engineer and Patent Agent, for the invention of "Improvements in propelling ships or other vessels through water."—A communication from abroad by Philip Kearney Skinner, of Bombay, in the East Indies, a Colonel in the Bombay Army.

858. And to Francis Maltby Crichton, of Stoke Abbey, Stoke Bishop, in the parish of Westbury-upon-Frym, in the county of Gloucester, Gentleman, for the invention of "Improvements in clocks or time keepers."

On their several petitions, all recorded in the Office of the Commissioners on the 5th day of April, 1859.

862. To William Owen, of Rotherham, in the county of York, Engineer, for the invention of "Improvements in the manufacture of railway wheels and tyres and in the apparatus employed therein."—Partly a communication from Robert Owen, residing at San Geronimo, Central America.

864. And to John Scoffern, of No. 4, Barnard's Inn, Bachelor of Medecine, for the invention of "Improvements in lubricating projectiles and cartridges."

On both their petitions, recorded in the Office of the Commissioners on the 6th day of April, 1859.

866. To Alexander Chaplin, of Glasgow, in the county of Lanark, North Britain, Engineer, for the invention of "Improvements in steam boilers."

868. To Robert Wardell, of Stanwick, in the county of York, and Henry Kearsley, of Ripon, in the county of York, for the invention of "Improvements in reaping machines."

870. To John Lakin the younger, of Hall End, near Tamworth, in the county of Warwick, Farmer, for the invention of "A new or improved agricultural drill."

872. And to James Rawlings, of Carlton Hill East, in the county of Middlesex, Gentleman, for the invention of an "Improved construction of boot tree."

On their several petitions, recorded in the Office of the Commissioners on the 7th day of April, 1859.

874. To William Henry Smith, of the city of Philadelphia, in the state of Pennsylvania, one of the United States of America, M.D., for the invention of "Improvements in the construction of of cartridges, and in the fire arms for using the same."

876. To William Campion, of the town and county of the town of Nottingham, Machine Builder, of the firm of W. W. Campion, of the said town, Machine Builders, for the invention of "Improvements in machinery for the manufacture of looped fabrics."

878. To Marc Antoine François Mennons, of the British and Foreign Patent Office, No. 39, Rue de l'Echiquier, Paris, in the Empire of France, for the invention of "An improved articulated joint for water, gas, and steam pipes."—A communication from Victor Doré, a person resident in Paris, France.

880. To Nicolas Alexis Grumel, formerly a Dyer, and at present Ink Manufacturer, in Paris, in the empire of France, for the invention of "Improvements in dying cotton, wool, silk, flax, and other fibrous materials or fabrics."

882. And to William Hooper, of Mitcham, in the county of Surrey, India Rubber Manufacturer, for the invention of "Improvements in re-working or re-manufacturing compounds of india rubber and sulphur."

On their several petitions, recorded in the Office of the Commissioners on the 8th day of April, 1859.

888. To Thomas Barnett, of Oldham, in the county of Lancaster, Henry Turner Sourbuts, and William Loynd, of Hyde, in the county of

Chester, Engineers, for the invention of "Improvements in steam engines."

890. To JOHN HAWKINS, of Lisle Street, London, in the county of Middlesex, and of Walsall, in the county of Stafford, Bit, Spur, and Stirrup Manufacturer, for the invention of "Certain improvements in the manufacture of stirrups, bits, spurs, buckles, and other such like articles connected with harness and saddlery."

892. To RICHARD JONES DERHAM, of No. 46, Redcliffe Street, Bristol, in the county of Somerset, Cooper, for the invention of "Improvements in cheese vats."

894. To CHARLES FRÉDERIC VASSEROT, of 45, Essex Street, Strand, London, Patent Agent, for the invention of "A new motive power applicable to tanneries."—A communication from Jean Pascal Lucet, residing at Fontenay-le-Comte, Vendée, in the empire of France.

896. And to HENRY FRANCIS GARDNER, of Boston, in the United States of America, for the invention of "Improvements in machinery for blocking or crimping the uppers of boots and shoes, and in treeing boots."—Partly a communication from abroad by William Willmott and Philander Shaw, of the United States of America.

On their several petitions, recorded in the Office of the Commissioners on the 9th day of April, 1859.

---

904. To ALFRED BOWER, of Liverpool, in the county of Lancaster, Cotton Broker, for the invention of "Improvements in or applicable to the keels of navigable vessels."

906. To RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improvements in candle moulds."—A communication from Auguste Godchaux, residing at Paris.

908. And to WILLIAM HENRY BARLOW, of Great George Street, Westminster, for the invention of "Improvements in beams and girders."

On their several petitions recorded in the Office of the Commissioners on the 11th day of April, 1859.

---

910. To WILLIAM CLARK, of Langhaugh, Galashiels, Scotland, a Lieutenant in Her Majesty's Navy, for the invention of "An improved safety block to be used for lowering ships' boats, the same being applicable to other like or analogous purposes."

912. To PATRICK AITCHISON, Brass Founder, of Sheffield, in the county of York, for the invention of "Improvements in taps."

914. To EUGÈNE THÉODORE NOUALHIER, of Paris, France, Manufacturer, for the invention of "An improved ventilator."

916. To PHILIP HILL, of Manchester, in the county of Lancaster, Weaver, and JOHN MOORE, of Salford, in the same county, Small Ware Manufacturer, for the invention of "Improvements in weaving double pile fabrics."

918. To MATHIEU CASTAY, of Paris, in the empire of France, Clergyman, for the invention of "Improvements in metallic bridges."

920. To JOSEPH WARD, of King's Norton, in the county of Worcester, Machinist, for the invention of "An improvement or improvements in working fly presses used for raising metals, coining, and other like purposes."

922. And to SAMUEL TATTON, of Leek, in the county of Stafford, Silk Dyer, for the invention of "Improvements in preparing and treating silk, and improvements in dyeing silk."

On their several petitions, recorded in the Office of the Commissioners on the 12th day of April, 1859.

---

924. To WILLIAM ARENA MARTIN and JAMES PURDIE, of Woolwich, in the county of Kent, Engineers, for the invention of "Improvements in fire bars."

928. To WILLIAM CRAFT, of No. 12, Cambridge Road, Hammersmith, and THOMAS WILSON, of Bradmore House, Chiswick, both in the county of Middlesex, for the invention of "Improvements in the manufacture of pinafores and bibs for children."

932. And to JOHN LEE STEVENS, of No. 1, Fish Street Hill, in the city of London, Civil Engineer, for the invention of "Improvements in the fire grates of locomotive, marine, and other furnaces."

On their several petitions, recorded in the Office of the Commissioners on the 13th day of April, 1859.

Inventions protected for Six Months by the Deposit of a Complete Specification.

NOTICE is hereby given, that the petition of

935. JOZÉ LUIS, of the British and Foreign Office for Patents, No. 1 B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, praying for Letters Patent for the invention of "A new cooling apparatus for liquids, especially beer,"—a communication from Jean Louis Baudelot, of No. 10, Rue Mogador, Paris, in the empire of France,—was deposited and recorded in the Office of the Commissioners on the 14th day of April, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

And notice is also given, that the petition of

988. ALEXANDER WILLIAM WILLIAMSON, of University College, London, praying for Letters Patent for the invention of "Improvements in making extracts from liquorice root," was deposited and recorded in the Office of the Commissioners on the 19th day of April, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

21st April, 1859.

2389. JOZÉ LUIS, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for an invention of "A new machine for boring."—A communication from a Foreigner now residing abroad.—Dated 27th October, 1858.

2391. Adolphe Paul Auguste Beau, of 152, Regent Street, London, for an invention of "A pocket stereoscope."—Dated 27th October, 1858.

2392. John Kinsey, of Brighton, Engineer, for an invention of "Improvements in steam engines and pumps."—Dated 27th October, 1858.

2395. George Speight, of 19, Woodbridge Street, Clerkenwell, in the county of Middlesex, Artist in Hair, for an invention of "Improved plaits and curls or ringlets for head dresses or ornaments or additions to the natural hair, and an improved apparatus for the manufacture of curls or ringlets."—Dated 27th October, 1858.

2408. Benjamin Foster, of Denholme, near Bradford, in the county of York, Spinner, and Prince Smith, of Keighley, in the county of York, Machinist, for an invention of "Improvements in machinery or apparatus for spinning and doubling wool, alpaca, mohair, cotton, silk, flax, and other fibrous substances."—Dated 28th October, 1858.

2410. James Smith, of the city of Bristol, Horsehair Seating and Curled-hair Manufacturer, for an invention of "Improved hats and coverings for the head."—Dated 28th October, 1858.

2412. Pierre Brunon, of Paris, France, Manufacturer, for an invention of "An improved mode of manufacturing cocks."—Dated 29th October, 1858.

2413. William Kirrage, of No. 10, Goulston's Buildings, Bermondsey New Road, in the county of Surrey, Surveyor, for an invention of "An improved elastic combination of materials impervious to atmospheric influences, as a substitute for hard woods, metal, leather or felting, and for other purposes."—Dated 29th October, 1858.

2427. Edward Thomas Hughes, of the firm of Hughes and Son, Patent Agents, 123, Chancery Lane, London, W.C., for an invention of "Improvements in machinery or apparatus to prevent railway accidents."—A communication from Jean Aimé Delormas, jeune, and Amable Gaspard Terrel, both residing at Lyons, in the empire of France."—Dated 30th October, 1858.

2438. Marc Antoine François Mennons, of the British and Foreign Patent Offices, 39, Rue de l'Echiquier, Paris, in the empire of France, for an invention of "An improved system of railway brakes."—A communication from Claude Arnoux, residing at Paris.—Dated 2nd November, 1858.

2463. George Palmer Evelyn, of Eccleston Terrace, in the county of Middlesex, Esquire, for an invention of "The improvement of the form of the stocks of rifles, carabines, and other fire arms."—Dated 4th November, 1858.

2478. Simon Davey, Merchant, residing at Rouen, France, for an invention of "Improvements in blasting powder."—Dated 5th November, 1858.

2859. James Webster, of Birmingham, in the county of Warwick, Engineer, for an invention of "A new or improved method of recovering copper and zinc from liquids which have been employed to dip or pickle articles made of brass or other alloys containing copper and zinc."—Dated 14th December, 1858.

2898. Isaac Ketchum, of 59, Canning Street, Liverpool, in the county of Lancaster, Merchant, for an invention of "Improvements in the method of roasting meat, poultry, game, by basting the same, and in the method of manufacturing the necessary apparatus for so doing."—Dated 18th December, 1858.

282. John Hosking, of No. 5, Catherine Terrace, Gateshead-on-Tyne, in the county of Durham, and Thomas Cock, of Cleator Moor, near Whitehaven, in the county of Cumberland, for an invention of "Improvements in furnaces or fire places."—Dated 1st February, 1859.

348. Thomas Moss, of 69, Fleet Street, in the city of London, in the employment of Messrs. Perkins, Bacon, and Co., for an invention of "Improvements in the manufacture of paper and printing ink suitable for bank notes, bills of exchange, and other documents requiring like security against being copied."—Dated 8th February, 1859.

404. Henry Gardner, of 1, Old Quebec Street, Portman Square, in the county of Middlesex, for the invention of "Improvements in machinery for breaking and preparing flax and other fibres."—Dated 12th February, 1859.

481. Joseph Grimond, of the city of Manchester, in the county of Lancaster, Manufacturer, for an invention of "Improvements in the treatment and preparation of jute and other fibrous materials, and in machinery or apparatus employed therein."—Dated 22nd February, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 20th April, 1859, inclusive.*)

18th April.

945. William Crosley, of No. 16, Westbourne Park, in the county of Middlesex, and 103, Southwark Bridge Road, in the county of Surrey, Gas Meter Manufacturer, and George Goldsmith, of Leicester, in the county of Leicester, Gas Meter Inspector, for an invention of "Improvements in wet gas meters."—Dated 19th April, 1856.

19th April.

994. Charles Swift and John James Derham, of Blackburn, in the county of Lancaster, Engineers, for an invention of "Improvements in steam-engines."—Dated 25th April, 1856.

20th April.

953. William Maugham, of Ifield Terrace, Stockwell, in the county of Surrey, for an invention of "An improvement in the preparation or manufacture of starch."—Dated 21st April, 1856.

958. Alexander Symons, of George Street, Mansion House, in the city of London, and Edward Burgess, of Clerkenwell Green, in the county of Middlesex, for an invention of "Improvements in apparatus for producing alarums to indicate burglary, by means of electricity."—Dated 22nd April, 1856.

Patent on which the Stamp Duty of £100 has been Paid.

19th April, 1859.

452. John Carnaby, of No. 130, St. John Street, Clerkenwell, in the county of Middlesex, Gentleman, for an invention of "Apparatus for turning, managing, and regulating the main taps of gas-pipes laid on to houses or buildings at a part of the house or building distant from the main tap."—Dated 20th October, 1852.

A List of the Patents for Inventions which have become Void by reason of the Nonpayment of the additional Stamp Duty of £50 before the expiration of the Third Year from the date of such Patents, pursuant to the Act of the 16th Vict. c. 5, sec. 2,—for the Quarter ending the 31st day of March, 1859.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1	1st Jan. 1856.	Henry Truelove, of Liverpool, in the county of Lancaster, Teacher.	Improvements in gloves.
2	„	Ferdinand Swift, of Brompton Row, Brompton, in the county of Middlesex, Gentleman.	Improvements in carriage wheels and axles, and in vehicles for common roads.
8	2nd Jan. 1856.	Andrew Shanks, Engineer, 6, Robert Street, Adelphi, Westminster.	Certain improvements in machinery for cutting screws.
10	„	Richard Albert Tilghman, of Philadelphia, United States of America.	Improvements in the manufacture of iron.
11	„	George Hamilton, of Great Tower Street, in the city of London, Gentleman.	Improvements in apparatus for weighing.
12	„	Harvey Lewis Sellers, of Cincinnati, in the state of Ohio, in the United States of America, Doctor of Medicine, and John Littler Talbott, of the same place, Gentleman.	Improved apparatus for measuring and weighing grain seeds and other substances.
14	3rd Jan. 1856.	Frederick Haines, Patent Agent, of 22, Lime Street, City, in the county of Middlesex, London.	The deadening of the sound, and the prevention of vibration and concussion, in connection with machinery, gun and mortar boats, and general ordnance and other purposes.
15	„	Charles Toye, of Gloucester Street, Queen Square, Bloomsbury, in the county of Middlesex, Mechanic.	Improvements in weaving terry fabrics.
16	„	George Williams, of No. 16, Cannon Street East, in the county of Middlesex, Plumber.	Improvements in the construction of waterclosets for ships.
18	„	William Alfred Distin, of No. 31, Cranbourn Street, Leicester Square, in the county of Middlesex.	Improvements in pipes for smoking.
19	„	James Bagster Lyall, of Castle Frome, in the county of Hereford, Gentleman.	Certain improvements in carriages.
22	„	John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman.	Improvements in apparatus or means for facilitating the performance of church and other music on organs, harmoniums, pianos, and other similar keyed musical instruments.
26	„	James Frederick Lackersteen, of 7, Young Street, Kensington Square.	Improvements in the prevention of collisions on railways.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
28	3rd Jan. 1856.	CHARLES MARSDEN, of Kingsland Road, in the county of Middlesex, Ventilating Engineer.	Improvements in the ventilation of sewers, tunnels, mines, and other confined places.
30	4th Jan. 1856.	HENRY BACH, of Sheffield, in the county of York, Hoiser.	Improvements in the application of glass to decorative purposes.
32	„	WILLIAM SIMMONS, of Oldham, in the county of Lancaster, Hat Manufacturer.	An improved hat body.
33	„	ROBERT GREY, of No. 21, Ridley Place, Newcastle-on-Tyne, Builder and Brick Maker.	Improvements in machinery or apparatus for moulding bricks, tiles, and other similar articles.
37	„	JOSEPH WRIGHT, of Burton-upon-Trent, in the county of Stafford, Engineer and Iron Founder.	Improvements in furnaces and fire-bars.
38	„	GEORGE TOMLINSON BOUSFIELD, of Sussex Place, Loughborough Road, Brixton, in the county of Surrey.	Improvements in the manufacture of jacquard piled or terry fabrics, when parti-coloured yarns are used.
39	„	JOSEPH BETTELEY, of Liverpool, in the county of Lancaster, Chain Cable Manufacturer.	An improvement in the rolling of iron for the making of ships' knees.
40	„	FRANCIS WILLIAM GERISH, of East Road, City Road.	An improvement in the manufacture of cast hinges.
41	„	ROBERT SAM NORTH, of Derby, in the county of Derby, Engineer, and RALPH PEACOCK, of New Holland, in the county of Lincoln, Engineer.	Improvements in metallic packings for pistons.
42	„	WILLIAM OLIVER JOHNSTON, of Broomhill Colliery, Acklington, Northumberland, Engineer.	An improvement in apparatus used for giving notice when the water in a steam boiler is too low.
48	5th Jan. 1856.	JOSEPH CORBETT, of Brierley Hill, in the county of Stafford, Engineer.	A new or improved method of preserving the tuyeres of blast furnaces.
52	7th Jan. 1856.	CHARLES JARVIS, of Birmingham, in the county of Warwick, Ironfounder, and THOMAS DEYKIN CLARE, of Birmingham aforesaid, Mineral Merchant.	A new or improved oven or kiln to be used in the manufacture of coke and pottery, and for heating and drying generally.
56	„	ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman.	An improved mode of manufacturing rods, shafts, and tubes of iron and steel.
61	8th Jan. 1856.	EDWIN THOMAS TRUMAN, of Old Burlington Street, in the county of Middlesex, Dentist, in Ordinary to Her Majesty's Household.	Improvements in artificial palates and teeth.
62	„	HENRY STUART, of Liverpool, in the county of Lancaster, and THOMAS PRITCHARD, of Runcorn, in the county of Chester, Watchmakers.	Improvements in watches and chronometers, which improvements are also applicable to clocks and other timepieces.
63	„	PETER ARMAND LE COMTE DE FONTAINEMOREAU, of 4, South Street, Finsbury, London, and 39, Rue de l'Echiquier, Paris, in the empire of France.	Certain improvements in jacquard machines.
64	„	SAMUEL MIDDLETON, of St. George's Row, Southwark.	An improvement in the leather covered rollers used in spinning machinery.
66	9th Jan. 1856.	GEORGE JOHN CHRISTIAN ERHARD HALD, of the city of Manchester, Merchant.	Improvements in the construction of stoves.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
67	9th Jan. 1856.	Frederick Albert Gatty, of Accrington, in the county of Lancaster, Manufacturing Chemist.	Improvements in the manufacture of lake colours.
69	„	William Barrie, of Maida Hill, London, in the county of Middlesex, Commander, R.N.	An improved reflective leveller.
70	„	Edward Hallen, of Cornwall Road, Lambeth, in the county of Surrey, Civil Engineer, and William Holland Kingston, of Bandon, in the county of Cork, Ireland, A.B.F.C., Dublin.	Improvements in communicating between the guards and engine drivers, and between the passengers, guards, and engine drivers of railway trains.
79	10th Jan. 1856.	John Erskine, of Glasgow, in the county of Lanark, North Britain, Merchant.	The application of a new material or mixture for dressing or sizing textile fabrics or materials.
80	„	Jane Ann Herbert, of No. 5, Waterden Place, Guildford, in the county of Surrey, Widow.	An improved method for extracting the dirt or the gum or the colouring matter or the principle from various vegetable or animal substances or materials.
85	11th Jan. 1856.	Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman.	A new and improved method of curing meats, preserving provisions, and ventilating and cooling buildings, cars, and vessels.
89	12th Jan. 1856.	Alexander Bain, of Westbourne Park Road, Paddington, in the county of Middlesex, Mechanical Engineer.	Improvements in the construction of inkstands.
90	„	Emile Constantin Fritz Sautelet, Chemist, of Paris, in the French empire.	An improved process of tanning.
91	„	Charles François Leopold Oudry, of 39, Rue de l'Echiquier, Paris, in the empire of France, and of 4, South Street, Finsbury, London, Gentleman.	Certain improvements in the preservation of metals and other solid substances.
96	14th Jan. 1856.	Alexandre Tolhausen, of No. 7, Duke Street, Adelphi, London, in the county of Middlesex, Sworn Interpreter at the Imperial Court of Paris.	Certain improvements in balanced slide valves for steam engines.
97	„	William Collett Homersham, of Caroline Villas, Kentish Town, in the county of Middlesex, Engineer.	Improvements in machinery for the preparation of hemp, flax, and other fibrous materials.
99	„	Adolf Pollak, of the firm of A. M. Pollak, of Vienna, in the empire of Austria.	Treating waste oily matters to obtain a product applicable to the manufacture of soap and other useful purposes in the arts.
101	„	Nathaniel Shattswell Dodge, of the firm of Dodge, Bacon and Co., of 44, St. Paul's Churchyard, in the city of London, Merchants and Manufacturers.	Improvements in the preparation or manufacture of leather cloth.
102	„	Austen Chambers, of Canterbury, and William Harrison Champion, of Lynsted, Kent.	An improved mode of working railway breaks.
103	„	John Gottlieb Ulrich, of 63, Mark Lane, in the city of London.	Improvements in chronometers and other time-keepers.
104	„	Anne Emilie Malteste, of Paris (France), Milliner.	Improvements in shirts.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
107	15th Jan. 1856.	Pierre Théophile Auguste Nicoulland, of 39, Rue de l'Echiquier, Paris, in the empire of France, and of 4, South Street, Finsbury, London, Gentleman.	Improvements in steam-boiler furnaces.
109	,,	Samuel Sheppard, of Birmingham, in the county of Warwick, Manufacturer.	A new or improved tap or stop cock.
111	16th Jan. 1856.	Thomas Dunn, of the Windsor Bridge Iron Works, Pendleton, in the county of Lancaster, Engineer.	Improvements in boilers and apparatus for heating water and generating steam.
112	,,	Henry McEvoy, of Hall Street Works, Birmingham, in the county of Warwick.	Improvements in locks, latches, and staples.
113	,,	Henry Law, Civil Engineer, of No. 15, Essex Street, Strand, in the county of Middlesex.	Improvements in heaving up slips for the repair or construction of ships or other vessels, and for a continuous action purchase for the same, which is also applicable to other purposes.
118	,,	Johnson Thompson, of Sunderland, Builder.	Improvements in ships' keelsons.
119	,,	John Hamilton, junior, of Liverpool -	Improvements in constructing the permanent ways of railways.
121	,,	David Dring, of 149, Great Dover Road, in the county of Surrey.	Improvements in machinery for cutting wood pegs.
123	17th Jan. 1856.	Peter Armand le Comte de Fontaine-Moreau, of 4, South Street, Finsbury, London, and 39, Rue de l'Echiquier, Paris, in the empire of France.	An improved apparatus for the prevention of accidents or collisions on railways.
125	,,	Philipp Rechten, of Bremen - -	The taking of whales and other cetaceous fish, by means of a harpoon constructed on entire new principles.
129	,,	William Chapman, of Sunderland -	An improvement in propelling vessels.
130	,,	Joseph Jesse Comstock, of New York, in the United States, but now at Liverpool, county of Lancaster.	Improvements in generating steam.
131	,,	John Platt, of Oldham, in the county of Lancaster, Mechanical Engineer, and John Whitaker, of the same place, Doubler.	Improvements in machinery or apparatus for doubling or twining yarns or threads, parts of which improvements are also applicable to mules for spinning.
132	,,	William Westbrooke Squires, of Liverpool, in the county of Lancaster, Doctor in Medicine.	Improvements in preventing the bursting of pipes and tubes for conveying liquids.
133	18th Jan. 1856.	Giuseppe Antonio Tremeschini, of Vicence (Lombardo-Venetian), Mechanician.	Improvements in electro-telegraphic communications.
135	,,	Miguel De Berque, of Barcelona, in the kingdom of Spain, Engineer.	Improvements in the permanent way of railways.
141	,,	Nathaniel Shattswell Dodge, of St. Paul's Churchyard, in the city of London, of the firm of Dodge, Bacon, and Company, Merchants and Manufacturers.	Improvements in treating vulcanized india-rubber or gutta-percha.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
148	19th Jan. 1856.	Alfred Dawson, of 14, Barnes Place, Mile End Road, in the parish of St. Dunstan's, Stepney, in the county of Middlesex, Engineer.	An apparatus for converting small coals or coal dust, or small coals and coke, or coal dust and coke, with the admixture of water or other materials into solid blocks of fuel, parts of which apparatus can be used and are suited for other purposes.
149	„	Edward Pickering, of Chatham Place, Blackfriars, in the county of Middlesex, Railway Contractor.	Improvements in the permanent way of railways.
151	„	Isaac Barnes, of Birmingham, in the county of Warwick, Manufacturer.	Improvements in carriage lamps.
155	„	Charles Robertson, of 68, Mark Lane, Shipmaster.	Improvements in mariners' compasses.
157	21st Jan. 1856.	John Coope Haddan, of Cannon Row, in the city of Westminster, Civil Engineer.	Improvements in omnibuses and other similar carriages.
159	„	James Pockson, of Penton Street, Walworth, county of Surrey, Carpenter.	Improvements in the construction of roofing and other tiles.
161	„	Gustav Adolph Blittkowski, of the city of New York, United States of America.	Improvements in repeating fire-arms.
169	22nd Jan. 1856.	Edward Lawson, of Leeds, in the county of York, Machine Maker, and George Jennings, of Hunslet, in the parish of Leeds, aforesaid, Mechanic.	Improvements in reeling-machines for winding flax, cotton, wool, and other yarns.
170	„	Dundas Smith Porteous, of Paisley, in the county of Renfrew, in Scotland.	A rotatory engine.
173	„	Henry Elliott Hoole, of Green Lane Works, Sheffield, in the county of York, Stove Grate and Fender Manufacturer.	Improvements in stove grates.
176	23rd Jan. 1856.	Alexandre Tolhausen, of No. 7, Duke Street, Adelphi, London, county of Middlesex, Sworn Interpreter at the Imperial Court of Paris.	An improved manufacture of yarn from wool or other felting material.
177	„	Alexandre Tolhausen, of No. 7, Duke Street, Adelphi, London, county of Middlesex, Sworn Interpreter at the Imperial Court of Paris.	An improved lock joint for the rails of railways.
183	„	Isaac Barnes, of Birmingham, in the county of Warwick, Manufacturer.	Improvements in the manufacture of knobs and furniture for doors, drawers, and other similar purposes, parts of which improvements are also applicable to the manufacture of cornice poles and other like articles.
185	„	Stephen Norris, of New Peter Street, Westminster, in the county of Middlesex.	Improvements in the manufacture of boots and shoes, and other coverings for the human feet.
189	24th Jan. 1856.	Charles Rothwell, of the firm of Taylor, Lang, and Co., Castle Iron Works, Staleybridge, in the county of Chester.	Improvements in self-acting mules.
190	„	John Strafford, Lamp Maker, of Stratford, in the county of Essex.	Certain improvements in portable signal lamps for railway, marine, and other purposes.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
191	24th Jan. 1856.	JOHN GIMSON, of Staleybridge, in the county of Lancaster, Engineer, and GEORGE GIMSON, of the same place, Engineer.	An improved apparatus applicable to steam pipes used for the purposes of heating and drying, which said apparatus may also be used for other similar purposes where steam is employed.
194	„	DAVID FISHER, of No. 12, Ranelagh Road, Thames Bank, Middlesex.	Improvements in machinery for pressing, cutting, drying, and opening tobacco.
196	25th Jan. 1856.	ALEXANDRE TOLHAUSEN, of No. 7, Duke Street, Adelphi, London, county of Middlesex, Sworn Interpreter at the Imperial Court of Paris.	An improved machine for boring and other cutting operations in stone and other mineral substances of similar character.
198	„	ANDREW SHANKS, Engineer, 6, Robert Street, Adelphi, Westminster, and FRANCIS HERBERT WENHAM, Engineer, Effra Vale Lodge, Brixton, Surrey.	Certain improvements in water gauges.
200	„	JOHN KERSHAW, of Stockport, in the county of Chester, Manager.	Improvements in apparatus for preventing the explosion of steam boilers.
204	„	ALEXANDER DALGETY, of 76, Florence Road, Deptford, in the county of Kent, Engineer.	Improvements in vices or gripping or holding apparatus.
205	„	GENTLE BROWN, of Swinton, near Rotherham, in the county of York, Gentleman.	An improvement in the manufacture of cast steel.
206	„	WILLIAM OWEN, of the firm of Owen Stodart and Company, of Red Lion Square, in the county of Middlesex, Piano-forte Nanufacturers.	An improvement in piano-fortes.
207	„	ALEXIS JEAN DESSALES, of 13, Rue des Enfants Rouges, Paris, in the empire of France, and of 43, Southampton Buildings, Chancery Lane, in the county of Middlesex.	Improvements in oil lamps, and in reflectors for the same for railway carriages and other purposes.
209	„	ALEXANDER DALGETY, of 76, Florence Road, Deptford, in the county of Kent, Engineer.	An improved self-acting stand or tilt for casks or barrels.
210	26th Jan. 1856.	GEORGE NAPIER, of Bath Street, Glasgow, in the county of Lanark, and of the Adelphi, in the county of Middlesex, Engineer.	Improvements in the construction and arrangement of the flues, air passages, and other parts of furnaces, and also in controlling the passage of smoke, and in heating and regulating the supply of air to facilitate combustion.
212	„	EDWARD VINCENT GARDNER, of 24, Norfolk Street, Middlesex Hospital, in the county of Middlesex.	Improvements in heating, drying, desiccating, and evaporating.
213	„	PATRICK DORAN, residing at No. 10, Cornwallis Street, in the town of Liverpool, in the county of Lancaster.	Improvements in pneumatic apparatus for raising sunken vessels or otner bodies under water, and for keeping afloat vessels or other bodies liable to sink.
214	„	JEAN LOUIS AMBROISE HUILLARD, of Paris, Manufacturing Chemist.	Improvements in the processes of singeing and dressing textile fabrics, and in apparatus for the same.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
215	26th Jan. 1856.	William Spurrier, of Birmingham, in the county of Warwick, Manufacturer.	A new or improved method of attaching handles to metallic teapots and other vessels, which method of attachment may also be applied to the fixing of castors on furniture and other like purposes.
216	„	Samuel Statham, of Islington, in the county of Middlesex, Gentleman.	Improvements in electric telegraph conductors.
217	„	Wilhelm Dreschfeld, of Manchester, in the county of Lancaster, Clerk.	An improvement in or addition to rollers employed in spinning.
225	28th Jan. 1856.	Jean Baptiste Jules Hyppolite d'Auvergne, of Blois, in the empire of France, Gentleman.	Improvements in portable writing or drawing desks.
226	„	Pierre Samain, of Meusnes (Loire-et-Cher), in the empire of France, Lock Maker.	Improvements in table stools and other pieces of household furniture.
228	„	Robert Barrow, of 32, Garford Street, Poplar, in the county of Middlesex, Engineer.	An equilibrium slide valve for steam engines.
230	„	William Asbury, of Birmingham, in the county of Warwick, Engineer.	A new or improved tap or stopcock.
231	„	Jean Hector Destibeaux, Manufacturer, of Paris, in the French empire.	An improved waterproof fabric.
232	„	John Whitehead, of Leeds, in the county of York, Machine Maker.	Improved machinery for fulling cloth.
233	„	Henry Samuel King, of the firm of Smith, Elder, and Company, of Cornhill, in the city of London, Stationers.	Improved apparatus for printing and embossing.
237	29th Jan. 1856.	William Henry Lancaster and James Smith, both of Liverpool, in the county of Lancaster.	Improved arrangements for the application of gas and atmospheric air to the generation of heat in furnace or other flues, and the consumption of smoke.
242	„	Henry Chance, of Birmingham, Glass Manufacturer.	An improvement in the manufacture of moulded articles when using vitreous materials.
243	„	Samuel Palmer Gladstone, of Lea Cottage, Orchard House, Poplar.	Improvements in the construction of masts and yards.
244	„	Joseph Fowell Walton, of Sarratt Hall, Rickmansworth, Herts, and Honore le François, of Lambeth, in the county of Surrey.	Improvements in cleaning forks, spoons, stew-pans, and other culinary utensils.
245	„	Abraham Pope, of Edgware Road, in the county of Middlesex, Engineer.	Improvements in the manufacture of iron, copper, tin, and lead.
247	30th Jan. 1856.	Robert Walter Wingfield, of Birmingham, in the county of Warwick, Merchant and Manufacturer.	An improvement or improvements in the manufacture of metallic bedsteads and other articles of metallic furniture.
257	31st Jan. 1856.	Henry Holford, of Newton Iron Works, Hyde, in the county of Chester, Engineer, and Mark Mason, of the same place, Machine Maker.	Improvements in machinery or apparatus for compressing metals, and for manufacturing all kinds of metallic rivets, bolts, or similar articles.
259	„	James Mash, of the city of Manchester, in the county of Lancashire, Engineer.	Improvements in working the valves of steam engines.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
264	31st Jan. 1856.	Thomas Burdett Turton and John Root, both of the Sheaf and Spring Works, Sheffield, in the county of York.	Improvements in buffer bearing and draw springs.
267	„	George Hallen Cottam and Henry Richard Cottam, of Old St. Pancras Road.	Improvements in folding bedsteads and chairs.
270	„	John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman.	Improvements in gas-burners and in regulating the combustion of gas.
272	1st Feb. 1856.	Matthew Ker, of No. 8, Cumberland Market, in the parish of St. Pancras, in the county of Middlesex.	A machine for sweeping carpeted and other floors.
274	„	Francis Preston, of the city of Manchester, Machinist.	Improvements in machinery for shaping and rolling metal.
275	„	George Holcroft, Joseph Smith, and Thomas Holcroft, all of the city of Manchester, Engineers.	Improvements in machinery for preparing, spinning, and doubling cotton and other fibrous materials.
276	„	Charles Robert Moate, of No. 65, Old Broad Street, in the city of London, Metal Broker.	An improvement in securing and sustaining the rails of railways.
277	„	Peter Armand le Comte de Fontainemoreau, of 39, Rue de l'Echiquier, Paris, and of No. 4, South Street, Finsbury, London, Patent Agent.	Certain improvements in the saponification of fatty matters.
280	„	Francis Best Fawcett, of Kidderminster, in the county of Worcester, Carpet Manufacturer.	Improvements in the manufacture of carpets.
281	„	Henry Bestwick, of Manchester, in the county of Lancaster, Brass Founder, and Joseph Bury, of the same place, Brass Founder.	Certain improvements in cocks, taps, or valves.
282	„	George Norgate Hooper and William Hooper, of the Haymarket, in the county of Middlesex, Carriage Builders.	Improvements in springs for carriages, and for the cushions of carriages, chairs, mattrasses, beds and other similar articles.
283	„	James Timmins Chance, of Birmingham.	Improvements in furnaces used for flattening glass.
286	„	Charles Catherine Joubert, of Rue de Moscow, and Leon Andre Bordier, of Rue de la Ferme des Mathurins, both in Paris, in the empire of France.	Improvements in motive power engines.
288	„	John O'Meara, Beamish, of Trafalgar Road, Old Kent Road, Gentleman.	An improvement in the manufacture of Morocco leather.
289	2nd Feb. 1856.	James Townsend Ward, of Swansea, in the county of Glamorgan, Manufacturer.	A new or improved omnibus.
290	„	John Rock Day, of Birmingham, in the county of Warwick, Machinist.	A new or improved door lock and latch.
292	„	Benjamin Burleigh, of the Great Northern Railway, King's Cross.	Improvements in certain parts of the permanent way of railways.
294	„	William Goodman, of 3, Canning Place, Leicester.	Improvements in machinery for producing knit or looped fabrics.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
295	4th Feb. 1856.	Alexandre Tolhausen, of No. 7, Duke Street, Adelphi, London, county of Middlesex, Sworn Interpreter at the Imperial Court of Paris.	Certain improvements in machinery for picking, carding, and combing fibrous substances.
297	,,	Rudolph Bodmer, of 2, Thavies Inn, Holborn, in the city of London.	An improved lubricating oil.
298	,,	Ralph Waller, of the city of Manchester, Manufacturer,	Improvements in machinery for preparing cotton and other fibrous materials.
301	,,	Edwin Clark, of 24, Great George Street, Westminster.	An improvement in the apparatus for suspending insulated electric telegraph wires.
304	,,	Nathan Ager, of Upper Ebury Street, Pimlico, in the county of Middlesex, Carpenter.	Improvements in connecting spindles of locks and latches with their knobs and handles.
307	5th Feb. 1856.	George Cumins Thomas, of Washington City, United States, but now of 67, Gracechurch Street, London.	An improved method of hardening and tempering steel.
309	,,	Thomas Hinchliffe, of Mill Bridge, in Liversedge, in the parish of Birstall, in the West Riding of the county of York, Engineer.	Certain improvements in machinery or apparatus for "drawing" and "spinning" wool or other fibrous substances, or wool mixed with other fibrous substances.
311	,,	Theodore Bergner, of the firm of Howson and Bergner, of Philadelphia, in the United States of America, and of No. 19, Arundel Street, Strand, London.	Embossing veneers so as to represent carvings in wood.
312	,,	Francis Montgomery Jennings, of the city of Cork, Manufacturing Chemist.	Improvements in bleaching vegetable fibres.
314	,,	Alexander McDougall, of Manchester, in the county of Lancaster, Manufacturing Chemist.	Improvements in treating bones, other animal matters, and other substances containing phosphates for the purpose of obtaining manure and other products.
318	6th Feb. 1856.	George Napier, of Bath Street, Glasgow, in the county of Lanark, and of the Adelphi, in the county of Middlesex, and John Miller, of Cavendish Street, Glasgow, in the county of Lanark.	Improvements in the mode of driving, and in applying screw propellers to the propulsion of vessels.
321	,,	John Fletcher, of Salford, in the county of Lancaster, Ironfounder, and William Fletcher, of the same place, Millwright.	Improvements in the construction of weighing cranes and other similar elevating machines.
322	,,	John Inshaw, of Birmingham, in the county of Warwick, Engineer.	A new or improved pressure gauge.
325	,,	Thomas Frederick Tyerman, of Weymouth Street, Portland Place, in the county of Middlesex, Architect and Surveyor.	Improvements in apparatus to be applied to omnibuses and other carriages for receiving wet umbrellas.
326	,,	Franklin Prestage, of Wylye, Heytesbury, in the county of Wilts.	Improvements in locomotive engines.
328	,,	Charles Frederick Philipp Funcke, of Herdecke, Westphalia, Tanner and Currier.	Improvements in tanning skins and hides.
329	,,	James Meacock, of Snow Hill, in the city of London, Gas Meter Maker.	An improved means of fixing diaphragms in gas meters.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
332	7th Feb. 1856.	WILLIAM KENWORTHY, of Blackburn, in the county of Lancaster, Manufacturer.	Certain improvements in self-acting mules.
333	„	RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, Patent Agent.	A method of obtaining alcohol from the fruit or pod of the carob tree.
337	8th Feb. 1856.	THOMAS RESTELL, of New Kent Road, in the county of Surrey, Chronometer Maker.	Improvements in breech-loading and revolving fire-arms, and in cartridges.
340	„	CHARLES WALKER, of Glasgow, in the county of Lanark, North Britain, Engineer.	Improvements in safety valves, and in apparatus for cleansing or purifying water in steam boilers.
342	9th Feb. 1856.	CHARLES SWAN and GEORGE FREDERICK SWAN, of 49, High Street, in the borough of Southwark, Ink Manufacturers.	An improved colouring matter for writing, staining, or dyeing, which is also applicable to the production of a copying fluid.
350	„	LOUIS SCHWARTZKOPFF, of Berlin.	Improvements in apparatus for raising mud and soil from the bottoms of rivers and other waters.
352	11th Feb. 1856.	CHRISTOPHER MURATORI, of Paris, Doctor of Physics.	Improvements in the waterproofing of hangings or ornamental stuffs.
353	„	WILLIAM HENRY ZAHN, of New York, in the United States of America, but now residing in London, and JOSEPH HENRY GEORGE WELLS, of 3, Ebenezer Place, Neckinger Road, Bermondsey, Surrey, Mechanical Engineer and Draughtsman.	Improvements in windmills or wind engines.
355	„	THOMAS STEVEN, of the Milton Foundry, Glasgow, in the kingdom of Scotland, Ironfounder.	Improvements in the construction of open and close stoves, which improvements are applicable in part to kitchen ranges and boiler fireplaces.
361	13th Feb. 1856.	FREDERICK STEINER, of Accrington, in the county of Lancaster, Turkey Red Dyer.	Improvements in machinery to be used in drying fabrics.
362	„	PIERRE ISIDOR DAVID, of Paris, in the empire of France, Machinist.	Certain improvements in the method of bleaching.
364	„	LOUIS VIGNAT, of the firm of Vignat frères, of No. 3, Place des Victoires, in the city of Paris, Merchant.	A regulator-compensator for the weaving of ribbons and cloths.
365	„	WILLIAM FREDERICK COLLARD MOUTRIE, of 4, King Street, Holborn.	An improvement in the damper action of pianofortes.
367	„	RICHARD KNIGHT, of Foster Lane, in the city of London.	Improvements in medical chests.
368	„	WILLIAM GILCHRIST, of Kirkintilloch, in the county of Dumbarton, North Britain, Manufacturer.	Improvements in ornamental weaving.
369	„	WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improvements in the manufacture of zinc.
370	„	WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improvements in the construction of fire arms.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
371	13th Feb. 1856.	Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman.	Improvements in springs applicable to railroad carriages, and to other uses.
372	„	Henry Fort Mitchell and William Mitchell, Whitesmiths, and John Clarkson, Coal Merchant, of Silsden, near Keighley, in the county of York.	Improvements in sewing machines.
374	„	Gustave Louis Keller, of Paris, in the empire of France, Pocket Book Maker and Manufacturer.	A new kind or system of carpet or travelling bag.
376	14th Feb. 1856.	Thomas Parkinson Capp, of the American and European Patent Offices, 67, Gracechurch Street, London.	An improved lamp.
378	„	Henry Robert Ramsbotham and William Brown, of Bradford, in the county of York, Wool Comber.	Improvements in combing wool, alpaca, cotton, and other fibrous substances.
379	„	Stephen Rossin Parkhurst, of the city, county, and state of New York, United States of America.	Improvements in sails and rigging for vessels.
383	„	John Taylor, of Spring Grove, Hounslow, in the county of Middlesex.	An improvement in constructing and facing walls.
384	„	William Hamond Bartholomew, of 15, Brunswick Terrace, Leeds.	Improvements in propelling vessels when screws or submerged propellers are used.
386	„	William Watson Hewitson, of Headingley, near Leeds.	An improvement in casting the bearings or brasses of machinery.
387	„	Thomas Evans Blackwell, of Clifton, near Bristol, Gentleman.	Improvements in condensing steam, and in cooling and heating fluids.
388	„	Charles Cowper, of 20, Southampton Buildings, Chancery Lane, in the county of Middlesex, Patent Agent.	Certain improvements in impregnating wood with preservative and colouring materials, and in apparatus for that purpose.
389	„	George Gulliver and John Goldthorpe, of Barnsley, in the county of York, Ironmonger, &c.	An improved signal bell.
392	15th Feb. 1856.	Alexandre Tolhausen, of No. 7, Duke Street, Adelphi, London, county of Middlesex, Sworn Interpreter at the Imperial Court of Paris.	A machine for cutting articles of polygonal figure in wood or other material.
393	„	Edmund Leach, James Leach, and Edmund Leach the younger, all of Rochdale, in the county of Lancaster, Machine Makers.	Improvements in machinery or apparatus for preparing, spinning, and drying yarns, and manufacturing the same into cloth.
394	„	James Hogg, junior, Publisher, of No. 4, Nicolson Street, Edinburgh, in the county of Edinburgh.	Improvements in the manufacture of envelopes, and certain other combinations and applications of paper and gum denominated "letter checks," for containing and securing written, printed, or other communications.
396	„	Eddlestone Elliott, Woollen Manufacturer, Cyrus Leach, Blacksmith, and James Ratcliffe, Spinner, all of Ridings, in the parish of Rochdale, in the county of Lancaster.	Improvements in machinery for spinning wool and other fibrous substances.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
397	15th Feb. 1856.	JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman.	Improvements in fountain pens.
398	„	WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improved machinery for making boots and shoes.
402	16th Feb. 185 .	GEORGE HARRISON, of 4, Little Goodwin Street, Hull, in the county of York.	Improvements in axles for railway carriages.
404	18th Feb. 1856.	WILLIAM WILLCOCKS SLEIGH, of London, in the county of Middlesex, Physician and Surgeon.	Producing motive-power which he entitles "the hydrostatic motive power engine."
406	„	JAMES STRANG THOMSON, of Kilmarnock, in the county of Ayr, North Britain, Manufacturer, and ANDREW BARCLAY, of the same place, Engineer.	Improvements in printing and embossing textile fabrics and other surfaces, and in the production of apparatus to be employed therein.
407	„	HENRY HODGKINSON, of Donegall Street Place, Belfast, in the county of Antrim.	Improved machinery or apparatus for bleaching cotton, linen, and other woven or textile fabrics.
413	19th Feb. 1856.	SYLVESTER EMIL SICHEL, of Bradford, in the county of York, Merchant.	Certain improvements in apparatus for weaving "ribbed" cloth and bands of "chenille."
414	„	FREDERICK AUSTIN SPALDING WITTER, of Manchester, in the county of Lancaster, Agent.	An improved stove.
415	„	WILLIAM HENRY BOWERS, of No. 4, Singleton Street, South East Road, in the county of Middlesex.	Improvements in the construction of railways.
423	20th Feb. 1856.	WILLIAM ARISTIDES VÉREL, of Macduff, in the county of Banff, Merchant.	Improvements in grinding or pulverizing hoofs and horns, and in using them alone or mixed with pulverized bones for manure.
424	„	RICHARD LAMING, of Carlton Villas, Maida Vale, Paddington, in the county of Middlesex.	Improvements in purifying gas, in preparing materials useful for purifying gas, and in apparatus to be used in purifying gas and disinfecting gas, liquors, or washings.
425	„	THOMAS SMITH and JOSEPH GILL, of Hebden Bridge, in the county of York, Manufacturers.	Improvements in the mode or method of casing horizontal shafting.
427	„	JAMES KNOWLES, of Eagley Bank, near Bolton-le-Moors, in the county of Lancaster, Coal Proprietor.	Improvements in the construction of metallic pistons.
428	„	WILLIAM LYNN, of Her Majesty's Dockyard, Portsmouth, Assistant Inspector of Machinery.	Improvements in the construction and mode of applying screws for propelling vessels.
435	„	JEREMIAH CLARK, of 13, Moorgate Street, in the city of London, Stationer, and JAMES AUSTIN, of the same place, Stationer's Assistant.	Improvements in apparatus for stoppering or closing bottles, jars, and other similar vessels.
436	„	DAVID AULD, of the city of Glasgow, in the county of Lanark, North Britain, Engineer, and JOHN STEPHEN, of the same place, Mill Manager.	Improvements in steam boilers and furnaces, and in apparatus connected therewith, and in the consumption or prevention of smoke.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
439	20th Feb. 1856.	William Oliver Johnston, of Broomhill Colliery, Acklington, Northumberland, Engineer, and John Dixon, of High Bridge Works, Newcastle-upon-Tyne, Engineer.	Improvements in cutting and working coal.
447	21st Feb. 1856.	James Durell Greene, of Craven Street, in the city of Westminster, Gentleman.	An improvement in breech loading fire-arms.
448	„	William Clarke, of Nottingham, Manufacturer.	Improvements in the manufacture of warp fabrics.
453	22nd Feb. 1856.	Frederick William Mowbray, of Saltaire, near Bradford, in the county of York, Gentleman.	Improvements in machinery or apparatus employed in spinning and doubling.
454	„	John Kingsford Field, of Lambeth, in the county of Surrey, Wax Chandler, and Charles Humfrey, of No. 14, the Terrace, Camberwell, in the said county of Surrey, Gentleman.	Improvements in the manufacture of paraffine candles.
455	„	William Vincent Wallace, of Great Portland Street, in the county of Middlesex, Gentleman, and Benjamin Lawrence Sowell, of Harrow Road, in the same county, Gentleman.	Improvements in treating tobacco in order to manufacture cigars and other articles for smoking together with the manufacture of cigars and cheroots from tobacco so treated.
456	„	James Griffiths, of Wolverhampton, in the county of Stafford, Engineer.	A new or improved break for colliery and other steam engines.
457	„	Leonard Bower, of Birmingham, in the county of Warwick, Manufacturer.	New or improved machinery for the manufacture of screws.
458	„	William Strang, of Glasgow, in the county of Lanark, North Britain, Manufacturer.	Improvements in ornamental weaving.
459	„	Georges Toucas, of 39, Rue de l'Echiquier, Paris, in the empire of France, and of 4, South Street, Finsbury, London, Metallurgist.	A new metallic alloy.
462	23rd Feb. 1856.	James Edward Boyd, of Hither Green, Lewisham, in the county of Kent, Gentleman.	Improvements in scythes.
464	„	George Holme Spencer, of Heathersage (near Sheffield), in the county of Derby, Manufacturer.	Improvements in the manufacture of card surfaces employed in carding cotton and wool.
471	„	William Sangster, of 75, Cheapside, in the county of Middlesex.	An improvement in the manufacture of umbrellas and parasols.
472	„	Samuel Rogers Samuels, of Nottingham.	Improvements in weaving fabrics.
473	„	Charles Brook the younger, of Meltham Mills, near Huddersfield, in the county of York, Cotton Spinner, and Joseph Hirst, of Wilshaw, near Huddersfield aforesaid, Woollen Cloth Manufacturer.	An improvement in finishing yarns of wool or hair, and in the finishing of woven fabrics or piece goods.
474	25th Feb. 1856.	Louis Normandy, of 67, Judd Street, Brunswick Square, in the county of Middlesex, Civil Engineer.	Improvements in the mode of constructing and fixing the rails of railways.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
475	25th Feb. 1856.	Bennett Johns Heywood, of the city of Dublin, Gentleman.	An improved holder for leads, slate, and other marking materials, applicable also as a case for other articles.
476	„	Frederick Kersey, of 5, Laurie Terrace, Saint George's Road, Southwark.	An improvement in the manufacture of drain pipes.
478	„	Robert Hawthorn and William Hawthorn, both of the town and county of Newcastle-upon-Tyne, Engineers.	An improved arrangement of steam pump.
480	„	Charles Frederick Claus, of Latchford, in the county of Chester, Chemist.	Improvements in metal ship building, applicable also to steam boilers, bridges and other structures in which metal plates are used.
481	„	Louis Arnier, of Marseilles, in the empire of France.	Improvements in condensing hot air and obtaining motive power therefrom.
482	„	Charles Damas Auguste Joseph Planque, Merchant, of Pont St. Maxence, France.	Improvements in the manufacture of fecula.
484	„	Edward Slaughter, of the Avonside Iron Works, Bristol, Engineer.	Improvements in the fire-boxes of locomotive and other steam boilers.
485	26th Feb. 1856.	John Barrow, junior, of the city of Manchester, in the county of Lancaster, Manufacturing Chemist.	Improvements in the manufacture of soda, sulphurous, and sulphuric acids, carbonic acid, chlorine and muriatic acid and apparatus used therein.
487	„	Samuel Henn and Thomas Haddon, Rivet Manufacturers, trading as Co-partners, at Gibb Street Works, Gibb Street, Deritend, Birmingham, in the county of Warwick.	Certain improvements in the mode or modes of forming or making the heads of ornamental nails when such heads are formed of a different metal or metals from the shanks of the same.
490	„	James Steedman, of Albany Street, in the county of Middlesex, Pianoforte Maker.	An improvement in piano-fortes.
491	„	John Cornes, of Swan Lane, in the city of London, Engineer.	Improvements in machines for washing and churning.
493	„	Francis Thompson, of the firm of Parker and Thompson, of Sheffield, in the county of York, Tool and Patent Skate Manufacturers.	An improvement in skates.
494	„	Richard Archibald Brooman, of 166, Fleet Street, in the city of London, Patent Agent.	A composition or compositions to be used as a substitute for hops in brewing.
495	„	George Parry, of the Ebbw Vale Iron Works, in the county of Monmouth, Furnace Manager.	An improvement in the puddling and refining of iron.
496	„	Isaac Reckitt, George Reckitt, and Francis Reckitt, of Kingston-upon-Hull, being people called Quakers.	Improvements in the manufacture of starch, British gum, and size.
499	27th Feb. 1856.	Peter Armand le Comte de Fontaine-Moreau, of 39, Rue de l'Echiquier, Paris, in the empire of France, and of 4, South Street, Finsbury, London.	A new cicatrising preparation.
502	„	William Exall, of Reading, in the county of Berks, Civil Engineer.	Improvements in the manufacture and arrangement of sawing machinery.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
503	27th Feb. 1856.	Edward Ellis Allen, of 376, Strand -	Improvements in the permanent ways of railways.
508	28th Feb. 1856.	John Smith, of Derby, Brassfounder.	Improvements in water gauges for steam boilers, which improvements are also applicable to cocks used for steam and other purposes.
515	„	Pierre Louis Grosrenaud, Engineer, of St. Etienne Town, in the French Empire.	Certain improvements in apparatus or furnaces for melting and puddling metals.
516	„	Richard Archibald Brooman, of 166, Fleet Street, in the city of London, Patent Agent.	Improvements in treating bituminous shale, boghead mineral, and other like schistous bodies in order to obtain various commercial products therefrom.
518	29th Feb. 1856.	John Brierley, of Blackburn, in the county of Lancaster, Spinner and Manufacturer.	Improvements in machinery or apparatus for twisting and doubling yarns for mule banding and similar purposes.
520	„	John Graham, of Aughton, in the county of Lancaster, of the firm of Kay and Hilton, Liverpool, Millstone Manufacturer.	Improved machinery for cleaning and dressing rice and other grain.
521	„	John Greenwood, of Rawden, near Leeds, in the county of York.	Improvements in heating water for the supply of steam boilers.
522	„	Foster Connor, of Belfast, in the county of Antrim, Ireland, Linen Manufacturer.	Improvements in looms for weaving.
523	„	Charles Barlow, of the Office for Patents, 89, Chancery Lane, London.	Improvements in machinery for cutting cloth and other textile fabrics.
524	„	William Allen Turner, of No. 125, Wood Street, Cheapside, in the city of London, India Rubber Manufacturer.	Improvements in the manufacture of elastic tubing.
525	1st Mar. 1856.	William Crozier, of the borough of Sunderland, in the county of Durham, Civil Engineer.	The better extinction of fire, street watering, and other purposes.
530	„	John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman.	Improvements in looms for weaving.
531	„	Paul Rapsey Hodge, of No. 4, Albion Grove, Islington, in the county of Middlesex, Civil Engineer.	Improvements in the method of lighting domestic fires.
533	„	Alfred Francis, of Encomb Terrace, Wandsworth Road, Cement Manufacturer.	Certain improvements in the manufacture of a composition applicable as a cement or plaster, and to other purposes.
535	„	Cyprien Marie Tessié du Motay, of No. 24, Rue Fontaine St. George, Paris, Chemist, and Jean Jacques Fontaine, of No. 19, Rue Paradis, Poissonnière, Paris, Merchant.	Improvements in treating cast iron.
537	„	François Rualem, of 29, Rue de Paris à Belleville, France, Milkman.	An improvement in the manufacture of fuel.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
539	3rd Mar. 1856.	ADOLPHUS OPPENHEIMER, of Manchester, in the county of Lancaster, Manufacturer.	Certain improvements in machinery or apparatus for stretching or distending velvets and other piled goods or fabrics, for the purpose of cutting the pile of such goods.
540	„	JAMES WALLACE, junior, of Glasgow, in the county of Lanark, North Britain, Manufacturer.	Improvements in bleaching, washing, cleansing, and drying textile fabrics and materials.
541	„	JULIUS HOMAN, of Milk Street, Cheapside, in the city of London, Manufacturing Outfitter.	An improved mode of driving sewing machines.
542	„	JOHN ASPINALL, of Limehouse, in the county of Middlesex, Civil Engineer.	Improvements in machinery for curing sugar or extracting moisture therefrom, applicable to separating liquids from solids.
544	„	JOHN VENABLES, of Burslem, in the county of Stafford, China and Earthenware Manufacturer.	Improvements in ornamenting articles made of clay and other similar plastic materials.
548	4th Mar. 1856.	RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, Patent Agent.	An improved fabric suitable for ladies' garments.
550	„	CHARLES THOMAS ROSENBERG, of 12, Clarence Terrace, Camberwell New Road.	Improvements in ornamenting china, glass, and other surfaces when transferring printed impressions.
551	„	MARTIN SAMUELSON, of Scott Street, Hull.	Improvements in screw propellers.
554	5th Mar. 1856.	SAMUEL CLEGG and JOHN KAY, of Padiham, near Burnley, in the county of Lancaster, Warpers.	Improvements in machinery or apparatus for warping yarns.
555	„	RICHARD DUGDALE KAY, of Accrington, in the county of Lancaster, Manufacturer.	Improvements in the manufacture of fabrics from fibrous materials.
556	„	WILLIAM BILLINTON, of Great George Street, Westminster, Civil Engineer.	An improved method of treating wooden railway sleepers.
557	„	SAMUEL LAST, of Oxford Street, in the county of Middlesex, Trunk Manufacturer.	Improvements in trunks or portmanteaus, and an improved lock for the same.
558	„	CHARLES MORGAN, of Cwm Aman, near Llanelly, in the county of Carmarthen, Gentleman, and CHARLES RANKEN VICKERMAN, of Kilgetty, near Saundersfoot, in the county of Pembroke, Gentleman.	An improved preparation of fuel, and the application of the same to steam boiler purposes.
565	6th Mar. 1856.	ROBERT MORRISON, of the town and county of Newcastle-upon-Tyne, Engineer.	Improvements in pile-driving machinery.
568	„	JOHN WILLIAM SCOTT, of the city of Worcester, Manufacturer of Finch's Patent Solid Leather Button.	An apparatus for fastening or securing buttons which may itself be used as a stud or button.
571	7th Mar. 1856.	The CHEVALIER GUILLAUME HÄHNER, of Leghorn, in Tuscany, and of 4, South Street, Finsbury, London.	Certain improvements in the treatment of ores.
572	„	DAVID BROWN, of Smethwick, in the county of Stafford, Machinist, and WILLIAM BROWN, of Smethwick aforesaid, Roll Turner.	An improvement or improvements in rolling railway switches from railway bars, and in rolling taper ends on other bars requiring the same.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
573	7th Mar. 1856.	Frederic Hale Holmes, of London, in the kingdom of Great Britain, Analytical Chemist.	Improvements in machines known under the name of Magneto-electric Machines.
574	8th Mar. 1856.	Thomas Cook, of Addiscombe, in the county of Surrey, Lieutenant in Her Majesty's Royal Navy.	Improvements in portable bedsteads.
575	„	Henry B. Young, of Barnstaple.	Certain improvements in steam engines.
578	„	David Yoolow Stewart, of Glasgow, in the county of Lanark, North Britain, Iron-founder.	Improvements in moulding or shaping metals.
579	10th Mar. 1856.	Robert Hannah, of Glasgow, in the county of Lanark, North Britain, Pottery Manager.	Improvements in pottery kilns.
581	„	Pierre Denis Nolet, of Rue de la Lune, Paris, Practical Engineer.	Improvements in pen holders.
584	„	James Mills, of Oldham, in the county of Lancaster, Machinist.	An improvement in spindles used in certain machines for preparing spinning and doubling cotton and other fibrous substances.
587	11th Mar. 1856.	Alexandre Tolhausen, of No. 7, Duke Street, Adelphi, London, county of Middlesex, Sworn Interpreter at the Imperial Court of Paris.	Certain improvements applicable to bakers' ovens.
590	„	Oliver Maggs, of Bourton Foundry, Dorset.	Improvements in the straw shaking apparatus of thrashing machines.
591	„	Henri Petitpierre, of No. 15, Avenue de St. Ouen, Batignolles, near Paris, Engineer.	Improvements in sawing or cutting stone.
593	12th Mar. 1856.	Henry Horner and Richard Bagley, both of Sheffield, in the county of York.	Improvements in buffers and draw and bearing springs for railway and other purposes.
594	„	George Spencer, of No. 6, Cannon Street, Engineer, London.	Improvements in supporting the rails of railways.
602	„	William Bramwell Hayes, of Manchester, in the county of Lancaster, Manufacturer.	Certain improvements in looms for weaving.
603	„	John Northcote Ryder, of Thames Street, in the city of London.	An improvement in slide valves of steam engines.
604	„	George Murray, of Whitehill Point, in the county of Northumberland, Engineer.	An improvement in the construction and manufacture of wheels for locomotive engines, waggons, and other carriages to be used on railways.
606	13th Mar. 1856.	Christopher Duckworth and Thomas Marsden, both of the city of Manchester, Manufacturers.	The manufacture of a new or improved woven fabric.
608	„	Joseph Sturge, of Kennington, in the county of Surrey, and Alfred Sturge, of Northfleet, in the county of Kent, Engineers.	Improvements in rotary fluid meters.
610	„	Isaac Dickson, of Liverpool, in the county of Lancaster, Builder.	An improved propeller for steam ships and other vessels.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
611	13th Mar. 1856.	Grand de Châteauneuf, of 39, Rue de l'Echiquier, Paris, in the empire of France, and of 4, South Street, Finsbury, London, Civil Engineer.	A hydro-pneumo-metric gas meter.
613	„	James Murdoch, of 7, Staple Inn, in the county of Middlesex, Patent Agent.	An improved mode of manufacturing cut velvets and other similar fabrics.
615	14th Mar. 1856.	Prosper Pimont, of Rouen, in France, Manufacturer.	A certain process for restoring metallic spoiled pens.
616	„	Charles Durand Gardissal, of 10, Bedford Street, Strand, London, Patent Agent, and of 29, Boulevart Saint Martin, Paris.	An improvement in capstans.
617	„	Charles Durand Gardissal, of 10, Bedford Street, Strand, London, Patent Agent, and of 29, Boulevart Saint Martin, Paris, France.	An improvement in ships' windlasses.
621	„	William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improved machinery for separating gold and other metals from their ores.
623	15th Mar. 1856.	Louis Joseph Richard, of Tirlemont (Belgium), Sugar Refiner.	Improvements in sugar manufacture.
627	„	James Rice, of Foley Place, Surgeon, and William Rice, Lieutenant, H.E.I.C.S.	Improvements in breech-loading repeating guns and rifles.
628	„	Joseph Dumas, of Marseilles, in the empire of France, at present residing at No. 8, Windsor Terrace, City Road, in the county of Middlesex.	An improved description of tile.
634	17th Mar. 1856.	George Hills, of Bellmont Hill, Lee, in the county of Kent.	Improvements in treating fatty and oily substances, so as to obtain stearine and oleine in separate states.
637	„	Thomas Palmer, of Tavistock, in the county of Devon, Currier.	Pumps with a new or improved box and valve.
638	„	Robert Thomson, of Glasgow, in the county of Lanark, North Britain, Manager.	Improvements in weaving.
639	„	William Graham, of Glasgow, in the county of Lanark, North Britain, Master Mariner.	Improvements in marine compasses and in adjusting the same on board ship.
643	18th Mar. 1856.	Edward Rowley, of West Bromwich, in the county of Stafford, Iron Roller, and John Hadley, of Birmingham, in the county of Warwick, Engineer.	A new or improved method of shaping iron.
645	„	John Drury, of Paddock, near Huddersfield, in the county of York, Machine Maker.	Improvements in steam boilers for preventing explosion thereof.
649	„	Peter Appleton, of 7, London Street, New Swindon, in the county of Wilts.	Improvements in knives for peeling apples, potatoes, and other fruits and roots.
650	19th Mar. 1856.	Lazare Ochs, of Saint Josse-ten-Noode, in the kingdom of Belgium, Manufacturer.	Improvements in the manufacture of certain kinds of paper from the refuse of tanned leather.
651	„	Richard Morgan, of Acton, in the county of Middlesex, Gentleman.	A cellular purse.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
652	19th Mar. 1856.	Thomas Richardson, of Hartlepool, in the county of Durham, Engineer, and George William Jaffreys, Engineer, of Hartlepool, in the county of Durham.	Improvements in marine steam engines.
653	„	Augustus Dacre Lacy, of Hall House, Knayton, near Thirsk, Yorkshire, Gentleman.	Improvements in certain apparatus for taking up and delivering mail bags and other packages from a railway carriage or carriages whilst the train is in motion.
658	„	David Cope, of Birmingham, in the county of Warwick, Manufacturer.	A new or improved manufacture of spoons, forks, and ladles.
660	„	John Bishop Hall, of the city of New York, in the United States of North America.	Improvements in preparing and treating pictures.
661	„	Charles Frederick Parsons, of Lambeth, in the county of Surrey, Engineer.	Machinery to be employed in the bleaching and dyeing of cloths, yarns, and fabrics.
662	„	Richard Archibald Brooman, of 166, Fleet Street, in the city of London, Patent Agent.	Improvements in balance slide valves.
664	20th Mar. 1856.	Peter Armand le Comte de Fontaine-Moreau, of 4, South Street, Finsbury, London, and 39, Rue de l'Echiquier, Paris, in the empire of France, Patent Agent.	Improvements in looms for weaving.
667	„	William Charles Theodore Schaeffer, of Bradford, in the county of York.	An improvement in treating soap suds and wash waters.
669	„	John Trueman, of 34, Castle Street, Belfast, Ireland, Baker and Confectioner.	Improvements in ovens for baking.
671	22nd Mar. 1856.	James Murphy, of Newport, in the county of Monmouth, Civil Engineer.	Improvements in means or apparatus for stopping or retarding vehicles used on rail or other roads; which improvements are also applicable to the break wheels in connection with stationary engines.
673	„	William Brierley and James Platts Brierley, of Cleckheaton, in the county of York, Machine Makers.	Improvements in looms for weaving.
674	„	Walter Glover, of Salford, near Manchester, in the county of Lancaster, Dyer and Finisher.	Improvements in the construction and arrangement of machinery or apparatus for damping and beetling woven fabrics.
675	„	Henry Pratt, Engineer, of Worcester.	Certain improvements in the construction of union mills, and in the application of the motive power apparatus and machinery connected with the manufacture of flour and bread, parts of which are also applicable for other useful purposes.
679	„	John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman.	Improvements in electro-magnetic printing telegraphs.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
681	22nd Mar. 1856.	JOHN HINKS and GEORGE WELLS, of Birmingham, in the county of Warwick, Manufacturers and Co-partners.	Improvements in metallic pens and penholders.
684	„	WILLIAM HENRY BARLOW, of the Midland Railway, Derby.	Improvements in covering and constructing bridges, viaducts, floors, and other structures of a like nature when iron is used.
686	„	JOHN JUCKES, of Dame Street, Islington -	Improvements in furnace bars.
690	24th Mar. 1856.	THOMAS HEATON, of Blackburn, in the county of Lancaster, Engineer.	Improvements in self-acting doors and gateways.
691	„	JAMES BRYANT the Younger, of Plymouth, in the county of Devon, Sugar Refiner.	Improvements in machinery or apparatus for the reburning of animal charcoal.
694	„	PETER BROWN, of Liverpool, in the county of Lancaster, Corn Merchant, and GEORGE BROWN, of the same place, Corn Merchant.	An improved ash-pan for fire grates.
695	„	RICHARD HUSBAND, of Manchester, in the county of Lancaster, Hat Manufacturer.	Certain improvements in the manufacture of hats.
696	„	JOHN TYSOE, of Salford, in the county of Lancaster, and CHARLES TYSOE, of the same place, Cotton Spinners and Manufacturers, and PETER FOXCROFT, of the same place, Manager.	Certain improvements in machinery or apparatus for roving, spinning, and doubling cotton and other fibrous substances.
697	„	WILLIAM PITT and EDWIN TURNER DAVIES, of Birmingham, in the county of Warwick, Brass Founders.	Improvements in the manufacture of brackets and castors for furniture.
698	„	WILLIAM CLAY, of Liverpool, in the county of Lancaster, Iron Merchant.	Improvements in the manufacture of wrought or bar iron.
700	„	WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Certain improvements in cranes.
706	25th Mar. 1856.	JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman.	Improvements in machinery or apparatus for raising nap or pile.
709	„	JAMES HARGREAVES, of the Woollen Works, Carlisle, in the county of Cumberland.	Improvements in the apparatus used for dyeing fabrics.
712	„	ROBERT COLLINS, of Trent, in the county of Somerset.	An improved agricultural implement.
717	26th Mar. 1856.	ALEXANDRE TOLHAUSEN, of No. 7, Duke Street, Adelphi, London, county of Middlesex, Sworn Interpreter at the Imperial Court of Paris.	A new process of producing chemical writing, and of marking and inscribing chemically any characters or figures upon paper or other substances of similar character.
718	„	ALEXANDRE TOLHAUSEN, of No. 7, Duke Street, Adelphi, London, county of Middlesex, Sworn Interpreter at the Imperial Court of Paris.	An improved mode of manufacturing porous earthenware.
719	„	WILLIAM ARMAND GILBEE, of No. 4, South Street, Finsbury, London, and 39, Rue de l'Echiquier, Paris, Gentleman.	Improvements in the manufacture of glass.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
721	26th March, 1856.	David Lowe, of Leicester, in the county of Leicester, Mechanic.	Improvements in knitting machinery.
725	,,	James Rock the Younger, of Hastings, in the county of Sussex, Carriage Builder.	Improvements in carriages, parts of which are applicable to other structures.
726	,,	William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improved apparatus for exploring under water.
727	,,	William Clayton, of Watling Street, in the city of London, Perfumer and Soap Manufacturer.	An improved manufacture of soap.
728	,,	William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improvements in macerating substances to be employed in the process of distillation.
731	27th Mar. 1856.	Joseph Tall, of Islington, in the county of Middlesex, Gentleman.	Improvements in blind rollers, and in fixings for the same.
733	,,	Richard Durant Cumming, of St. James's, Middlesex.	A footstool and hassock combined.
734	,,	Bonnet Frédéric Brunel, of Hampstead Road, in the county of Middlesex, Chemist.	Improvements in the manufacture of Prussian blue.
737	,,	Allen Levinston Hill, of Birmingham, in the county of Warwick, Builder.	Improvements in furnaces for steam-boilers, japanners' stoves and other such like purposes.
741	28th Mar. 1856.	Joseph Auguste Barratte, of 39, Rue de l'Echiquier, Paris, in the empire of France, and of 4, South Street, Finsbury, London, Civil Engineer.	A new rotatory steam engine.
743	,,	William Ward, of Warrington, in the county of Lancaster, Spinner and Manufacturer,	Improvements in apparatus for lubricating the spindles of certain machines used in preparing and spinning.
744	,,	Alfred Daniel, of Moorfields, Wolverhampton, in the county of Stafford, Lock Manufacturer.	Improvements in the manufacture of keys and locks.
745	,,	Joseph Webber, of Torquay, in the county of Deven, Slate and Cement Merchant.	Improvements in generating steam.
746	,,	John Charritie, of Cannon Street, and William Smith, of 10, Salisbury Street, Adelphi.	Improvements in the manufacture of small shot.
748	,,	Samuel Getley, of 6, Ivy Street, Birkenhead, in the county of Chester, Plumber.	Improvements in supplying and drawing water to and from cisterns.
750	,,	Alfred Trueman, of Swansea - -	Improvements in treating argentiferous regulus.
753	29th Mar 1856.	Charles Wye Williams, of Liverpool, in the county palatine of Lancaster, Gentleman.	Improvements in the application of air propelling or exhausting apparatus for ventilating, and like purposes on board steam vessels.
755	,,	Francis Puls, of Soho Square, in the county of Middlesex, Chemist.	Improvements in galvanic batteries.
756	,,	John James Rippon, of Oakenshaw Print Works, near Accrington, in the county of Lancaster, Manufacturer.	An improvement or improvements in rollers or cylinders for printing fabrics.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
758	29th Mar. 1856.	James Eives, of 17, Cornhill, London.	A new mode of preparing fibres from plants.
759	,,	William Muschamp, of the Tyne Paper Mill Company, Gateshead.	An improvement in the manufacture of paper in order to render the same waterproof.
760	,,	Herbert Newton Penrice, Captain in the Royal Engineers, now stationed at Newcastle-upon-Tyne, in the county of Northumberland.	Improvements in machinery for driving galleries through rock and other strata.
763	,,	William Nimmo, of Pendleton, in the county of Lancaster, Spinner and Manufacturer.	Improvements in the manufacture of textile fabrics.
764	,,	Charles Durand Gardissal, of 10, Bedford Street, Strand, London, and of 29, Boulevart St. Martin, Paris, Patent Agent.	Certain improvements in steam boilers
767	,,	Charles Durand Gardissal, of 10, Bedford Street, Strand, London, and of 29, Boulevart St. Martin, Paris, Patent Agent.	An improvement in screw stop valves.
768	,,	Charles Durand Gardissal, of 10, Bedford Street, Strand, London, and of 29, Boulevart St. Martin, Paris, Patent Agent.	Certain improvements in machinery for sweeping streets and other ways.
769	31st Mar. 1856.	James Hicks, of Piddle Trenthide, in the county of Dorset, Clerk.	Improvements in stoves.
771	,,	Charles Jean le Mélorel de la Haichois, of 39, Rue de l'Echiquier, Paris, and of 4, South Street, Finsbury, London, Advocate.	Certain improvements in paving.
772	,,	Henry Henderson, of Glasgow, in the county of Lanark, North Britain, Plumber.	Improvements in stop cocks or valves.
775	,,	Thomas Waller Burrell, of Fareham, in the county of Hants, Civil Engineer.	Improvements in machinery for obtaining power by water.
776	,,	Henry Cornforth, of Birmingham, in the county of Warwick, Manufacturer.	A new or improved manufacture of plated teapots and coffee pots, and other vessels and articles of like manufacture.
778	,,	George Thomas Smith, of Northampton, in the county of Northampton, and Joel Watts, of Battersea, in the county of Surrey.	An improved lubricator.
779	,,	Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman.	Improved machinery for folding paper.

FOREIGN PATENTS.

BELGIUM.*

List of Patents of Invention Delivered on the 7th April, 1859.†

(*Communicated by the Belgian Government.*)

(For previous List, see No. 550 of this Journal.)

1. C. Verger, represented by J. Boutillier, of Schaerbeek, for an imported invention of "Metal socles of crosses."—Dated 18th March, 1859.—(French Patent, 11th December, 1858.)
2. Sulzberger and Graf, represented by H. Biebuyck, of Brussels, for an imported invention of "A machine for folding and stitching sheets of paper."—Dated 18th March, 1859.—(French Patent, 9th March, 1859.)
3. A. Castelloi, represented by H. Biebuyck, of Brussels, for an imported invention of "A system of railway breaks."—Dated 21st March, 1859.—(French Patent, 14th March, 1859.)
4. V. Fourquenot, represented by H. Biebuyck, of Brussels, for an imported invention of "A mode of lubricating axle journals, pivots of carriages and connecting machinery."—Dated 21st March, 1859.—(French Patent, 12th March, 1859.)
5. S. Davey and A. L. Chanu, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "Additions to their composition for blasting rocks, &c."—Dated 21st March, 1859.—(Original Patent, 20th November, 1858.)
6. F. Bertinchamps, represented by D. de Vos Verraert, of Brussels, for "Iron slide rafters, applicable to constructions, timber-work, &c."—Dated 22nd March, 1859.
7. The Vandenbrande's Works, at Schaerbeek, for "An apparatus for discharging condensed steam without waste of steam."—Dated 23rd March, 1859.
8. J. Thérèse, represented by H. Biebuyck, of Brussels, for an imported invention of "An horizontal mill worked by two levers."—Dated 23rd March, 1859.—(French Patent, 27th February, 1859.)
9. L. and A. Noetens, of Brussels, for "Foot coverings."—Dated 23rd March, 1859.
10. L. J. E. Dupont, represented by O. Daillencourt, of Brussels, for an imported invention of "Machines for hulling grits."—Dated 23rd March, 1859.—(French Patent, 10th January, 1859.)
11. E. Bauthière-Paquet, of Montigny-sur-Sambre, for "Vertical benches for glass pots in glass furnaces, with a rectilinear horizontal movement."—Dated 24th March, 1859.
12. P. Goeseels, of Liége, for "Iron projectiles and leaden balls for rifled arms and ordnance."—Dated 24th March, 1859.
13. J. Ruelle and Co., of Liége, a Patent of Improvement for "Modifications in their apparatus for extracting coal."—Dated 24th March, 1859.—(Original Patent, 20th January, 1859.)
14. A. Feron, of Salzinne-lez-Namur, for "A circular oven with a moveable hearth for baking bread."—Dated 22nd March, 1859.
15. H. Meidinger, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "Improvements in his constant electrical batteries."—Dated 25th March, 1859.—(Original Patent, 13th December, 1858.)
16. A. F. Jaloureau, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "Improvements in his system of piping."—Dated 25th March, 1859.—(Original Patent, 8th September, 1855.)
17. T. E. O. Sarrazin and H. Vincent, represented by H. Biebuyck, of Brussels, for an imported invention of "A machine for checkering skins for hats, scabbards, bookbinding, &c."—Dated 25th March, 1859.—(French Patent, 21st March, 1859.)
18. F. Marchal, represented by H. Biebuyck, of Brussels, for an imported invention of "A closing apparatus for preventing any excessive pressure of steam."—Dated 25th March, 1859.—(French Patent, 19th March, 1859.)
19. S. Dreyfous, G. Richer, and E. Cormier, represented by X. Raclot, of Brussels, for an imported invention of "A mode of preserving eggs."—Dated 26th March, 1859.—(French Patent, 7th February, 1859.)
20. C. Delflas, of Mons, for "A double cylinder with double branches applicable to all brass instruments."—Dated 29th March, 1859.
21. L. G. Linant, represented by X. Raclot, of Brussels, for "Improvements in railway breaks."—Dated 28th March, 1859.
22. E. L. Desaint, of St. Josse-ten-Noode, for "Modifications in locks of doors of railway carriages, &c."—Dated 29th March, 1859.
23. F. Deboubers, of Ghent, for "Improvements in double machines for planing straight and conical gearings."—Dated 29th March, 1859.
24. T. Dubout, represented by X. Raclot, of Brussels, a Patent of Improvement for "Additions to his mode of making envelope paper."—Dated 30th March, 1859.—(Original Patent, 16th April, 1856.)
25. E. Libotte and G. Planche, of Gilly, a Patent of Improvement for "A modification in his parachute for mines."—Dated 31st March, 1859.—(Original Patent, 20th January, 1859.)

* For the Belgian Patent Law, see Nos. 292 and 348 of this Journal.

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

Erratum in Journal of 19th April.

434. For "William Horstman," read "William H. Horstman."

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2*d.* each, or 3*d.* free by post:—

Austria, No. 291.
Bavaria, No. 262.
Belgium, Nos. 292 and 348.
Baden, and Petty States of Germany, No. 325.
Canada, No. 279.
Cuba, No. 498.
Dutch West Indies, No. 322.
France, No. 228.
Greece, No. 325.
Germany, No. 435.
Hanover, No. 231.
India, Nos. 240 and 348.
Mexico, No. 496.
Netherlands, No. 289.
New South Wales, No. 386.
Prussia, Nos. 313 and 329.
Parma, Piacenza, and Guastalla, No. 321.
Portugal, No. 325.
Poland, No. 335.
Roman States, No. 319.
Russia, Nos. 334 and 508.
Sardinia, Nos. 233 and 235.
Saxony, No. 236.
Sicilies (the Two), No. 316.
Spain, No. 323.
Sweden, Nos. 327 and 354.
Victoria, Nos. 186 and 359.
Wurtemberg, No. 314.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*
The Indexes, separately, price 3*s.*

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price 21*s.*

In course of Publication, by Order of the Commissioners.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. Drain Tiles and Pipes, price 6*d.*
2. Sewing and Embroidering, price 6*d.*
3. Manure, price 6*d.*
4. Preservation of Food, price 6*d.*
5. Marine Propulsion, price 4*s.*
6. Manufacture of Iron and Steel, price 5*s.*
7. Aids to Locomotion, price 1*s.*
8. Steam Culture, price 2*s.*
9. Watches, Clocks, and other Time-keepers, price 1*s.* 6*d.*
10. Fire-arms and other Weapons, Ammunition, and Accoutrements, price 6*s.* 6*d.*
11. Paper.—Part I. Manufacture of Paper, Pasteboard, and Papier Mâché, price 3*s.*

The following are in the press:—

Paper.—Part II. Cutting, Folding, and Ornamenting; including Envelopes, Cards, Paper-hangings, &c.
Electricity and Magnetism: their Generation and Applications.
Typographic, Lithographic, and Plate Printing.
Bleaching, Dyeing, and Printing Yarns and Fabrics.
Preparation of Fuel, and Apparatus for its Combustion.
Manufacture and Applications of India Rubber, Gutta Percha, &c.; including Air, Fire, and Water Proofing.
Production and Applications of Gas.
Steam Engines.

B. Woodcroft.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

LONDON:
Printed by George E. Eyre and William Spottiswoode, Printers to the Queen's most Excellent Majesty.
Published at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 554. TUESDAY, APRIL 26, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

2845. PATRICK ROBERTSON, of Sun Court, Cornhill, in the city of London, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "Improvements in shuttles." —A communication.

2847. And MAXIMILIEN SCHAFFNER, Civil Engineer, of Eisenach, has given the like notice in respect of the invention of "Improvements in smelting zinc ores, and in furnaces employed for this purpose."

As set forth in their respective petitions, both recorded in the said office on the 11*th day of December,* 1858.

2851. And ROBERT WHITTAM, of Accrington, in the county of Lancaster, Engraver to Calico Printers, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for tracing designs from an engraved roller, or from an engraver's sketch upon steel or other metallic surfaces used as dies by engravers to calico printers."

As set forth in his petition, recorded in the said office on the 13*th day of December,* 1858.

2866. And FERDINAND JOSSA, of Bishop Auckland, in the county of Durham, Chemist, has given the like notice in respect of the invention of "Improvements in furnaces for generating steam and other purposes."

As set forth in his petition, recorded in the said office on the 14*th day of December,* 1858.

2876. And JONATHAN WARDILL, of Commercial Road, East, in the county of Middlesex, Engineer, has given the like notice in respect of the invention of "An improved stopper or controller to stop and control the running out of chains and ropes."

As set forth in his petition, recorded in the said office on the 15*th day of December,* 1858.

2886. And JOHN WALTER FRIEND, of Freemantle, Southampton, Watch and Clock Maker, has given the like notice in respect of the invention of "Improved apparatus for ascertaining and registering the depth and flow of liquids, and the distances run by ships at sea."

2887. And ALEXANDER MACKENZIE, of Glasgow, in the county of Lanark, North Britain, Machinist, has given the like notice in respect of the invention of "Improvements in sewing machines."

2888. And JOSEPH JEAN MARÇAIS, of Paris, France, Civil Engineer, has given the like notice in respect of the invention of "Improvements in galvanic batteries."

2890. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Editor of the Mechanics' Magazine and Patent Agent, has given the like notice in respect of the invention of "An improvement in plating and gilding forks, spoons, and other metal articles."—A communication from Messieurs de Sauvigny, residing at Paris.

As set forth in their respective petitions, all recorded in the said office on the 16*th day of December,* 1858.

2893. And WILLIAM BECKETT JOHNSON, Manager for Messrs. Ormerod and Son, of Manchester, in the county of Lancaster, Engineers, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for preparing for joining the rails of railways."

As set forth in his petition, recorded in the said office on the 17*th day of December,* 1858.

2902. And JAMES TAYLOR, of Birkenhead, Engineer, has given the like notice in respect of the invention of "Improvements in the construction

of pumps or engines for lifting and discharging water."

As set forth in his petition, recorded in the said office on the 18th day of December, 1858.

2920. And ROBERT CLEGG, of Islington, in the county of Middlesex, FREDERICK ANGERSTEIN, of Kennington, in the county of Surrey, and GEORGE FERRY, of Hackney, in the said county of Middlesex, have given the like notice in respect of the invention of "Improved mechanism for imparting reciprocating motion to machinery, and more especially pumps."

2924. And MICHAEL KENNEY, of Queen Street, Dublin, Mechanical Engineer, has given the like notice in respect of the invention of "Improvements in bridges."

2929. And FREDERICK RANSOME, of Ipswich, has given the like notice in respect of the invention of "Improvements in the manufacture of grinding and rubbing surfaces."

As set forth in their respective petitions, all recorded in the said office on the 22nd day of December, 1858.

2952. And WILLIAM BECKETT JOHNSON, Manager for Messrs. Ormerod and Son, of Manchester, in the county of Lancaster, Engineers, has given the like notice in respect of the invention of "Improvements in the employment of gas for generating steam, and in engines connected therewith."

As set forth in his petition, recorded in the said office on the 24th day of December, 1858.

2963. And HENRY LOWE, of Birmingham, in the county of Warwick, Manufacturer, and WILLIAM TRUEMAN, of Birmingham aforesaid, Axle Maker, and JOHN LINWOOD PITTS, of Birmingham aforesaid, Accountant Clerk, have given the like notice in respect of the invention of "A new or improved axle for carriages."

As set forth in their petition, recorded in the said office on the 27th day of December, 1858.

2975. And WILLIAM TAYLOR, of Nursling, in the county of Southampton, Gentleman, and WILLIAM DAKIN GRIMSHAW, of the town and county of the town of Southampton, Engineer, have given the like notice in respect of the invention of "Regulating the admission of natural atmospheric air and eduction of rarefied air or gases from hothouses or any other place or premises and for supporting a required temperature."

2976. And RICHARD DUGDALE KAY, of Accrington, in the county of Lancaster, Manufacturer of Patent Fabrics, has given the like notice in respect of the invention of "An improved chemical means of applying or fixing on woven or felted fabrics certain coloring matters produced from tar."

As set forth in their respective petitions, both recorded in the said office on the 29th day of December, 1858.

3000. And HENRI ROBIN, of Nantes, in the empire of France, has given the like notice in respect of the invention of "Improvements in reaping machines."

3005. And FREDERIC WILHELM ALEXANDRE CASPER and GUILLAUME HENRY SCHMAHL, both of 152, Rue du Faubourg St. Martin, Paris, have given the like notice in respect of the invention of "Using spart or Spanish broom in manufacturing seats of all descriptions."

As set forth in their respective petitions, both recorded in the said office on the 31st day of December, 1858.

7. And JOHN OLIVER, of White Bank, near Chesterfield, in the county of Derby, has given the like notice in respect of the invention of "Improvements in lubricators for steam engine cylinders."

As set forth in his petition, recorded in the said office on the 1st day of January, 1859.

38. And WILLIAM DRAPER, of No. 2, Gordon Terrace, Holland Road, Brixton, in the county of Surrey, Artist, has given the like notice in respect of the invention of "Improvements in machinery for printing on paper and other fabrics."

42. And WILLIAM CORFIELD the younger, of Charlton-Adam, in the county of Somerset, has given the like notice in respect of the invention of "Improvements in chains for coupling, cranes, cables, mining purposes, hoisting, and all other purposes where chains are used."

As set forth in their respective petitions, both recorded in the said office on the 5th day of January, 1859.

59. And WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in machinery for winding, twisting, and doubling fibrous materials."—A communication from Louis Barnabé Duboc, junior, of Paris, in the empire of France.

As set forth in his petition, recorded in the said office on the 7th day of January, 1859.

153. And RICHARD GARRETT, junior, of Leiston Works, Saxmundham, in the county of Suffolk, and JAMES KERRIDGE, Foreman to Messrs. Garrett and Sons, of Leiston Works aforesaid, have given the like notice in respect of the invention of "An improved arrangement of combined thrashing and dressing machine."

As set forth in their petition, recorded in the said office on the 18th day of January, 1859.

177. And WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improved apparatus for measuring water and other liquids."—A communication from Mr. Alfred Nobel, Engineer, of Paris, in the empire of France.

As set forth in his petition, recorded in the said office on the 20th day of January, 1859.

647. And THOMAS PATSTONE, of Birmingham, in the county of Warwick, Warehouse Clerk, has given the like notice in respect of the invention of "Improvements in shades or glasses for gas and other lamps, and in the supports of the said shades or glasses."

As set forth in his petition, recorded in the said office on the 14th day of March, 1859.

62. And Henry Ambler, of Halifax, in the county of York, has given the like notice in respect of the invention of "Improvements in breech-loading ordnance, and in the means of producing part or parts thereof, which improvements are also applicable to what are called small arms."
As set forth in his petition, recorded in the said office on the 16th day of March, 1859.

734. And John Macintosh, of North Bank, Regent's Park, Gentleman, and Godfrey Rhodes, of Regent's Street, Major in Her Majesty's Army, have given the like notice in respect of the invention of "Improvements in tents and such like coverings for shelter against the weather."
As set forth in their petition, recorded in the said office on the 22nd day of March, 1859.

765. And Mark Firth, of the firm of Thomas Firth and Sons, of Sheffield, in the county of York, Steel Manufacturers and Merchants, has given the like notice in respect of the invention of "Improvements in machinery for grinding saws and flat plates of steel."—A communication from E. T. Jones, residing in Montreal.
As set forth in his petition, recorded in the said office on the 26th day of March, 1859.

876. And William Campion, of the town and county of the town of Nottingham, Machine Builder, of the firm of W. W. Campion, of the said town, Machine Builders, has given the like notice in respect of the invention of "Improvements in machinery for the manufacture of looped fabrics."
As set forth in his petition, recorded in the said office on the 8th day of April, 1859.

935. And Jozé Luis, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, has given the like notice in respect of the invention of "A now cooling apparatus for liquids, especially beer."—A communication from Jean Louis Baudelot, of No. 10, Rue Mogador, Paris, in the empire of France.
As set forth in his petition, recorded in the said office on the 14th day of April, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 23rd April*, 1859, *inclusive.*)

21st April.

1006. Thomas Heiffor, of Sheffield, in the county of York, Manufacturer, for an invention of "An improved method of manufacturing razor blades."—Dated 26th April, 1856.

23rd April.

997. Robert Lakin, of Stretford, in the county of Lancaster, Machinist, John Thompson, of Ardwick, in the city of Manchester, in the said county, Foreman, Edward Gerrard Fitton, of Ardwick aforesaid, Foreman, and Frederick Alexander Fitton, of Ardwick aforesaid, Mechanic, for an invention of "Improvements in or applicable to certain machines for preparing and spinning cotton and other fibrous substances, some of which improvements relating to apparatus for lubricating and to the construction of studs are also applicable to machinery for other purposes."—Dated 25th April, 1856.

1003. Claude Antoine Arnaud, of Lyons, in the empire of France, Manager of the Company called "La Rotative," for an invention of "Improvements in obtaining motive-power from steam and other fluids, and in pumping and forcing water and other fluids."—A communication.—Dated 26th April, 1856.

1058. Isaac Holden, of St. Denis, near Paris, in the empire of France, Wool Comber, for an invention of "Improvements in preparing and combing wool and other fibrous substances."—Dated 5th May, 1856.

1097. George Jordan Firmin, of Newton-le-Willows, Lancashire, Manufacturing Chemist, for an invention of "Improvements in the manufacture of sulphuric, tartaric, citric, and oxalic acids, ammonia, and cyanides."—Dated 9th May, 1856.

Erratum in Journal of 22nd April.

880. For "Improvements in dying" read "Improvements in dyeing."

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

FOREIGN PATENTS.

FRANCE.

CURRENT LIST of PATENTS of Invention and Certificates of Addition.

1859.

(Communicated by His Excellency the Minister of Agriculture, Commerce, and Public Works.)

NOTE.—The duration of a Patent is fifteen years, except where determined by that of a previously existing foreign Patent.*

754. CHARLES DEYRES, of 25, Rue des Ayres, Bordeaux, département de la Gironde, for "Glass for tumblers."—Dated 21st February, 1859.

755. GABRIEL DESCAT, of Flers, département du Nord, for "A system of finishing fabrics."—Dated 23rd February, 1859.

756. LOUIS TAILLY, of 98, Rue St. Sauveur, Lille, département du Nord, a Certificate of Addition to his Patent of 25th February, 1858, for "A system of emptying cesspools without causing smell."—Dated 23rd February, 1859.

757. GILBERT LASSAUZÉE, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Books of cigaret paper with commercial addresses."—Dated 16th February, 1859.

758. PIERRE ANTOINE BELORGÉ, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, a Certificate of Addition to his Patent of 21st August, 1858, for "Improvements in the arrangement and manufacture of braces, &c."—Dated 16th February, 1859.

759. LOUIS CHARLES BAINVILLE, of La Varenne, St. Maur, for "Improvements in opera glasses."—Dated 16th February, 1859.

760. CLAUDE MAMES AUGUSTIN MARION, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 17th December, 1858, for "An arrangement of boxes for preserving nitrated paper for photographic and other purposes."—Dated 16th February, 1859.

761. PAILLARD and ROUSSEAU, the former of 16, Impasse du Maine, of Vaugirard, for "Inlaid floors expanding freely."—Dated 17th February, 1859.

* For the French Patent Law see No. 228 of this Journal.

762. MENEUT and GORGU, domiciled with Letellier, of 8, Rue Neuve des Martyrs, Paris, a Certificate of Addition to their Patent of 17th November, 1858, for "A system of railway switches, &c."—Dated 17th February, 1859.

763. THÉODORE NICAISE, of 54, Rue de Ménilmontant, Paris, for "A process for manufacturing oil."—Dated 17th February, 1859.

764. LOUIS PIERRE DOUSERIN TRAGIN, represented by Daubréville, of 60, Boulevart de Strasbourg, Paris, for "Improvements in plates of bracelets."—Dated 17th February, 1859.

765. PAUL MARIE SALOMON, of 46, Rue Bourbon-Villeneuve, Paris, for "An economical system of lighting by means of oil-essences in mixed lamps with prepared wicks."—Dated 17th February, 1859.

766. JEAN BAPTISTE MARIE AMIDÉE BOURREIFF, of 12, Rue des Petites Ecuries, Paris, for "Applying cast-iron, ivory, horn, &c. to crystal articles in buildings and furniture, &c."—Dated 17th February, 1859.

767. PIERRE EUGÈNE DUCHASSAING, represented by Brade, of 22, Rue Ste. Anne, Paris, a Certificate of Addition to his Patent of 26th February, 1858, for "An apparatus for candles, &c."—Dated 17th February, 1859.

768. ERNEST BAGNICKI, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "A syringing apparatus."—Dated 17th February, 1859.—(American Patent, expiring 18th January, 1873.)

769. JEAN AUGUSTE HILAIRE BALLANDE, of 10, Rue de Madame, Paris, for "A kind of paper and ink."—Dated 17th February, 1859.

770. FRÉDÉRIC JULES FLAMMGER, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in the construction of dressing cases, bags, portemonnaies, cigar cases, &c."—Dated 17th February, 1859.

771. Messrs. DEPOULLY, of 12, Rue du Bac d'Asnière, Clichy-la-Garenne, for "Preparing indigo."—Dated 17th February, 1859.

772. Miss FÉLICITÉ PROPHÊTE, represented by Bresson, of 57, Rue de Bretagne, Paris, for "Processes and apparatuses for producing and using carbonic acid gas, for improving gaseous beverages."—Dated 18th February, 1859.

773. JEAN BAPTISTE ROBIN, of 28, Boulevart des Amandiers, Belleville, for "A curvilinear saw with an alternate movement."—Dated 18th February, 1859.

774. CHARLES LOUIS LEROY, of 11, Rue St. Joseph, Paris, for "A kind of weaving."—Dated 18th February, 1859.

775. JEAN VICTOR FOUCHIER, of 33, Rue de Rivoli, Paris, for "An improved mode of grinding corn so as to obtain flour which may be made into bread at once."—Dated 18th February, 1859.

776. FRANCISCO RIDAURA-Y-ABAD, represented by Amouroux, of 333, Rue St. Martin, Paris, for "Cigaret paper."—Dated 18th February, 1859.

777. CHARLES JOSEPH LOUIS MARCELIN, of 40, Rue Basse du Rempart, Paris, for "A system of inlaid floors."—Dated 18th February, 1859.

778. L. SAGNIER and Co., of 182, Rue du Faubourg St. Denis, Paris, for "A double pedestal for por-

table scales and weighing machines, combined with a wedging apparatus."—Dated 18th February, 1859.

779. François Désiré Savalle, of 14, Rue de Paris, St. Denis, a Certificate of Addition to his Patent of 4th April, 1857, for "A distilling apparatus, provided with a regulator of heat."—Dated 18th February, 1859.

780. Pierre Patrice Leterme, of 190, Rue du Temple, Paris, a Certificate of Addition to his Patent of 23rd October, 1854, for "A melophonorgan."—Dated 18th February, 1859.

781. Jacques Fulcraud Pascal Hugouneng, domiciled with Rohart, of 13, Rue Lemercier, Batignolles, for "Treatment of wool dyed with blue colours."—Dated 18th February, 1859.

782. Thomson and Armstrong, represented by Courrouve, of 3, Rue de la Bourse, Paris, for "Improvements in the permanent way of railroads."—Dated 18th February, 1859.

783. Messrs. Champaux, of 44, Boulevart des Amandiers, Belleville, for "A machine or apparatus for compressing crucibles."—Dated 18th February, 1859.

784. Gilbert Smith, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in breech-loading fire-arms, and in cartridges used therewith."—Dated 18th February, 1859.—(English Patent, expiring 23rd June, 1871.)

785. Louis Droissart, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 17th November, 1847, for "Improvements in manometers."—Dated 18th February, 1859.

786. Léon Numa Dejean, of 20, Place de l'Estrapade, Paris, a Certificate of Addition to his Patent of 23rd February, 1858, for "An hydraulic machine."—Dated 18th February, 1859.

787. Pierre Léonard Marc Debain, of 132, Boulevart Mont Lamasse, Paris, for "A system of cesspools."—Dated 19th February, 1859.

788. Marie Dreyfus, of 28, Rue des Martyrs, Paris, for "Glass for gas or oil apparatus used in lighting."—Dated 19th February, 1859.

789. François Félix Hélie Clément, of 49, Rue Folie Mericourt, Paris, for "A moveable reservoir, for rearing leeches."—Dated 19th February, 1859.

790. Jean Henri Guillaume Daniél Wagner, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Apparatus for removing substances, suspended and dissolved in water used for feeding boilers, being also applicable to other purposes, &c."—Dated 19th February, 1859.

791. A. Parent, T. Hamet, and Co., represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 21st September, 1858, for "A machine for making buttons."—Dated 19th February, 1859.

792. William H. Bell, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A self-acting system of distributing capsules in fire-arms."—Dated 19th February, 1859.

793. Philibert Larochette, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 6th March, 1858, for "A brewing machine for making beer."—Dated 19th February, 1859.

794. Edme Ferdinand Evras, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "So-called renaissance pages for suspending ladies' dresses."—Dated 19th February, 1859.

795. Wilhelm-Schneider, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Improvements in ladies' bags, travelling bags, dressing cases, &c. of leather or other stuffs."—Dated 19th February, 1859.

796. George Leach, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "An apparatus for winding off skeins of thread."—Dated 19th February, 1859.—(English Patent, expiring 2nd February, 1873.)

797. Frédéric Prince, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in breech-loading fire-arms."—Dated 19th February, 1859.—(English Patent, expiring 28th January, 1873.)

798. Louis Le Chatelier, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 11th April, 1858, for "Manufacture of alumina for industrial purposes."—Dated 19th February, 1859.

799. Torrilhon, Verdier, and Co., represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in the construction of straps for transmitting motion, &c."—Dated 19th February, 1859.

800. Charles Husson, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 15th December, 1857, for "Improvements in the manufacture of transparent tissues, &c."—Dated 19th February, 1859.

801. Paul Morin and Co., represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in filtering and refining liquids and substances."—Dated 19th February, 1859.

802. Jean Jerome Fages, of 86, Rue St. Antoine, Paris, for "A system of piercing taps."—Dated 19th February, 1859.

803. Pierre Carbonnier, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Apparatus for measuring the quantity of water fallen on any surface within a certain time, being also applicable as a water counter."—Dated 19th February, 1859.

804. Charles Hippolyte Mourceau, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, a Certificate of Addition to his Patent of 14th August, 1858, for "Improvements in the manufacture of carpets for furniture."—Dated 19th February, 1859.

805. Charles Louis Diray, of 3, Rue de Crébillon, Paris, a Certificate of Addition to his Patent of 25th February, 1858, for "An eccentric apparatus for breaking sugar."—Dated 21st February, 1859.

806. Pierre Carmien, of 31, Rue de Bretagne, Paris, for "A registering apparatus for public carriages."—Dated 21st February, 1859.

807. Joseph Isidore Morel, of Péronne, département de la Somme, a Certificate of Addition to his Patent of 16th November, 1858, for "A fountain pen."—Dated 17th February, 1859.

808. Jean Jacques Emile Collas, of Argenteuil, département de Seine et Oise, a Certificate of Addition to his Patent of 23rd September, 1858, for "A process for burning lime."—Dated 18th February, 1859.

809. François Calloch, of Ploutimec, département du Morbihan, for "A revolving apparatus for throwing out seeds by centrifugal power."—Dated 22nd February, 1859.

810. Pierre Lyonnet, of La Rochelle, département de la Charente Inférieure, "A system of loading fire-arms with metal cartridges."—Dated 22nd February, 1859.

811. Louis Fages, of Limoux, département de l'Aude, for "Improvements in the manufacture of hydrogen gas for lighting."—Dated 23rd February, 1859.

812. Massiaux, of Godart, Commune de Mantey St. Pierre, département des Ardennes, for "Improvements in nail machines." — Dated 23rd February, 1859.

813. Scrive Brothers, of Lille, departement du Nord, for "A tissue for making cards for carding all kinds of filaments."— Dated 24th February, 1859.

814. Charin Brothers, of Valence, département de la Drôme, for "A machine for making corks."—Dated 18th February, 1859.

815. Victor Chevalier, of 12, Rue Constantine, Lyon, département du Rhône, for "Beehives for rearing bees."—Dated 19th February, 1859.

816. Marrel Brothers, represented by Rambaud, of 13, Rue d'Algérie, Rive de Gier, département de la Loire, for "An economical process of manufacturing iron."—Dated 19th February, 1859.

817. Jean Vogel, of 1, Rue du Plâtre, Lyon, département du Rhône, for "Improvements in the construction of transposing pianos."—Dated 21st February, 1859.

818. Ducis Brothers, of 2, Rue Impériale, Lyon, département du Rhône, for "Tulle resembling lace called 'Lyon lace.'"—Dated 21st February, 1859.

819. Charles Prouvier, of Valence, département de la Drôme, a Certificate of Addition to his Patent of 8th September, 1858, for "A kind of telegraphic receiving apparatus." — Dated 22nd February, 1859.

820. Jean Odet Boutier, of 32, Quai de l'Hôpital, Lyon, département du Rhône, a Certificate of Addition to his Patent of 15th July, 1852, for "A kind of calorifere stoves with a steady heat." —Dated 23rd February, 1859.

821. Edouard Dorsett, represented by Zacharie, of 40, Rue de Bourbon, Lyon, département du Rhône, for "Improvements in distilling oil obtained from coal tar, and applying the same to apparatus used for preserving timber, also a vessel or cask used in the processes employed for preserving railway sleepers, &c."— Dated 23rd February, 1859.

822. Joseph Gillet, of 20, Chemin du Sacré-Cœur, Lyon, département du Rhône, for "Obtaining pure orchil." — Dated 23rd February, 1859.

823. Malicet, of Prix, département des Ardennes, for "A kind of blast pipe."—Dated 25th February, 1859.

824. Rosay, with his Son and Daughter, domiciled 5, Rue de la Cité, Hâvre, for "A direct rotary motor for working vessels, engines, &c., by steam." —Dated 19th February, 1859.

825. Goldenberg and Co., represented by Christmann, of Zornhoff near Saverne, département du Bas Rhin, a Certificate of Addition to their Patent of 23rd February, 1857, for "Making shoulders and applying them to rolled edge tools, such as scissors, gouges, firmer chisels, &c."—Dated 19th February, 1859.

826. Louis François Auguste Ausiaume, of 59, Rue St. Nicolas, Rouay, département de la Seine Inférieure, for "Spring mattresses with a double system."—Dated 21st February, 1859.

827. François Théophile Moison, of Mouy, département de l'Oise, a Certificate of Addition to his Patent of 5th February, 1858, for "A process for cleaning organic substances."— Dated 23rd February, 1859.

828. Adèle Félix Levannier, of Rohan, commune de Vannes, département du Morbihan, for "Apparatus for separating tare from good grains." —Dated 23rd February, 1859.

829. Louis Gloriod, of 85, Rue Battant, Besançon, département du Doubs, for "A machine for turning gold and silver watch cases."—Dated 24th February, 1859.

830. Misses Madeleine Hermine Basset, of 4, Rue de la Vielle Poterie, Orléans, département du Loiret, for "A machine for turning over leaves."— Dated 24th February, 1859.

831. Jacquard Dumezil, of 5, Place Bourgogne, Bordeaux, département de la Gironde, for "Refining sugar."—Dated 24th February, 1859.

832. Jean Baptiste Neyret, of 6, Rue Ste. Catherine, St. Etienne, département de la Loire, a Certificate of Addition to his Patent of 8th September, 1858, for "Printing several ribbons at once on tissues with silk warps and cotton wefts." —Dated 25th February, 1859.

833. Antoine Célis, of 13, Rue Neuve des Minimes, Amiens, département de la Somme, a Certificate of Addition to his Patent of 19th October, 1857, for "A machine for extracting peat."— Dated 22nd February, 1859.

834. Eugène Constant Vray, of St. Martin des Besaces, département du Calvados, for "Tiles for covering houses."—Dated 24th February, 1859.

835. Jean Verière, of 28, Rue des Princes, Meudon, département de Seine et Oise, a Certificate of Addition to his Patent of 3rd February, 1859, for "A system of pumps."—Dated 24th February, 1859.

836. Jean Pizzala, of Metz, département de la Moselle, for "Modifications and improvements in his chimneys combined with an hot-air stove, as patented 20th April, 1849."—Dated 24th February, 1859.

837. Alfred Dezaunay, of 4, Rue Deurbrouck, Nantes, département de la Loire Inférieure, for "A press for pressing grapes."—Dated 26th February, 1859.

838. Edmond Pesier, of Valencienne, département du Nord, for "Modifications in the manufacture of sugar."—Dated 28th February, 1859.

839. Henri Philippe Gis, of 219, Rue St. Martin, Paris, for "Manufacture of high-warp velvet."—Dated 21st February, 1859.

840. William Pearce, represented by Rowland, of 224, Rue de Rivoli, Paris, for "Improvements in the manufacture of bottles, vessels, and other similar articles hermetically closed."—Dated 25th February, 1859.—(English Patent, expiring 20th August, 1872.)

841. Mrs. Grogniet Betrema, represented by Baron, of 16, Rue Michel le Comte, Paris, for "Buttons of gloves."—Dated 21st February, 1859.

842. Doré, Chevé, and Co., domiciled with Doré, of 108, Rue du Cherche Midi, Paris, for "A machine for moulding pipes, axle-boxes, &c."—Dated 21st February, 1859.

843. Doré, Chevé, and Co., domiciled with Doré, of 108, Rue du Cherche Midi, Paris, for "Pipes with knuckle joints."—Dated 21st February, 1859.

844. Louis Auguste Mangin, of 74, Rue Richelieu, Paris, for "A slide apparatus for suspending dresses."—Dated 21st February, 1859.

845. François Lécuyer, of 12, Rue de Crussol, Paris, for "A winding-off apparatus."—Dated 21st February, 1859.

846. Paul Clément Jean Laurency, of 57, Rue Neuve des Petits-Champs, Paris, for "Hair tissue for artificial hair."—Dated 21st February, 1859.

847. Charles Alexandre Brillaux, of 4, Rue de Paris, Joinville-le-Pont, a Certificate of Addition to his Patent of 28th June, 1858, for "A continuous safety apparatus for preventing railway collisions."—Dated 21st February, 1859.

848. Fourès and Malet, with Dr. Siry, of 25, Rue de Ponthieue, Paris, for "Extracting carbonated hydrogen gas from wood, and using the same for heating boilers."—Dated 21st February, 1859.

849. Louis Alexandre Dubray, represented by Dreyfous, of 54, Rue de Bondy, Paris, for "A fixed column, with a moveable illuminating apparatus."—Dated 21st February, 1859.

450. Joseph Sharp Bailey, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 28th July, 1858, for "Improvements in machines for combing wool, &c."—Dated 21st February, 1859.

851. Thomas Restell, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 14th October, 1857, for "Improvements in breech-loading fire-arms, &c."—Dated 21st February, 1859.

852. Jules Joseph Neullies, represented by Armengaud, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 27th December, 1856, for "A vice."—Dated 21st February, 1859.

853. François Joseph Imbs, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Making a kind of soles, and applying them to foot-coverings."—Dated 21st February, 1859.

854. Jean Baptiste Benjamin Laignel, of 33, Rue de la Harpe, Paris, for "A system of canals."—Dated 22nd February, 1859.

855. Philibert Favre, represented by Amouroux, of 333, Boulevart St. Martin, Paris, for "Woven furs with friezed or undulated hair."—Dated 22nd February, 1859.

856. Joseph Reimann, represented by Daubréville, of 60, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 22nd February, 1858, for "An improved sewing machine."—Dated 22nd February, 1859.

857. Jean Pierre André, represented by Daubréville, of 60, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 22nd October, 1858, for "A system of tiles."—Dated 22nd February, 1859.

858. Charles François Le Page, of 24, Avenue de Clichy, Batignolles, for "A system of smoking pipes."—Dated 22nd February, 1859.

859. Pierre Marie Mercier, of 61, Galerie de Valois, Palais Royal, Paris, for "An apparatus for subduing horses."—Dated 22nd February, 1859.

860. Charles François Mongin, of 11, Rue des Juifs, Paris, a Certificate of Addition to his Patent of 8th January, 1859, for "Manufacture of saws."—Dated 22nd February, 1859.

861. Charles Guillaume Moreau, of 5, Rue Bailleul, Paris, for "A system of trousers."—Dated 22nd February, 1859.

862. Emile Louis François Sauvage, of 63, Avenue des Ternes, commune de Neuilly, for "An apparatus for separating fecal matter."—Dated 22nd February, 1859.

863. Charles Eugène Roger, domiciled at 19, Rue du Bouloi, Hôtel du Rhône, Paris, for "A system of diamonds for cutting glass and mirrors."—Dated 22nd February, 1859.

864. Louis Le Chatelier, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 23rd February, 1858, for "Applying fluoric acids to the manufacture of soda and potash."—Dated 22nd February, 1859.

865. Pierre Joachim Dubois, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 31st July, 1858, for "A system of transmission applicable to foot lathes."—Dated 22nd February, 1859.

866. Alexis Grellou, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Manufacture of wove buttons."—Dated 22nd February, 1859.

867. Pierre Ernest Aimont, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 23rd February, 1858, for "A safety indicator for railways."—Dated 22nd February, 1859.

868. Jérome Jean Baptiste Adolphe Pichault, of 35, Rue St. Dominique St. Germain, Hôtel

des Colonies, Paris, a Certificate of Addition to his Patent of 9th November, 1858, for "A system for making good the rupture of wheels of carriages, &c."—Dated 22nd February, 1859.

869. Antoine Ernest Potier, represented by De Bougnoux, of 13, Rue Villedo, Paris, for "A sweeping machine."—Dated 23rd February, 1859.

870. Etienne François Houzelot, of 51, Rue des Portes, Paris, for "Applying niello to silver and gold medals."—Dated 23rd February, 1859.

871. Samuel Nicolson, represented by Basset, of 14, Boulevart Montmartre, Paris, for "Improvements in wooden roads or pavements."—Dated 23rd February, 1859.

872. Auguste Toussaint Ozou de Verrie, of 27, Rue Lamartine, Paris, for "A process for conglomerating coal and burning glance coal."—Dated 23rd February, 1859.

873. Messrs. Gibus, of 40, Rue Beaubourg, Paris, a Certificate of Addition to their Patent of 3rd June, 1857, for "Improvements in silk hats."—Dated 23rd February, 1859.

874. André Jacques Amand Gautier, represented by Brade, of 22, Rue Ste. Anne, Paris, a Certificate of Addition to his Patent of 30th October, 1858, for "Improvements in the manufacture of manure."—Dated 23rd February, 1859.

875. Prudent, Echinard of 45, Rue de Saintonge, Paris, for "An apparatus for registering expenses and income."—Dated 23rd February, 1859.

876. Louis Auguste Leclercq, of 70, Grande Rue Vaugiraud, for "Watch glasses of transparent horn."—Dated 23rd February, 1859.

877. Levavasseur Brothers, of 18, Rue Montmorency, Paris, a Certificate of Addition to his Patent of 24th August, 1854, for "Improvements in moderator lamps, &c."—Dated 23rd February, 1859.

878. Cyprien Louis Philippe Combarieu, of 68, Rue St. Honoré, Paris, for "A machine for making type."—Dated 23rd February, 1859.

879. Henri Noe, of 30, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 20th February, 1857, for "An expansion pocket stereoscope."—Dated 23rd February, 1859.

880. Bernard alias Prévost-Bernard, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "A kind of flowers and head ornaments."—Dated 23rd February, 1859.

881. Jean François Legrand, of 79, Rue du Temple, Paris, for "Improvements in gold articles."—Dated 23rd February, 1859.

882. Pierre Patureau, of 6, Rue de Lancry, Paris, for "A washing and dressing table."—Dated 23rd February, 1859.

883. Leroux Brothers, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "An apparatus called twister."—Dated 23rd February, 1859.

884. Antoine Roux-Mollard, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 30th March, 1858, for "A kind of printing with gold and silver colours."—Dated 23rd February, 1859.

885. Théodore Dheruel, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in presses for making tiles, bricks, and all ceramic products."—Dated 23rd February, 1859.

886. François Daina, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Condensing steam."—Dated 23rd February, 1859.

887. Louis François Clément, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 8th January, 1859, for "Improvements in the arrangement and construction of chronometers."—Dated 23rd February, 1859.

888. Armand Hyacinthe Ferry, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, a Certificate of Addition to his Patent of 15th June, 1858, for "Improvements in the construction of brass instruments."—Dated 23rd February, 1859.

889. Louis Duhamel, of Curçay, département de la Vienne, for "A system of cleaning corn."—Dated 28th February, 1859.

890. Pierre Antoine Carlier, of Grougies, département de l'Aisne, for "A system of harrows with curved rotary teeth which may be cleared whilst at work."—Dated 28th February, 1859.

891. Louis Durot, of Roost-Warendin, département du Nord, for "A clack valve for feeding and letting in steam."—Dated 1st March, 1859.

892. Pierre Goy, of 55, Rue de Bourbon, Lyon, département du Rhône, for "A propeller applicable to navigation and balloons."—Dated 26th February, 1859.

893. Simon Berne, of 19, Rue de la Vierge, St. Etienne, département de la Loire, a Certificate of Addition to his Patent of 2nd March, 1858, for "An unravelling machine, &c."—Dated 28th February, 1859.

894. Piaton, Michel, and Co., of 3, Rue de la Quarantine, Lyon, département du Rhône, for "Scouring silks."—Dated 28th February, 1859.

895. Demichel, junr., of La Couronne, département de la Charente, for "Manufacture of gauze-wire for dropping cylinders."—Dated 23rd February, 1859.

896. Jean Jayles, of 64, Route de Bayonne, Bordeaux, département de la Gironde, a Certificate of Addition to his Patent of 4th August, 1857, for "Refining sugar."—Dated 1st March, 1859.

897. Guillaume Arnaud, of 14 and 16, Rue Maubee, Bordeaux, département de la Gironde, for "A coating for impervious linen."—Dated 2nd March, 1859.

898. Chrétien Chellet, of Mulhouse, département du Haut Rhin, for "A physical instrument, called 'optical photometer.'"—Dated 28th February, 1859.

899. Franc and Co. and Tabourin, of 7, Rue Neuve, Lyon, département du Rhône, a Certificate of Addition to their Patent of 6th August, 1858, for "A violet colour, called 'judicine.'"—Dated 1st March, 1859.

900. Lucien-Antoine Guétat, of St. Fous, Commune de Venissieux, for "Preparing orchal and separating the colouring substances therefrom."—Dated 3rd March, 1859.

901. Miss Brunel-Clément, of 16, Rue Dubois Lyon, département du Rhône, for "A puffing-up petticoat."—Dated 3rd March, 1859.

902. Félix Fontaine, of 18, Rue des Capucins, Lyon, département du Rhône, for "Trimming stuffs."—Dated 3rd March, 1859.

903. Pierre Rondeau, of St. Jean aux Bois, département des Ardennes, for "A chaff-cutter."—Dated 4th March, 1859.

904. Paul Martin, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in apparatus for projecting water, and destined to various purposes."—Dated 23rd February, 1859.

905. Jacques Stamm, of 2, Rue Malher, Paris, a Certificate of Addition to his Patent of 21st January, 1857, for "An apparatus for dividing the light of gas-lamps."—Dated 24th February, 1859.

906. Jean Antoine Victor Burg, of 8 bis, Cité Trévise, Paris, for "A medical dynamometer."—Dated 24th February, 1859.

907. Albert Poncelin, of 60, Rue de Paris, Clamart, a Certificate of Addition to his Patent of 27th December, 1858, for "An apparatus for making seltzer water." — Dated 24th February, 1859.

908. Miss Louisa Yanolik, of 10, Rue des Moineaux, Paris, for "A liquid for the hair."—Dated 24th February, 1859.

909. Edouard Pelletier, represented by Dreyfous, of 54, Rue de Bondy, Paris, for "Mineral canvass."—Dated 24th February, 1859.

910. Craf and Wilson, represented by Courrouve, of 3, Rue de la Bourse, Paris, for "Improvements in drawers and towels (for ladies), whereby they are rendered impervious." — Dated 24th February, 1859.—(English Patent, expiring 14th January, 1873.)

911. Victor Marie Zammaretti, represented by Courrouve, of 3, Rue de la Bourse, Paris, for "A system of doors of ovens and apparatus for the interior of chimneys." — Dated 24th February, 1859.

912. Jean Bisson, of 113, Faubourg du Temple, Paris, for "Caoutchouc musical toys." — Dated 24th February, 1859.

913. Tessié du Motay and Goëgg, represented by Aucante, of 7, Rue Notre Dame de Lorette, Paris, for "Silvering and coppering mirrors and glass."—Dated 24th February, 1859.

914. Achille Nicolas Meuley, of 13, Rue Cadet, Paris, for "A registering apparatus for carriages."—Dated 24th February, 1859.

915. Edmund Elsden Goldsmid, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "A coke oven for culinary and other purposes."—Dated 24th February, 1859.

SARDINIA.*

List of Patents of Invention and Certificates of Addition Delivered and Prolonged during the Third and Fourth Quarters of 1858.†

(*Communicated by the Sardinian Government.*)

(For previous List, see No. 514 of this Journal.)

Third Quarter, 1858.

Patents delivered.

1. Giovanni Piatti, of Milan, represented by Luigi Bassini, Turin, for "Improvements in apparatus for compressing air through the direct action of water."—6 years.—Dated 5th June, 1858.

2. Giovanni Bergagna, of Turin, for "A vegetable powder for destroying insects."—3 years.—Dated 5th July, 1858.

3. Francesco Tovo, of Oleggio, Novara, for "An expeditious apparatus for signalling fires."—10 years.—Dated 6th July, 1858.

4. Giuseppe Benati and Luigi Gastaldon, of Turin, for "Improvements in screw-propellers." 15 years.—Dated 10th July, 1858.

5. Edoardo Smalwood, of Turin, represented by Capuccio and Latini, Turin, for "A railway writer, to be used also by blind or paralyzed persons."—9 years.—Dated 21st May, 1858.

6. Sostene Bizot, of Turin, for "An economical machine for making drain-pipes." —3 years.—Dated 24th May, 1858.

7. Celeste Menotti, of Turin, represented by Capuccio and Latini, Turin, for "A new system of tents for soldiers, caravans, &c."—6 years.—Dated 28th May, 1858.

8. Alessandro Salietti and Reynero and Co., of Turin, represented by Capuccio and Latini, Turin, for "An expeditious and economical mode of manufacturing petticoats of elastic fabrics."—2 years.—Dated 1st June, 1858.

9. Carlo Sagey, of Paris, represented by Capuccio and Latini, for "Improvements in processes for treating peat and the hydro-carburetted products contained therein."—10 years.—Dated 29th May, 1858.

10. William Sankey, of London, represented by Luigi Bassini, Turin, for "A universal railway." —2 years.—Dated 22nd June, 1858.

* For the Sardinian Patent Law, see Nos. 233 and 235 of this Journal.

† The Specifications of the above Patents may be consulted in the original languages (Italian or French), or translations of them be had, at the Free Public Library in the Commissioners' Office.

11. Anselmo Spinelli and Giuseppe Schiavi, of Turin, represented by Capuccio and Latini, Turin, for "A motor worked by pyro-nitric gas." —1 year.—Dated 16th June, 1858.

12. Onvrina Bertrand de Sivray, of Paris, represented by Edoardo Cretté, Turin, for "A combined table and bedstead."—15 years.—Dated 25th November, 1857.

13. Giuseppe Westermann, of Sestri Ponente, for "A machine for spinning and twisting silk."—15 years.—Dated 10th May, 1858.

14. Giuseppe Ceruti, of Milan, for "Inodorous closets."—1 year.—Dated 24th May, 1858.

15. Giuseppe Ceruti, of Milan, for "A new system of moveable or fixed inodorous privies."—1 year.—Dated 24th May, 1858.

16. Giuseppe Ceruti, of Milan, for "A gas lamp." —1 year.—Dated 24th May, 1858.

17. Angelo Lue, of Paris, represented by Edoardo Cretté, Turin, for "Rails and wheels with their accessory parts."—3 years.—Dated 21st May, 1858.

18. Michele Theynard, of Grenoble, represented by Antonio Burlet, Turin, for "A bath with a fixed furnace inside and a small steam boiler."—6 years.—Dated 30th June, 1858.

19. Luigi De Medici, of Turin, for "Venetian blinds of woven wood."—3 years.—Dated 9th July, 1858.

20. Antonio Richelmi and Giovanni Rocca, of Genoa, for "A kneading trough with a pressure cylinder inside."—1 year.—Dated 29th July, 1858.

21. Emilio Hubner, of Paris, for "Improvements in machines for working filamentous substances." —1 year.—Dated 31st May, 1858.

22. Giovanni Gilardini, of Turin, for "Covers of parasols of one single piece."—1 year.—Dated 20th July, 1858.

23. Giuseppe Giozza, of Turin, for "A new method of stereotype printing."—6 years.—Dated 19th June, 1858.

24. Giuseppe Vivaldi, of Turin, for "A mode of putting goats and sheep to perambulators."—1 year.—Dated 5th July, 1858.

25. Gaetano Saporiti, of Turin, for "A machine for the expeditious manufacture of building materials."—5 years.—Dated 5th August, 1858.

26. Giorgio Chevillet, of Savona, represented by Capuccio and Latini, Turin, for "A steam turbine."—3 years.—Dated 18th August, 1858.

27. Venanzio Ugazzi, of Varallo, for "A machine for making nails."—1 year.—Dated 30th June, 1858.

28. Arrin William Grover, of Boston, represented by Capuccio and Latini, Turin, for "Improvements in sewing machines."—14 years.—Dated 3rd July, 1858.

29. Vittorio Merighi, of Turin, represented by Capuccio and Latini, Turin, for "Means of preventing dust on railways."—3 years.—Dated 12th July, 1858.

30. Luciano Decoppet, of Liége, represented by Capuccio and Latini, Turin, for "An apparatus for tinning the inside of lead pipes stretched by pressure and tinned whilst being worked."—6 years.—Dated 16th July, 1858.

31. Edoardo Smalwood, of Turin, represented by Capuccio and Latini, Turin, for "Building materials of baked clay or any other substance, to be assembled from all sides for partition walls, pavings, or roofings."—1 year.—Dated 17th July, 1858.

32. Lodovico Farant, of Turin, represented by Edoardo Cretté, Turin, for "A moveable crane with a jointed fly-wheel and vertical rotation applicable to platforms of railways."—10 years.—Dated 23rd June, 1858.

33. Giuseppe Tremeschini, of Vicenza, represented by Capuccio and Latini, Turin, for "Applying thin card-paper in bands to weaving figured stuffs."—6 years.—Dated 21st July, 1858.

34. Pietro Denuelle, of Lyons, represented by Edoardo Cretté, for "A combined regulating float."—3 years.—Dated 29th July, 1858.

35. John Chadwick and Arturo Elliot, of Middleton, represented by Edoardo Cretté, Turin, for "Improvements in machines for working silk."—6 years.—Dated 30th July, 1858.

36. Luigi Durand, of Marseilles, represented by Luigi Bassini, for "A steam generator with circulating water and a large heating surface for locomotives, vessels, &c."—15 years.—Dated 29th May, 1859.

37. Vincenzo Chiara, of Arassa, (Novara), represented by Capuccio and Latini, Turin, for "A new system of wheels for railway carriages."—3 years.—Dated 10th August, 1858.

38. John and Ezra Harlan, Brothers, of London, represented by Capuccio and Latini, Turin, for "A machine for obtaining motive power."—6 years.—Dated 11th August, 1858.

39. Luigi Orlondo and Co., of Genoa, represented by Capuccio and Latini, Turin, for "Portable ventilation forges."—6 years.—Dated 31st August, 1858.

40. Maria Angela Reyna, of Turin, represented by Carlo Reyna, Turin, for "A new system of hot-air stoves, called 'Pyr-Catacleiston.'"—1 year.—Dated 7th September, 1858.

41. Domenico Ghigliano, of Mondovi, for "Making matches without phosphorus."—6 years.—Dated 1st September, 1858.

42. Giacomo Roy, of Tours, France, represented by Capuccio and Latini, Turin, for "A new system of grease boxes and shaft cushions with oblique slides and crank axles, applicable to railway carriages."—12 years.—Dated 13th August, 1858.

43. Mathieu-Chaufour and Co., of Paris, represented by Capuccio and Latini, Turin, for "A system of cylinder boxes and cushions, applicable to railway and other carriages, machines, &c."—1 year.—Dated 14th August, 1858.

44. Leopoldo De Sibille, of Passy, near Paris, represented by Capuccio and Latini, Turin, for "A new process of manufacturing pure saltpetre without refining."—6 years.—Dated 25th August, 1858.

45. Ulisse Puech, of Paris, represented by Luigi Bassini, Turin, for "A self-acting rectilinear hosiery-frame."—15 years.—Dated 14th August, 1858.

Certificate of Addition.

1. Giuseppe Tappaz, of Turin, represented by Capuccio and Latini, Turin, for "Fire-arms with moveable chambers and wedges, and levers."

2. Pietro Guyet, of Turin, represented by Cappuccio and Latini, Turin, for "Improvements in his new system of taps."

3. Eugenio Barsanti and Felice Matteucci, of Florence, for "Obtaining a motive-power by means of an explosive fluid."

Prolonged Patents.

1. Giuseppe Icardi, of Turin, for "A new mechanism for lubricating axles of railway carriages."—2 years.—(Original Patent, 1 year.)

2. Francisco Amadoni, of Genoa, for "Manufacture of esparto paper."—3 years.—(Original Patent, 1 year.)

Disclaimer.

1. Michele Valle, of Genoa, for "A floating pontoon for loading, hoisting vessels, putting on their keels, putting up steam-boilers, &c."

Fourth Quarter, 1858.

Patents Delivered.

1. Agostino and Giuseppe Garneri, Brothers, of Turin, for "A machine for making paving tiles, bricks, &c."—1 year.—Dated 9th September, 1858.

2. Riccardo Westley, of Birmingham, represented by Francisco Tofano, of Turin, for "A new construction of breech-loading fire-arms."—13 years.—Dated 9th September, 1858.—(English Patent, 25th March, 1858.)

3. Cesare Tubino, of Voltri, represented by Capuccio and Latini, Turin, for "Processes for reducing fibrous plants into pulp for the manufacture of paper."—15 years.—Dated 18th September, 1858.

4. Giuseppe Franco, of Turin, for "A mode of deriving water."—5 years.—Dated 16th September, 1858.

5. Claudio Arnaud and Co., of Lyons, represented by Capuccio and Latini, Turin, for "Improvements in rotary steam engines."—1 year.—Dated 1st October, 1858.

6. Giuseppe Franco, of Turin, for "Italian fountains."—15 years.—Dated 21st August, 1858.

7. John Chisholm, of Bermondsey, represented by Capuccio and Latini, Turin, for "Treatment of fecal matter in a liquid or solid state, of infectious and deleterious gases, for the purpose of utilizing the products therefrom, and disinfecting privies, sewers, buildings, &c."—6 years.—Dated 25th August, 1858.

8. Vittorio Merighi, of Paris, represented by Capuccio and Latini, Turin, for "Means of preventing and extinguishing fires in railway trains."—3 years.—Dated 30th August, 1858.

9. Giuseppe Ghersi, of Turin, represented by Capuccio and Latini, Turin, for "A loom for weaving velvet and plush for bonnets in two pieces."—6 years.—Dated 7th September, 1858.

10. Angelo Ponzetti, of Bergamo, for "A new mode of propelling railway trains by means of compressed air-tubes without valves."—3years.—Dated 18th September, 1858.

11. Francesco Cambiaso, of Genoa, for "A circular machine for obtaining looped fabrics without wrong sides and with borders."—10th years."—Dated 25th August, 1858.

12. Lodovico Farant, of Turin, represented by Edoardo Cretté, Turin, for "An endless saw with three blades and a circular, rectilinear, and alternate movement."—10 years.—Dated 2nd July, 1858.

13. Augusto Piard, of Turin, for "A lamp-burner with two currents of air."—2 years.—Dated 22nd October, 1858.

14. Luigi Girard and Giulio Sarti, of Genoa, for "A new system of hydraulic and hydro-pneumatic railways."—15 years.—Dated 24th September, 1858.

15. Prospero Prinont, of Rouen, represented by Edoardo Cretté, Turin, for "New plastic compounds to be used as a coating, or as a building material."—3 years.—Dated 22nd October, 1858.

16. John Leigh, of Manchester, represented by Capuccio and Latini, Turin, for "A new mode of using certain substances for sizing, finishing or preparing cotton, flax, or other thread and woollen tissues."—3 years.—Dated 7th October, 1858.

17. Pasquale Fioravanti, and Capuccio and Latini, of Turin, for "An improved process for hardening and colouring calcareous stones without decomposing the same, so as to resemble marble and any other hard stone."—6 years.—Dated 29th October, 1858.

18. Secondo Ferrero, of Turin, for "Improvements in purifying resinous oil for lighting and other purposes."—1 year.—Dated 13th November, 1858.

19. Giuseppe Vanossi, of Chiavenna, Lombardy, represented by Luigi Bassini, Turin, for "A new system of steam engines for railways and navigation."—6 years.—Dated 12th October, 1858.

20. Christoforo Carenzi, of Turin, for "A new physical and mechanical system of obtaining and modifying oxide and salts of lead."—6 years. Dated 20th November, 1858.

21. Giuseppe Vallod and Co., of Paris, represented by Edoardo Cretté, Turin, for "Lubricating apparatus."—3 years.—Dated 30th September, 1858.

22. Gaetano La Loggia, of Genoa, for "A machine worked by carbonic acid gas, with a continuous or intermediate circulation by means of a system of commutation."—5 years.—Dated 6th October, 1858.

23. Carlo Perratone, of Paris, represented by Giuseppe Oppelt, Turin, for "Iron-spring apparatus."—6 years.—Dated 13th October, 1858.

24. Giuseppe Franco, of Turin, for "Crowned and holed piles."—5 years.—Dated 21st October, 1858.

25. Enrico Bessemer, of London, represented by Francesco Tofano, Turin, for "Improvements in treating anthracite, and in separating heterogeneous substances therefrom."—12 years 7 months. —Dated 5th November, 1858.

26. Luigi Guillemont, of Paris, represented by Luigi Bassini, Turin, for "Street-lamps lighted by schist oil."—15 years.—Dated 19th November, 1858.

27. Eligio Marchand, of Nice, represented by Francesco Tofano, for "An apparatus for preventing boiling liquids from flowing over."—5 years. —Dated 12th August, 1858.

28. Giovanni Bartelli, of Genoa, for "Boats for ponds."—5 years.—Dated 11th November, 1858.

29. Lodovico Faraut, of Turin, represented by Edoardo Cretté, Turin, for "Applying steelyards to cranes."—10 years.—Dated 2nd July, 1858.

30. Beniamino Nadoult de Buffon, of Paris, represented by Edoardo Cretté, Turin, for "Tubular filters."—15 years.—Dated 28th October, 1858.

31. Sebastiano Grandis, of Turin, for "Grooved wedges with cramps for assembling double T rails." —5 years.—Dated 20th November, 1858.

32. Salvatore Caccianino, of Milan, for "A mechanism in locomotives for ascending great gradients on railways."—6 years. — Dated 26th November, 1858.

33. Francesca Anfussi and her Son Lorenzo Pejrano, of Genoa, represented by Luigi Bassini, for "A new apparatus for using flour as a substitute for corn in the manufacture of starch, and for utilizing the paste of flour itself after said operation."—6 years.—Dated 14th December, 1858.

34. Antonio Favier, of Paris, represented by Capuccio and Latini, Turin, for "Improvements in tanning hides."—6 years.—Dated 17th December, 1858.

35. Serafino Mori, of Avigliana, for "Hydraulic cement."—5 years.—Dated 21st December, 1858.

Certificates of Addition.

1. Michele Oddini, of Ovada, represented by Giuseppe Piantelli, Genoa, for "Pumps with collars worked by a gradual pressure."

2. Enrico Monticelli, of Marasi, represented by Capuccio and Latini, Turin, for "An economical mode of mannfacturing starch."

3. Antonio Eyraud, of Marseilles, represented by Pietro Marchese, Turin, for "Extracting oil, fat, or other soluble substances by means of volatile dissolvents."

4. Sebastiano Grandis, of Turin, for "Adding soles to his grooved wedges for assembling rails."

5. Pietro Guyet, of Turin, for "Adding compensating, oscillating, moveable, and fixed valves to his joints of pipes."

6. Giuseppe Deforesta, of Turin, for "Obtaining lighted gas by simultaneously distilling wood, or peat with oil, grease, resin, tar, and fossil coal mixed together in the same retort or separately."

Patents Prolonged.

1. Ferdinando Biondi, of Turin, for "A pocket instrument for summing up numbers of various orders."—2 years.—(Original Patent, 1 year.)

2. Antonio Eyraud, of Marseilles, represented by Pietro Marchese, Turin, for "Extracting oil, fat, or other soluble substances, by means of volatile dissolvents."—2 years.—(Original Patent, 1 year.)

3. Tommaso Agudio, of Turin, for "An hydraulic machine for propelling railway trains on ascents of railways."—2 years.—(Original Patent, 1 year.)

4. Gian Domenico Folco, of Cassine, represented by Luigi Bassini, for "An economical kitchen-stove."—2 years.—(Original Patent, 3 years.)

5. Antonio Richelmi, of Genoa, for "A kneading trough with a pressure cylinder."—14 years.—(Original Patent, 1 year.)

6. Francesco Amadori, of Genca, for "Manufacture of pulp for making paper from esparto."—3 years.—(Original Patent, 1 year.)

SAXONY.†

List of Patents for Inventions Delivered between the 1st January and 31st March, 1859.‡

(*Communicated by the Saxon Government.*)

(For preceding List, the No. 526 of this Journal.)

1. Henry J. Rogers, of Baltimore, represented by Friedrich Georg Wieck, of Leipzig, for "Improvements in the construction of electric telegraph wires or cables."—5 years.—Dated 31st December, 1858.

2. Neander Osar Paul Meister, of Chemnitz, for "A process for washing and scouring loose wool, and for dyeing the same uniformly."— 5 years.—Dated 8th January, 1859.

3. C. S. Lister and Co., of Addingham, represented by Hermann Böhme, Dresden, for "Improvements in preparing wool and other fibrous substances." — 5 years. — Dated 10th January, 1859.

4. Bernhard Zachariä, of Leipzig, for "A registering clock for public carriages."—5 years.—Dated 12th January, 1859.

† For the Saxon Patent Law, see No. 236 of this Journal.
‡ All the published Specifications are deposited in the free Library of the Commissioners of Patents, where translations of the same may be had.

5. Paul Moll, of Brieg (Silesia), for "A printing machine with double plates."—5 years. — Dated 13th January, 1859.

6. Frederick William Mowbray and James Broadley, of Bradford, represented by Prillwitz, Berlin, for "Improvements in weaving and in looms."—5 years.—Dated 13th January, 1859.

7. Carl Krumbholz and Gottfr. Spoerey, of Paris, represented by Friedrich Georg Wieck, Leipzig, for "A new kind of gas-burners."—5 years.—Dated 13th January, 1859.

8. Rudolph Wappenstein, of Manchester, represented by Hermann Böhme, Dresden, for "A process for obtaining artificial whalebone from horn."—5 years.—Dated 20th January, 1859.

9. A. Mönnich and Co., of Chemnitz, for "An improved malt kiln of flat wire."—5 years.—Dated 20th January, 1859.

10. Heinrich Ferdinand Ebert, of Waldenburg, for "A process for obtaining knotless cords of horsehair."—5 years.—Dated 26th June, 1859.

11. Peter Noack, of Camina, near Budissin, for "A process for manufacturing rum and spirits from the residues of breweries."—5 years.—Dated 22nd February, 1859.

12. Julius Winckelmann, of Leipzig, for "A process for manufacturing hardened or steeled copper plates or utensils."—5 years.—Dated 28th February, 1859.

13. Schaeffer and Budenberg, of Magdeburg, for "An apparatus for feeding steam boilers so as to obtain a steady water-gauge."—5 years.—Dated 4th March, 1859.

14. Charles Edmund Wendt and Wilhelm Kubel, of Brunswick, for "A process for removing the bad smell and taste from syrup and molasses of beetroot."—5 years.—Dated 5th March, 1859.

15. Grandis, of Turin, represented by Hermann Böhme, Dresden, for "A construction of grooved joints for assembling rails of railways."—5 years. —Dated 9th March, 1859.

16. Friedrich Dietrich, of Dresden, for "Improvements in their Patent self-acting cotton-cards."—5 years.—Dated 9th March, 1859.

17. André Köchlin and Co., of Mulhouse, represented by Hermann Böhme, Dresden, for "A mountain locomotive." — 5 years. — Dated 12th March, 1859.

18. Gotthelf Reinhold Beck, of Altenberg, for "A new kind of anti-phosphorus matches." — 5 years.—Dated 11th March, 1859.

19. Boyer and Co., of Ludwigshafen, for "A new kind of air heating."—5 years.—Dated 15th March, 1859.

20. Johann Heinrich Wilhelm Daniel Wagner, of Berlin, for "An apparatus for purifying and heating water for steam boilers."—5 years.—Dated 17th March, 1859.

21. Giugnet, of Paris, represented by Albert Ossertag, Dresden, for "A process for obtaining fine green hydrate of oxide of chromium."—5 years.—Dated 17th March, 1859.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

List of Patents, with Claims annexed, issued from the United States Patent Office, for the week ending 5th April, 1859, and each bearing that date.

No. 23,435. Wm. Arthur, of Brooklyn, N. Y., for an "Improved arrangement for extinguishing fires in steam vessels."

"Having thus described the means I employ for obtaining a supply of water, and the mode of operating the same, what I claim as my invention, and desire to secure by Letters Patent, is, the application of the waste water discharged from the air pump raised to such hight as flood the steam vessel with water for the purpose of extinguishing fire, as herein described, instead of discharging it as usual as waste water from the sides of the vessel."

No. 23,436. S. A. Bailey, of New London, Conn., for an "Improved machine for wringing clothes."

"Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is, the employment of the cylindrical wooden spring piece *a*, *a*, which is divided in two parts at its centre, each part being slotted from the place of division, as shown in the drawing towards its outer end, the same being covered by rubber cylinder, substantially in the manner and for the purpose specified."

No. 23,437. Abel H. Bartlett, of Spuyten Duyvil, N. Y., for an "Improvement in condensing covers."

"I claim the reservoirs I, I, and R, the pipes F & E, when made and arranged substantially as and for the purposes specified."

No. 23,438. Alexr. Beckers, of New York, N. Y., for an "Apparatus for exhibiting stereoscopic pictures."

"Having thus described the construction and operation of my invention, what I claim as new, and desire to secure by Letters Patent, is, 1, placing the endless belt, chain, band, or apron *o*, *o*, in such a position as to form an acute or obtuse angle with the base F of the box or chamber of the apparatus substantially as described. 2, placing the slides or frames holding the pictures in such a position as to form acute or obtuse angles with the endless belt, or with the line of motion, substantially in the manner and for the purpose as specified."

No. 23,439. Asa G. Bill, of Cuyahoga Falls, Ohio, for an "Improvement in metallic piston packing."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement of the arms F, F¹, on the central hub B, of a piston which act on a ring E, and which are operated by means of a cam G, substantially as and for the purpose set forth."

No. 23,440. Robt. B. Benson, of New York, N. Y., for an "Improvement in reefing sails."

"I have described my invention in connection with a top sail; but I do not wish to limit myself to that use only, as it is evident that the same general principles are also applicable to other sails. I claim reefing the sail from the deck by the use of a supplementary foot rope or its equivalent, in combination with the auxilliary sheet and with the reefing lines, substantially in the manner and for the purposes set forth."

No. 23,441. Wm. Blake, of Boston, Mass., for an "Improvement in gas burners."

"I claim the arrangement of one or more conduit tubes *h*, *h*, in the burner or jet chamber, and with respect to the base of the said burner or jet chamber, and its inlet passage or passages as described. And in combination with the arrangement of the inlet conduit, or conduits, in such manner as to cause the gas to pass around in the expansion jet chamber, in one or more helical currents, I claim an annular or ring exit orifice *i*, whereby the current or currents of gas may be thrown out of the burner in one or more helical streams, so as to equalize the height of the flame, and prevent it from flickering."

No. 23,442. Mannervillette E. D. Brown, of Utica, N.Y., for an "Improved life-boat."

"What I claim as my invention, and desire to secure by Letters Patent is, the construction of a life-boat with three recesses, substantially in the manner and form, and for the purposes as above specifically set forth. Also, in combination with the foregoing, the making a groove in the rudder iron, and a peg in the rudder bolt, as above described, for the purpose as above substantially set forth."

No. 23,443. Wm. R. Brown, of Cleveland, O., for an "Improvement in pumps."

"I am aware that pumps with an oscillating diaphragm, are not new; but what I claim, and desire to secure by Letters Patent of the United States, is:—1. I claim the bi-cuspid valve, constructed substantially as herein described. 2. I claim the arrangement of the bi-cuspid valve, in connection with the oscillating pump, the whole being constructed, arranged, and operated, substantially as set forth, for the purposes described."

No. 23,444. Joel Bryant, of Brooklyn, N. Y., for an "Improvement in hydrants."

"What I herein claim as my invention, and desire to secure by Letters Patent, is, as follows; to wit, first, I claim in the construction and use of hydrants, the shaft A, (whether hollow or solid, naked or encased,) when used for obtaining water, substantially as herein described, and for the purposes set forth. Secondly, and in connection with the said shaft A, I claim the perforated open top and banded chamber valve B, constructed and operating substantially as herein described and for the purposes set forth."

No. 23,445. Cyrus Chambers, jr., of Philadelphia, Pa., for an "Improvement in paper folding machines."

"Having now described the construction and operation of my improvements, I wish it to be distinctly understood, that, I do not desire to confine myself to the precise construction of the devices herein described, as several modifications of, or equivalents to the same, might be substituted, without departing from the main features of the invention; but I claim and desire to secure by Letters Patent, First, the register pins *e* and e^1, so constructed and so attached to a paper folding machine, that they shall retain a position proper for the adjustment of the sheet, and yield by the movement of the latter. Second, adjusting one of the register pins e^1, laterally and longitudinally, independently of the other pin, by means of the slides n^1 and n^2, or their equivalents. Third, adjusting both pins simultaneously, both laterally and longitudinally by the frames X and Y, or their equivalents, the frame X being adjustable in one direction on the frame Y, and the latter together with the frame X being adjustable in another direction on the frame of the machine, or any attachment thereto. Fourth, any convenient number of rods 1, 2, and 3, terminating at one of the folding rollers, the ends of the rods passing into grooves in the said rollers, as and for the purpose specified. Fifth, the adjustable stop Z, with its inner edge of a curved or angular form or otherwise, so constructed, that the end of the folded edge only of the sheet, shall be in contact with the said stop, for the purpose specified. Sixth, the plunger 6, with its adjustable plate 8, in combination with the adjustable plate 9, the said plates being arranged substantially as and for the purpose herein set forth. Seventh, the curved wires 15 and 16, or their equivalents, attached to the machine in any convenient manner, situated under the folding apparatus, and adjacent to the trough, for the purpose specified. Eighth, the combination of an alarm or indicating apparatus with a paper folding machine, when the said indicator is operatad by a sheet folded by the machine. Ninth, causing the sliding board O^1, to move along the trough, with a diminution of friction, as the folded sheets accumulate by means of the springs 4, attached to the said board, and arranged to bear against the wedge-formed or inclined strips 5, substantially as herein set forth, and for the purpose specified."

No. 23,446. Wm. H. Cheetham, jr., of New York, N.Y., for an "Improvement in power looms."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the employment, to contain the shuttles which are inoperative of a frame L, which is constructed to hold the said shuttles, arranged in proper order, in two tiers, and is applied in such a manner in front of either or each set of shuttle boxes of the loom, as to be capable of receiving in one tier, the shuttles which are required to be thrown out of operation, and of supplying from the other tier the proper shuttles to take their places, substantially as herein described. 2nd, the box M, applied and operating in combination with the shuttle frame L, substantially as and for the purposes herein specified. 3rd, the pushers *m*, *m*, *n*, *n*, and *p*, *p*, applied and operating in combination with the shuttle frame and box M, substantially as and for the purpose herein described."

No. 23,447. John B. Christian and Abner Beeler, of Mt. Carroll, Ill., for an "Improvement in pumps."

"What we claim as our invention, and desire to secure by Letters Patent, is, the construction, arrangement, and combination of the pumping cylinders G, G, and cylinders B, B, and I, I, substantially in the manner and for the purpose herein specified."

No. 23,448. Henry Clayton, of Tamaqua, Pa., for an "Improvement in the valve arrangement of steam engines."

"I do not claim the fitting of plates or blocks to the back of a slide valve, when they are intended to operate as cut-offs for using the steam expansively in the cylinder; but what I claim as my invention, and desire to secure by Letters Patent, is, 1st, the employment, in combination with a slide valve of one or more shutters applied and secured thereto, substantially as described, to vary and regulate the area of opening of the port or ports, as and for the purposes herein specified. 2nd, combining the two shutters E, E^1 (when two are employed), with the slide valve by means of two screws G, G^1, one of whose stems passes through the other, which turns in a bearing on the back of the valve, and both of which stems pass through one end of the valve chest, the whole operating substantially as herein described. 3rd, the valve L, with its screwed stem *w*, or its equivalent, and spring *y*, arranged and applied substantially as described, for the purpose herein set forth."

No. 23,449. Levi H. Colborn, of Baltimore, Md., for an "Improvement in polishing rice."

"Having thus fully described my process, what I claim as my invention, and desire to secure by Letters Patent, is, the process of breaking the outer covering and moistening the inner coating of rice, and polishing the same, as herein set forth."

No. 23,450. Jacob A. Conover, of New York, N.Y., for an "Improvement in steam engines."

"What I claim as my invention, and desire to secure by Letters Patent, is, combining with the mechanism which connects the governor with the throttle valve, to regulate the admission of steam to the engine, substantially as described, a mechanism substantially such as described, which disconnects the throttle from the governor, to permit it to be closed by an independent power, to shut off the steam from the engine, as described, and for the purpose set forth."

No. 23,451. Caleb Cook, of Hillsborough, N.H., for an "Improved shoe peg machine."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the discs, as described. 2d, the method of holding the peg wood together by the chain and drum and friction appliance, substantially as described. 3d, the method of holding the peg wood firmly in place by pressing it up against the guide piece D by means of the spring S and the levers and posts, substantially as described. 4th, the method of relieving the upward pressure against D, for the purposes of the feed motion by means of the system of levers *x*, *x*, substantially as shown and described."

No. 23,452. Jacob Creamer and Thos. W. Ricards, of London, Ohio, for an "Improvement in mole plough."

"What we claim as our invention, and desire to secure by Letters Patent, is, the arrangement of the beam (B), screw (H), wheel (*d*), and shaft (S) upon the sliding shoe (A), (*a*, *a*, *b*, *b*,) constructed and operating substantially as described."

No. 23,453. James E. Cronk, of Poughkeepsie, N. Y., for an "Improved pump."

"I do not claim to be the inventor of dipigrams or dipigram pumps; I, therefore, disclaim as such the dipigrams H and I, also the valves J and K, the pipes D and E, the rod F, and the brake or lever G. Claim:—What I claim as my invention, and desire to secure by Letters Patent, is, the peculiar form and arrangement of the dipigrams H and I with the shells B and C, as before described, and the ring A, forming a chamber between them with the discharge therefrom, as before mentioned, and for the uses and purposes herein expressed."

No. 23,454. Ephraim Cushman and John R. Cushman, of Amherst, Mass., for an "Improvement in manufacture of artificial leather."

"Claims:—What we claim as our invention, and desire to secure by Letters Patent as an improvement in machines for the manufacture of artificial leather, is, 1st, holding the felt H up to the roll F, for the purpose substantially herein set forth. 2d, removing the adhering fibers from the surface of the felt H before it reaches the felt washer by means of the scratcher *o*, or its equivalent."

No. 23,455. Chas. Dickinson and Wm. Bellamy, of Newark, N. J., for an "Improved ice pitcher."

"We do not claim, broadly, the making of double walled ice pitchers, nor the interposition of a felt or woolen non-conductor between the walls; but we claim, as an improved article of manufacture, an ice pitcher provided between its walls with a hard non-conductor, so as to protect the walls from indentation or fracture from within or without, while it also assists refrigeration, as herein shown and described."

No. 23,456. James Easterly, of Albany, N. Y., for an "Improvement in grate bars."

"Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is, the within-described corrugated grate bar, constructed substantially in the manner and for the purpose specified."

No. 23,457. Winthrop B. Fay and Russell W. Collier, of Upton, Mass., for an "Improvement in boot trees."

"We are aware that adjustable lasts and foot pieces of boot trees have been arranged in various ways in order to modify their shape or form so that they may be fitted perfectly in boots, and we do not claim, broadly, such device irrespective of the particular construction and arrangement herein shown and described, for effecting the purpose; but having thus described our invention, what we claim as new, and desire to secure by Letters Patent, is, the elastic plates B, B, attached to the sides of the foot piece A in connection with the adjustable bars C, C, arranged to operate substantially as and for the purpose herein set forth."

No. 23,458. Fritz Fedderke, of New York, N.Y., for an "Improved billiard table."

"What I claim as new, and desire to secure by Letters Patent, is, constructing a billiard which may be changed from an American into a French billiard, by effecting a perfect continuation of the cushion throughout the whole length of the same by means of cushion pieces D and E, inserted between and fastened to the jaws by a handle N operating upon a forked lever L, latches or bolts R, and springs S, and re-converting the French billiard thus formed into an American billiard by removing the said cushion pieces by the same means, substantially as described."

No. 23,459. Josiah P. Fitch, of New York, N. Y., for an "Improvement in water wheels."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the combination of the wheels D, one or more, and gate F, arranged relatively with each other, and placed within a proper case, which is fitted within a penstock or flume A, substantially as and for the purposes set forth."

No. 23,460. Hiram M. Fletcher, of Newport, N. H., for an "Improved clothes frame."

"Having described the construction and mode of operation of my said improvements, what I claim as my invention, and desire to secure by Letters Patent, are, first, the plank A, in combination with the plank B, the bearings M and N, and the sectional shaft C, D, constructed and operating substantially as above described. Second, the sectional shaft C, D, constructed and operating substantially as above described. Third, the reel frame, composed of the parts E, F, F^{1}, F^{11}, F^{111}, G, G^{1}, G^{11}, G^{111}, and H, H^{1}, H^{11}, H^{111}, in combination with the sectional shaft C, D, the plank A, the plank B, the bearings M and N, with their corresponding mortises *m* and *n*, the spring K, the pulley O, and the cord L, constructed and operating substantially as above described."

No. 23,461. Alven K. Gilmore, of Bath, Me., for an "Improvement in mechanism for obtaining rotary motion from reciprocating rectilinear motion."

"Having thus described my invention for connecting a reciprocating rectilinear motion into a vertical one, what I claim is, the combination of the bifurcated slider A, two pulley sectors C, D, their double pawls G, H, (or mechanical equivalents therefor,) and the wheel F, the whole being arranged, connected, applied to one shaft E, and made to operate substantially in manner and for the purpose as herein-before set forth. I also claim, in combination with the pawls G, H, and their disk wheels I, I, the disk-moving mechanism, consisting of the levers *m*, *m*, bent arms *o*, *o*, sliders *p*, *p*, forked arms *s*, *s*, slide rod *t*, and shifting lever *u*, combined and arranged substantially as herein-before explained. I also claim, in combination with each double pawl G, H, and the shaft E, a disk or wheel I, having studs or stops *i*, *k*, and being applied to the shaft and friction wheel *l*, substantially as and for the purpose described."

No. 23,462. John M. Hancock, of Lansing, Iowa, for a "Fire-escape."

"I do not intend to confine myself to the precise mode of winding up the machine, as it may be varied, and, in fact, must be, when the form of the case or piece of furniture in which it is enclosed is changed; nor do I confine myself to the materials of which the basket is composed, as in changing the case the materials of the basket must be changed also. I am aware that the use of the flying pinion, as a retarding power, is not new, therefore, separately considered, I do not claim them; but I do claim, and desire to secure by Letters Patent, the flying pinion "E," "E," in combination with the detent "X," the driving wheel "D," the spring brake "M," and block brake "*y*," as substantially described, and for the purpose set forth. I also claim, in combination with the described piece of mechanism, the table, or its equivalent, as substantially described and for the purpose set forth."

No. 23,463. A. E. Harding, of Middletown, Ohio, for an "Improved ships' propelling apparatus."

"What I claim as new, of my own invention, and desire to secure by Letters Patent, is, 1st, the rollers (g^{1}), arranged and operating substantially as herein described. 2d, I claim the arrangement and combination of the propeller chambers (B, B), air tubes *d*, *d*, openings (*c*), chambers (E, E), pistons (*f*, *h*, *f*, *h*), gates (*j*, *j*), pipe (*p*), and propellers (g, g^{1}), all arranged substantially as herein described, for the purposes set forth."

No. 23,464. Gordis D. Harris, of Fitchburgh, Mass., for an "Improved stump extractor."

"Having thus described my invention, I claim and desire to secure by Letters Patent, as an improved article of manufacture, a stump puller, having a pulley N, and two conical shafts D, E, one shaft D, for winding the chain with a variable speed, the other shaft E, for correspondently winding the rope M, and otherwise constructed as herein shown and described."

No. 23,465. Levy J. Henry, of New York, N. Y., assignor to Daniel Benrimo, of same place, for an "Improvement in rendering friction matches water proof."

"Having thus described my said invention, and shown the benefits resulting therefrom, what I claim as new, and desire to secure by Letters Patent, is, rendering friction matches partially or entirely waterproof, by the application of a melted coating, in the manner and for the purposes substantially as specified."

No. 23,466. Daniel Hughes, of Rochester, N. Y., for "An improved rotary engine."

"What I claim as my invention, and desire to secure by Letters Patent, is, the oscillating shoes G, G^{1}, applied and operating in combination with the oscillating abutments and the rotating piston hub, substantially as and for the purpose herein described. And I also claim the discs N, N^{1}, having openings *g*, *g*, and sockets *d*, *d*, applied, in combination with the rotary piston hub, the cylinder heads and the main shaft, substantially as and for the purposes herein described."

No. 23,467. J. Burrows Hyde, of Newark, N. J., for an "Improvement in treatment of peat for composting."

"What I claim, and wish to secure by Letters Patent, is, the use of peaty matter, as a basis for admixture with other richer manures, when said peaty matter shall have been dried and finely powdered previous to admixture, as set forth."

No. 23,468. J. Burrows Hyde, of Newark, N. J., for an "Improvement in rotating shot and shells."

"What I claim and desire to secure by Letters Patent, is, the use of tangential holes bored from the outer surface into the solid portion of the front end of the shot, for receiving the rotating composition; and I also claim the use of the adjustable tubes or cases of rotating composition."

No. 23,469. Anthony Isky, of Lancaster, Pa., for an "Improvement in extension tables."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of the pivoted cross slats F, affixed on each side of the central partition I, in the table frame H, H^1, the double wings B, C, when hinged, so that the wing *c* may be turned over on to the slats F when extended, as also the adjustment and combination of the several parts herein described, and for purpose specified."

No. 23,470. Edmund M. Ivens, of New Orleans, La., for an "Improvement in steam boilers."

"Having fully described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement of a cylindrical or annular water drum (having a forced circulation) within the flue of an ordinary flue boiler, in the manner and for the purposes set forth."

No. 23,471. Hiram Johnson, of Farmersville, N.Y., for an "Improvement in tanning."

"What I claim as my particular invention, and desire to secure by Letters Patent, is, the use of a solution of quick lime as a tanning ingredient, to be used in connection with any of the tanic acids or tanning ingredients now in general use, not confining myself, however, to the exact proportions, as above specified."

No. 23,472. Wm. Johnson, of Lambertville, N. J., for an "Improved lathe clutch."

"What I claim as my invention, and wish to secure by Letters Patent, is, not the construction or form, or proportion, of all or any of the parts of the chuck herein-before described or mentioned; but the combination of toothed wheels and arms, actuated by a single screw shaft, so as always to present three several points of pressure centrally upon the body to be turned or wrought, substantially as described and set forth."

No. 23,473. Ahron Lewenberg, of New York, N. Y., for an "Improvement in moulds for forming artificial teeth."

"What I claim as my invention, and desire to secure by Letters Patent, is, a divided socket or holder receiving the pins of artificial teeth, so fitted as to be removable from said pins prior to taking the teeth out of the mould, for the purposes and as specified."

No. 23,474. Richd. Lewis, of Charleston, S. C., for an "Improvement in metallic cotton bands."

"I claim, in the above device, plates A, B, with sloots *c*, *d*, projections E, E, opening *f*, legs *g*, *g*, and shoulders *h*, *h*, in combination, constructed, united, and operated in the manner substantially as above described, and for the purpose set forth."

No. 23,475. Richd. Lewis, of Charleston, S. C., for an "Improvement in metallic cotton bands."

"Claim:—I claim, in the above device, plates A, B, opening E, projections *f*, *f*, shoulders *c*, *c*, and *d*, *d*, in combination, constructed, united, and operated in the manner substantially as above described, and for the purpose set forth."

No. 23,476. E. D. Lockwood, of Penfield, N. Y., for an "Improvement in mode of attaching horses to vehicles."

"I am aware that horse collars have been constructed with a breast strap and back strap, arranged similarly to the straps B, C, herein shown, and I do not claim, separately and broadly, said straps as a horse collar; but, having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, attaching the strap B to the thills A, A, by means of the perforated plates *c* and the pins *f*, placed in the recesses *e* of the thills, and having wide and narrow parts 1, 2, substantially as described."

No. 23,477. Matthias Ludlum, of Fair Haven, Vt., for "Improved water-tight doors for marine safes, lockers, &c."

"What is here claimed is, the double door (A, C,) constructed and operating substantially as described, in combination with the outer or surrounding framework (B) and independent interior frame (E), or its equivalent, essentially as and for the purposes set forth."

No. 23,478. Jacob Marx, of N. York, N. Y., for an "Improved refrigerator."

"What I claim as new, and desire to secure by Letters Patent, is, the combination and arrangement of ice chamber A, the gutter D, pipe E, the water tank C, and provision chamber B, substantially as and for the purpose specified."

No. 23,479. Chas. McBurney, of Roxbury, Mass., for an "Improvement in india-rubber soles for boots and shoes."

"I do not claim making a sole for boots and shoes of vulcanized india rubber; neither do I claim attaching such sole to the boot by means of pegs; but what I claim as my invention, and desire to secure by Letters Patent, is, a sole made of vulcanized india rubber, and having the holes for the reception of the pegs formed in the mould in which it is vulcanized, as set forth."

No. 23,480. Wm. McConnell, of Philadelphia, Pa., for an "Improvement in sandals."

"I am aware that clogs have been made with soles made of two separate blocks hinged together, as shown in the English Patent of Jos. Shuller, May 6, 1826, I therefore do not claim, broadly, such a device; neither do I claim a slide for adjusting the distance between the heel and the toe of the sandal; but I limit my claim to, and desire to secure by Letters Patent, a sandal, consisting of three blocks, B, B^1, and B^2 of wood, or other suitable material attached to an elastic metal strip A, when the said blocks are so situated in respect to each other that one shall coincide with the toes, the other with the ball, and the third with the heel of the wearer's foot, as and for the purpose specified."

No. 23,481. O. H. Melendy, of Delhi, Iowa, for an "Improvement in seeding machines."

"I do not claim broadly the employment or use of a reciprocating seed slide E. for they are well known and in common use; but having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the levers F, H, slides E, G, and projections *g* on the wheel B^1, in connection with the bars I, K, O, P, connected by the links *j*, j^1, the whole being arranged substantially as and for the purpose set forth."

No. 23,482. Gregor Menzel, of Milwaukie, Wis., for an "Improvement in steam boilers."

"I do not claim, irrespective of the arrangement I have described, the employment of ascending and descending tubes may be seen in the withdrawn applications of Thomas Greer, October, 1847, and Thomas E. Warren, July 19, 1852; but the arrangements of tubes and parts therewith connected in the above examples is quite different from mine. I claim, first, the arrangement in an upright cylindrical boiler of a fire box D, and series of ascending tubes E, a smoke box F, a single or double circle of descending tubes G, a flue H, and flue I, in combination with jacket N, without or with horizontal steam dome L, as shown and described. I do not claim, irrespective, a circulation pipe for an upright boiler; but claim the arrangement of my circulation pipes K, which hang loose and inside the cylinder *m*, openings T, and steam dome L, in the manner shown and described."

No. 23,483. Albert H. North, of Hartford, Conn., for an "Improvement in lamps."

"What I claim as my invention, and desire to secure by Letters Patent, is, the rotating plate A, with the elongated scroll teeth, in combination with the vertical gears E, and the vertical actuating gear D, in the manner and for the purpose substantially as herein described."

No. 23,484. Washington Obenchain, of Logansport, Ind., for an "Improved machine for making patterns for cog wheels, &c."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the mode of adjusting the arm E,

vertically by means of screw M, in combination with the upright D, which is also adjustable about a vertical axis, as and for the purposes set forth. 2nd, the track frame F, when adjustable laterally, for the purpose of giving taper to the piece cut. 3rd, the arrangement and devices for adjusting the cutters I, as and for the purposes set forth."

No. 23,485. John K. O'Neil, of Kingston, N. Y., for an "Improvement in pumps."

"I claim the combination and arrangement of the vibratory arms *p*, *o*, rod *q*, stem *m*, guide *n*, and spring *r*, for controlling the valve I, from the top of the well, substantially as described. I also claim constructing the pistons *o*, *o*, with raised rims *w*, *w*, and guiding edges *h*, *h*, upon the heads thereof, in combination with the packing *y*, coiled springs Z, Z, and central disk *u*, arranged in the manner and for the purposes herein set forth."

No. 23,486. John W. Peer, of Troy, N. Y, for an "Improvement in rope machinery."

"What I claim as my invention, and desire to secure by Letters Patent, is, conducting the strands from their bobbins round the exterior of one side of the flyer, and from thence over guide rods *f*, *f*, or their equivalents, to and through a hole or guide *c*, on the opposite side of the flyer, substantially as and for the purpose herein set forth."

No. 23,487. Daniel A. Peirce, of East Greenwich, R. I., for an "Improvement in pencil cases."

"Having thus described the pencil, what I claim as my improvement and desire to secure by Letters Patent, is, I claim constructing the end of the tube F, with a screw thread, and forming the row of teeth therein, in the manner substantially as described and for the purposes herein set forth."

No. 23,488. Wm. L. Potter, of Clifton Park, N.Y., for an "Improvement in the management of machinery for operating corn shellers separately or jointly with a fan or cutters."

"I do not limit myself to the precise construction, arrangement, and proportion of the parts shown in the drawings; nor do I claim, broadly, the employment of a winnower, corn sheller and straw cutter complete in one frame; having now fully described my invention, what I claim as new therein, and desire to secure by Letters Patent, is, the arrangement of the fan E, E^1, and the gearing *i*, in relation to the shafts C and I, so as to connect and disconnect the same, for the purpose of allowing either the fan or the cutting apparatus to be operated with the sheller, or the sheller to be worked independently of either, substantially in the manner herein described."

No. 23,489. John Powers, of New York, N.Y., for an "Improved pump."

"Having thus described my improved pump, what I claim as my invention, and desire to secure by Letters Patent, is, arranging two forcing valvular pistons back to back in line with each other, and combining them, by means of a piston rod, or other connection common to both, with the arm of the pump brake, at a point between the two pistons, substantially as herein set forth, so that both may be operated by the same arm of the pump brake. I also claim combining the pump brake with the duplex pump barrel, by means of an air vessel, constructed and located substantially as herein set forth, so that it forms a secure fulcrum for the brake, and affords a passage through it, for the arm of the brake to the piston rod upon which it acts."

No. 23,490. Saml. Pierce, of Troy, N.Y., for an "Improvement in steam-boilers."

"I do not claim as of my invention, the application of air in numerous small jets, by means of perforated tubes in the fire chamber of steam-boilers; nor do I wish to limit my claim to any precise position of the tubes within the fire chamber, so long as they are placed above the fire, to discharge the jets of air among the gases evolved, where they are at an intense heat; nor do I claim the use of hollow stay bolts for connecting tubes or other vessells; nor do I claim the circulation of water to prevent metal from being injured by the action of intense heat; nor do I claim a series of water tubes embodying air tubes, when such series are made to constitute a water table, as shown in the application of the Patent granted 22nd December, 1857, to B. L. Griffiths: but what I do claim as my invention, and desire to secure by Letters Patent, is, the employment of air tubes placed within the fire chamber of a steam boiler, substantially as described in combination with the surrounding water tubes, connected at both ends with the water spaces of the boiler, and connected with the inner air tubes by means of hollow stay bolts when the air and water tubes so combined, are arranged substantially as specified, for the purpose set forth."

No. 23,491. Geo. W. Pittman and Wm. C. Boone, of Bushwick, N. Y., for an "Improvement in machinery for laying rope."

"We do not claim the arrangement of the flyers with their axes in the same line, nor the connection of flyers so arranged; nor do we claim, in combination with such arrangement, applying one of the bobbins without a flyer, like the bobbin C^2; but what we claim as our invention, and desire to secure by Letters Patent, is, the laying and unlaying of the strands c^1, c^2, to forward the twist, as herein described. And we further claim the ring guide i^1 applied in combination with the bobbin C^2 to the nearest flyer, substantially as and for the purpose set forth."

No. 23,492. Thos. H. Pollock and Danl. Bliven, of Greenville, Conn., for an "Improved cheese cutter."

"What we claim as new, and desire to secure by Letters Patent, is, the platform A, being provided with a rim *a* and with projections *j*, in combination with the turntable D, or its equivalent, to operate substantially as and for the purpose specified. And we do also claim, the arrangement of the knife E^*, the cutting edge of which makes an obtuse angle with the rack to which it is attached, and operates in combination with the slots *p* and *o*, substantially in the manner herein specified."

No. 23,493. Ransom S. Potter, of Chicago, Ill., for an "Improvement in rail-splicing chairs."

"I do not claim, broadly, a clamp wedge, nor the form of the chairs; but what I do claim, and desire to secure by Letters Patent, is, a clamp wedge operated by the same bolts as a clamp and as a wedge acting upon each rail equally in combination with the chair guard 6, substantially as shewn and specified."

No. 23,494. Jesse Reed, of Marshfield, Mass., for an "Improved machine for pointing and splitting shoe pegs."

"What I claim as my invention, and desire to secure by Letters Patent, is, first, a traversing carriage M, in combination with a revolving table R, so arranged that after a series of cuts has been made in one direction the table may be revolved 90 degrees preparatory to making the second series of cuts. Second, I claim the device for traversing and returning the carriage, consisting of the following parts, or their substantial equivalents, in combination, viz., the screw shafts U and V, the block X, the lever Z, with its spring C^2 and tripping arrangement f^1, B^2, A^2, the whole operating in the manner substantially as herein set forth. Third, I claim the device for automatically revolving the table R, consisting of the spring *l* and the parts *m*, *n*, *o*, *p*, and *k*, or their equivalents, operating as described. Fourth, I claim the grooving and splitting irons *e* and *g* traversing the block, as set forth, in combination with the holders D^2, or their equivalents, operating in the manner substantially as herein described. Fifth, I claim feeding the block S by means of the continuous revolution of a screw operating through a spring *x*, as described, so that when the block is released the feed is instantly given to it, in the manner substantially as herein set forth."

No. 23,495. Benjn. F. Rice, of Clinton, Mass., for an "Improvement in air engines."

"What I claim as new, and desire to secure by Letters Patent, is, the giving to the plungers or pistons of air engines a rotary motion, for the reasons specified. I also claim, giving to the plungers or pistons of air engines a rotary motion, in combination with the means employed for keeping the entire surfaces of the plungers or pistons continually lubricated, in the manner and form and for the purposes substantially as set forth."

No. 23,496. Andrew Ralston, of West Middletown, Pa., for an "Improvement in bands for binding grain, hemp, &c."

"Having thus described the nature, construction, and operation of my improvement, what I claim as of my invention, and desire to secure by Letters Patent of the United States, is, furnishing cords or straps used for binding grain, hemp, &c., &c., with a T-shaped clasp, as herein described, and for the purpose set forth."

No. 23,497. Silas G. Randall, of Middlebury, Vt., for an "Improvement for keeping air springs supplied with air."

"Having thus fully described the nature and object of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, so combining an air spring and an air

pump, or its equivalent, with a car or carriage, or other moving conveyance, as that the motion of said car, carriage, or other conveyance, shall, through such air supplyer, keep the air springs supplied with air, substantially as herein set forth."

No. 23,498. J. Clinton Ransier, of Lyons, N.Y., for an "Improvement in car couplings."

"Having thus fully described the construction and operation of my improved car coupling and inventions of the same, I lay no claim to bars H and H, bumper plates I, link G (Fig. 1), sill L, nor bolt J as my invention, as the same is now in general use. But what I claim as my invention, and desire to secure by Letters Patent, is, first, is clevis B, in connection with fulcrum E, key bolt D, for the purpose of a connecting link between railroad cars, so constructed and arranged, that said clevis or link will encircle and revolve up and down, and sway to the right and left over the outside of bumper plate (or plates) I, and the body of the bumper, and otherwise arranged and constructed for the purpose as substantially set forth and described in this specification. Second, I also claim revolving arms A, A, or their equivalents, in combination with dog O (as seen in right hand plan (Fig. 1), for the purpose of aiding in casting off the opposite clevis from hook C, in the process of disconnecting or uncoupling; also, for a rest for and in aiding in throwing clevis B (on the same bumper) forward from its upright position, in the process of affecting a coupling, as substantially set forth and described in this specification. Third, I also claim hook C, or its mechanical equivalent, placed on top of the upper bar H, and in rear of the top shoulder of fulcrum E, for the purpose of receiving the curved point of the opposite clevis B, in the process of coupling. I do not intend to confine myself to rod or shaft N, for the purpose of turning dog *o*, against the shoulder of arms A, A, for the purpose of raising the points of said arms in the process, casting off the opposite clevis in the process of uncoupling, as herein described, as other well known modes of screw or lever power can be applied with equal effect."

No. 23,499. Jesse Reed, of Marshfield, Mass., for an "Improved capstan."

"Claim:—I do not claim a single stationary incline or screw thread, for the purpose of fleeting a cable or rope upon a windlass or capstan. But what I do claim as my invention, and desire to secure by Letters Patent, is, the adjustable detached fleeter, operating as set forth. 2nd, I claim the employment of the double inclines *t*, whereby I am enabled to fleet the cable, whatever may be the direction in which the capstan is turned."

No. 23,500. Thos. N. Rooker, of New York, N.Y., for an "Improvement in printers' type cases."

"I claim the herein described method of arranging the compartments of a type case, that is to say, placing at the side of the 'lower case' character, its corresponding 'upper case' character, for the purposes and in the manner substantially as set forth."

No. 23,501. James Sangster and Amos W. Sangster, of Buffalo, N. Y., for an "Improvement in pegging machines."

"What we claim as our invention, and desire to secure by Letters Patent, is, first, the combination of the wheels P and O, the ratchet K, and the peg wood L, with the awl, peg driver, the knife F, and the shoulder J^2, when the same are arranged substantially in the manner herein specified. 2nd, placing the adjustable wheel R in arrangement with those parts which from the subject of the first claim, for the purpose of regulating the distance at which the pegs are to be driven from the edge of the leather or material pegged, substantially as herein set forth."

No. 23,502. Henry Sauerbier, of Newark, N. J., for an "Improved machine for making hoes."

"I do not claim any of the parts of the machine separately; but what I claim, and desire to secure, is, the cam lever A and the dies *c* and *d*, in combination with the lever B, the loose pin 7, and the clamp *e*, constructed and arranged, substantially in the manner and for the purpose herein above specified."

No. 23,503. L. K. Selden, of Haddam, Conn., for an "Improvement in umbrellas."

"What I claim as new, and desire to secure by Letters Patent as a new and improved article of manufacture, is, an umbrella or parasol having its frame constructed of a rim A and stretcher C, formed of arms or bars *a*, a^1, pivoted and connected together, as shown, in connection with the tube B and rod F, arranged as described."

No. 23,504. Wm. W. Shaw, of Troy, N. Y., for a "Rubber-head for lead pencils."

"Having described my invention, I claim as an improved article of manufacture, a head A for lead pencils made of rubber, in the manner herein shown and described."

No. 23,505. Thos. E. Shull, of Millersburgh, Pa., for an "Improvement in breech-loading fire-arm."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the combination with a fire-arm constructed with a stationary and closed breech or breech piece, and with an opening in the barrel to receive the cartridge of a hinged flap, door, or lid, which opens and closes the cartridge-charging aperture, substantially as and for the purposes set forth. 2nd, the combination with a hinged flap, door, or lid, of a sliding collar or sleeve, so that the operation of sliding the collar back will open the flap door or lid, and the operation of moving it forward will close and lock the same, substantially as and for the purposes set forth."

No. 23,506. Henry T. Sisson, of Providence, R. I., for a "Portfolio."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the combination of the barrel A, shaft B, hooks or teeth *b*, *b*, a spring or springs, *d*, *d*, spring latch *f*, and stop *g*, the whole constructed and arranged substantially as and for the purposes herein set forth."

No. 23,507. Alexr. McDonald Sprague, of Mobile, Ala., for an "Improvement in side wheel steamers."

"Having thus described my improvement in the construction of steam boats, what I claim therein as new, and desire to secure by Letters Patent, is, raising the after guards next adjacent to the wheel above the deck and hull of the boat, and also above the forward guard, substantially as described, so as to leave a clear waterway beneath the after guard, and immediately abaft of the wheel for the purpose as set forth."

No. 23,508. W. S. Stetson, of Baltimore, Md., for an "Improvement in harvesters."

"Claim:—I claim giving to the frame H a back and forth motion upon the axle tree B, said frame supporting at its rear end the axis of the driving pinion K, all in the manner and for the purposes herein set forth. I claim the vibrating frame R, connected with the rear end of frame H, and having its center of motion coincident with the axis of pinion K, as set forth. I claim the combination of the shoe X with the vibrating frame R, by means of the hinge bolt *y*, arranged and attached to the rear of said frame, in the manner set forth, by which combination the knife bar is made self-adjustable. I claim connecting the adjusting lever *z*, with the platform C and sliding frame H, as set forth. I claim "horsing" the knife bar over the platform, or in a position at right angles, or nearly so, to the axle B, by the two movements substantially as described."

No. 23,509. H. H. Stimpson, of Boston, Mass., for an "Improvement in cooking ranges."

"Having thus stated my improvements, I shall state my claim as follows:—What I claim as my invention, and desire to have secured to me by Letters Patent, is, the combination of the flanges or projections attached to the side plates of the boiler chambers, with the grate constructed so as to admit air to the fuel from below, and hung so as to allow of its free play, and made narrower than the fire chamber as described, whereby the contraction and expansion of the grate is prevented from injuriously affecting the remaining portions of the range or stove. Second, the use of the sliding covers *q*, *q*, in combination with the top plate, arranged to operate substantially as described."

No. 23,510. Stephen Strung, of Birmingham, Pa., for an "Improvement in manufacture of resin soap."

"What I claim as of my invention, and desire to secure by Letters Patent of the United States, is, the admixture, compounding, and preparing of the ingredients named in the proportions herein specified, and for the purpose set forth."

No. 23,511. Saml. Teague, of Newton, Ohio, for an "Improvement in machine for dressing mill stones."

"I do not claim the sliding frame levers and picks separately considered; but what I claim as my invention, and

desire to secure by Letters Patent, is, the adjustable braces *f*, when combined with the picks *a*, sliding frame A, and levers *l*, constructed and operated in the manner set forth for the purpose specified."

No. 23,512. ALFRED THOMAS, of Howard Iron Works, Pa., for an "Improvement in the manufacture of iron."

"What I claim as my invention, and desire to secure by Letters Patent, is the mixing of charcoal and anthracite metal and forge cinder, in the proportions substantially as herein stated, and working them together in the puddling or boiling process, or in a refinery fire, for the purpose of making a superior quality of iron, as herein stated."

No. 23,513. PELATIAH THOMPSON, of Springfield, Ohio, for an "Improved bedstead."

"Having fully explained the construction and operation of my improved spring bedstead bottom, what I claim therein as new, and desire to secure by Letters Patent, is, the combination of the double series of helical springs *d*, with the removable holder strips E, and series of cross slats *c*, with their steading pins *e*, the whole arranged to operate, as and for the purposes specified. In combination with the series of slats *c*, operating with a series of springs, as specified, and the removable holder strip E, I claim the series of guiding blocks *b*, when two or more are extended down, to prevent the removable strips E, from jumping as herein-before described."

No. 23,514. JONATHAN TROOP, of Sinclairville, N. Y., for an "Improved machine for jointing staves."

"I do not claim, separately, a rotating cutter wheel C, for such device has been previously used for similar or analogous purposes; but having thus described my invention, what I do claim as new, and desire to secure by Letters Patent, is, 1st, the vibrating frame F, provided with the clamp bars *h*, *h*, and stave adjusting bars *m*, and used in connection with the gauge screws a^1, arranged substantially as shown, for the purpose of properly presenting the staves to the cutters. 2nd, the combination of the above-named parts with the rotating cutter wheel C, arranged for joint operation, substantially as and for the purpose set forth."

No. 23,515. WM. C. TURNER, of St. Louis, Mo., for an "Improved syrup charging apparatus."

"What I claim as my invention, and wish to secure by Letters Patent of the United States, is, the construction of a machine, so arranged, that a uniform and definite measure of any liquid may be supplied to bottles or any other vessel, before, during, or after filling the same with soda, mineral, or water surcharged with carbonic acid gas, or other gas, or any other liquid, by means of pump air vessel, safety valve, charging valve, or charger, constructed and applied substantially as described in above specifications.

No. 23,516. ALBERT WARREN, of Jefferson, Ohio, for an "Improvement in machines for cutting soles for boots and shoes."

"What I claim as my invention, and desire to secure by Letters Patent, is, a series of pieces covering the bottom of the box-like C, C, separated by a straight line thro' the centre, together with the series of pieces like B, C, with the knife I, held securely between the crooked edges, and arranged alternately, with a toe to the right and left, and covered by the forms D, D, D, &c. in the manner described, when these devices are combined with the slide P, arranged and operating as herein-before specified."

No. 23,517. NATHL. WATERMAN, of Boston, Mass., for an "Improved egg-pan."

"What I claim, is the new or improved manufacture of baking pan, or arrangement of cups, and a handle at each end of the series, all connected together and cast or founded in one solid piece of metal, and with heat passages between the cups, substantially as herein before stated."

No. 23,518. CLINTON G. WELLS, of Galveston, Texas, for an "Improvement in fastening iron bands on cotton bales."

"What I claim as my invention, is, the application of the washer C, and the mode of fastening the end of the band with it, as mentioned above, and thus expediting the operation of baling and compressing bales of cotton, or merchandize, and retaining them securely in their compressed form."

No. 23,519. GEO. D. WEST, of Brandywine Hundred, Del., assignor to P. W. Neefus, of New York, N.Y., for an "Improvement in the valve motion of oscillating steam engines."

"Having thus fully described my invention, what I claim therein, and desire to secure by Letters Patent, is, the combination of arch *d*, and lever *c*, for the purpose and in the manner substantially as set forth."

No. 23,520. LE ROY S. WHITE, of Waterbury, Conn., for an "Improved burnishing machine."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, so applying two burnishers in a burnishing machine that they shall operate simultaneously at opposite points at opposite sides of the article or piece of work to be burnished, and burnish both sides at once, and that during such operation each shall serve to support the article or piece of work against the pressure of the other, substantially as herein set forth. 2nd, the combination of the reciprocating and partially-rotating shaft C and yoke D, or their equivalent, and the tool stock E, by means of the rods S, S, the arm *k*, rod *l*, and arm *m*, the whole operating substantially as and for the purposes herein specified. 3rd, the sliding bars *n*, n^1, *p*, applied in combination with the tool stock carriage to operate substantially as and for the purposes herein specified."

No. 23,521. D. A. WOODBURY, of Rochester, N. Y., for an "Improved variable cut-off for steam engines."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination of the vibrating yoke D attached to the valve stem, and the rotary cam or wiper wheel E, having arc-formed tappets or wipers *h*, *h*, the whole being applied and operating substantially as herein set forth."

No. 23,522. WM. H. and GEO. YATES, of Chittenango, N. Y., for an "Improved method of sawing shingles from the bolt."

"Having thus described our invention, what we claim as new, and desire to secure by Letters Patent, is, the adjustable bar H and the carriage E, provided with the adjustable dog *e*, connected with the hand lever F, the whole being arranged for joint operation as and for the purpose set forth."

No. 23,523. ANTHONY ZINK, of Lancaster, O., for an "Improvement in trace fastening."

"What I claim as my invention, and desire to secure by Letters Patent, is, a new article of manufacture, to wit, a trace fastening, consisting of the metal ferrule B, provided with a circular groove E running in path of a vertical circle, and two slots *a*, *a*, running at right angles to the groove, and a metal cap F, having two lugs *c*, *d*, on its inner circumference, with a space existing between them and its head, and a plate *b* extending from the circumference of the head some distance into the side of the trace, all as herein set forth."

No. 23,524. JAMES BLACK, of Philadelphia, Pa., assignor to Geo. M. and Wm. S. Worl, and said Geo. M. Worl assignor to Wm. S. Worl aforesaid, for an "Improved steam engine."

"I believe I have described and represented my invention, so as to enable any person skilled in the art to make and use it. I will now state what I desire to secure by Letters Patent, to wit, the arrangement of the cylinder A, hoops F, F, and discs or wheels G, G, when said discs are set eccentrically to an axle which pierces the cylinder transversely, and one end of the piston rod of the cylinder is connected with and operates the hoops, substantially in the manner herein specified."

No. 23,525. LEVI W. BUXTON, of Nashua, N. H., assignor to Josephus Baldwin and L. Kimball, of same place, for an "Improved bedstead fastening."

"Having described my improved device for fastening bedsteads, what I claim as my invention, and desire to secure by Letters Patent, is, the combination of the shoulders *j*, *j*, on the locking or rail piece *e*, with the notched or serrated circular edges *l*, *l*, and conical pin *h*, substantially as and for the purposes set forth. I also claim the combination of the hook e^1 with the tube or friction roller *f*, and stationary pin *g*, substantially as and for the purposes herein described."

No. 23,526. JACOB EDSON, of Boston, Mass., assignor to himself and H. F. Gardner, of same place, for an "Improved carpet sweeper."

"Having thus described my improvements, I shall state my claim as follows:—What I claim as my invention, and

desire to secure by Letters Patent, is, first, holding the rubber tire upon the driving wheel by means of the groove *c*, formed in the said wheel, as described, whereby I am enabled to use a cheaper form of soft or elastic tire than would otherwise be possible, as set forth. Second, the use of the flap or float *h*, arranged and operating as described, for preventing the escape of dust and the wear of the brooms, as set forth. Third, arranging two sets of brooms on their common shaft, in such a manner that they shall cross each other diagonally as described, and for the purposes set forth. Fourth, holding the brooms upon their shaft, by sectional adjustable clamps that reach by or overlap each other, whereby, while every portion of the brooms is securely held, they can be adjusted at pleasure, or new ones inserted. Fifth, hanging the broom shaft in such a manner, by means of the hinge or pivot joint and yielding spring, that the brooms will adapt themselves to any and all inequalities of the surface to be swept, and at the same time perform their work thoroughly."

No. 23,527. Wm. C. Grimes, of Philadelphia, Pa., assignor to himself and R. B. Fitts, of same place, for an "Improved washing machine."

"Claim.—The combined arrangement of the two parallel rock shafts (*e* and *i*) having the wash boards (B and C) attached thereto respectively, and connected together by the flexible apron (D), as described, in combination with the double curved bottom (*m* and *m*[1]) of the box (A), the same operating together in the manner and for the purpose set forth and described."

No. 23,528. Wm. C. Grimes, of Philadelphia, Pa., assignor to himself and R. B. Fitts, of same place, for an "Improved portable steam generator."

"I am aware that a steam generator has been made portable, by making the boiler separable from and adjustable upon a furnace or common stove, and that a feed valve has been operated by a float by the water of the boiler, for the purpose of regulating the air draught through the flues, and also that on annular chamber has been arranged between the casing of the boiler and the fire cylinder, so as to cause the draught air to pass through the said annular chamber before it enters the fire cylinder; therefore I do not claim broadly the making 'a portable steam generator' in several distinct or separable parts, nor the use of a float valve operated by the water of the boiler, so as to regulate the draught of air through the flues. Neither do I claim making an annular chamber around the fire cylinder, so as to operate as part of a flue between the said fire cylinder and the escape flues. But having fully described my improved portable generator, what I claim as new therein, and desire to secure by Letters Patent is,—1st, making the three distinctively specified parts, consisting of the furnace (A), the boiler (B) with its external cylinder (K) and float (V) attached, as described, and the reservoir (H), so as to be readily separable from each other, and readjustable together at any moment, as specified, in the manner and for the purpose set forth and described. 2nd, making the boiler (B) self-supplying (with water) by means of the float (*v*) and its containing cylinder (*k*), arranged in connection with the boiler, as described, the same operating together in combination with the reservoir H, substantially as set forth and described. 3rd, I also claim making the furnace (A) with an annular chamber between the fire cylinder (D), the outside shell (A) and the rings (C and F), when the same are constructed, arranged, and combined together, and with the other parts of the boiler, so as to cause the air which supports the combustion of the fuel in the said cylinder (D) to pass down through the said annular chamber (F) before it enters the said fire cylinder (D), as and for the purpose set forth and described."

No. 23,529. G. A. Silliendahl, of New York, N. Y., assignor to Martha J. Costan, of Washington, D. C., for "Improved pyrotechnic night signals."

"Having thus fully described my improvements on B. Franklin Costan's system of pyrotechnic night signals, and also in the means and appliances for producing the same, what I claim therein as my invention, and desire to secure by Letters Patent, is,—First, enclosing the necessary charges of pyrotechnic composition for producing signal fires within cases, whose sides are composed of thin paper and tin foil, substantially as herein set forth. 2nd, separating the respective layers of composition in the abovementioned cases, by means of thin partitions or disks, substantially as herein set forth. 3rd, charging the aforesaid cases with such proportions of combustible and noncombustible materials as will allow the cases to be all made of the same length, and also enable a socket to be formed at the lower end of each of said cases, substantially as herein set forth. 4th, so proportioning the paper and tin foil portions of the aforesaid cases, that a sufficient portion of the tin foil will project above the stiff sides of each of said cases, to form, when bent inwards, a metallic covering for the top of the same, substantially as herein set forth."

No. 23,530. James H. Mosher, of New York, N. Y., assignor to himself and Anson T. Colt, of same place, for an "Improved steam pressure gauge."

"I do not claim the use of a valve to close the top of the index leg of the gauge, or a valve in the back leg. What I claim as my invention, and desire to secure by Letters Patent, is, so applying the valves E, *c*, in combination with each other, that the gauge may be charged while both legs are open to the atmosphere, as described, and that the air above the mercury in the index tube may be caused to have an ordinary atmospheric pressure, while the mercury is at zero, and there is only the pressure of the atmosphere on the back leg."

No. 23,531. Wm. McNiece, of Conshohocken, Pa., assignor to Walter Cresson, of same place, for an "Improved gauging device attached to hand saws."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent as a new and useful article of manufacture, is, the back saw A, with the folding or adjustable blade B, fitted in its rib or back bar *c*, substantially as described."

No. 23,532. Julius A. Pickering, of Milford, Mass., assignor to Wm. Walker, of same place, for an "Improvement in mode of attaching straps to boot legs."

"I am aware that it is not new to cut the leather or lining of the leg to insert the strap; and this I do not claim. But what I claim as new, and desire to secure by Letters Patent, is, supporting or retaining the loop or upper part of the strap, in the manner and for the purposes substantially as above set forth and described."

No. 23,533. Geo. W. Randall, of Boston, Mass., assignor to himself and Reuben J. Todd, of same place, for an "Improvement in faucets."

"What I claim is, the combination of the auxiliary or inner tap with the outer tap and the conduit case, provided with two or more conduits, the whole being constructed and made to operate together, substantially as specified. I also claim the arrangement of the air passage *p*, so as to discharge, with reference to the discharging end of the inner tap, substantially as described."

No. 23,534. D. J. Wilcoxson, of Milan, Ohio, assignor to himself and Isaac Collins, of Huron, Ohio, for an "Improved ships' steering apparatus."

"Having thus described my improvements in steering apparatus for vessels, what I claim therein as new, and desire to secure by Letters Patent, is, first, the combination of the double yoke with the traversing nuts, arranged substantially as described, for the purposes set forth. Second, arranging the screws, by which the rudder is turned, on either side and below the top of the rudder post, so that in case of accident the tiller may be used to steer the vessel, without its being interfered with by the steering mechanism."

No. 23,535. Cutting B. Wiley, of Adrian, Mich., assignor to himself and Alexr. Stebbins, of Lenawee Co., Mich., for an "Improved hub borer."

"The particular improvement which constitutes my said invention, and which I claim as having been originally and first invented by me, is the combination of the sliding cutter heads G, with the adjustable ways or slides E[1], with the nut K, and screw C, the whole being arranged as described, for the purpose set forth."

No. 23,536. Martha J. Costan, of Washington City, D. C., administratrix of the estate of B. Franklin Costan, deceased, for an "Improvement in pyrotechnic night signals."

"That which it is desired to secure by Letters Patent as the invention of the late B. Franklin Costan is, the signalizing of any numeral combination of numerals, or any character or combination of characters, by a methodical exhibition of different pyrotechnic fires, substantially as herein set forth."

Re-issues.

N. Aubin, of Albany, N. Y., for an "Improvement in making illuminating gas."—Patented 8th January, 1856.—Re-issued 5th April, 1859.

"I claim, as of my own invention, the herein described process of making gas for heating or illumination, which consists, first, in mixing materials substantially such as are herein specified. Second, in introducing them into a chamber substantially such as is described, located when the process is going on within retort. Third, in causing the products of distillation of the mixture to pass out of such interior chamber, and then be subjected to a higher degree of heat by passing in contact with the heated surface of the retort itself, substantially as specified, not intending to claim any one step of the process separately, but only the process substantially as herein set forth as a whole."

N. Aubin, of Albany, N. Y., for an "Improvement in gas generators."—Patented 8th January, 1856.—Re-issued 5th April, 1859.

"I do claim, as of my invention, the combination with a gas retort of a removable interior chamber open at bottom, and having such relative shape with regard to the retort, and so located therein, substantially as is specified, and for the purposes herein-before set forth, and this I claim irrespective of the location of the opening through which said removable chamber can be introduced or withdrawn, and either with or without an apparatus for introducing steam into the retort."

N. Aubin, of Albany, N. Y., for an "Improvement in tight joints for gas retorts."—Patented 8th January, 1856.—Re-issued 5th April, 1859.

"I claim of my own invention, and desire to secure by Letters Patent, a joint between a gas retort and its cover, made by fusible metal contained in a groove, into which enters a rim. The joint being substantially such and for the purposes herein-before set forth."

Franklin Peale, of Philadelphia, Pa., for an "Improved tubular elastic valve."—Patented 26th June, 1856.—Re-issued 5th April, 1859.

"Having thus described my improved valves, what I claim as my invention, and desire to secure by Letters Patent, is,—1st, the flexible valves herein described, for the purposes specified. 2nd, the method herein described of adapting the said flexible valves to pump or other tubes of any kind, whether rigid or elastic, and inserting them therein, in the manner set forth and shewn, or in any equivalent mode."

Hiram Tucker, of Cambridgeport, Mass., for an "Improvement in spring bed bottoms."—Improvement added 9th June, 1857.—Patented 3rd July, 1855.—Re-issued 5th April, 1859.

"Claim.—What I claim as my invention, and desire to secure by Letters Patent, is, the within-described spring bed bottom, consisting of the combination—the frame (*a*), slats (*b*), and radial springs (*c*), essentially as described."

Designs.

James Paterson, of Elizabeth, N. J., for a "Design for floor cloth."

"What is claimed by the subscriber, and desired to be secured by Letters Patent of the United States, is, the above described arrangement of ornamental figures forming a design, as shown by the accompanying drawing."

Saml. H. Ransom, of Albany, N. Y., for a "Design for the plates of a stove."

"What I claim as my production, and desire to secure by Letters Patent, is, the combination and arrangement of ornamental figures and forms, represented in the accompanying drawings, forming together the ornamental design for the plates of a stove."

Saml. H. Ransom, of Albany, N. Y., for a "Design for the plates of a cook's stove."

"What I claim as my production, and desire to secure by Letters Patent, is, the combination and arrangement of ornamental figures and forms, represented in the accompanying drawings, forming together the ornamental design for the plates of a cooking stove."

Additional Improvement.

Charles Cox James, of Dayton, Ohio, for an "Improvement in seeding machines."—Patented 15th December, 1857.—Additional Improvement, dated 5th April, 1859.

"What I claim as new, and desire to secure by Letters Patent, is, the arrangement of the stationary roof-like screen N, lateral sloping projections e^1, septum O, slides G^1 and G , slotted bars *f*, and shoes I, I, with slide E and trough F, the above part being constructed substantially as described, and used in combination with the features covered by my Patent of Dec. 15th, 1857."

List of Specifications published during the week ending 21st April, 1859.

No.	Price.	Subject-Matter.
2091	7*d.*	Swimming belts and life preservers.
2094	3*d.*	Life boats, &c.
2095	5*d.*	Manufacture of cartridges.
2097	3*d.*	Apparatus for indicating strains on engine ropes or chains.
2098	7*d.*	Burglar detector.
2099	10*d.*	Apparatus for dressing and finishing fabrics.
2100	3*d.*	Apparatus for separating the liquid from the solid portions of fecal matters.
2102	2*s.* 6*d.*	Omnibuses, cabs, railway carriages, waggons, &c.
2103	5*d.*	Copying letters, invoices, and other writings.
2104	3*d.*	Ornamenting boas, victorines, and muffs.
2105	6*d.*	Application of gutta percha for clogs, goloshes, shoes and boots, &c.
2106	8*d.*	Application of centrifugal force in the manufacture of fecula, &c.
2107	10*d.*	Manufacture of wrought-iron beams and girders.
2108	10*d.*	Sporting and other guns.
2109	9*d.*	Looms for weaving.
2110	5*d.*	Apparatus for submerging electric telegraph cables.
2111	6*d.*	Smoke-consuming furnaces or chauffers.
2112	3*d.*	Cartridge opener and ramrod fastener.
2113	6*d.*	Cartridge boxes.
2114	6*d.*	Machine for cleansing chaff, &c.
2116	8*d.*	Manufacture of iron.
2117	3*d.*	Preparing bankers' cheques.
2118	3*d.*	Torsion spring for doors, &c.
2119	6*d.*	Apparatus to be applied to gas burners.
2120	3*d.*	Tubes, pipes, or mains for liquids or gas, &c
2121	3*d.*	Treating pyrites.
2122	6*d.*	Machine for sweeping carpets and floors.
2127	8*d.*	Calico printing roller.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

A FREE LIBRARY and READING ROOM, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

NOTE.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Limerick.
Liverpool (*Free Public Library, Duke Street*).

Wakefield (*Mechanics' Institution, Barston Square*).
Warrington (*The Museum and Library*).
Waterford (*Town Hall, The Mall*).
Wednesbury (*Board of Health Offices*).
Wexford (*Mechanics' Institute, Crescent Quay*).
Wigan.
Wolverhampton (*School of Practical Art, Darlington Street*).
Wolverton (*Railway Station*).
Yarmouth, Norfolk (*Public Library, South Quay*).
York (*Lower Council Chamber, Guildhall*).

The Commissioners' publications have also been presented to the following Public Offices, Seats of Learning, British Colonies, and Foreign States:—

Public Offices.

Admiralty, Department of the Surveyor of the Navy.
——— Steam Branch.
——— Deptford Dockyard.
——— Woolwich ditto.
——— Chatham ditto.
——— Sheerness ditto.
——— Portsmouth ditto.
——— Devonport ditto.
——— Pembroke ditto.
Artillery Institute, Woolwich.
Board of Trade, Whitehall.
Ordnance Office, Pall Mall.
——— Small Arms Factory, Enfield.
War Office, Pall Mall.
Government School of Mines, &c., Jermyn St., Piccadilly.
Dublin Castle, Dublin.
Rolls Office, Chancery (Four Courts), Dublin.
Office of Chancery, Edinburgh.
East India House, Military Stores, Leadenhall Street.
Incorporated Law Society, Chancery Lane, London.

Seats of Learning.

Cambridge University.
Trinity College, Dublin.
Queen's College, Galway.
University College, London.

British Colonies.

Malta.
Cape of Good Hope.
Mauritius.
India—Bengal.
North-West Provinces.
Madras.
Bombay.
Ceylon.
Victoria—Patent Office, Melbourne.
Parliamentary Library, Melbourne.
New South Wales.
South Australia.
Tasmania.
New Zealand.
Newfoundland.
Canada—Quebec.
Toronto.
New Brunswick.
Prince Edward Island.
Antigua.
Barbados.
Jamaica.
Trinidad.
British Guiana.

Foreign States.

Austria—Handels Ministerium, Vienna.
Bavaria—Konigliche Bibliothek, Munich.
Belgium—Ministère de l'Interieur, Brussels.
France—Bibliothèque Impériale, Conservatoire des Arts et Métiers, Hôtel de Ville. } Paris.
Gotha—Ducal Friedenstein Collection.
Hanover—Ministerium des Innern, Hanover.
Netherlands—Ministère de l'Intérieur, The Hague.
Prussia—Handels Ministerium, Berlin.
Russia—Bibliothèque Impériale, St. Petersburg.
Sardinia—Ufficio delle Privative, Turin
Saxony—Polytechnische Schule, Dresden.
Sweden—Stockholm.
United States—The Patent Office, Washington.
The Astor Library, New York.
The State Library, Albany.
The Franklin Institute, Philadelphia.
The Free Library, Boston.
The Philadelphia Library Company.
Wurtemberg—Bibliothek des Musterlagers, Stuttgart.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period—*Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE REFERENCE INDEX of PATENTS pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2*d.* each, or 3*d.* free by post:—

Austria, No. 291.
Bavaria, No. 262.
Belgium, Nos. 292 and 348.
Baden, and Petty States of Germany, No. 325.
Canada, No. 279.
Cuba, No. 498.
Dutch West Indies, No. 322.
France, No. 228.
Greece, No. 325.
Germany, No. 435.
Hanover, No. 231.
India, Nos. 240, 348, and 552.
Mexico, No. 496.
Netherlands, No. 289.
New South Wales, No. 386.
Prussia, Nos. 313 and 329.
Parma, Piacenza, and Guastalla, No. 321.
Portugal, No. 325.
Poland, No. 335.
Roman States, No. 319.
Russia, Nos. 334 and 508.
Sardinia, Nos. 233 and 235.
Saxony, No. 236.
Sicilies (the Two), No. 316.
Spain, No. 323.
Sweden, Nos. 327 and 354.
Victoria, Nos. 186 and 359.
Wurtemberg, No. 314.

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price 21*s.*

Free Patent Museum and Library, South Kensington.

NUMBERS of VISITORS for the Week ending 23rd April, 1859.

Day of Month.	Day of Week.	Morning.	Evening.	Total.
April 18	Monday -	173	552	725—Fine.
„ 19	Tuesday -	212	408	620— „
„ 20	Wednesday	176	83	259— „
„ 21	Thursday*	154	—	154— „
„ 22	Good Friday	—	—	Not opened.
„ 23	Saturday -	419	—	419—Fine.
	Total -	1134	1043	2177

* The Museum closes at 5 o'clock.

Total number of visitors since the period of free daily admission (12th May, 1858) to 23rd April, 1859, —88,123.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS. —This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of *2l. 3s. 11½d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of *9l. 18s. 6½d.*

The Indexes, separately, price *3s.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price *6d.*
2. SEWING AND EMBROIDERING, price *6d.*
3. MANURE, price *6d.*
4. PRESERVATION OF FOOD, price *6d.*
5. MARINE PROPULSION, price *4s.*
6. MANUFACTURE OF IRON AND STEEL, price *5s.*
7. AIDS TO LOCOMOTION, price *1s.*
8. STEAM CULTURE, price *2s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price *1s. 6d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price *6s. 6d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price *3s.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.
BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

865. To DAVID MOSELEY, of the Chapel Field Works, Ardwick, in the city of Manchester, Manufacturer of India Rubber and Gutta Percha, for the invention of "Improvements in the manufacture of cards for carding cotton and other fibrous materials."

867. To ROBERT POSTLETHWAITE, of Liverpool, in the county of Lancaster, Saddler, for the invention of "An improvement in harness pads for horses."

869. To GEORGE CHAMPNEY, of Halsham, in the East Riding of the county of York, Farmer, for the invention of "Improvements in reaping machines."

871. And to JOHN GARRETT, of Arundel Place, Haymarket, in the county of Middlesex, Tinman, for the invention of "Improvements in the construction of goblets, jugs, and other like articles."

On their several petitions, recorded in the Office of the Commissioners on the 7th day of April, 1859.

---

873. To JOHN TALBOT PITMAN, of the American and European Patent Offices, No. 67, Gracechurch Street, London, for the invention of "Improvement in the construction and use of fireworks for signals." — A communication from abroad by Martha J. Coston, of the city of Washington, D. C., in the United States of America.

875. To JOHN BINDLEY, of Birmingham, in the county of Warwick, Engineer, and JOSEPH LESTER HINKS, of Birmingham aforesaid, Manufacturer, for the invention of "Improvements in rotatory steam engines and pumps, a portion of which improvements may also be applied to the bearings of shafts or axles, and other rotating bodies."

877. To MATTHEW WHEELDON, of No. 174, Liverpool Road, Burslem, in the county of Stafford, Glass Cutter, for the invention of "An improvement in looking-glasses and mirrors."

879. To MARC ANTONIE FRANÇOIS MENNONS, of the British and Foreign Patent Offices, 39, Rue de l'Echiquier, Paris, in the empire of France, for the invention of "Improvements in the treatment of mineral phosphates of lime."—A communication from B. de Siebenthal, a person residing in Paris.

881. To WILLIAM HOOPER, of Mitcham, in the county of Surrey, India Rubber Manufacturer, for the invention of "Improvments in insulating and protecting telegraphic conductors."

883. To WILLIAM HENDERSON, of Alderley Edge, in the county of Chester, Chemist, for the invention of "Improvements in treating certain ores and in obtaining products therefrom."

885. And to ELIAS ROBISON HANDCOCK, of No. 23, Norfolk Street, Strand, in the county of Middlesex, Esquire, for the invention of "Improvements in steam and other motive power engines."

On their several petitions, recorded in the Office of the Commissioners on the 8th day of April, 1859.

---

887. To EDWARD JOSEPH HUGHES, of the city of Manchester, in the county of Lancaster, Patent Agent, for the invention of "Improvements in the manufacture of woven fabrics."—A communication from abroad by Edward Davies, of Boras, in the kingdom of Sweden.

889. To JAMES HADDEN YOUNG, of No. 66, Great College Street, Camden Town, London, county of Middlesex, for the invention of "Improvements in setting-up (composing) and distributing types."

891. To JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow,

North Britain, Gentleman, for the invention of "Improvements in the manufacture or production of the ferrocyanide and cyanide of potassium."—A communication from abroad by Jean Victor Lucas, of Paris, in the French empire, Chemist.

893. To JOHN MARTIN, of No. 4, Buckingham Street, Islington, in the county of Middlesex, Manufacturer, for the invention of "Improvements in the materials used in the manufacture of bonnet fronts and ruches."

895. To WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in steam engines and boilers."—A communication from abroad by Ernest Georges Xavier Boileau, of Paris, in the empire of France.

897. And to ROBERT BROWN, of No. 5, St. Paul's Churchyard, in the city of London, for the invention of "Improvements in stoves and apparatus for warming and ventilating apartments and buildings."

On their several petitions, recorded in the Office of the Commissioners on the 9th day of April, 1859.

---

899. To RUDOLPH WAPPENSTEIN, of the city of Manchester, in the county of Lancaster, Medallion Engraver, for the invention of "Improvements in cop tubes, and in machinery or apparatus for placing the same on the spindles used for spinning and doubling fibrous materials."

901. To JAMES ANDERSON, of Liverpool, Lancashire, for the invention of "Improvements in the construction of the furnaces of bakers ovens, for the purpose of consuming smoke, which improvements are also applicable to the consumption of smoke in other furnaces."

903. To LEOPOLD WIMMER, of Vienna, in the empire of Austria, Master Baker, for the invention of "An improved preparation for killing beetles."

905. To WILLIAM ROWAN, of the firm of John Rowan and Sons, of Belfast, in the county of Antrim, Engineers, for the invention of "Improvements in spinning flax, hemp, and other fibrous materials."

907. To WILLIAM SOUTHERN CLARK, of Aberdare, in the county of Glamorgan, Mining Engineer, for the invention of "Improved means of loading ships or vessels with coal, and of separating or removing small coal therefrom."

909. And to JOHN MARLAND, of Southport, in the county of Lancaster, for the invention of "An improvement in the manufacture of cop tubes."

On their several petitions, recorded in the Office of the Commissioners on the 11th day of April, 1859.

---

913. To GEORGE JOSEPH JOHNSTON, of Ashley, in the county of Cambridge, Machinist, for the invention of "Improvements in drills, for drilling of corn, seeds, and manure."

915. To WILLIAM EDWARD NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in the manufacture of iron."—A communication from abroad by William Kelly, of Pittsburgh, in the United States of America.

917. To CHARLES BURRELL, of Thetford, in the county of Norfolk, Engineer, for the invention of "Improvements in apparatus for screening corn and seeds."

919. To JAMES CROSSDALE, of Rotherfield Street, Lower Islington, in the county of Middlesex, Boot and Shoe Maker, for the invention of "Certain improvements in boots and shoes."

921. And to RICHARD ARCHIBALD BROOMAN, of No. 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improvements in the preparation of red dyes."—A communication from abroad by Messrs. Renard Frêres, of Lyons.

On their several petitions, recorded in the Office of the Commissioners on the 12th day of April, 1859.

---

923. To RICHARD EMERY, of No. 6, King Street, St. James's Square, in the city of Westminster and county of Middlesex, Gentleman, for the invention of "Certain improvements in carriages for common roads."

925. To HEINRICH ECKHORN, of No. 24, Cranbourne Street, Leicester Square, in the county of Middlesex, and of Bieberich, in the Duchy of Nassau, Manufacturer of Lamps, for the invention of "Improving and regulating the production of light in lamps, to which he gives the name of 'universal lamp regulator.'"

927. To JAMES APPERLY, Cloth Manufacturer, and WILLIAM CLISSOLD, Engineer, both of Dudbridge, in the county of Gloucester, for the invention of "An improved construction of fulling machine."

929. To ALFRED RICHARD JOHNSON, of Saint John's Wood, in the county of Middlesex, Gentleman, for the invention of "An instrument for damping, severing, and affixing postage and other like stamps."

931. To WILLIAM ARMAND GILBEE, of No. 4, South Street, Finsbury, London, Patent Agent, for the invention of "Improvements in the construction of the axles of railway and other carriages."—A communication from abroad by M. Tenting ainé, of Paris, France.

933. And to JOHN HUGHES, WILLIAM WILLIAMS, and GEORGE LEYSHON, of Brockmoor Works, Brierley Hill, Staffordshire, for the invention of "Improvements in the manufacture of tin and terne plates."

On their several petitions recorded in the Office of the Commissioners on the 13th day of April, 1859.

---

937. To HIRAM CRAVEN COULTHARD, Engineer, and JAMES JORDAN, Pattern Maker, both of Blackburn, in the county of Lancaster, for the invention of "Certain improvements in steam engines."

939. To EBENEZER PARTRIDGE, of Stourbridge in the county of Worcester, Engineer and Iron Founder, for the invention of "An improvement in the manufacture of 'pipe' boxes for cart and wagon axles."

941. To EDWARD DOWLING, of Little Queen Street, Holborn, in the county of Middlesex, Scale Maker, for the invention of "Improvements in parts of scales or weighing machines and in balance weights

used for those articles, which are also applicable for other purposes."

943. To ALEXANDER MCDOUGALL, of Manchester, in the county of Lancaster, Chemist, for the invention of "Improvements in coating metallic surfaces."

945. And to STEPHEN BARNWELL, of Coventry, in the county of Warwick, Manufacturer, and ALEXANDER ROLLASON, of Birmingham, in the same county, Chemist, for the invention of "Improvements in the manufacture of umbrellas, parasols, hats or hat covers, caps, capes, coats, mantles, dresses, gloves, and other similar articles."

On their several petitions, recorded in the Office of the Commissioners on the 14th day of April, 1859.

---

947. To WILLIAM ARMAND GILBEE, of No. 4, South Street, Finsbury, London, Patent Agent, for the invention of "Improvements in the construction of buffers for railway and other carriages, also applicable to other purposes where springs are employed."—A communication from abroad by M. Tenting ainé, of Paris, France.

949. To GEORGE ASHCROFT, of Cardiff, in the county of Glamorgan, Engineer, for the invention of "Improvements in working presses and other hydraulic machines."

951. And to HUGH ADAMS SILVER, of Cornhill and Bishopsgate Street Within, in the city of London, and Silver Town, in the county of Essex, India Rubber Manufacturer, for the invention of "Improvements in insulating wire for electric telegraphs."

On their several petitions, recorded in the Office of the Commissioners on the 15th day of April, 1859.

---

953. To THOMAS WHITE, of Edgbaston, near Birmingham, in the county of Warwick, Managing Clerk, for the invention of "An improvement or improvements in frames or stands for holding liquor bottles, pickle jars, cruets and castors, and for holding bottles and vessels generally."

955. To LUKE COLLIER, of Rochdale, in the county of Lancaster, Machine Maker, for Confectionary, for the invention of "An improved feeding apparatus, applicable to grain, loaf sugar, drugs, or other similar materials."

957. To WILLIAM EDWARD NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in the manufacture of alumina."—A communication from abroad by Mr. Le Chatelier, of Paris.

959. To ALFRED COURAGE, of Bagillt, in the county of Flint, Smelter, for the invention of "An improved method of obtaining the metallic particles contained in fumes or vapours from lead and other smelting work."

961. To JOHN SIDEBOTTOM, of Broadbottom, near Mottram, in the county of Chester, Cotton Spinner and Manufacturer, for the invention of "Improvements in the construction of tubes and partial tubes, and in machinery or apparatus for placing them on the spindles of machines used in spinning, doubling, winding, and warping, also improvements in machinery for making such tubes and partial tubes."

963. To NELSON KENWARD, of Sutton, in the county of Surrey, for the invention of "Improvements in machinery for obtaining motive power by fluids."

965. And to WILLIAM WALKER, of Liverpool, in the county of Lancaster, Patent Agent, for the invention of "Improvements in rocket guns."—A communication from Bridge Town, in the island of Barbadoes, by Thomas Welcome Roys, of the town of Southampton, Long Island, in the state of New York, one of the United States of America, Master Mariner, a citizen of the United States of America.

On their several petitions, recorded in the Office of the Commissioners on the 16th day of April, 1859.

Invention protected for Six Months by the Deposit of a Complete Specification.

NOTICE is hereby given, that the petition of

997. LUCIUS PHELPS PORTER, of New York, praying for Letters Patent for the invention of "Improvements in knitting machinery,"—a communication from abroad by Joseph R. Kilbourn and Edward E. Kilbourn, of Norfolk, in the county of Litchfield, and state of Connecticut,—was deposited and recorded in the Office of the Commissioners on the 20th day of April, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Notice of Application for Leave to enter a Disclaimer and Memorandum of Alteration.

In the matter of Letters Patent granted to GEORGE EDMOND DONISTHORPE and JOHN WHITEHEAD, bearing date at Westminster, the 8th day of May, 1859.

Notice is hereby given, that the assignees of the above-named Letters Patent have applied to Her Majesty's Attorney General for leave, certified by his fiat and signature, to enter with the Clerk of the Patents of England, a Disclaimer and Memorandum of Alteration of parts of the Specification and Title of the said Letters Patent.—Dated this 23rd day of April, 1859.

WILLIAM CARPMAEL,
Agent for the Petitioners,
No. 24, Southampton Buildings,
Chancery Lane.

Patents Sealed.

List of LETTERS PATENT which passed the Great Seal on the

29th April, 1859.

2418. JAMES WRIGHT, of 21, Bridge Street, Blackfriars, London, county of Middlesex, Civil Engineer, for an invention of "An improved application of machinery to be used as a new motive propelling power."—A communication from a Foreigner residing abroad.—Dated 29th October, 1858.

2419. GEMINIANO ZANNI, of Union Street, Barnet, in the county of Middlesex, for an invention of "Improvements in arranging magneto-electric machines for medical and other purposes."—Dated 29th October, 1858.

2420. ROBERT WILSON CHANDLER, of Bow, in the county of Middlesex, Engineer, and THOMAS OLIVER, of Hatfield, in the county of Hertford, Farmer, for an invention of "Improvements in agricultural apparatuses for ploughing and otherwise operating upon land."—Dated 29th October, 1858.

2422. LESTER JOHN LEWIS, Jeweller, of New Bridge Street, Birmingham, in the county of Warwick, for an invention of "Certain improvements in fastenings for ladies' dresses and other such like purposes, as also in the machinery for manufacturing the same."—Dated 29th October, 1858.

2423. JOHN MORRIS, of Broughton, Salford, in the county of Lancaster, for an invention of "Improvements in the manufacture of rollers or cylinders for printing fabrics."—Dated 29th October, 1858.

2428. FRANCIS WRIGLEY, of Manchester, in the county of Lancaster, Consulting Engineer, for an invention of "An improved self-acting safety coupling for railway and other purposes."—Dated 1st November, 1858.

2431. HENRY HENSON HENSON and WILLIAM FREDERICK HENSON, of No. 38, Parliament Street, in the city of Westminster, for an invention of "Improvements in the manufacture and treatment of starch for domestic purposes."—Dated 1st November, 1858.

2432. JOHN DOBSON and DANIEL PEARCE, of Saint James' Street, in the county of Middlesex, Glass Manufacturers, for an invention of "Improvements in the manufacture of bird-cages."—Dated 1st November, 1858.

2433. JOHN CARISS, of York, Yorkshire, for an invention of "An improved safety switch box and gear."—Dated 1st November, 1858.

2491. JOHN RICHMOND, Engineer and Machinist, of 21, Carlisle Terrace, Fairfield Road, Bow, in the county of Middlesex, JOSEPH QUICK, junr., and ALEXANDER FRASER, Civil Engineers, both of Sumner Street, Southwark, in the county of Surrey, for an invention of "Construction of a meter for measuring water, spirits, or any other fluids."—Dated 8th November, 1858.

2679. CHARLES PARKER, of Dundee, in the county of Forfar, North Britain, Engineer, for an invention of "Improvements in looms for weaving."—Dated 25th November, 1858.

2711. WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improved expansion or cut-off gear for steam engines."—Dated 29th November, 1858.

2751. LEVI BISSELL, of the city and state of New York, United States of America, for an invention of "Improvements in trucks for locomotive engines."—Dated 1st December, 1858.

2871. ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improved machinery for manufacturing bullets."—Dated 15th December, 1858.

235. WILLIAM RICHMOND ALEXANDER, of Glasgow, in the county of Lanark, North Britain, Merchant, for an invention of "Improvements in furnaces and apparatus for the manufacture of sugar, and for the consumption or prevention of smoke."—Dated 26th January, 1859.

237. OBED HUSSEY, of Baltimore, United States of America, for an invention of "Improvements in the construction of ships' blocks."—Dated 26th January, 1859.

383. JAMES EVANS, of Tarlton Street, Liverpool, in the county of Lancaster, Coach Builder, for an invention of "An improvement in 'Hansom' cabs." Dated 11th February, 1859.

581. JOHN FRASER, of the town and county of Banff, North Britain, Manager of the Banff Iron Foundry, for an invention of "Improvements in ploughs."—Dated 5th March, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 27th April*, 1859, *inclusive.*)

16th April.

928. URIAH SCOTT, of Camden Town, in the county of Middlesex, Engineer, for an invention of "Improvements in metal fittings for furniture."—Dated 18th April, 1856.

26th April.

1091. LÉON LOUIS JARDIN and JOSEPH BLAMOND, of 39, Rue de l'Echiquier, Paris, and 4, South Street, Finsbury, London, Engravers, for an invention of "Certain improvements in engraving on stone, earthenware, china, and glass, and also in ornamenting the same."—Dated 9th May, 1856.

27th April.

1009. THOMAS RESTELL, of New Kent Road, in the county of Surrey, Chronometer Maker, for an invention of "Improvements in fittings or appendages for doors, and in the means of fixing or attaching the same."—Dated 28th April, 1856.

1020. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman, for an invention of "Improvements in anchors."—A communication from Louis Frederic François David, of Havre, in the empire of France, Chain Manufacturer.—Dated 29th April, 1856.

1027. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "An improved method of and machinery for polishing the surface of glass, stone, metal, or other materials capable of being polished by friction."—A communication from Albert Broughton, Alexander Lindsay, and John Ruthven Platt, all of New York, in the United States of America."—Dated 30th April, 1856.

1059. Alfred Chadburn, of Sheffield, in the county of York, Optician, for an invention of "An improved construction of pressure gauge."—Dated 5th May, 1856.

1087. Alexander Charles Louis Devaux, of King William Street, in the city of London, Merchant, for an invention of "Improvements in the construction of granaries."—Dated 8th May, 1856.

1211. Charles de Jongh, of Lautenbach, near Guebwiller, in the empire of France, Manufacturer, for an invention of "An improved method of separating and assorting combed fibres of different lengths."—Dated 21st May, 1856.

Erratum in Journal of 22nd April.

842. For "Castellir" read "Castelvi."

FOREIGN PATENTS.

AUSTRIA.*

List of Patents for Inventions which were Delivered, Prolonged, or became Void during the Month of February, 1859.†

(*Communicated by the Austrian Government.*)

1. Patents Delivered.

1. Wilhelm Leopold Reitzer, of Alt-Ofen, for "An economical and expeditious mode of manufacturing tallow candles and soaps."—1 year.—(Secret).—Dated 4th February, 1859.

2. Joseph Tobias Goldberger, of Berlin, represented by Dr. Carl von Hardtl, Vienna, for "A peculiar preparation and composition of a quintessence of eau de Cologne."—5 years.—(Secret.)—Dated 6th February, 1859.

3. Joseph Rohrbacher, of Ober St. Veit, near Vienna, for "Improvements in omnibus."—2 years.—(Public.)—Dated 9th February, 1859.

4. Johanna Rumpel, of Vienna, for "Sizing felt and silk hats."—1 year.—(Secret.)—Dated 9th February, 1859.

5. Christine Roth, of Pest, for "Vegetable oil for the hair."—2 years.—(Secret).—Dated 9th February, 1859.

6. Carl Thoma and Anton Schlee, of Vienna, for "Improvements in finishing silk articles, whereby they obtain a fine lustre, fast colours, and whereby faded colours are restored."—5 years.—(Secret.)—Dated 9th February, 1859.

7. Bartholomäns Joseph Bottero, of Milan, for "Manufacture of pure hydrogen gas for heating and lighting."—1 year.—(Secret.)—Dated 9th February, 1859.

8. Joseph Schury, of Vienna, for "Improvements in the construction of suspension bridges, whereby they are made more rigid."—1 year.—(Public.)—Dated 11th February, 1859.

9. Jacob Bierstinger, of Vienna, for "So-called seed pomatum."—1 year.—(Secret.)—Dated 11th February, 1859.

* For the Austrian Patent Law, see No. 291 of this Journal.

† In the case of inventions patented in other states as well as in Austria, the Specifications (whether described as "public" or not) may in most cases be consulted, or translations of them be had, at the Library of the Commissioners' Office.

10. Ignay Stowasser, of Vienna, for "A peculiar brass instrument, called 'Bassalt,' uniting the elements of a bombardo, euphonium, and bugle." —5 years. — (Public.) — Dated 11th February, 1859.

11. Ludwig Farant, of Turin, represented by Alexander Bonnefond, Milan, for "A registering crane."—1 year.—(Secret.)—Dated 16th February, 1859.—(Sardinian Patent, 30th September, 1858.)

12. Joseph Tobias Goldberger, of Berlin, represented by Dr. Carl von Hardtl, for "Extracting oil from the roots of herbs, for perfumery."—5 years.—(Secret.)—Dated 16th February, 1859.

13. Joseph Aug. Lagard, of Charleville, France, represented by Georg. Märkl, Vienna, for "A process for obtaining and reducing animal charcoal by means of peculiar furnaces."—1 year.—(Public.)—Dated 17th February, 1859.

14. Franz Johanus, of Ober Dobling, near Vienna, and Eduard Hammer, of Vienna, for "An improved apparatus for earth-borers for sinking shafts and artesian wells."—1 year.—(Secret.)—Dated 17th February, 1859.

15. Johann Bapt. Toselli, of Mantua, for "An apparatus for maintaining railway and other carriages travelling on inclines in a steady motion." —1 year.—(Secret.)—Dated 19th February, 1859.

16. Ludwig Farant, of Latorre, Sardinia, represented by Alexander Bonnefond, Milan, for "A moveable crane, being chiefly applicable to platforms of railways."—1 year.— (Secret.)— Dated 19th February, 1859.—(Sardinian Patent, 30th June, 1858.)

17. Michael Markert, of Vienna, for "A mode of fixing doors in a finished state by means of screws."— 1 year.—(Secret.)— Dated 19th February, 1859.

18. Simon and Joseph Schlesinger, of Alt-Ofen, for "Manufacture of solid furniture."— 1 year.—(Secret.)—Dated 19th February, 1859.

19. Joseph Schonfeld, of Vienna, for "Hydraulic stones of silicate for monumental architecture and sculpture."—1 year.—(Secret.)—Dated 19th February, 1859.

20. Theodosia von Papavera, of Lemberg, for "Improvements in her keyboards for pianofortes." —1 year.—(Public.)—Dated 19th February, 1859.

21. Franz Schmidt, of Pressburg, for "A peculiar construction of clock-movements for striking the hour and quarters."—1 year.—(Secret.) —Dated 16th February, 1859.

22. Samuel Wurm, of Pest, for "Improvements in fur garments, whereby they are made to fit well, and to keep their shape."—1 year.— (Secret.) — Dated 19th February, 1859.

23. Joseph Hirschfeld, of Vienna, for "An improved portable voltaic apparatus for brushes, with a peculiar conducting fluid, called 'electroline.'"—1 year.—(Secret.)—Dated 19th February, 1859.

24. August Klitsch, of Vienna, for "Manufacture of meerschaum snuff-boxes."—1 year.—(Public.)— Dated 21st February, 1859.

25. Friedrich Rodiger, of Vienna, for "Improvements in apparatus for oiling axles of locomotives and railway carriages, as well as moveable parts of machinery."—1 year. — (Public.) — Dated 21st February, 1859.

26. Joseph Tobias Goldberger, of Berlin, represented by Dr. Carl von Hardl, Vienna, for "A peculiar composition and preparation of so-called 'Balsamic olive soap.'"—5 years. — (Secret.) — 23rd February, 1859.

27. Franz Durand and Heinrich Aug. Pradel, of Paris, represented by Georg Märkl, Vienna, for "A self-acting loom for weaving shawls and figured stuffs."—1 year.—(Public.)—Dated 23rd February, 1859.

28. Peter Franz Demonlin and Joseph Cotelle, of Paris, represented by Georg Märkl, Vienna, for "A process for converting heavy coal containing carbureted hydrogen gas into oil for illumination."—1 year. — (Public.) — Dated 23rd February, 1859.

29. Carl Lejolle, of Vienna, for "Improvements in priming and varnishing gilt frames and fillets that can be washed."—1 year.—(Secret.) — Dated 23rd February, 1859.

30. Alexander Athenodor Frécot, of Paris, represented by Anton Martin, Vienna, for "A peculiar machine for obtaining fuel for industry and commerce from peat."—5 years.—(Secret.)— Dated 23rd February, 1859.

31. Anton F. Hack, of Vienna, for "So-called mineral files and grinding wheels for grinding and cutting porcelain, enamel and glass, and for polishing the hardest metals."— 1 year. — (Secret.)— Dated 23rd February, 1859.

32. Anton Kailan, of Nusdorf, near Vienna, for "Obtaining paint from wood and coal tar."— 1 year.—(Secret.)—Dated 24th February, 1859.

33. Adalbert Hueber, of Tauss, Bohemia, for "Improvements in the manufacture of matches, whereby they are prevented from spurting."— 1 year.—(Secret.)—Dated 24th February, 1859.

34. Constantin Legnain, of Cassano d'Adda, for "Obtaining a fire-proof substance resembling marble, from a mixture of different earths."— 3 year.—(Secret.)—Dated 24th February, 1859.

35. Simon M. Bunzl, of Vienna, for "Improvements in the manufacture of solid durable perfumery articles by applying a grease not used till now."— 1 year.—(Secret.)—Dated 26th February, 1859.

36. Georg Aubury and Wilhelm Richard Bridges, of London, represented by Fr. Ed. Schoch, Vienna, for "A moveable apparatus for the manufacture of lighting gas."—2 years.—(Secret.)—Dated 26th February, 1859.

37. Heinrich Wilhelm Jentzsch, of Unter-Meidling and Gregor Windsteig, of Sechshaus, near Vienna, for "An improved washing apparatus of wood and zinc."—3 years.—(Secret.)— Dated 26th February, 1859.

38. Marcus Rocca and Joseph Gentilli, of Triest, for "Obtaining oil from cotton-seeds."— 5 years.—(Public.)—Dated 26th February, 1859.

39. Johann Schmidt, of Gernsbach, Baden, represented by Dr. Joseph Velini, Milan, for "A peculiar furnace for tempering wheel-tyres of railway carriages, rails, axles, and other metal objects,

by means of chemical ingredients." — 1 year. — (Secret.) — Dated 26th February, 1859.

40. Andreas Köchlin and Co., of Mulhouse, France, represented by Cornelius Kasper, of Vienna, for "A mountain locomotive with combined joints and couplings."—1 year.—(Secret.)—Dated 26th February, 1859.

41. Hippolyt Monier, of Paris, represented by Georg Märkl, Vienna, for "Improvements in gas-burners."—1 year.—(Secret.) — Dated 26th February, 1859.

42. Adrian Stockar, of Laibach, for "A peculiar process for consuming the smoke and gases of fires, whereby a great saving in fuel is obtained." —1 year.—(Public.)—Dated 26th February, 1859.

43. Cornelius Kasper, of Vienna, for "Improvements in the construction of capsules, and of a self-acting lighting apparatus."—1 year.—(Secret.) —Dated 26th February, 1859.

44. Johann Christoph Endris, of Vienna, for "Improvements in the manufacture of cartridges for rifles and other fire-arms."—2 years.—(Secret.) —Dated 26th February, 1859.

45. Friedrich Paget, of Vienna, for "Improvements in slide valves of steam engines." — 2 years.—(Public.)—Dated 27th February, 1859.

46. Ludwig Manzi, of Milan, for "A machine for kneading bread."—1 year.—(Public.)—Dated 27th February, 1859.

47. A. Syry, Lizars and Co., of Leipzig, represented by Dr. Joseph Krenzberger, Vienna, for "A peculiar system of gasmeters with a steady water-level." — 2 years. — (Public.)—Dated 28th February, 1859.—(Saxon Patent, 18th December, 1858.)

48. G. Pfannkuche and C. Scheidler, of Vienna, for "Improvements in Chubb's locks."—1 year.—(Public.)—Dated 28th February, 1859.

49. Matthäus Georg Ratsch, of Ofen, for "Improvements in cushions for friction rollers for the main arbors of windmills."—1 year.—(Public.)—Dated 28th February, 1859.

50. Franz Miller and Franz Piko, of Vienna, for "An economical steam apparatus."—1 year.—(Secret.)—Dated 28th February, 1859.

51. Maria Alexander Emil Letestu, of Paris, represented by Georg Märkl, Vienna, for "A peculiar system of pumps, with a new construction of valves and pistons."—1 year.—(Public.)—Dated 28th February, 1859.

52. Caroline Cattaneo, of Milan, for "So-called 'Duchesse petticoats' fastened by means of metal clasps."—1 year.—(Secret.)—Dated 28th February, 1859.

53. Ludwig B. Goldschmid, of Prague, for "A peculiar sewing machine for the manufacture of vamps."—1 year. — (Secret.)— Dated 28th February, 1859.

54. August Lenz, of Vienna, for "Improvements in tempering, polishing, and blueing iron and steel articles."—2 years.—(Public)—Dated 28th February, 1859.

2. Prolonged Patents.

1. Carl Frumann, for "A composition for cutting and grinding marble, granite, and other stones."—6th year.—(Secret).—Dated 19th January, 1854.

2. Tony Petitjean, for "A process for foliating mirrors."—4th year.—(Secret.)—Dated 23rd January, 1856.

3. Franz Meder, for "A composition for multiplying sculpture."—4th year.—(Secret.)—Dated 28th February, 1856.

4. Joseph Schaller, for "Improvements in cylinder blasts."—3rd year.—(Secret.)—Dated 25th January, 1857.

5. Carl Joseph Rospini, for "So-called 'dialitic stereoscopes.'"—3rd year.—(Public.)—Dated 10th February, 1857.

6. Ignaz Hellmer, for an "Apparatus for distilling grease."—3rd year.—(Secret.)—Dated 15th February, 1857.

7. Wenzel Worechowsky, for "Decimal scales." 3rd year.—(Secret.)—Dated 27th March, 1857.

8. Anton Anton, for "Improvements in the mechanism of brass instruments." — 2nd year.— —(Secret.)—Dated 21st January, 1858.

9. Dr. Anton Schmidt, for "Improvements in furnaces for carbonizing peat and brown-coal, and utilizing the tar they contain."—2nd and 3rd years.—(Secret.)—Dated 21st January, 1858.

10. Joseph Adolph Grünwald and Ludwig Seyss (Prince Moritz Montleart assignee), for "A rotary loom."—9th year.—(Public.)—Dated 30th March, 1851.

11. Florian Bitterlich and Lazar Löwy (Cäcilie Löwy and family, assignees), for "Rendering linen, half-linen, and cotton fabrics more solid and durable."—7th year. — (Secret.)—Dated 29th January, 1853.

12. Ferdinand Leitenberger, for "A cylindrical force and lift pump."—7th year.—(Public.)—Dated 29th January, 1853.

13. L. Ruziczka (Benjamin Trenkler assignee), for "So-called 'universal zephyr night-lights.'"—4th year.—(Secret.)—Dated 25th January, 1856.

14. Ferdinand Gruber, for "So called 'economical front shirts.'"—3rd year.—(Public.)—Dated 20th January, 1857.

15. Charles Leyherr, for "An apparatus for combing wool."—3rd and 5th years.—(Public.)—Dated 13th April, 1857.

16. John Chisholm, for "A process for disinfecting cesspools, &c."—3rd year.—(Secret.)—Dated 22nd September, 1858.

17. Johann Christoph Endris, for "Manufacture of metal vices."—3rd year.—(Secret.)—Dated 9th December, 1856.

18. Johann Christoph Endris, for "Obtaining cold by evaporating volatile fluids."—3rd year.—(Secret.)—Dated 6th December, 1856.

19. Walter Westrup (Xav. Spannraft, assignee), for "So-called 'conical mills.'" — 6th year. — (Public.)—Dated 24th January, 1854.

20. Anton Panesch, for "Varnish for boots."—4th year.—(Secret.)—Dated 23rd January, 1856.

21. Markus Anton Franz Mennons, for "A new kind of matches."—2nd year.—(Secret.)—Dated 24th February, 1858.

22. Joseph Schölder, for "A powder for extinguishing fires."—2nd year.—(Secret.)—Dated 15th March, 1858.

23. Johann Baptist Vergne, for "Improvements in screw propellers."—2nd year.—(Public.)—Dated 21st April, 1858.

24. Augustin Cattaneo, for "Improvements in Biancotti's machine for making chocolate."—4th year.—(Secret.)—Dated 3rd February, 1856.

25. Adalbert Patzau, for "Improvements in cigar-cases."—2nd year.—(Public.)—Dated 28th January, 1859.

26. Reinhold Stumpe, for "A machine for controlling spirits."—3rd year.—(Secret.)—Dated 27th May, 1857.

27. Gustav Pfaunkuche (Georg Sigl, assignee), for "Construction of self-lubricators."—6th year.—(Public.)—Dated 2nd February, 1854.

28. Gustav Pfaunkuche (Georg Sigl, assignee), for "Improvements in iron safes and chests."—3rd year.—(Secret.)—Dated 6th February, 1857.

29. Alois Haasmann (Joh. Toscana del Banner, assignee), for "Improvements in the construction of chimney-pots and ventilators."—3rd year.—(Secret.)—Dated 13th February, 1857.

30. Wilhelm Adolph Zempliner, for "Improvements in his Patent self-acting breaks for carriages."—2nd year.—(Public.)—Dated 9th February, 1858.

31. Georg Schreiber, for "A machine for cutting chenille."—5th year.—(Secret.)—Dated 9th February, 1855.

32. Carl Gierke, for "Universal pumps without cylinders."—3rd year.—(Public.)—Dated 28th January, 1857.

33. Jules Guyot, for "A power-loom for making straw-mats for protecting vines."—3rd year.—(Public.)—Dated 27th March, 1857.

34. Maximilian Evrard (Felix Dehaynin, assignee), for "A machine for conglomerating waste of coals, coke, charcoal, and other fuel."—3rd year.(Public.)—Dated 3rd May, 1857.

35. Johann Georg Muschek, for "Improvements in his Patent tooth-paste."—2nd year.—(Secret.)—Dated 22nd February, 1858.

36. Georg Martin, for "A system of constructing bridges for railroads and other roads."—2nd year.—(Public.)—Dated 30th March, 1858.

37. Ludwig Franz N. Ruziczka (Carl Franz Wocelka, assignee), for "A chemical composition for making fine black copying ink."—2nd year.—(Secret.)—Dated 17th March, 1858.

38. Franz S. Raffelsperger, for "Improvements in the manufacture of typometrical lines and compositions in printing."—2nd year.—(Secret.)—Dated 9th March, 1858.

39. Leopold Hahn, for "Improvements in the manufacture of foot coverings."—2nd year.—(Secret.)—Dated 20th April, 1858.

40. Adam Heller (Anton Rösler, assignee), for "A machine for catching muskitoes."—5th year.—(Public.)—Dated 16th February, 1855.

41. Joseph Winter and Emanuel Hofkeller, for "A set of gas-burners."—6th and 7th years.—(Public.)—Dated 6th March, 1854.

42. Richard Albert Tilghmann, for "Treatment of fat and oily substances used in the manufacture of candles, soap, and glycerine."—5th year.—(Secret.)—Dated 27th April, 1855.

43. Carl Gangloff, for "A concentrical shingle-machine."—4th year.—(Public.)—Dated 12th April, 1856.

44. Moriz Diamant, for "Manufacture of paper from the stalks and straw of maize."—3rd year.—(Secret.)—Dated 18th February, 1857.

45. Carl Ludwig Kriegel and Carl Johann Hoschek, for "Water and fire proof cement varnish."—3rd year.—(Secret.)—Dated 18th February, 1857.

46. Georg Märkl (Mitschele Herring, assignee), for "Applying galvanic and magnetic action to combs and brushes."—3rd year.—(Secret.)—Dated 18th February, 1857.

47. Joseph Ergert, for "A mashing process for obtaining alcohol from potatoes."—2nd year.—(Secret.)—Dated 27th March, 1858.

3. Patents which became Void.

1. Wilhelm Felix Aroux, for "A sewing machine."—Dated 19th October, 1857; expired 19th October, 1858.

2. J. Alexandre, for "Manufacture of cases from a mixture of gutta percha and other ingredients."—Dated 6th November, 1857; expired 6th November, 1858.

3. Eduard Schmidt and Friedrich Paget, for "An apparatus applied to cigars for lighting the same."—Dated 11th July, 1857; disclaimed 14th December, 1858.

4. Hugo Bechade, Johann Lacroix, and Johann Leonard, for "A railway break."—Dated 16th December, 1857; expired 16th December, 1858.

5. Carl Endler, for "An improved vat for the expeditious manufacture of vinegar whereby a regular and steady ventilation takes place, and whereby the strongest vinegar may be obtained.'—Dated 18th February, 1857; annulled 3rd February, 1859, in consequence of Dr. Spitaler's prior claims, dated 22nd February, 1849.

6. Johann Christoph Endris, for "Treatment of flax, hemp, and other fibrous substances."—Dated 9th December, 1856; expired 9th December, 1858.

7. Johann Christoph Endris, for "Improvements in steam boilers and apparatus."—Dated 9th December, 1856; expired 9th December, 1858.

8. Johann Christoph Endris, for "Improvements in the manufacture of glass and clay articles."—Dated 9th December, 1856; expired 9th December, 1858.

* The Specifications of these Patents may be consulted in the original language, or translations be had at the Public Free Library.

9. Johann Christoph Endris, for "Improvements in the manufacture of iron and steel, consisting of uncarbonizing and refining pig iron."—Dated 24th December, 1856; expired 24th December, 1858.

10. Johann Christoph Endris, for "Improvements in the construction of pumps with two or several cylinders and a common clack-box."—Dated 30th December, 1856; expired 30th December, 1858.

11. Gottfried Bernhardt, for "Improvements in sewing machines."—Dated 12th November, 1857; expired 12th November, 1858.

12. Anton Srba and Joseph Pessina, for "Manufacture of fine solid felt for hats from a mixture of wool and the hair of hares."—Dated 4th January, 1856; expired 4th January, 1859.

13. Johann Weszelowsky, for "Improvements in printing and dyeing linen and cotton with indigo blue by the cold process."—Dated 7th August, 1853; expired 7th August, 1858.

14. Ferdinand Peterson and Co., for "A process for washing or scouring and ungreasing raw wool and for ungreasing spun and woven wool."—Dated 22nd August, 1853; expired 22nd August, 1858.

15. Peter August Kruss, for "Improvements in the manufacture of machine-hats."—Dated 2nd August, 1854; expired 2nd August, 1858.

16. Laurentius Mathias Eiler, for "Locks to be opened by means of magnets."—Dated 14th August, 1854; expired 14th August, 1858.

17. Charles Marie Pouillet, for "A new system of constructing railways."—Dated 7th August, 1855; expired 7th August, 1858.

18. Anton Swaty and Carl Kirchhof, for "An apparatus for preserving and keeping objects."—Dated 21st August, 1855; expired 21st August, 1858.

19. Ludwig Edmund Mayer, for "Improvements in advertisements."—Dated 24th August, 1855; expired 24th August, 1858.

20. Ludwig Edmund Mayer, for "Improvements in apparatus for keeping papers of advertisements."—Dated 24th August, 1855; expired 24th August, 1858.

21. Ludwig Edmund Mayer, for "Machines for washing, drying, and finishing fabrics by grease."—Dated 24th August, 1855; expired 24th August, 1858.

22. Ludwig Edmund Mayer, for "An apparatus for drying linen, &c."—Dated 24th August, 1855; expired 24th August, 1858.

23. Ludwig Edmund Mayer, for "A mangle."—Dated 24th August, 1855; expired 24th August 1858.

24. Andreas Györky, for "An apparatus for propelling and steering vessels."—Dated 28th August, 1855; expired 28th August, 1858.

25. Thomas Stregzek, for "Improvements in seals and stamps with raised and intaglio ornaments and letters."—Dated 2nd August, 1856; expired 2nd August, 1858.

26. Carl Fischer, for "Moveable economical kitchen ranges."—Dated 11th August, 1856; expired 11th August, 1858.

27. Andreas Fröhlich and Alexander Gibon, for "Apparatus for saving fuel and other expenses in the treatment of metals."—Dated 11th August, 1856; expired 11th August, 1858.

28. Paul Pechiné and Joseph Colas, for "Apparatus for drying and burning tiles, bricks, water-pipes, &c."—Dated 11th August, 1856; expired 11th August, 1858.

29. Michael Riss, for "A peculiar process for manufacturing lighting-gas."—Dated 16th August, 1856; expired 16th August, 1858.

30. Friedrich Aschermann (Philipp Wertheimber, assignee), for "Manufacture of paraffine candles from peat, pit-coal and brown-coal, bituminous lime, and schist, &c."—Dated 16th August, 1856; expired 16th August, 1858.

31. Alexander Laurent, for "Riveted, nailed, and glued leather straps for mills, factories, &c."—Dated 1st August, 1857; expiried 1st August, 1858.

32. Alexander Laurent, for "Rolled leather cords."—Dated 1st August, 1857; expired 1st August, 1858.

33. Anton Hausner, for "Improvements in paper for documents."—Dated 3rd August, 1857; expired 3rd August, 1858.

34. Ignaz Pollak, for "Improvements in purifying alcoholic liquids."—Dated 7th August, 1857; expired 7th August, 1858.

35. Rudolph Girtler, for "Apparatus for superheating steam."—Dated 12th August, 1857; expired 12th August, 1858.

36. Dr. Adolph Sacks, for "Improvements in making and fixing teeth without crotchets."—Dated 12th August, 1857; expired 12th August, 1858.

37. Henry Emil Bour and Salomon Sturm, for "An improved machine for grinding convergent and divergent lenses."—Dated 12th August, 1857; expired 12th August, 1858.

38. Simon Deutsch, for "An insoluble glue for joiners' works."—Dated 12th August, 1857; expired 12th August, 1858.

39. Carl Gerster and Ferdinand Dolainszky, for "A peculiar substance for making vessels for all kinds of liquids, and especially for beer and spirits."—Dated 12th August, 1857; expired 12th August, 1858.

40. Mayer Besch, for "Cementing measures for liquids."—Dated 15th August, 1857; expired 15th August, 1858.

41. Johann Keusch, for "Improvements in his patent Kremser vine-scissors."—Dated 17th August, 1857; expired 17th August, 1858.

42. Liborius Burian, for "Manufacture of bracelets and rings of tortoise-shell and horn."—Dated 17th August, 1857; expired 17th August, 1858.

43. Anton Predeval, for "Improvements in wigs, &c."—Dated 18th August, 1857; expired 18th August, 1858.

44. Johann Mayer, for "A peculiar construction of forks for economical kitchen-ranges."—Dated 26th August, 1857; expired 26th August, 1858.

45. Adolph Kappeller, for "An apparatus for regulating the outlets in Jouval's turbines."—Dated 26th August, 1857; expired 26th August, 1858.

46. Moses Haym Picciotto, for "Improvements in the permanent way of railroads."—Dated 26th August, 1857; expired 26th August, 1858.

47. Moses Haym Picciotto, for "Manufacture of elastic substances to be used in railways, and for other purposes."—Dated 26th August, 1857: expired 26th August, 1858.

48. Pierre Dugué, for "A machine for cleaning and crushing corn."—Dated 27th August, 1857; expired 27th August, 1858.

49. Eduard Mack, for "A peculiar liquid for impregnating wood so as to protect it from rot, and to make it burn slowly and without flame."—Dated 27th August, 1857; expired 27th August, 1858.

50. Carl Winternitz and Joh. Bichler, for "Obtaining transparent printings."—Dated 28th August, 1857; expired 28th August, 1858.

51. Joseph Hensler (Andreas Schrabek, assignee), for "Manufacture of so-called 'stone soap.'"—Dated 22nd September, 1846; expired 22nd September, 1858.

52. Franz Klein and Brothers, for "Improvements in the manufacture of joined plates of rails of wrought iron."—Dated 1st September, 1848; expired 1st September, 1858.

53. Joseph Daninger, for "An horizontal windmill."—Dated 2nd September, 1850; expired 2nd September, 1858.

54. Thaddäus Hassmann and August Collete, for "Improvements in the manufacture of lake, varnish, lithographic and printing ink."—Dated 24th September, 1852; expired 24th September, 1858.

55. Wenzel Reichelt, for "A travelling armchair which may be also used as a bed."—Dated 22nd September, 1856; expired 22nd September, 1858.

56. Franz Michalek, for "A machine for planing straight and hollow metals."—Dated 20th January, 1857; expired 20th January, 1859.

57. Luise Boerkel, for "A machine for cutting French beans."—Dated 11th December, 1857; expired 11th December, 1858.

58. Johann Maria August Eugen Fabart, for "An apparatus for weaving India shawls."—Dated 2nd February, 1858; expired 2nd February, 1859.

BELGIUM.*

List of Patents of Invention Delivered on the 14th April, 1859.†

(*Communicated by the Belgian Government.*)

(For previous List, see No. 553 of this Journal.)

1. A. Graf, of Liege, for "A kind of travelling trunk."—Dated 16th March, 1859.
2. P. A. Pontierre and A. R. A. Lagant, of Brussels, for an imported invention of "A system of railways without wooden sleepers, and with chairs and cast-iron wedges."—Dated 1st April, 1859.—(French Patent, 20th January, 1859.)
3. F. Bastens, represented by Mrs. S. Paridaens, of Brussels, for "A glass Venetian blind ventilator with a moving mechanism."—Dated 1st April, 1859.
4. T. Bailey, represented by H. Biebuyck, of Brussels, for an imported invention of "A mechanical movement, applicable to loading fire-arms and to other purposes."—Dated 1st April, 1859.—(French Patent, 21st March, 1859.)
5. A. M. Herland, represented by A. Crovy, of Brussels, a Patent of Improvement for "Improvements in his apparatus for mounting straps."—Dated 1st April, 1859.—(Original Patent, 30th August, 1858.)
6. J. V. Lucas, represented by A. Crovy, for an imported invention of "Preparing prussiate of potash and cyanide of potassium."—Dated 1st April, 1859.—(French Patent, 29th March, 1859.)
7. A. Cheval, of Tournai, for "A machine for cutting tobacco."—Dated 4th April, 1859.
8. C. Carteron, represented by A. Depuichault, of Schaerbeek, for an imported invention of "A trap for catching moles."—Dated 2nd April, 1859.—(French Patent, 24th November, 1858.)
9. J. B. Pieux Aubert, represented by A. Depuichault, of Schaerbeek, for an imported invention of "A machine for making wire strands."—Dated 2nd April, 1859.—(French Patent, 21st September, 1858.)
10. F. Ch. Bierlin, represented by A. Depuichault, of Schaerbeek, for an imported invention of "A blast for forges."—Dated 2nd April, 1859.—(French Patent, 14th January, 1859.)

---

* For the Belgian Patent Law, see Nos. 292 and 348 of this Journal.

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

11. J. P. Lucet, represented by A. Depuichault, of Schaerbeek, for an imported invention of "A horse-gin for tanning-works."—Dated 2nd April, 1859.—(French Patent, 4th January, 1859.)

12. N. Rave, of Cureghem-lez-Bruxelles, a Patent of Improvement for "Additions to his chemical product, called 'Alkal-oxide.'"—Dated 4th April, 1859.—(Original Patent, 23rd March, 1858.)

13. A. Perier and L. Possoz, represented by X. Raclot, of Brussels, a Patent of Improvement for "Additions to their process for manufacturing sugar."—Dated 4th April, 1859.—(Original Patent, 1st March, 1858.)

14. H. J. Newcombe, represented by J. Piddington, of Brussels, for an imported invention of "Improvements in apparatus for heating and ventilating houses, drying-kilns, wash-houses, &c."—Dated 4th April, 1859.—(English Patent, 31st January, 1859.)

15. T. J. G. Steppe, represented by D. de Vos-Verraert, of Brussels, a Patent of Improvement for "Improvements in his lace of coloured thread."—Dated 4th April, 1859.—(Original Patent, 20th December, 1858.

16. J. Desmet-Séant, represented by D. de Vos-Verraert, of Brussels, for "Improvements in pistons of brass instruments."—Dated 4th April, 1859.

17. F. Dumont-Lamarche, of Liege, for "A system of lighting by means of the atmosphere and lighting fluids."—Dated 5th April, 1859.

18. C. F. Mertz, of Brussels, for "A curtain-frame without counter-weights."—Dated 5th April, 1859.

19. F. Verhalle, of Ruysselede, for "An apparatus applicable to churns."—Dated 7th April, 1859.

20. A. Jansen, of Brussels, for "Improvements in Lefaucheux's revolvers."—Dated 7th April, 1859.

HANOVER.*

List of Patents of Invention Delivered between the 1st January and 31st March, 1859.

(*Communicated by the Hanoverian Government.*)

(For previous List, see No. 531 of this Journal.)

1. J. G. Schavekaver, of Rüsford, for "A machine for scutching flax."—5 years.—Dated 24th January, 1859.

2. Sebastian Grandis, of Turin, for "A mode of assembling rails on railways."—5 years.—Dated 31st January, 1859.

3. Ed. Schmidt, of Vienna, for "Coating electric telegraphic wires by means of folded or plaited fibres or wire."—5 years.—Dated 4th February, 1859.

4. G. Bodensiek, of Linden, for "An apparatus for recovering the sulphur contained in the soda residues by the introduction of gaseous muriatic acid."—5 years.—Dated 17th February, 1859.

5. E. Guignet, of Paris, for "Manufacture of green colours of chromium."—5 years.—Dated 4th March, 1859.

6. H. W. Wimshurst, and T. Trueman, of London, for "A machine for obtaining plates from metal cylinders by means of a spiral action."—5 years.—Dated 7th March, 1859.

7. Mrs. Jolibois, née Thomas Poulain, of Dijon, for "An apparatus for expeditiously cooling the wort of beer."—5 years.—Dated 7th March, 1859.

8. F. J. Foncon, of Paris, for "A smoke-consuming fire-place."—5 years.—Dated 18th March, 1859.

9. C. Kessler, of Greisswald, for "A valve apparatus worked by electro-magnetic power for the distribution of steam in engines without rotary motion, applicable to the direct working of hammers, pile-drivers, and pumps."—5 years.—Dated 26th March, 1859.

10. F. Wesch, of Nordsohl, near Stadthagen, for "A kiln for burning grey tiles."—5 years.—Dated 29th March, 1859.

11. W. von Weyhe, of Hanover, for "Chemical matches."—5 years.—Dated 29th March, 1859.

12. J. H. A. Koch, of Freyburg on the Elbe, for "Ink for metal pens."—5 years.—Dated 31st March, 1859.

13. John Eason, of London, for "Improvements in apparatus for tanning, dyeing, and extracting vegetable, animal, and mineral substances."—5 years.—Dated 31st March, 1859.

14. J. H. W. Wagner, of Paris, for "An apparatus for cleaning steam-boilers, for feeding the same, and for simultaneously warming the feeding water."—5 years.—Dated 29th March, 1859.

* For the Hanoverian Patent Law, see No. 231 of this Journal.

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.

TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.

BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.

PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.

MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.

PRODUCTION AND APPLICATIONS OF GAS.

STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 556. TUESDAY, MAY 3, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

2910. JAMES RONALD, of Liverpool, in the county of Lancaster, Merchant, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "An improved machine for the direct spinning of hemp, flax, and other like fibrous materials."

As set forth in his petition, recorded in the said office on the 20th day of December, 1858.

2917. And WILLIAM SPEAKMAN YATES, of Leeds, in the county of York, Brush Maker, has given the like notice in respect of the invention of "Machinery or apparatus for dragging bristles and drawing hair and vegetable fibre."

As set forth in his petition, recorded in the said office on the 21st day of December, 1858.

2926. And EDWARD THOMAS DUNN, of Hammersmith, in the county of Middlesex, Gentleman, has given the like notice in respect of the invention of "Improved fabrics suitable for the covering of floors, walls, and other like purposes."

As set forth in his petition, recorded in the said office on the 22nd day of December, 1858.

2933. And JAMES RONALD, of Liverpool, in the county of Lancaster, Merchant, has given the like notice in respect of the invention of "Improvements in, and machinery for, the manufacture of 'hard-topped' and 'soft-laid' twine 'mill-banding' strands for ropes and other purposes, and cordage generally, from hemp, flax, cotton, and other like fibrous material."

As set forth in his petition, recorded in the said office on the 23rd day of December, 1858.

2945. And DICKINSON EDLESTON, of Halifax, in the county of York, Dyer and Finisher, has given the like notice in respect of the invention of "Improvements in preparing and finishing textile fabrics, and in the means or apparatus employed therein."

2946. And JOHN RAILTON, of Blackburn, in the county of Lancaster, Machine Maker, and SETH LANG, of the same place, Mechanic, have given the like notice in respect of the invention of "Improvements in looms."

As set forth in their respective petitions, both recorded in the said office on the 24th day of December, 1858.

2956. And JOSEPH SMETHURST, of the firm of Messieurs Martin and Smethurst, of Guide Bridge, in the county of Lancaster, Engineers, has given the like notice in respect of the invention of "Certain improvements in metallic pistons."

2960. And JOHN DAVIES, of Liverpool, in the county of Lancaster, Provision Merchant, has given the like notice in respect of the invention of "An improved portable self gas generating lamp."—A communication from James Lawrence Butler, resident at Brooklin, in the state of New York, one of the United States of America.

As set forth in their respective petitions, both recorded in the said office on the 27th day of December, 1858.

2965. And BENJAMIN BROWNE, of No. 52, King William Street, London Bridge, E.C., Civil Engineer and Patent Agent, has given the like notice in respect of the invention of "Certain improvements in the manufacture of boots and shoes or other coverings for the feet, and in the mode or method of uniting the same or parts thereof."—A communication.

2971. And JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in

the manufacture of boots and shoes or other coverings for the feet."—A communication.

As set forth in their respective petitions, both recorded in the said office on the 28th day of December, 1858.

2994. And WILLIAM BURGESS, of the firm of Burgess and Key, of Newgate Street, in the city of London, Agricultural Engineers, has given the like notice in respect of the invention of "Improvements in apparatuses for converting reciprocating into rotary motion."—A communication from G. Bancker, residing in New York.

As set forth in his petition, recorded in the said office on the 30th day of December, 1858.

2999. And JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in the manufacture or production of boots and shoes or other coverings for the feet, and in machinery and apparatus employed in such manufacture."—A communication.

3003. And JOHN LEES, of Park Bridge, near Ashton-under-Lyne, in the county of Lancaster, Roller Maker, and WILLIAM HEAP, of Ashton-under-Lyne aforesaid, Tool Maker, have given the like notice in respect of the invention of "Improvements in machinery for punching square holes in the ends of rollers and other articles."

3006. And LOUIS A. NORMANDY, junr., of 67, Judd Street, London, has given the like notice in respect of the invention of "A new system of shaft tugs."—A communication.

As set forth in their respective petitions, all recorded in the said office on the 31st day of December, 1858.

14. And MONTAGUE WIGZELL, of Friar's Green, Exeter, in the county of Devon, has given the like notice in respect of the invention of "An improved form of nail or driving article."

As set forth in his petition, recorded in the said office on the 1st day of January, 1859.

37. And FREDERICK CLARK, of King Street, Bloomsbury, in the county of Middlesex, Turner, has given the like notice in respect of the invention of "Improvements in connecting knobs and handles to the spindles of locks and latches and other articles of a like nature."

As set forth in his petition, recorded in the said office on the 5th day of January, 1859.

73. And LOUIS A. NORMANDY, junr., of 67, Judd Street, London, has given the like notice in respect of the invention of "Improvements in the process of distilling and clarifying resinous substances."—A communication from E. Dromart, D. Dusillol, and A. Dusillol, of Préchac, département de la Gironde, in the empire of France.

As set forth in his petition, recorded in the said office on the 10th day of January, 1859.

133. And WILLIAM BETTS, of Wharf Road, City Road, in the county of Middlesex, Capsule Manufacturer, has given the like notice in respect of the invention of "Improvements in the manufacture of capsules, and in the apparatus to be employed therein."

As set forth in his petition, recorded in the said office on the 15th day of January, 1859.

154. And GEORGE COLLIER and JOHN COLLIER, both of Halifax, in the county of York, have given the like notice in respect of the invention of "Improvements in means or apparatus for washing and drying wool and other fibres, part of which improvements is also applicable for other purposes where steam, hot water, or other fluids are required to be conveyed under pressure through moveable connections."

As set forth in their petition, recorded in the said office on the 17th day of January, 1859.

202. And BENJAMIN TEMPLAR, of the city and county of Bristol, Dyer, has given the like notice in respect of the invention of "Improvements in umbrellas and parasols."

As set forth in his petition, recorded in the said office on the 22nd day of January, 1859.

238. And DAVID GRAHAM, of the firm of Graham, West, and Company, of Wapping, in the county of Middlesex, Millwrights and Engineers, has given the like notice in respect of the invention of "An improved method of driving centrifugal machines."—A communication from T. Hanning, residing in the Mauritius.

242. And JAMES KERR, of No. 17, Bedford Terrace, Trinity Square, Southwark, in the county of Surrey, Engineer, has given the like notice in respect of the invention of "Improvements in the construction of revolving fire-arms."

As set forth in their respective petitions, both recorded in the said office on the 26th day of January, 1859.

560. And HENRY BROWN, of the firm of Henry Brown and Company, Woollen Manufacturers, of Galashiels, in the county of Selkirk, Scotland, has given the like notice in respect of the invention of "Improvements in machinery for cutting and finishing the surfaces of woollen and other fabrics."

As set forth in his petition, recorded in the said office on the 2nd day of March, 1859.

641. And RICHARD ARCHIBALD BROOMAN, of No. 166, Fleet Street, in the city of London, E.C., Editor of the Mechanics' Magazine, and Patent Agent, has given the like notice in respect of the invention of "An improved method of treating wool and other fibres in order to form threads."—A communication from Messieurs Tavernier and Vouillon, residing in Paris.

As set forth in his petition, recorded in the said office on the 14th day of March, 1859.

651. And GEORGE BELL GALLOWAY, of Newcastle-on-Tyne, in the county of Northumberland, has given the like notice in respect of the invention of "Improvements upon and in connection with his former patents, and in the manufacture of fuel, and working steam-engines more economically."

As set forth in his petition, recorded in the said office on the 15th day of March, 1859.

680. And ALEXANDER MEIN, Glass Bottle Maker, at Saint Rollox, Glasgow, in the county of Lanark,

has given the like notice in respect of the invention of "Improvements in making glass bottles and in the apparatus connected therewith."
As set forth in his petition, recorded in the said office on the 17th day of March, 1859.

740. And Benjamin Browne, of No. 52, King William Street, London Bridge, in the city of London and county of Middlesex, Civil Engineer and Patent Agent, has given the like notice in respect of the invention of "A new method of working or operating switches and signals on railways by improved apparatus for that purpose."—A communication from abroad by Victor Armand Prou, of Rue de Sèvres, Paris, in the empire of France.

745. And Pierre Paul Boll, of Paris, in the French empire, Gentleman, and Hermann Reger, of Cologne, Gentleman, have given the like notice in respect of the invention of "Improvements in steam-boiler and other furnaces."—A communication from Antoine Speich, residing at Strasbourg.
As set forth in their respective petitions, both recorded in the said office on the 23rd day of March, 1859.

792. And John Wilson Hadwen, of Kebroyd Mills, in the parish of Halifax, and West Riding of the county of York, Cotton Spinner, has given the like notice in respect of the invention of "A new art or manufacture for converting certain kinds of silk waste into yarns or threads."
As set forth in his petition, recorded in the said office on the 30th day of March, 1859.

858. An Francis Maltby Crichton, of Stoke Abbey, Stoke Bishop, in the parish of Westbury-upon-Frym, in the county of Gloucester, Gentleman, has given the like notice in respect of the invention of "Improvements in clocks or time-keepers."
As set forth in his petition, recorded in the said office on the 5th day of April, 1859.

866. And Alexander Chaplin, of Glasgow, in the county of Lanark, North Britain, Engineer, has given the like notice in respect of the invention of "Improvements in steam-boilers."

867. And Robert Postlethwaite, of Liverpool, in the county of Lancaster, Saddler, has given the like notice in respect of the invention of "An improvement in harness pads for horses."
As set forth in their respective petitions, both recorded in the said office on the 7th day of April, 1859.

903. And Leopold Wimmer, of Vienna, in the empire of Austria, Master Baker, has given the like notice in respect of the invention of "An improved preparation for killing beetles."
As set forth in his petition, recorded in the said office on the 11th day of April, 1859.

916. And Philip Hill, of Manchester, in the county of Lancaster, Weaver, and John Moore, of Salford, in the same county, Small Ware Manufacturer, have given the like notice in respect of the invention of "Improvements in weaving double pile fabrics."

919. And James Crossdale, of Rotherfield Street, Lower Islington, in the county of Middlesex, Boot and Shoe Maker, has given the like notice in respect of the invention of "Certain improvements in boots and shoes."

922. And Samuel Tatton, of Leek, in the county of Stafford, Silk Dyer, has given the like notice in respect of the invention of "Improvements in preparing and treating silk, and improvements in dyeing silk."
As set forth in their respective petitions, all recorded in the said office on the 12th day of April, 1859.

951. And Hugh Adams Silver, of Cornhill and Bishopsgate Street Within, in the city of London, and Silver Town, in the county of Essex, India Rubber Manufacturer, has given the like notice in respect of the invention of "Improvements in insulating wire for electric telegraphs."
As set forth in his petition, recorded in the said office on the 15th day of April, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

List of Letters Patent which passed the Great Seal on the

3rd May, 1859.

2453. Victor Blumberg, of Bloomfield Lodge, Notting Hill, in the county of Middlesex, Gentleman, for an invention of "Improvements in the construction of slate billiard tables, which improvements are also applicable for other useful purposes."—Dated 3rd November, 1858.

2458. John Fowler, junior, Robert Burton, and David Greig, all of Cornhill, in the city of London, for an invention of "Improvements in applying motive power to actuate ploughs and other agricultural implements."—Dated 3rd November, 1858.

2467. Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for an invention of "Improvements in treating air and gases, and the employment of the same for obtaining motive power."—Dated 4th November, 1858.

2471. Thomas Till, of Hooper Street, in the Borough of Birmingham, in the county of Warwick, Mechanic, for an invention of "Improve-

ments in machinery for making nails, and for other analogous purposes where metal is compressed by dies or stamps."—Dated 5th November, 1858.

2472. Thomas Briggs Smith, of Marietta, in the state of Ohio, and United States of America, for an invention of "Preparing wood, so as to be used as a substitute for curled hair in the manufacture of mattresses, and in the other purposes to which curled hair and its substitutes are applied."—Dated 5th November, 1858.

2477. Louis Schwartzkorf and Ferdinand Carl Philippson, both of Berlin, for an invention of "Improvements in machinery for boring holes in rocks and minerals for blasting and other similar purposes."—Dated 5th November, 1858.

2485. John Cliff, of the Imperial Potteries, Lambeth, in the county of Surrey, for an invention of "Improvements in the construction of kilns for burning stoneware, red clayware, porcelain, and all other kinds of earthenware."—Dated 6th November, 1858.

2489. James Jackson, Aaron Fisher, and John Jones Harney, of Sheffield, in the county of York, Crinoline Manufacturers, for an invention of "Improvements in the manufacture of strips or bands of steel, and in the machinery or apparatus to be employed therein."—Dated 6th November, 1858.

2495. Jonathan Wardill, of Commercial Road East, in the county of Middlesex, Engineer, for an invention of "Improvements in purchases for the raising and lowering of weights by means of chains especially applicable to ships' capstans and windlasses."—Dated 8th November, 1858.

2510. William Clark, of 53, Chancery Lane, in the county of Middlesex, Patent Agent and Engineer, for an invention of "Improvements in signals for railways, and in apparatus for actuating the same."—A communication from Auguste Lucien Verité and Julien Stephane Bazin, both residing abroad.—Dated 9th November, 1858.

2544. John Benyon, of Swinton, near the city of Manchester, Manager, and John Warburton Bridge Bowden, of the same place, Manufacturer, for an invention of "Certain improvements in looms for weaving."—Dated 13th November, 1858.

2570. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in machinery or apparatus for kneading dough or working and mixing plastic materials."—A communication from Monsieur Valleé, a foreigner resident abroad.—Dated 16th November, 1858.

2595. William Clark, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for the invention of "A process of thickening, strengthening, and improving tanned hides."—A communication from Antoine Louis Adolphe Farrer, residing at Nancy, in the empire of France.—Dated 17th November, 1858.

2626. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in the construction of electric telegraph cables or conductors."—A communication from Henry J. Rogers, resident at Baltimore, Maryland, in the United States of America.—Dated 19th November, 1858.

2738. Edward Jones, of Dudley, in the county of Worcester, Manager of Iron Works, for an invention of "An improvement or improvements in the manufacture of coke in ovens."—Dated 1st December, 1858.

522. William Burgess, of the firm of Burgess and Key, of Newgate Street, in the city of London, Agricultural Implement Makers, for an invention of "An improvement in reaping and mowing machines."—Dated 26th February, 1859.

530. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in apparatus for taking soundings, applicable also to the throwing of life lines."—A communication from William P. Trowbridge, residing at Washington, Columbia, in the United States of America.—Dated 28th February, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 30th April, 1859, inclusive.*)

28th April.

1029. Henry Mapple, of Child's Hill, in the county of Middlesex, parish of Hendon, Electric Engineer, for an invention of "Barometers."—Dated 1st May, 1856.

30th April.

1028. Nathan Defries, of Fitzroy Square, in the county of Middlesex, and George Henry Bachhoffner, of Montague Street, in the county of Middlesex, for an invention of "Improvements in gas fires."—Dated 1st May, 1856.

1033. Richard Archibald Brooman, of 166, Fleet Street, in the city of London, Patent Agent, for an invention of "Improvements in compressing, regulating the pressure and flow of and conveying gas;—parts of which are applicable to air and other fluid pumps."—A communication from P. Hugon, of Paris.—Dated 1st May, 1856.

1042. William Naylor, of the city of Norwich, Engineer, for an invention of "Improvements in power hammers and rivetting machines, parts of such improvements being applicable to the manufacture of bolts or rivets."—Dated 2nd May, 1856.

FOREIGN PATENTS.

FRANCE.

CURRENT LIST of PATENTS of Invention and Certificates of Addition.

1859.

(Communicated by His Excellency the Minister of Agriculture, Commerce, and Public Works.)

NOTE.—The duration of a Patent is fifteen years, except where determined by that of a previously existing foreign Patent.*

916. PAUL CHARLES AIMABLE DE BOURGOING (Baron), of 3, Rue de l'Université, Paris, for "Optical means of obtaining the exact image of the sky on walls, or so-called 'heliophany or celestial reflects.'"—Dated 24th February, 1859.

917. PAUL AMAND SAINTOMER, of 24, Rue Chapon, Paris, for "A fall-stool."—Dated 25th February, 1859.

918. PERRONCEL and COTTET, of 159, Rue St. Denis, Paris, for "A toy of artificial caoutchouc, &c."—Dated 25th February, 1859.

919. BATTON and CHEVAUCHEZ, of 11, Rue Notre Dame des Champs, Paris, for "A continuous motor."—Dated 25th February, 1859.

920. CHARLES AUGUSTE LEGROS, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in spinning and weaving machines."—Dated 25th February, 1859.

921. ARMAND LOUIS ANDRÉ HERBELOT, of 10, Rue du Dôme, Passy, for "A special break for locomotives."—Dated 25th February, 1859.

922. ROSALIE ISIDORE BEAU, of 11, Rue de la Monnaie, Paris, for "A thread-box."—Dated 25th February, 1859.

923. Mrs. ACHET née ROBERT DE MASSY, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "A system and means of stopping horses."—Dated 25th February, 1859.

924. HYACINTHE FERDINAND D'HANGEST, of 27, Rue Neuve des Petits Champs, Paris, for "Fabrics with relief flowers and fancy designs by application."—Dated 25th February, 1859.

925. NOURY and Miss DE LABOREY DE VIERY, of 41, Rue Vielle du Temple, Paris, for "A system of hat-cushions."—Dated 25th February, 1859.

926. ALEXANDRE VICTOR DUCRAY-CHEVALLIER, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A microscope with a moveable plate."—Dated 25th February, 1859.

927. CLAUDE ROBARDET, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 28th June, 1855, for "Iron venetian blinds with moveable wings."—Dated 25th February, 1859.

928. PIERRE JOSEPH GUYET, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A system of cocks and clack-valves."—Dated 25th February, 1859.

929. JEAN FRANÇOIS FRÉMONT, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 12th August, 1858, for "A system of openings for hot air."—Dated 25th February, 1859.

930. MARCELIN FRANÇOIS DOROTHÉE CAVALERIE, with Castaings, of 1, Rue des Moulins, Paris, for "A motive power applicable to navigation, railways, to all kinds of machines and industrial purposes."—Dated 25th February, 1859.

931. LOUIS JULIEN CÉLESTIN MIRANDET, of 10, Rue de l'Epée de Bois, Paris, a Certificate of Addition to his Patent of 1st April, 1858, for "A kind of pictures on glass."—Dated 25th February, 1859.

932. MATHURIN ALPHONSE LANGLOIS, domiciled with Bougarel, of 35, Boulevart du Temple, Paris, a Certificate of Addition to his Patent of 1st December, 1853, for "An apparatus for extracting fecula."—Dated 25th February, 1859.

933. CHARLES ALFRED DUFEY, represented by Layssard, of 17, Rue Notre Dame de Nazareth, Paris, for "Improvements in handles in general."—Dated 26th February, 1859.

934. ALEXIS VERGNE, of 9, Rue des Maçons, Sorbonne, Paris, for "A process for obtaining stucco work."—Dated 26th February 1859.

935. ANATOLE HIPPOLYTE MAUBERT, domiciled with Bouvalet, of 100, Boulevart Beaumarchais, Paris, a Certificate of Addition to his Patent of 12th September, 1857, for "An apparatus for air-navigation."—Dated 26th February, 1859.

936. EUGÈNE DENAMPS, of 23, Rue Censier, Paris, for "A process for dyeing wool."—Dated 26th February, 1859.

937. PERIER and POSSOZ, domiciled with Descoues, of 1, Rue de Provence, Paris, for "Improvements in the manufacture of sugar."—Dated 26th February, 1859.

938. JAMES COOKE, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in the treatment of textile tissues."—Dated 26th February, 1859.—(English Patent, expiring 26th July, 1872.)

939. RAABE and LUNEL, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "An apparatus, called 'hippolasso,' for subduing fiery horses."—Dated 26th February, 1859.

* For the French Patent Law see No. 228 of this Journal.

940. Aimable Hippolyte Closier, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in the manufacture of fans for obtaining designs or cuttings resembling lace, &c." —Dated 26th February, 1859.

941. Charles Masson, of 115, Rue du Faubourg St. Martin, Paris, for "A means of cleansing the inside of bottles."—Dated 26th February, 1859.

942. Joseph Anthelme Gay, of 26, Rue Vielle du Temple, Paris, for "Stopping horses."— Dated 26th February, 1859.

943. Elie Edouard Legris, represented by Sassiat, of 4, Rue des Moulins, Paris, a Certificate of Addition to his Patent of 15th March, 1858, for "Metallic packings, &c."—Dated 26th February, 1859.

944. Elie Edouard Legris, represented by Sassiat, of 4, Rue des Moulins, Paris, a Certificate of Addition to his Patent of 3rd May, 1858, for "A mercury-level."—Dated 26th February, 1859.

945. Pierre Georges, domiciled with Lebreton, of 34, Avenue Montaigne, Paris, for "A machine for polishing wood, metals, marble, mirrors, &c."— Dated 26th February, 1859.

946. Arsène Flotard, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "A system of keeping accounts." — Dated 26th February, 1859.

947. Cregeen and Dickson, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Improvements in the treatment of vegetable fibres in general, and in machines, apparatus, and processes employed thereat."—Dated 26th February, 1859. —(English Patent, expiring 16th June, 1872.)

948. Eugène Charles Sonnet, represented by Barrault, of 33, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 10th March, 1858, for "An harvesting machine."—Dated 26th February, 1859.

949. Alexander Schottlander, represented by Herpst, of 39, Rue de l'Echiquier, Paris, for "Improvements in the manufacture of tiles."—Dated 26th February, 1859.

950. François Toussaint Brunelle, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 28th August, 1856, for "Improvements in opera-glasses, &c."—Dated 26th February, 1859.

951. Pierre Joachim Dubois, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 31st July, 1858, for "A system of transmission applicable to foot lathes."—Dated 26th February, 1859.

952. Jules François Victor Mouilleron, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A registering apparatus for public carriages."—Dated 26th February, 1859.

953. Carteron and Dupont, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Processes for rendering paper, tissues, wood, oil, tar, &c. incombustible." — Dated 26th February, 1859.

954. Pierre Louis Bergeon, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "An oyster stand."—Dated 26th February, 1859.

955. Guillaume Julien Defrance, of 2, Rue St. Séverin, Paris, for "A camera-obscura with two optical effects for obtaining proofs instantaneously."—Dated 26th February, 1859.

956. François Marie Guiheneuf, of 5, Rue Vintimille, Paris, for "A disinfecting preservative." —Dated 28th February, 1859.

957. Jacques Noël Boneau, represented by Dreyfous, of 54, Rue de Bondy, Paris, a Certificate of Addition to his Patent of 13th December, 1858, for "Manufacture of a tissue for braces."—Dated 28th February, 1859.

958. Desmet-Séant, represented by Fringant, of 10, Rue Ste. Elizabeth, Batignolles, for "A gas-apparatus."—Dated 28th February, 1859.

959. Jules Hippolyte Queral, of 52, Rue Notre Dame de Lorette, Paris, a Certificate of Addition to his Patent of 8th July, 1858, for "Improvements in electric telegraph apparatus."— Dated 28th February, 1859.

960. Jean Claude Gillet, of 326, Rue St. Jacques, Paris, for "A metal form for the manufacture of hats."—Dated 28th February, 1859.

961. Auguste Jouan, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "An apparatus for the manufacture of sugar and for other chemical operations."— Dated 28th February, 1859.

962. Auguste Prouvost, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 22nd December, 1856, for "Improvements in the arrangement of steam-boilers."—Dated 28th February, 1859.

963. Auguste Prouvost, represent by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 4th April, 1857, for "Arrangements in boilers for increasing, superheating, and regenerating steam."—Dated 28th February, 1859.

964. Charles Garbe, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 6th March, 1858, for "Improvements in pianos."—Dated 23rd February, 1859.

965. Mondollot Brothers, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 26th January, 1853, for "Improvements in apparatus for preparing gaseous liquids."—Dated 28th February, 1859.

966. Louis Camille Leferme, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "A musical percussion instrument, called 'angelophone.' "—Dated 28th February, 1859.

967. Beckmann-Olofson, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "So-called 'hermetic graphite mastic.' "—Dated 28th February, 1859.

968. Jean Pierre André, of 98, Rue de la Harpe, Paris, for "A system of cupping glasses with independent clack-valves." — Dated 1st March 1859.

969. Charles Victor Guyot, of 10, Rue Vendôme, Paris, for "Running knots for braces, &c." —Dated 1st March, 1859.

970. Caselli, domiciled 71, Rue Caumartin, at the Tuscany Légation, Paris, for "Telegraphic paper prepared by means of aluminium."—Dated 1st March, 1859.

971. Claude François Mertz, of 60, Rue St. Louis, Paris, for "Chimneys with slide doors without counter-weights."—Dated 1st March, 1859.

972. Pierre Sicouret, represented by Ducout, of 3, Rue Rossini, Paris, for "A thrashing machine."—Dated 1st March, 1859.

973. Pellerin and the Society Claparède and Commartin, the former of La Chapelle St. Denis, the latter of la Villette, for "A system of pistons for steam-engines."—Dated 1st March, 1859.

974. Joseph Marie Giudicelle, of 11, Rue du Regard, Paris, for "Carriage with a variable leverage, moved by steam or hand on common roads."—Dated 1st March, 1859.

975. Mercier and Bertin, Grande Rue des Près, Près St. Gervais, for "Cigar-cases."—Dated 1st March, 1859.

976. Joseph Giordano, of 18, Avenue du Grand Montrouge, Montrouge, for "A system of rack drill."—Dated 1st March, 1859.

977. Mathias Muller, of 14, Rue de la Monnaie, Paris, for "Bellows for blowing in powder for destroying insects."—Dated 1st March, 1859.

978. George Finlayson, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Improvements in machines or apparatus for sowing or depositing seeds in lands."—Dated 1st March, 1859.—(English Patent, expiring 20th April, 1872.)

979. Major William Talbot, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "An improved apparatus for facilitating the lowering and detaching of boats from ships, being also applicable to other purposes."—Dated 1st March, 1859.—(English Patent, expiring 25th June, 1872.)

980. Libert, Hill, and Co., domiciled with Libert, of 124, Rue Montmartre, Paris, for "Improvements in steel pens."—Dated 1st March, 1859.

981. Jacques Charles Joseph L'Hôte, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 7th June, 1858, for "An inexplosive apparatus for preparing seltzer water, &c."—Dated 1st March, 1859.

982. Henry Jacques Toussaint, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 13th December, 1858, for "Separating substances of the same volume, &c. by means of a column of water."—Dated 1st March, 1859.

983. Edme Eduard D'Heurle, of 39, Rue Poissonnière, Paris, a Certificate of Addition to his Patent of 2nd March, 1858, for "A case for measures and perfumes."—Dated 2nd March, 1859.

984. Jules Rival, of 55, Rue Montmartre, Paris, a Certificate of Addition to his Patent of 22nd March, 1858, for "A manometer with a specific weight and regulator."—Dated 2nd May, 1859.

985. Hugues Marie Duru, of 10, Rue du Cloître St. Jacques, Paris, for "Billiard tables with humming tops."—Dated 2nd March, 1859.

986. Jean Louis Maxime Voxeur, of 8, Rue St. Honoré, Paris, for "Powder for destroying insects."—Dated 2nd March, 1859.

987. Eloi Eugène Derogy, of 33, Quai de l'Horloge, Paris, a Certificate of Addition to his Patent of 9th March, 1858, for "An optical instrument or object glass for photography."—Dated 2nd March, 1859.

988. Charles Lizars, of 3, Rue des Petits d'Hôtels, Paris, for "A water meter."—Dated 2nd March, 1859.

989. Désiré Joseph Goubet, of 115, Rue de Flandre à la Villette, for "An apparatus for covering fire-holes on railways."—Dated 3rd March, 1859.

990. William A. Royce, represented by Tolhausen, of 35, Boulevart Bonne Nouvelle, Paris, for "An improved pneumatic condenser for compressing aeriform or gaseous substances about to be used as motive agents."—2nd March, 1859.

991. James Greene Arnold, represented by Tolhausen, of 35, Boulevart Bonne Nouvelle, Paris, for "Improvements in the manufacture of envelopes."—Dated 2nd March, 1859.

992. Furne, junr., and Tournier, represented by Tournier, of 57, Rue de Seine, Paris, for "An object glass with a double frame."—Dated 2nd March, 1859.

993. Amand Eugène Chrétien Hostellet, of 48, Rue de la Tour d'Auvergne, Paris, for "Easels."—Dated 2nd March, 1859.

994. Jacques Marie Burnichon, of 169, Rue de Lafayette, Paris, a Certificate of Addition to his Patent of 2nd March, 1857, for "Boxes with bellows."—Dated 2nd March, 1859.

995. Maheu, Leconte, and Libry, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "A process for tinning metals."—Dated 2nd March, 1859.

996. Godefroid Scheibel, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 22nd April, 1858, for "A clasp for portemonnaies."—Dated 2nd March, 1859.

997. Paignon and Vaudaux, represented by Brade, of 22, Rue Ste. Anne, Paris, for "A motor worked alternately by hot and cold air."—Dated 3rd March, 1859.

998. Armand Baudet, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in the manufacture of bracelets by applying rosaries thereto."—Dated 3rd March, 1859.

999. Martin Ziegler, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "An apparatus for subliming vegetable substances, camphor, indigo, alizarine, and all other volatile organic substances."—Dated 3rd March, 1859.

1000. François Jean Jamais, of 9, Rue Maître Albert, Paris, for "An oven for potatoes."—Dated 3rd March, 1859.

1001. Pierre Jules Février, of 3, Passage du Grand Cerf, Paris, for "A reflector."—Dated 3rd March, 1859.

1002. Jean Freland, of 41, Chemin de Halage, Courbevoie, for "Zinc purlins and rafters."—Dated 3rd March, 1859.

1003. Pierre Hugueniot, of 51, Rue de l'Echiquier, Paris, for "Frames for toilet mirrors."—Dated 3rd March, 1859.

1004. Louis Christophel, of Haguenau, département du Bas Rhin, for "Pumps which are protected from frost." — Dated 23rd February, 1859.

1005. Alexander Pierre Labatie, of 7, Boulevart de la Comédie, Montpellier, département de l'Hérault, for "Cloth-paper for cigarets."—Dated 1st March, 1859.

1006. Louis Armand César Le Blanc de St. Just, of 67, Rue Millière, Bordeaux, département de la Gironde, for "A steam-engine for extracting stones from quarries."—Dated 4th March, 1859.

1007. Jean Honoré Alphonse Leriche, of 211, Rue de l'Empereur, Rueil, département de Seine et Oise, for "Discolouring and purifying animal, vegetable, and mineral oils for lubricating machinery and for lighting." — Dated 4th March, 1859.

1008. Antoine Humbert, of 62, Rue Boileau, Lyon, département du Rhône, for "A machine for weaving silk stuffs."—Dated 4th March, 1859.

1009. Jean Baptiste Astier, of 30, Rue Crécy, Nantes, département de la Loire Inférieure, for "A moveable socket for bells." — Dated 4th March, 1859.

1010. Claude Marie Laurent Picard, domiciled with Boullemier, of 16, Rue St. Hélène, Lyon, département du Rhône, for "A mechanism with an alternate movement applicable to clock-work, and to mirrors for catching larks."—Dated 4th March, 1859.

1011. Joseph Lallemand, of Lieu de la Villette, Lyon, département du Rhône, for "An apparatus for lubricating railway carriages by means of oil." —Dated 4th March, 1859.

1012. Charles Désiré Roche, of Lafère, département de l'Aisne, a Certificate of Addition to his Patent of 9th March, 1858, for "A process for utilizing the waste-steam of high-pressure engines by means of an outlet-pipe, and a heating apparatus for feeding the generator." — Dated 5th March, 1859.

1013. Philibert Roussy, of 58, Rue de Charlemagne, Lyon, département du Rhône, a Certificate of Addition to his Patent of 6th March, 1858, for "A sector-break, &c."—Dated 5th March, 1859.

1014. Rousset and Perret, junr., of Grande Place, Oullins, département du Rhône, for "A water-meter."—Dated 5th March, 1859.

1015. Pierre Dernoncourt, of Denain, département du Nord, for "A safety lamp with a toothed disk to be used in mines, distilleries, and gasworks."—Dated 17th March, 1859.

1016. Thomas Scott, of 34, Rue d'Elbeuf, Rouen, département de la Seine Inferièure, for "A condensor with plane surfaces."—Dated 2nd March, 1859.

1017. Louis Gustave Linant, of 60, Rue de la Grosse Horloge, Rouen, département de la Seine Inférieure, for "Improvements in railway breaks." —Dated 3rd March, 1858.

1018. Simon Joret, of Guimgamp, département des Côtes du Nord, for "A horse-gin for thrashing corn."—Dated 7th March, 1859.

1019. Pierre and Jean Baptiste Diot, of Fallon, département de la Haute Saône, for "An apparatus to be used as a cone in charcoal kilns."— Dated 9th March, 1859.

1020. Jean Sans, of 84, Rue Française, Béziers, département de l'Hérault, for "Improvements in Fouceuse's plough, as used in the south of France."—Dated 4th March, 1859.

1021. Jean Abt, of Colmar, département du Haut Rhin, for "Iron-work for doors, windows, &c."— Dated 5th March, 1859.

1022. Jacques Aubry, of 9, Rue de la Trinité, Troyes, département de l'Aube, a Certificate of Addition to his Patent of 9th March, 1857, for "A machine for cutting, piercing, and embossing metals."—Dated 7th March, 1859.

1023. Philibert Dubois, of Cusset, département de l'Allier, for "An apparatus for taking the measure for all kinds of stays."—Dated 8th March, 1859.

1024. Jouniaux and Décamps, of Cousobre, département du Nord, for "A system of a regular down motion with counter-weights and catches for frames of marble saws."—Dated 10th March, 1859.

1025. Landre, Gras, and Co., of 26, Cours Bonaparté, Lyon, département du Rhône, for "A vertical parabolical retort for distilling schist and other minerals used for lighting."—Dated 25th February, 1859.

1026. Alexis Roux, of Séon St. Henri, banlieue de Marseille, département des Bouches du Rhône, a Certificate of Addition to his Patent of 11th July, 1854, for "Tiles of baked Seon earth."— Dated 28th February, 1859.

1027. Séraphin Joseph Rénée, of 50, Cours Belzunu, Marseille, département des Bouches du Rhône, for "A cast-iron sink." — Dated 28th February, 1859.

1028. René Robin, of Rochine, near Angoulême, département de la Charente, for "A distilling apparatus."—Dated 5th March, 1859.

1029. Charles Boyer, of 32, Rue du Vieux Marché aux Vins, Strasbourg, département du Bas Rhin, for "A system of steam boilers for fixed and moveable engines."—Dated 5th March, 1859.

1030. Barret and Beure, of Sancey-le-Grand, département du Doubs, for "Ploughs with revolving mould-boards."—Dated 5th March, 1859.

1031. Elizabeth Fantapié, of Rue Chabot-Charny, Dijon, département de la Côte d'Or, for "A process for mending stuffs without sewing."— Dated 7th March, 1859.

1032. Laurent Müller, of Cernay département du Haut Rhin, for "A machine for making stretched paper tubes for spinning."—Dated 7th March, 1859.

1033. Pierre Amanieu, of 32, Rue des Minîmes, Bordeaux, département de la Gironde, for "A system of closing casks containing liquids."—Dated 8th March, 1859.

1034. François Edouard Noël, of 64, Rue Stanislas, Nancy, département de la Meurthe, for "Millstones for grinding corn, vegetables, and other products."—Dated 7th March, 1859.

1035. Jules Lecointe, of St. Quentin, département de l'Aisne, a Certificate of Addition to his Patent of 11th March, 1858, for "A boiler with a multiple surface."—Dated 10th March, 1859.

1036. Thivet and Dickhoff, of Barte Dice, département de la Meuse, for "An apparatus for distributing and measuring pulp in paper machines."—Dated 10th March, 1859.

1037. Alexis Aimable Marchon, of Etampes, département de Seine et Oise, for "A kneading trough for bread, butter, clay, &c."—Dated 10th March, 1859.

1038. Edme Jules Maumené, of 22, Rue Colbert, Reims, département de la Marne, for 'Gaseous liqueurs."—Dated 10th March, 1859.

1039. Vermersch and Briquet, of Turcoing, département du Nord, for "A machine for preparing wool."—Dated 11th March, 1859.

1040. Lambert Auguste Vuillemin, of Marseille, département des Bouches du Rhône, for "An hydraulic and steam motor with pistons of quadrilateral and other forms."—Dated 1st March, 1859.

1041. Jean Baptiste Car, of 104, Rue d'Aubagne, Marseille, département des Bouches du Rhône, for "A machine for making round matches."—Dated 1st March, 1859.

1042. Auguste Arniaud, represented by Aubergier, of 5, Rue de Sion, Marseille, département des Bouches du Rhône, for "A pivot machine for navigation."—Dated 2nd March, 1859.

1043. Grimaud and Gras, of 1, Rue des Pénitents Bleus, Marseille, département des Bouches du Rhône, for "A coffee-roaster."—Dated 5th March, 1859.

1044. Gilles Adolphe Sauveton, of Montauban, département du Tarn et Garonne, for "A mechanical carriage"—Dated 8th March, 1859.

1045. Michele Loup, of Rue de l'Hôpital, Givors, département du Rhône, for "A machine for conglomerating pit-coal, lignite, anthracite, &c."—Dated 8th March, 1859.

1046. Tranquille Lecerf, of 6, Rue des Fossés, Saint Yves, Rouen, département de la Seine Inférieure, for "A furnace for tempering files."—Dated 8th March, 1859.

1047. Jean Baptiste Henri Guigues, of 27, Rue Terrasse, Marseille, département des Bouches du Rhône, for "A purifying and cooling filter."—Dated 8th March, 1859.

1048. Lucien Chamouton, of 4, Rue de Condé, Lyon, département du Rhône, for "A lithographic press."—Dated 8th March, 1859.

1049. François Briotet, of Dijon, département de la Côte d'Or, for "Copper ornaments of edges."—Dated 10th March, 1859.

1050. Théobald Mansard, of Rue de Viel, Bar le Duc, département de la Meuse, for "A process for protecting apartments from smoke."—Dated 11th March, 1859.

1051. Antoine Vergoin, of 13, Place d'Albon, Lyon, département du Rhône, for "Combs for hair dressing."—Dated 9th March, 1859.

1052. Félix Portes, of 32, Rue des Capucins, Lyon, département du Rhône, a Certificate of Addition to his Patent of 9th September, 1857, for "A machine for cutting pieces of chenille."—Dated 9th March, 1859.

1053. Lelarge and Pickon, of 7, Rue de l'Observance, Lyon, département du Rhône, for "Improvements in bobbinet looms."—Dated 9th March, 1859.

1054. Denis Gantillon, of 22, Quai d'Albret, Lyon, département du Rhône, for "A kind of moire."—Dated 10th March, 1859.

1055. Jean Baptiste Berthault, of 62, Quai de Serin, Lyon, département du Rhône, for "A mechanism for boiling and stretching threads."—Dated 10th March, 1859.

1056. Victor Petit, of Rambervillers, département des Vosges, for "Flat tiles of baked clay with two right sides."—Dated 11th March, 1859.

1057. Jacques Foussier, of 2, Place Fontaine des Barres, Limoges, département de la Haute Vienne, a Certificate of Addition to his Patent of 12th March, 1853, for "Inodorous privies."—Dated 11th March, 1859.

1058. Pierre Pfetsch, Directeur de la Saline, of Saint Nicolas Varangéville, for "Working mines of rock salt by means of water."—Dated 12th March, 1859.

1059. André Eléonore Loupot, of Vouziers, département des Ardennes, for "Manufacture of stained paper."—Dated 12th March, 1859.

1060. Pierre Joseph Fontaine, of the Anzin Mines, département du Nord, for "Parachutes with stops."—Dated 14th March, 1859.

1061. André François Emile Robert, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A condensing smoking pipe."—Dated 3rd March, 1859.

1062. Charles Renaux, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 1st March, 1858, for "A shaping lathe."—Dated 3rd March, 1859.

1063. Joseph René Chapelain, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "A mechanism applicable to bits, whereby the most fiery horses may be subdued."—Dated 3rd March, 1859.

1064. Albert Félix Jozwik, of 167, Rue du Faubourg St. Martin, Paris, for "Means for obtaining illimited power and velocity independent from each other, combined with perpetual movement."—Dated 4th March, 1859.

1065. Lebeuf, Milliet, and Co., represented by Perpigna, of 42, Rue Neuve St. Augustin, Paris, for "Improvements in the manufacture of porce-

lain or agate buttons, from any ceramic or plastic vitrifiable substance"—Dated 4th March, 1859.

1066. Adolphe Frédéric Marius Alexandre Iglesia, represented by Perpigna, of 42, Rue Neuve St. Augustin, Paris, for "A system of inlaid floors."—Dated 4th March, 1859.

1067. James Dupré Brabazon, represented by Sautter, of 14, Boulevart Montmartre, Paris, for "Using sails as motors for screws and other propellers of vessels." — Dated 4th March, 1859.—(English Patent, expiring 28th August, 1878.)

1068. Louis Ernest Descroisettes, of 151, Rue du Faubourg St. Denis, Paris, for "Applying silk embroideries on silk collars."—Dated 7th March, 1859.

1069. William Strode, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in gas-lighting and ventilating apparatus."—Dated 4th March, 1859.

1070. Midocq and Gaillard, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in the manufacture of travelling and other bags."—Dated 4th March, 1859.

1071. Jean Meurgey, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in assembling hoops in general." — Dated 4th March, 1859.

1072. Michel Bonière, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in lubricating machinery." — Dated 4th March, 1859.

1073. René Prosper Lavie, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 6th August, 1858, for "Improvements in the construction of horsegins."—Dated 4th March, 1859.

1074. Louis François Clément Brequet, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 22nd October, 1856, for "A printing apparatus for electric telegraphs."—Dated 4th March, 1859.

1075. Louis Hippolyte Ferry, of 31, Rue de Beaune, Paris, for "A kind of dressing-case."—Dated 4th March, 1859.

1076. Louis Albert Thirion, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 2nd November, 1857, for "Improvements in mills."—Dated 4th March, 1859.

1077. Alfred Mengarduque, represented by Barrault, of 33, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 16th August, 1858, for "A mode of stoppering by pressure."—Dated 4th March, 1859.

1078. Marc Reichenbach, of 20, Rue des Cinq Moulins, La Chapelle St. Denis, for "A float with direct indicator, without pulleys, balance, or counterweight."—Dated 4th March, 1859.

1079. Jacques Louis Auguste Legeay, of 68, Rue de Grenelle St. Germain, Paris, for "Rolling mills."—Dated 5th March, 1859.

1080. Louis Séverin Finbert, of 76, Rue Basse du Rempart, Paris, for "A coffee-mill."—Dated 5th March, 1859.

1081. Camille Léon Tronquoy, of 20, Rue Mazagran, Paris, for "A continuous apparatus for distilling, rectifying, and separating tar, resinous substances, &c."—Dated 5th March, 1859.

1082. Jean Baptiste Brûlé, represented by Amouroux, of 333, Rue St. Martin, Paris, for kind of button-buckles."—Dated 5th March, 1859.

1083. François Schmith, of 1, Rue de Poissy, Paris, a Certificate of Addition to his Patent of 29th March, 1858, for "An improved system of manufacturing peat."—Dated 5th March, 1859.

1084. Boyenval and Engler, of 27, Rue de la Glacière, Gentilly, for "A machine for bending iron into spiral shape."—Dated 5th March, 1859.

1085. Henry Jackson, represented by Sautter, of 14, Boulevart Montmartre, Paris, for "Improvements in the manufacture of lubricating substances." — Dated 5th March, 1859.—(English Patent, expiring 26th July, 1872.)

1086. Théophile Herlin, represented by Beluze, of 3, Rue Baillet, Paris, for "A sanitary apparatus for cleansing bottles."—Dated 5th March, 1859.

1087. Carlos de Castro y Franganillo, represented by Meaux St. Marc, of 19, Rue Hautefeuille, Paris, for "Manufacture of candles from animal wax."—Dated 5th March, 1859.

1088. Auguste Noël, of 26, Rue de Crussol, Paris, a Certificate of Addition to his Patent of 12th March, 1856, for "An apparatus for separating fecal matter."—Dated 5th March, 1859.

1089. Joseph Louis Dimier, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in machines for folding and goffering letter envelopes."—Dated 5th March, 1859.

1090. Auguste Hubert Stanislas Trève, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in electric cables."—Dated 5th March, 1859.

1091. Louis Lemancel, of 7, Rue de Valencienne, La Villette, for 'An hydraulic moderator apparatus.'—Dated 5th March, 1859.

1092. Jules Henri Etienne Mareschal, of 51, Rue Grange-aux-Belles, Paris, for "A machine for dressing wood."—Dated 5th March, 1859.

1093. Alexandre Prince, represented by Courrouve, of 3, Rue de la Bourse, Paris, for "Improvements in ornamenting and colouring glass surfaces." — Dated 5th March, 1859.—(English Patent, expiring 22nd December, 1872.)

1094. John Eason, represented by Courrouve, of 3, Rue de la Bourse, Paris, for "Improvements in apparatus and processes for tanning, dyeing, and for obtaining extracts from animal, vegetable, and mineral substances."—Dated 5th March, 1859.—(English Patent, expiring 16th February, 1873.)

1095. Walter Ralston, represented by Courrouve, of 3, Rue de la Bourse, Paris, for "Improvements in goffering and finishing tissues and in machines or apparatus employed thereat." — Dated 5th March, 1859.—(English Patent, expiring 23rd November, 1872.)

1096. Martial Henri Bonabel, of 16, Rue des Vielles Etuves, Paris, a Certificate of Addition to his Patent of 8th March, 1858, for "Machines for

making coppersmiths' articles." — Dated 5th March, 1859.

1097. Simon Alfred Sauvage, of 10, Rue du Petit Carreau, Paris, for "Fastening gloves."—Dated 5th March, 1859.

1098. Jean Deneirouse, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 24th April, 1858, for "A system of substituting continuous paper for cards in jacquard looms."—Dated 5th March, 1859.

1099. Gustave de Pierpont, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Improvements in lime-kilns in general and especially in Simoneau's kiln."—Dated 5th March, 1859.

1100. Brichard and Morizur, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Manchester butterfly gas burners."—Dated 5th March, 1859.

1101. Pierre Prosper Baudouin, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A mechanism for self-actors for winding up thread on bobbins without using guides."—Dated 5th March, 1859.

1102. Charles Macée, of 25, Rue Volta, Paris, for "A cigar case."—Dated 7th March, 1859.

1103. Frederick and Bouquet, domiciled with the former, of 23. Rue d'Orléans St. Marcel, Paris, for "A system of piles for carbonizing wood, pit-coal in forests, and a means of obtaining pyroligneous acids."—Dated 7th March, 1859.

1104. Jean Baptiste Victor Denis Tranchant, of 253, Rue St. Honoré, Paris, for "A machine for dyeing stuffs."—Dated 7th March, 1859.

1105. Antoine Edouard Chilliat, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "A system of twisting silk and of whirls, with a continuous action."—Dated 7th March, 1859.

1106. Philip Davies Margesson, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Improvements in the mode of treating sugar cane and other sacchariferous canes."—Dated 7th March, 1859.—(English Patent, expiring 31st August, 1872.)

1107. François Auguste Marie Barre, represented by Dubois, of 44, Quai d'Orléans, Paris, a Certificate of Addition to his Patent of 18th March, 1858, for "A machine for making paper bags."—Dated 7th March, 1859.

1108. Manuel Paul Jonas Lavater, of 9 and 10, Passage du Saumon, Paris, a Certificate of Addition to his Patent of 26th February, 1858, for "Pneumatic utensils."—Dated 7th March, 1859.

1109. Guyot and Baudot, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A motive mechanism rendered contractile by means of electro-magnetism."—Dated 7th March, 1859.

1110. Maurice Augustin Sormani, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 12th January, 1859, for "A tournure petticoat, &c."—Dated 7th March, 1859.

1111. Etienne Théodore Dumont, of Achoux, département de la Somme, for "Improvements in purlin-tiles."—Dated 9th March, 1859.

1112. Victor Ferre, of 15, Boulevart Lonchamps, Marseille, département des Bouches du Rhône, for "Fuel called 'carbonized vegetable capsules.'"—Dated 11th March, 1859.

1113. Nicolas Perrot, of Dommarieu, département de la Haute Marne, for "A process for preserving vines from frost by means of leaves."—Dated 12th March, 1859.

1114. Camille De Baeker, domiciled with Launoy-Lefébure, of 55, Rue Basse, Lille, département du Nord, for "An apparatus for planting beans and other grain." — Dated 14th March, 1859.

1115. Hugo Fréderic Forbes, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Copying-presses for drawing rooms." — Dated 7th March, 1859.

1116. The Joint Stock Company of the Rochum Mines and Steel Works (Prussia), represented by Hoechster, of 34, Rue des Petits Ecuries, Paris, for "A process for casting steel in clay moulds, and for manufacturing bells, &c. from cast steel." —Dated 8th March, 1859.

1117. Georges Henri Bourgoin, of 28, Cours la Reine, Paris, for "Extracting oil, &c. by means of centrifugal power."—Dated 8th March, 1859.

1118. Pierre Aléxandre Guillon, domiciled with Johamet, of 56, Rue de Sêvres, Paris, for "Improvements in wind and other mills." — Dated 8th March, 1859.

1119. Félix Hippolyte Florquin de St. Simon, of 73, Rue de Vaugirard, Paris, for "A machine for decorticating all kinds of substances."—Dated 9th March, 1859.

1120. Augustine Chateau, represented by Daubréville, of 60, Boulevart de Strasbourg, Paris, for "Handles of smoothing-irons."—Dated 9th March, 1859.

1121. Augustine Chateau, represented by Daubréville, of 60, Boulevart de Strasbourg, Paris, for "A Dutch-oven with several combined spits."—Dated 9th March, 1859.

1122. Bonnardot, Vasner and Letrillard, represented by Dreyfous, of 54, Rue de Bondy, Paris, for "Improvements in thrashing machines." —Dated 9th March, 1859.

1123. Jean Merard, of 37, Rue des Deux-Ponts, Paris, a Certificate of Addition to his Patent of 14th June, 1858, for "Improvements in hats."—Dated 9th March, 1859.

1124. Louis Claude Petit, of 62, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 12th April, 1855, for "Improvements in piston brass instruments." — Dated 9th March, 1859.

1125. Gustave Adolphe Salicis, of 43, Rue des Fossés St. Victor, Paris, a Certificate of Addition to his Patent of 22nd March, 1858, for "Barotrope apparatus (moving weights)."—Dated 9th March, 1859.

1126. Henri Nicolas Moyon, represented by Herpst, of 39, Rue de l'Echiquier, Paris, for "Improvements in the manufacture of boots."—Dated 9th March, 1859.

1127. Pierre Joseph Pouplin, of 87, Rue Ménilmontant, Paris, a Certificate of Addition to his Patent of 3rd November, 1858, for "Drawing-room pistols."—Dated 9th March, 1859.

1128. Sulzberger and Graf, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "A machine for folding and stitching printed sheets."—Dated 9th March, 1859.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

List of Patents, with Claims annexed, issued from the United States Patent Office, for the week ending 12th April, 1859, and each bearing that date.

No. 23,537. J. Wallace Arndt, of Green Bay, Wis., for an "Improved machine for noting the sums of numbers added."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement of the three indexes *c*, *m*, and *k*, on a dial marked with units, hundreds, and thousands, in combination with the swivel arm *d*, the ratchet wheel D, and with the pinions *c*, *h*, and *i*, and with the gear wheels F, G, H, and I, or their equivalents, to operate substantially as and for the purpose specified."

No. 23,538. Wm. H. Arnold, of Washington, D.C., for an "Improved projectile for fire-arms."

"What I claim, and desire to secure by Letters Patent, is, combining with hollow base projectiles B, a shaft R, split at its extremity and otherwise constructed as described."

No. 23,539. J. E. Atwood, of Mansfield Centre, Conn., for an "Improvement in gauging threads."

"What I claim as my invention, and desire to secure by Letters Patent is, an apparatus consisting of a series of rollers, or other equivalent devises, so arranged and applied that their surfaces combine, to constitute a number of gauges, through which the thread is conveyed by suitable means, and by which its thickness is measured at two or more points at the same time, and a multiplied measurement obtained, substantially as herein described."

No. 23,540. Silas D. Baldwin, of Milwaukie, Wis., for an "Improvement in gas regulators."

"Having thus fully set out the construction and operation of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, 1, the annular recess or chamber (W), for the purpose herein stated. 2d, and in combination with a regulator having such recess, I claim the union piece (*u*), arranged and operated as herein set forth."

No. 23,541. James K. Barker, of Lawrence, Mass., for an "Improved shutter operator."

"I do not claim the strap C, or the ornamental covering D, or any particular kind of fastening, as the same may be accomplished in many known ways, as by loops in the cord, links of a chain, or by a wheel with cog and catch, but I have adopted the strap as the most convenient of known ways of fastening a cord, it admitting an ornamental covering: but what I do claim as my invention, and desire to secure by Letters Patent, is, the use of the block or arc A and B, of convenient size, to be fastened to the blind or building, as described in this specification, and for the purpose herein described. I also claim the design of arranging the pipes and cords, and the design of opening, shutting, and fastening exterior blinds, in the inside of buildings, by means described in this specification."

No. 23,542. Fredk. S. Barnard, of New York, N.Y., for an "Improvement in dove-tail joints for wood, &c."

"I do not limit myself to the material in which my aforesaid tongued and grooved sectional dovetail is formed, but intend to apply the same, whenever available. Having thus described the nature of my invention, and shown some of the ways in which the same may be applied, I remark that other instances of its utility will suggest themselves to the carpenter, builder, cabinet maker, or others, such as in the construction of columns, pilasters, table tops, and a great many other articles, whenever available. The tongued and grooved sectional dovetails can be formed by means of saws and beveled gauges, or by mechanism especially adapted to the purpose for which I propose hereafter to seek Letters Patent. What I claim as my invention, and desire to secure by Letters Patent, is, the tongued and grooved sectional dovetail joint to connect wood or other material together, in substantially the manner specified."

No. 23,543. Alex. Beckers, of New York, N. Y., for a "Stereoscope case."

"Having thus described my invention, what I claim, and desire to secure by Letters Patent, is, 1st, the picture frames E, constructed of elastic wire, or of any other suitable substance, and provided with a hook C, for adjusting the pictures in the centre, substantially as herein described. 2d, I claim the arms H, arranged in such relation to the pictures, that by the motion of the arms each of the pictures, when brought before the eye-glasses, can be moved to and from the same until it comes into the proper focus, substantially in the manner herein specified."

No. 23,544. Abner Beeler and John B. Christian, of Mount Carroll, Ill., for an "Improved pump."

"What we claim as our invention, and desire to secure by Letters Patent, is, the combination of two sliding cylinders with each other and with a third stationary cylinder, arranged and operating substantially in the manner and for the purposes herein specified."

No. 23,545. Francis H. Bell, of Washington, D.C., for an "Improvement in self-priming gun-lock."

"What I claim as new, and desire to secure by Letters Patent, is, the combination of mechanical devices, substantially as herein described with the slide (E), by means of which the latter can be either kept rigidly in position over the mouth of the magazine chamber, thus intercepting all communication with the latter, or be thrown in gear with the lock plate, so that by cocking the hammer it will be operated in such manner as to force a cap from the magazine chamber into the discharge chamber of the hammer on the descent of the latter upon the nipple, for the purposes set forth."

No. 23,546. Jacob Benner, of Alleghany, Pa., for an "Improvement in grain separators."

"Having thus described the nature, construction, and operation of my improvement in separators, what I claim as my invention, and desire to secure by Letters Patent, of the United States, is, first, the arrangement of the receiving chamber (D), separating chamber (C), collecting chamber (B), and gathering chamber (E), when used in connection with the suction fan (*a*), as herein described and represented, and for the purpose set forth. Second, the arrangement of the shutes (*e*) and valves (*f*), when used in connection with the conical or convex bottom (*h*), of the chamber (B), as herein described and for the purpose set forth."

No. 23,547. Jacob Benner, of Alleghany, Pa., for an "Improvement in smut machines."

"Having thus described the nature, construction, and operation of my improvement, what I claim as of my inven-

tion, and desire to secure by Letters Patent of the United States, is, first, the use of plate (*p*) with the cone (8) and the opening (*o*) between the lattice work (*v*) and plate (*p*), when used in connection with the suction fan (*m*), the beaters (*q*) on drum (*r*), and the flues (D), (F), and (*e*), as herein described, and for the purpose set forth. Second, the arrangement of the chambers (A), (B), (C), and (L), and the flues (D), (F), and (*e*), when used in combination with suction fan (*m*), lattice work (*v*), opening (*o*), plate (*p*), with cone (8), and beaters (*q*) on drum (*r*), as herein described, and for the purpose set forth. Third, the use of the straight or perpendicular part (X), with cap (7) of the casing (*y*) of chamber (A), for the purpose of forming an eddy in chamber (L), as herein described, and for the purpose set forth."

No. 23,548. Hiram Berdan, of New York, N.Y., for an "Improved bread cutter."

"What I claim as new, and desire to secure by Letters Patent, is, the arrangement of certain devices, viz., the adjustable cavities, or their equivalents, in combination with the cutting-off knife, or its equivalent, and the large cylinder and piston, or their equivalents, and the so connecting the several parts that the amount of dough displaced by the piston shall be exactly equal to the cubic contents of the cavities presented for filling between each stroke of the cutting-off knife, substantially as and for the purpose specified. I also claim the devices for rounding up the loaves, as they fall from the cavities, consisting of the grooved roller and shield, or their equivalents, the roller having a vibratory motion, in the manner and for the purpose specified, in combination with the preceding arrangement of devices claimed, substantially as and for the purpose specified."

No. 23,549. Douglas Bly, of Rochester, N. Y., for an "Improvement in attaching thills to vehicles."

"I do not claim the hook form of the block D, nor the mere use of a shoulder to sustain the pressure of the thills or pole in backing in any other connection; but what I claim as my invention, and desire to secure by Letters Patent, is, the construction and arrangement of the movable piece or block E, having the notch G and a screw shank in half and slightly wedged shaped, in combination with the oblique shoulder H on the notched screw shank R and with the hook J of the block D, substantially in the manner and for the purposes herein set forth."

No. 23,550. Michael Brayer, of Rochester, N. Y., for an "Improved device for drawing saw-dust, etc. from stave machines."

"I do not claim a reciprocating knife gate working in the arc of a circle, for such device has been previously used; but having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the employment or use of the levers *n*, *n*, in combination with the inclined bed A, arranged substantially as and for the purpose set forth."

No. 23,551. Barnes Clayton, of Philadelphia, Pa., for a "Fastening for shirt studs."

"Having thus fully described my improved fastening, and its mode of operation, what I claim as new, and desire to secure by Letters Patent, is, the armed post (B), in combination with the crosspiece (D) fixed to the stem (C) of the front piece (A), the same operating together substantially in the manner and for the purpose set forth and described."

No. 23,552. Levi H. Colborn, of Baltimore, Md., for an "Improvement in harvesters."

"I do not confine myself to any particular dimensions or pitch of the spiral; what I claim as my invention, and desire to secure by Letters Patent, is, the spiral revolving cutter, constructed and arranged substantially as described, with a continuous opening through its centre for the purpose specified."

No. 23,553. I. M. Colman, of Milwaukie, Wis., for an "Improved variable cut-off for steam engines."

"What I claim as my invention, and desire to secure by Letters Patent, is, combining the double-seated balanced or equilibrium valve with the ordinary slide valve of steam engines, as herein set forth."

No. 23,554. I. P. Crutcher, of Silver Spring, Tenn., for an "Improvement in cotton seed planters."

"I claim the rotating hollow chamber C, constructed as described, in combination with the clearer and agitator *f* and swinging frame B, substantially as and for the purposes set forth."

No. 23,555. Josiah Danforth, of Middletown, Conn., for an "Improvement in hernial trusses."

"Having thus fully described my invention, I do not claim the crossing of the springs 4, 4; but what I claim as my invention, and desire to secure by Letters Patent, is, the uniting by a screw or rivet the two springs 4, 4, at a given point 2 from the end of each, with pads attached, which can be adjusted to the body without any additional spring, and thereby making the arrangement and combination of the two springs 4, 4, with their respective pads, a truss of itself."

No. 23,556. Edwd. L. Dorsey, of Greenwood, Ind., for an "Improved churn."

"Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is, the employment of the trundle wheel C, staff E, pitman F, and cog wheel H, substantially in the manner herein shown, for the purpose of giving, at the same time, a vertical and a circular motion to the dashers for churning butter, as is fully set forth."

No. 23,557. Nathl. Drake, of Newton, N. J., for an "Improvement in guide attachment for vehicles."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the slotted pole strap bar F, and catch G, placed on and connected with the draft pole D, respectively as shown, in connection with the cords *c*, *c*, attached to the catch G, passing through the uprights E, and sheeves *d*, *d*, of the horse collars, and attached to the foot levers H, H, or their equivalents, substantially as and for the purpose set forth."

No. 23,558. John B. Duane, of Schenectady, N.Y., for an "Improvement in seeding machines."

"What I claim as new, and desire to secure by Letters Patent, is, 1st, the arrangement of the vibrating toothed board G, and agitating bar E, connected by the lever H, in connection with the adjustable slide *f*, and perforated bottom *d*, and grooved roller F, the whole being arranged to operate as and for the purpose set forth. 2nd, the roller H, when attached to the frame A, by the bent levers I, I, and connected with the caster wheels M, through the medium of the bars J, J, K, K, L, L, arranged substantially as shown, for the purpose set forth."

No. 23,559. Richd. H. Dutton, of Philadelphia, Pa., for an "Improvement in artificial limbs."

"I do not claim the invention of artificial limbs, or of their several parts thereof generally; but what I claim as my invention, and desire to secure by Letters Patent, is:—Claim 1st.—The use of the hardened cylindrical tube A, in constructing joints for artificial limbs, substantially as and for the purposes set forth and described. 2nd, the use of the feather spring D, when so constructed and arranged to operate, substantially as herein set forth. 3rd, the use of the bolt E, and pulleys F, F, when so constructed and arranged for the purpose herein described. 4th, the use of the spring G, when so constructed and applied to act, substantially as and for the purpose set forth and described."

No. 23,560. Thos. Fildes, of Media, Pa., for an "Improvement in oil cans for lubricating."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, attaching the oil can D, by means of a clamp B, to a handle A, and using in connection therewith, the lever or bar C, actuated by the cord *i* and slide *k*, or their equivalents, substantially as and for the purpose set forth."

No. 23,561. James Ford, of Wabash, Ind., for an "Improvement in grain drills."

"Having thus described my invention, I claim, and desire to secure by Letters Patent, the arrangement and combination of the seed box E, lever N, rod P, slide S, lever M, and tilting frame T, T¹, as and for the purposes herein shown and described."

No. 23,562. Elbridge Foster, of Hartford, Conn., for an "Improvement in covers for traveling trunks."

"What I claim as my invention, and desire to secure by Letters Patent, is, the air inflated trunk cover, in the manner substantially as herein set forth and for the purpose described, as a new article of manufacture."

No. 23,563. Washington L. Gilroy, of Philadelphia, Pa., for an "Improvement in coffee roasters."

"I am aware that 'reversibly inclined concentrating plates' have been applied to the 'inner circumference of a revolving coffee roasting cylinder,' for the purpose of preventing the coffee from 'accumulating in piles at the heads of such cylinder,' during the operation of roasting, as in Heerman's patent of 7th September, 1858, but as this result cannot take place in a spherical roaster, during a rotary motion upon its axis, because, from its shape the contained coffee must necessarily gravitate to, and slide along the middle of its bottom, or the part nearest to the fire, an arrangement therein of 'concentrating plates' would be worse than useless; therefore, I do not claim broadly the use of plates or guides in coffee roasters, but what I claim as new, and desire to secure by Letters Patent, is, the arrangement of the two sets of the united staying and guiding pieces (B, B, and B^1, B^1,) on the inner side of the said hollow sphere, each set being placed diametrically opposite to the other, and with their apexes in the direction of the rotary motion of the said sphere, that they may, in succession, operation in combination with the interior spherical curve of the latter, during its rotary motion, to remove the coffee from the middle of the bottom of the said sphere toward the ends thereof, and essentially permit it to fall gradually over the edges of the said staying and guiding pieces, into the middle of the bottom again, as specified, thus rendering the said spherical coffee roaster perfect in its operation as described."

No. 23,564. Fayette Gould, of Huntingdon, N.Y., for "Improved calipers."

"I do not claim a stationary and sliding jaw, fitted to a graduated bar, for such device has been previously used for measuring, and is well known; but having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, in combination with the jaws B, C, and graduated bar A, the dial plate *f*, and index *e*, the latter being actuated by the pinion *c* and rack *b*, substantially as and for the purpose set forth."

No. 23,565. Henry H. Graham, of Paterson, N. J., for an "Improvement in chairs for rail road bars."

"Having thus described my said invention, and the advantages thereof, I wish it to be understood that I do not claim a chair taking the side of the rail, and coming up to the top thereof, neither do I claim a cross key or bolts uniting the rail by the use of fish bars, or similar devices; but I do not know of any previous instance in which the horizontal binder and vertical key spike have been used to bind the ends of the rails into a chair, having a vertical side, and fitted to receive the rail; therefore, what I claim as my invention, and desire to secure by Letters Patent is, the the horizontal binder *d*, and vertical wedge *e*, constructed substantially as set forth, in combination with the chair that receives and sustains the ends of the rails, in substantially the manner described and shown."

No. 23,566. Marshall Granniss, of Waterbury, Conn, for an "Improved carpet fastener."

"Having described my invention, I claim as an improved article of manufacture, a carpet fastener, composed of a plate B, provided with ears (*d*, *d*,) and a fork or plate A, A^1, having prongs (*a*, *a*,) as herein shown and described."

No. 23,567. Edwin J. Green, of Valparaiso, Ind., for an "Improvement in joint-bodied buggies."

"Having thus fully described the nature of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, connecting the front axle of a carriage to the body by means of a swivel joint, composed of shaft G, king bolt E, turning plate D, and stationary plate C, when the latter is secured directly to the body of the carriage, substantially in the manner and for the purpose herein described. I also claim connecting the front springs to the coupling or reach by means of the shaft G, which is welded or otherwise secured to said springs, as herein represented. I also claim, in combination with a hinged carriage body, the braces P and Q, for the purpose of preventing the rear axle from being thrown angling, when the carriage is loaded heavier on one side than on the other, substantially in the manner herein described."

No. 23,568. Ira Griggs, of Utica, N. Y., assignor to the Utica Screw Manufacturing Company, for an "Improved machine for threading screws."

"What I claim as my invention, and desire to secure by Letters Patent, is,—1st, so applying the rest E, and controlling it by a spring *d*, or its equivalent, as to provide for its longitudinal movement in and independently of the carriage, substantially as and for the purposes herein described. 2nd, fitting the cutter stock with an eccentric *m*, operated by means, substantially as described, to provide for it a movement for tapering the point of the screw, independent of the vibrating movement to feed the cutter, in cutting the other portion of the screw, as herein set forth. 3rd, and though I do not claim broadly a two-pointed cutter, I claim the construction of the cutter with two points at such a distance apart as to straddle two turns of the thread and the intervening space, substantially as and for the purpose set forth."

No. 23,569. Ira Griggs, of Utica, N. Y., assignor to the Utica Screw Manufacturing Company, for an "Improved machine for nicking heads of screws."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of the holding dies and feeding slider in a carrier F, which swings upon the same shaft which carries the cams for operating the said dies and slider, and operates in combination with the notching saw, substantially as herein described. And I also claim the discharging of the notched blanks from the holding dies in a lateral direction, by the introduction of the new blanks into the said dies, as herein set forth."

No. 23,570. H. S. Hall, A. D. Hunt, and C. J. Winchester, of Jamestown, N. Y., assignors to H. S. Hall, A. D. Hunt, and C. E. Jeffords, of same place, for an "Improved machine for tapering sticks."

"Having thus described our invention, what we claim as new, and desire to secure by Letters Patent, is, the rotating cylinder C, provided with the adjustable bearings *j*, *j*, and cutter *k*, one or more, when said bearings and cutter are operated through the medium of the plate D, bar E, with inclined bar *q* attached, and the rack and pinion *a*, *b*, in connection with the springs *e*, or their equivalents, substantially as described."

No. 23,571. Loren Hale, of Milford, Mass., for an "Improved elastic polishing wheel."

"What I claim as my invention, and desire to secure by Letters Patent, as an improvement in wheels for grinding and polishing, is, the hollow elastic ring, operating as set forth, for the purpose specified."

No. 23,572. Wm. J. Hamersley, of Hartford, Conn., for an "Improvement in stirrups."

"What I claim, therefore, and desire to secure by Letters Patent, is, a new, useful, and improved article of manufacture as a saddle stirrup, the employment of the tube C, spring E, spindle D, or their equivalents, for the purpose substantially as described."

No. 23,573. H. P. Hart, of New Woodstock, N. Y., for an "Improved bed bottom."

"The particular improvement which constitutes my said invention, and which I claim as having been originally and first invented by me, is, the arrangement described of the springs *b*, hooks *a*, and rails or rods *g*, in combination with each other, by which the turns of the hooks are made to form shoulders to support the springs against the pressure of the rods *g*, when these are made to bear directly upon both ends of the springs as described."

No. 23,574. Chas. T. Harvey, of Marquette, Mich., for an "Improvement in piers or breakwaters."

"I do not claim of itself a crib or frame of timber filled with stone or other material, and to be sunk on the bed of a river, lake, or sea, as such is well known to engineers; but what I do claim is, the combination and arrangement of the adjustable bottom fender or crib *h*, with the pier constructed substantially in the manner as specified; the said fender being hinged or so applied to the pier as to be capable of adapting itself to the slope of the bottom in front of the vertical side of the pier, and of protecting the foundation of such pier from the corroding action of currents, the whole being substantially as herein-before specified."

No. 23,575. Thos. Harvey, of Baltimore, Md., for an "Improvement in horse collars."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of the parts forming the body of a horse collar, and the construction of an underback in such form as that the outer edges of the underback, and the face of the collar and the outer back are all made perfectly secure by an underseam, and at the same time the underseam is hid from view and wear, as also showing the stitched edge of the outer back in its proper place, all being accomplished previously to the filling of the collar (instead of putting on the outer back after the collar is filled, as is the manner in putting together a case collar)."

No. 23,576. Thos. Harvey, of Baltimore, Md., for an "Improvement in horse collars."

"What I claim as my invention, and desire to secure by Letters Patent, is, the construction and addition of a fancy welt to a welted horse collar; the same being perfectly adapted to its location, being alongside of the usual welt, and so formed as to bring it directly down on the face of the collar, and thus showing a stitched edge, as also being in the proper place to prevent the hame tug from cutting into the collar, as herein set forth."

No. 23,577. Wm. Cleveland Hicks, of Boston, Mass., for an "Improvement in sewing machines."

"Firstly, I claim transmitting the motion to the needle stock, from that cam or crank on the main shaft which drives the said stock, by means of a pinion interposed between the connecting rod and the needle stock, and combining the two, by rack teeth cut on each and meshing into said pinion, whereby I am enabled to impart to the needle stock the precise motion of said cam or crank, as set forth. Secondly, I claim setting the feed wheel, or other feeding mechanism, and the shuttle race, in such position beneath the sewing table that the direction in which the materials will be fed and sewed shall be in a line parallel with the bracket arm, and toward or into the bight formed by said arm and the table, as set forth. Thirdly, I claim the herein-described apparatus for giving out and taking up the slack of the thread, consisting of a partially revolving crank or arm, placed and operated substantially as set forth."

No. 23,578. W. T. Hildrup, of Harrisburgh, Pa., for an "Improvement in rotary harrows."

"Having thus fully described my improvement, what I claim as new, and desire to secure by Letters Patent, is, the arrangement of the bars E, E, sliding piece F, and braces I, I, draught bar C, substantially in the manner herein specified, for the purpose of giving two or more harrows a self-adjusting movement to or from each other, as is herein fully set forth."

No. 23,579. Saml. A. Hill and David Alter, of Freeport, Pa., for an "Improvement in lamps."

"We do not claim, separately, the cap E, nor any portion of the device covered by the Patent granted to P. Plant, April 6, 1858; but having thus described our invention, what we claim as new, and desire to secure by Letters Patent, is, the arrangement and combination of the strip F within the cap E, as and for the purpose herein shown and described."

No. 23,580. Wm. C. H. Holmes, of Barnesville, Geo., for an "Improvement in plows."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of the double beams *a*, *a*, hook *d*, cross adjustable braces *b* and *c*, shanks *k*, and braces *m*, the whole being constructed in the manner described for the purpose specified. I also claim, in combination with the above, the seed dropper *f*, constructed for operation conjointly as set forth."

No. 23,581. Wm. R. Jackson, of Baltimore, Md., for an "Improved railroad car seat and couch."

"Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is, the method herein described of constructing the ordinary reversible seats of railroad cars, so that the backs can be brought down into line with the bottoms, but this I only claim when the backs, when so brought down, occupy the positions previously occupied by the bottoms, and the bottoms are used to fill the intermediate spaces between them, substantially as described and shown."

No. 23,582. Wm. B. Johns, of the United States Army, for an "Improvement in knapsacks."

"I do not claim the mere connecting of sheets together, nor of themselves the devices used; but I claim as new the construction of knapsacks so as to be entirely separated from their slings, and with the means of uniting several together and stretching them as described, so that the knapsack will perform the double function of sheltering the soldier and holding his kit, substantially as specified."

No. 23,583. Henry Johnson, of Washington, D. C., for an "Improvement in burners for vapor lamps."

"I am aware that a fluid pipe for conveying the fluid to the generator is not new, nor is a tube for conveying the gas from the generator to the burner new, therefore I do not claim either of them as new or of themselves, nor do I claim the thumb-screw for regulating the flow of the liquid to the generator, as this is not new; but what I claim as new, and desire to secure by Letters Patent, is, the generator *i*, burner *g*, and packing box *b*, constructed substantially as described, in combination with gas pipe *h* and fluid pipe *f*, arranged and operating substantially as described and for the purposes herein set forth."

No. 23,584. Isaac G. Johnson, of Spuyten Duyvil, N. Y., for an "Improvement stove covers."

"Having thus fully described my newly-constructed center piece for stoves, ranges, &c., what I desire to secure by Letters Patent is, the said center piece, constructed of malleable cast iron, as an article of manufacture, as above specified."

No. 23,585. Wm. Johnson, of Hampstead, N.H., for an "Improvement in machines for chamfering soles of boots and shoes."

"I claim the improved chamfering tool or manufacture as constructed with its sole rest and presser, arranged with respect to the carrier *f*, and the knife holder, substantially as shown in the accompanying drawings and as herein-before specified."

No. 23,586. Wm. Kegg, of Lassellsville, N.Y., for an "Improved mortising machine."

"What I claim as my invention, and desire to secure by Letters Patent, is, the method of feeding along the work as specified, consisting essentially of the feeding wedge or wedges M, M, combined with the arms or projections N, N, sliding bolts O, O, and adjustable cams P, P, and arranged in connection with the feeding table G, frame A, and sliding frame B, substantially in the manner herein described. I also claim the adjustable stops Q, Q, and notches *m*, *m*, in the wedges M, M, with their suspending hooks or staples *n*, *n*, arranged as described in combination with the feeding apparatus for the purpose set forth. I also claim the combination of the double scale *d*, on the face of the feeding table G, with the movable or adjustable pointer *f*, in the bed piece E, arranged and operating in the manner and for the purposes specified. I also claim the supporting index standard F, in combination with the scale *g*, and arrangement *a*, *a*, *b*, *c*, for adjusting the bed piece of the feeding table in position and securing it in place substantially as described. I also claim the 'key tenon' T, fitting into the oblique groove *v*, in the bottom of the feeding table G, for the purpose of properly securing and tightening the said table on the bed piece E^1, while at the same time the desired freedom of its motion is allowed substantially as set forth."

No. 23,587. Gilbert J. Kingsbury, of Rochester, N.Y., for an "Improvement in stoves."

"I do not claim employing side grates merely, or admitting air, to consume the gaseous products of combustion when the devices and arrangements therefor differ substantially from my own; but I claim constructing the fire pot or furnace B, so that a portion thereof is flaring or funnel shaped, yet having side grates or bars, with perpendicular faces *a*, *a*, and flame passages *b*, *b*, with air tubes and jets *i*, *o*, and grate cap *c*, when combined with the interior feeding cylinder D, the whole arranged and operating substantially in the manner and for the purpose herein shown and described."

No. 23,588. Saml. Lamon and W. S. Gaskill, of Van Wert, Ohio, for an "Improved device for heating feed water of steam boilers."

"Having thus described our invention, what we claim as new, and desire to secure by Letters Patent, is, the cylinder or other suitable vessel A, provided with the induction and eduction exhaust steam pipes B, C, and the spiral or helical feed water passages E, arranged substantially as and for the purpose set forth."

No. 23,589. A. B. Latta, of Cincinnati, Ohio, for an "Improvement in steam generators."

"Having thus described my improvement, what I claim as new, and desire to secure by Letters Patent, is, the method of regulating the circulation of water through the division coils, by means of a dividing piece A, constructed in the manner and for the purposes substantially as set forth."

No. 23,590. Richd. S. Lawrence, of Hartford, Conn., for an "Improvement in self-priming gun lock."

"What I claim as my invention, and desire to secure by Letters Patent, is, — 1st, the 'shut off' *g*, constructed, applied, and operating substantially as and for the purposes herein specified. 2nd, constructing the driver with its rear portion of about double the thickness of the pellets, and with the wedge-like bevel 11, and the groove 12, substantially as and for the purpose herein described. 3rd, the combination of the downwardly extended tooth 20 of the cover spring, and the notches 17, 18, in the shut-off, and *k* in the lock plate, substantially as and for the purpose herein set forth."

No. 23,591. HENRY LOCKWOOD, of New York, N. Y., for an "Improved alarm lock."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, 1st, the bar L, provided with the buttons e, e^1, connected with the hammer rod D, and arranged with the latch E and bolt J, provided with projections g, h, substantially as and for the purpose set forth. 2nd, the movable or adjustable plate or disk M, arranged with the key holes j, k, k, and provided with projections j^1 to act on the button i of the bar L, substantially as and for the purpose set forth. 3rd, the combination of the plate or disk M, and bar L, when arranged with the latch E, and bolt J, to operate as described."

No. 23,592. GILDEROY LORD, of Watertown, N. Y., for an "Improvement in harvesters."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the rake head, constructed as described, in combination with the endless belt O, and tripping foot or hand lever Q, m, substantially as and for the purposes set forth. 2d, the combination of the ledge L^1 with the spring catch L of the rake head, arranged substantially as and for the purposes set forth."

No. 23,593. EDWD. LYNCH, of Washington, D. C., for an "Improvement in steam boilers."

"Having thus fully described the character and advantages of my invention, what I claim as new, and desire to secure by Letters Patent, is, circulating the water and aiding the generating of steam in the main boilers of ocean steamers, by passing the steam from the steam space of an auxiliary boiler into the water of the water space below the ash pit of the main boilers, as herein set forth."

No. 23,594. EDWD. LYNCH, of Washington, D. C., for an "Improvement in steam engines."

"Having thus set out my invention, what I claim as new, and desire to secure by Letters Patent, is,—1, the arrangement of the several parts of the engine in their relation to each other and to the propeller shaft, as herein set forth. 2d, I claim constructing the connecting rod of one of the cranks or cross heads, in the manner described, so as to allow of its surrounding the propeller shaft, as herein described."

No. 23,595. HENRY MARTIN, of Louisville, Ky., for an "Improved folding life-boat."

"I do not claim of themselves either the hinged or pivoted ribs, or the hinged gunwale bars; but what I do claim as new, and desire to secure by Letters Patent, is, the within-described arrangement of the ribs, one half of which folds towards one, and the other half towards the other side, in combination with the hinged bottom boards D, which, by means of slots $e \times$, secure the ribs in an upright position, and which are provided with seats E, which are hinged to the bottom boards by means of rods d, and which are connected by the dovetailed projections d^1, the whole being constructed and operated, substantially as and for the purpose set forth."

No. 23,596. JONATHAN M. MATHEWS, of New York, N. Y., for an "Improvement in carpet bags."

"I do not claim as new any modification or construction of the bag, for they have been constructed precisely as herein shown and described; but having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the combination of the two frames A, B, with the catches E, E, substantially as and for the purpose specified."

No. 23,597. JOSEPH W. MAUTERSTOCK, of New York, N. Y., for an "Improvement in metallic lath."

"Having described my invention, I claim as an improved article of manufacture, a metallic lathing, composed of plates provided with slits, ridges, and furrows, as herein shown and described."

No. 23,598. JAMES MONTGOMERY, of Baltimore, Md., for an "Improved screw-propeller."

"I claim as new, and of my invention, and desire to secure by Letters Patent, a screw propeller, composed of a plurality of blades attached to their shaft, in one plane or nearly so, when surrounded by a containing cylinder firmly attached to the peripheries of the said blades, substantially in the manner and for the purposes set forth."

No. 23,599. RICHD. MONTGOMERY, of New York, N. Y., for an "Improved machine for corrugating metal plates."

"Having described my improved machine for corrugating iron for boiler plates and other purposes, what I claim therein as new, and desire to secure by Letters Patent, is, first, feeding the sheets or plates of metal at the proper time by a feeding device, constructed and operated substantially as above described. Second, the feeding device, above described, in combination with the adjusting pins on the first set of corrugating rolls, as herein set forth. Third, the combination of two sets of corrugating rolls with the side guides h, h, constructed, arranged, and operated substantially as shown and described. Fourth, I also claim the corrugated sweeping and forming roll w, constructed and used as and for the purposes described."

No. 23,600. THOS. W. H. MOSELY, of Cincinnati, Ohio, for an "Improvement in attaching iron roofing."

"What I claim as my invention and improvement in iron roofing, is, first, securing the metallic roofing to the ribs or purlins, so that it may slide or move freely upon and in the direction of the length of the purlins, substantially as herein set forth. Second, I claim securing the purlins to the rafters of the building, so that they may have freedom of motion in the direction of their length, substantially as herein set forth. Third, I claim the combination of the chairs c, double flanged rail e, anchors n, and metallic roofing m, as herein set forth."

No. 23,601. E. P. NEEDHAM, of New York, N. Y., for an "Improvement in reed musical instruments."

"I do not claim the arrangement of one or more sets of reeds above the keys in any other manner than that herein described; but what I claim as my invention, and desire to secure by Letters Patent, is, 1st, applying and arranging two or more actions one above another above the rear portion of the key board of a harmonium or other reed instrument in such a manner, substantially as herein described, that one or more of such actions may be removed at any time and any one be exposed for repair or other purpose. 2nd, in combination with the so arranged actions, I claim the passages e, e, and upright passage f, arranged as herein described, to combine the said actions with the bellows. 3rd, combining the several valves, or two or more of them, with the key by a system of push pins, or other equivalent direct connection from one valve to another, substantially as herein described. 4th, the sound board g applied to constitute the back of the wind passage f, substantially as herein described."

No. 23,602. JOHN F. PAGE, of Philadelphia, Pa., for an "Improvement in spark arresters."

"I claim, and desire to secure by Letters Patent, the intermediate casing B with its openings d and deflecting plates h, when arranged in respect to the chimney c, the deflector G, and outer casing A, substantially as and for the purpose herein set forth."

No. 23,603. JAMES B. PARISH, of Cleveland, Ohio, for an "Improvement in coffee pots."

"What I claim as my improvement, and desire to secure by Letters Patent, is, the fluid valve cover E, as arranged with the cup C and the helical condensing tube F, all operating in the manner and for the purpose set forth."

No. 23,604. FREDK. C. PAYNE and ALFRED REID, of New York, N. Y., for an "Improved wardrobe bed."

"What we claim, therefore, and desire to secure by Letters Patent, is, the combined arrangement with a secretary or wardrobe or bed in the back thereof, substantially in the manner and for the purpose described. Also the arrangement of the brackets L, board M, for the twofold purpose of folding compactly to hold the clothes in place, the folding legs K, the pulleys P, the cord R, weight S, as and for the purpose described."

No. 23,605. AUGUSTUS H. PHELPS, of Trenton, Mich., for an "Improved water cooler."

"What I claim and desire to secure by Letters Patent, is, the arrangement or combination of the tank C, the refrigerator B, and non-conducting chamber or casing. I also claim, in combination with preceding, the air chamber D, surrounding the faucet F, all the parts arranged substantially as and for the purpose described."

No. 23,606. LEONARD L. POLLARD, of Worcester, Mass., for an "Improvement in treeing sticks."

"What I claim as new, and desire to secure by Letters Patent, is, I claim as a new article of manufacture, the above described treeing stick, when constructed and operating in the manner and for the purposes above set forth."

No. 23,607. Robt. Ramsey, of New Wilmington, Pa., for an "Improved clothes frame."

"What I claim, and desire to secure by Letters Patent is, the combination and arrangement of the standard and the arms with the bolts, washers, and springs, substantially as and for the purpose specified."

No. 23,608. Henry Rieman, jr., of Rogersville, Ind., for an "Improvement in the mode of applying fover for extracting stumps and raising heavy weights."

"The following is what I claim as new, and of my invention, and I desire to secure by Letters Patent, 1st, in the described combination with the worm shaft F and spur wheel E, I claim the arrangement and application of the movable pillow block M, and wedge L, to hold the said spur wheel firmly in position, or admit of its being readily thrown out of gear, as set forth. 2d, I claim the adjustable supports N, P, & Q, T, adapted in the manner set forth, to sustain the machine on wheels, to convey it from place to place, and permitting its deposit on the ground while in operation."

No. 23,609. D. F. Robbins, and Simeon Morrison, of De Witt, Ill, for an "Improvement in mole plough."

"Having thus fully described the nature and object of our invention, what we claim therein as new, and desire to secure by Letters Patent, is, first, making the beam of a mole plough in two parts, united by a horizontal joint, to give it lateral adjustment, substantially as herein described. We also claim connecting the drag (which supports, and upon which the point of the beam is made adjustable, vertically,) to the rear portion of the beam by a hinged joint, or connection, so that the raising or lowering of the point of the plough beam shall not effect the drag, substantially as described."

No. 23,610. A. J. Robison, of Gypsum, N. Y., for an "Improvement in dirt scrapers."

"I am aware that dirt scrapers have been made, so as to empty themselves, by rotating or turning over, and therefore this I do not claim; but what I do claim, is the combination of the cam plate P with the spring bar A for consecutively releasing and retaing the scraper in position, as shown, the whole being arranged in the manner and for the purpose substantially as described."

No. 23,611. John S. Rowell, De Witt C. Teller, and Michael Lowth, of Beaver Dam, Wis., for an "Improvement in water wheels."

"What we claim as our invention, and desire to secure by Letters Patent, is, 1st, the combination of a series of curved guides G, G, with the buckets D, of a water wheel E, H, in the manner herein specified and for the purposes set forth. 2nd, having the guides curved and fitted to a hub of the wheel, and arranged on a rising and falling governor or spring, regulated capping plate I, so as to overhang the buckets, and extend down, more or less, over the discharge orifices of the same, as herein specified, and for the purposes set forth."

No. 23,612. Mark Runkel, of New York, N. Y., for an "Improved oscillating engine."

"What I claim as new, and desire to secure by Letters Patent, is, the segment D, with the projections d, in combination with the shell B, and the abutment c, or its equivalent, arranged substantially as and for the purpose specified."

No. 23,613. Hiram H. Scoville, of Syracuse, N.Y., for an "Improvement in harvesters."

"I do not claim the use of a bow or canvas attached to the back of a rake; but what I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of the propelling crank (E) and stationary cam (F) with respect to the rake bar, and universal joint, when the same are constructed and operated in the manner and for the purpose set forth. I also claim, suspending a swinging apron from framework over the platform and in front of the rake, the same being constructed and operating substantially in the manner and for the purpose set forth."

No. 23,614. Winthrop D. Shaw, of Tamworth, N. H., for an "Improved machine for splitting shoe-pegs from the block."

"I do not claim a reciprocating knife, in connecting with a fluted feed roller, for cutting shoe pegs, for such device has been previously used, neither do I claim, simply duplicating a reciprocating knife, or the employment of two reciprocating knives in connection with a feed roller, irrespective of the arrangement herein shown and described. I claim, therefore, as new, and desire to secure by Letters Patent, the feed roller I, in connection with the two reciprocating or vibrating knives G, H, the latter being so operated that one will move slightly in advance of the other so that the cuts will be given the block successively, and still admit of the proper feeding of the block M to the knives, the feed roller being operated by the pawl n, rendered adjustable by the attachment of the bent lever o, to the adjustable bar K, the whole being combined and operating substantially as and for the purpose set forth."

No. 23,615. D. H. Shirley, of Boston, Mass., for an "Improvement in skates."

"Having thus described my improvements I shall state my claim as follows:—What I claim as my invention, and desire to have secured to me by Letters Patent, is, a sliding heel piece or clamp, susceptible of being moved forward and back, and fastened at any desired point, in such a manner that the toe of the boot or shoe being held by a suitable toe piece, a longitudinal binding force can be brought to bear upon, or relieved from the foot, as set forth."

No. 23,616. Isaac C. Shuler, of Amsterdam, N.Y., for an "Improvement in metallic coffins."

"Having thus described my improvements and the mode of using them, what I claim as my invention, and desire to secure by Letters Patent, is, first, I claim the arrangement of fastening the flange, or lower edge of the walls of a sheet metal coffin, in a tray or pan (c), which forms the bottom, and which exceeds the circumference of the walls by a narrow chamber (m) which may be filled with molten metal for stiffening the base, also the strengthening bars (l, l, l,) for stiffening the bottom of the tray, substantially as described. I claim, 2d, the arrangement of scrolling or doubling over the flush lower edges of the walls of a sheet metal coffin, soldering, consecutively, each fold of the sheet metal, thus making a solid rim or flange of any required thickness, for the purpose of strengthening the base substantially as described. I claim, 3d, the arrangement of placing on the outside of the walls, even with the upper edge, and extending downward any required distance, according to the size of the coffin, a sheet metal rim (f), which may be filled with molten metal, for the purpose of strengthening and keeping in shape the upper edges of the walls of a sheet metal coffin, substantially as described. Claim 4th, I disclaim an entire frame for covering the joint of the air-tight lid of a sheet metal coffin with the coffin walls; I also disclaim any bisected sliding cover, these being claimed elsewhere; but I claim the hinged lids (i, i,) as applied to the joint in different sections, for the purpose of allowing a greater number of ornamental breaks in the coffin walls, substantially as described. I claim, 5th, the frame (n, n, n, n,) for the support of the coffin handles."

No. 23,617. Henry Simon, of Providence, R. I., for a "Fastening for shirt studs."

"What I claim as new, and desire to secure by Letters Patent, is, shirt studs A, arranged with arms b and e, to operate substantially in the manner and for the purpose herein specified."

No. 23,618. John Smalley, of Bound Brook, N.J., for an "Improvement in harvesters."

"Having described my improved reaper and mower, what I claim therein as new, and for which I desire to secure Letters Patent, is, first, the combination of the seats Y, Z, one of which is movable, as described, with the seat frame b, b, elliptical springs X, X, X^1, X^1, and main frame of the machine, the whole being arranged substantially as described and shown, and for the purposes set forth. Second, constructing the outer piece c^1, in the peculiar manner above described, viz., with two or more sockets a^{11}, in combination with the caster supporting hub 3, and extension piece a^{11}, for the purposes set forth. Third, the neck I, in combination with collars J, J, groove H, standard J^1, and lever d, arranged substantially as shown and described, for the purpose of throwing the gearing in and out of action, as set forth. Fourth, supporting the reel arms, by means of the peculiarly constructed hub w, as shown and described."

No. 23,619. Horace W. Smith, of Hartford, Conn., for an "Improvement in cocks for water basins."

"I claim the employment of the spring E and the grooved and bevel face cam H, when acting in combination, as and for the purpose described."

No. 23,620. James S. Smith, of New York, N.Y., for an "Improvement in epaulettes."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement and combination of the

adjuster B, fringe C, and shell A, substantially as and for the purpose herein shown and described."

No. 23,621. PHILIP SMITH, of Fall River, Mass., for an "Improvement in grates."

"I claim hanging the front plate G on pivots, arranged so far below the top that when the bottom is swung out it will carry in its top and operate the inner upper plate L, as described, for the purposes set forth. I claim arranging the plate L to vibrate, substantially as described, for the purposes set forth. I claim the plates H and H^1, constructed and arranged substantially as described. I also claim making the plate L in separate pieces fitted together, substantially in the manner described."

No. 23,622. PHILO P. STEWART, of Troy, N. Y., for an "Improvement in stoves."

"What I claim as my invention, and desire to secure by Letters Patent, is, the method substantially as described of preventing the heat from striking through to the rising flue leading to the chimney, by separating it from the back oven plate, and from the two descending flues, by non-conducting partitions, or the equivalents thereof, as described, and for the purpose set forth. I also claim, in combination with the flue above the oven, and with the rising flue leading to the chimney, the employment of a double damper, filled in with cement, or other equivalent non-conducting material, substantially as described, to prevent the heat from striking through from the top flue to the rising flue, as set forth. And I also claim separating the direct flue under the oven from the return flue below, by means of a plate lined with cement, or rendered non-conducting by equivalent means, substantially as described, to prevent the heat from striking through to the return flue, and thereby impart greater heat to the bottom of the oven, as set forth."

No. 23,623. AMASA STONE, of Philadelphia, Pa., for an "Improvement in tools for forming lugs in the mouths of bottles and jars."

"I claim making one part of the spindle, which forms the orifice of the jug, or bottle, to turn freely, substantially as described, while the other part remains stationary in the nose of the bottle. I claim making one, two, or more scores, in that part of the spindle that turns freely, in combination with the corresponding score, or scores, in that part of the spindle which is stationary, and which aid in forming the orifice in the jug, or bottle nose, substantially as described."

No. 23,624. DAVID STUART, of Philadelphia, Pa., for an "Improvement in stoves."

"What I claim as my improvement in gas consuming cooking stoves is the distributing chamber or discharge pipe *r*, formed with a central central projection *q*, and supplied with heated air from the grate front, through pipes *k*, as set forth. I claim the discharge pipe Z located under the oven, and supplied from the grate front by pipes *k*, as set forth. I claim dividing the grate front horizontally into two series of heating chambers, as set forth."

No. 23,625. PHILO P. STEWART, of Troy, N.Y., for an "Improvement in cover lifters in cooking stoves."

"Having thus set out the construction and advantages of my invention, what I claim as new, and desire to secure by Letters Patent, is, the lifter, made up of malleable cast iron and wood, as herein set forth."

No. 23,626. R. H. TUCKER, jr., of New York, N.Y., for an "Improvement in the construction of navigable vessels."—Patented in England, 10th December, 1857.

"What I claim, and desire to secure by Letters Patent, is, the construction of navigable vessels, in the form of an isosceles triangle, with vertical sides and flat bottom, the base for that side of the triangular figure, which terminates in the two equal angls consti the stern, in combination with the air chamber, constructed substantially as and for the purpose described."

No. 23,627. S. M. WADE, of Andover, Ohio, for an "Improvement in rotary harrows."

"What I claim as my improvement, and desire to secure by Letters Patent, is, the bar K, provided with the arm M, clutch N, and pins I, L, in combination with the angular draw bars, and double harrows, in the manner and for the purpose herein-before described. I also claim the rod O, arms Q, and rollers P, P, in combination with the angular draw bars and double harrows, when arranged in the manner and for the purpose set forth."

No. 23,628. PAUL WAGNER, of Buffalo, N.Y., for an "Improvement in water wheels."

"I claim the combination of the buckets (D) arranged on the cylinder E, as described, and the stationary inclined planes or buckets (G), arranged with reference to the cylinder (H), and buckets (D) as described, the whole being enclosed by the case (A), substantially as and for the purposes herein set forth."

No. 23,629. ELIJAH WARE, of South Boston, Mass., for an "Improvement in valve gear for steam engines."

"What I claim as my invention, and desire to secure by Letters Patent, is, combining the eccentric rod with the valve rock shaft G, or its equivalent, by means of the lever I, with its two arc-formed slots *d*, *e*, and the movable pins *f*, *g*, the whole applied and operating substantially as and for the purpose herein specified. And I also claim the combination with the double slotted lever I, and its movable pins *f*, *g*, of the levers Q, V, rods *m*, U, levers M, N, and T, secondary lever O, pinion *u*, toothed arc S, and rods L, P, the whole applied and operating substantially as and for the purpose herein described."

No. 23,630. MOSES D. WELLS, of Morgantown, Virginia, for an "Improvement in seeding machines."

"I claim the notches of the bar with the series of pins *c* therein, in combination with the guides *a*, *a*, and upward projecting rims *i* of the discharge openings *b*, substantially as set forth."

No. 23,631. JOSEPH WETHERILL, of Manchester, Conn., for an "Improved quilting frame."

"I claim the employment of the rolls C, D, E, in combination with the arms F, pawls G, notches H, so that the upper roll E may be lifted when desired, arranged in the manner and for the purpose described."

No. 23,632. GEO. J. WIDRIG, of Memphis, Tenn., for an "Improvement in hoop fastening for cotton bales."

"The particular improvement which constitutes my said invention, and which I claim as having been originally and first invented by me, is, the combination of the sides A, having slots or grooves *e*, with the bar B, for the purpose of fastening cotton bales or other similar substances, by bringing the last end *f* over the bar B, substantially as described, and for the purpose specified."

No. 23,633. JOHN W. WILCOX, of West Roxbury, Mass., for an "Improvement in constructing electro-plated rollers."

"Having thus fully described the nature and object of my invention, what I claim therein as new, and desire to secure by Letters Patent, in making electro-plate rollers, is, covering the shaft, base, or support, with a fillet or ribbon of metal, soldered or otherwise secured thereto, and depositing the copper on said surface by electro-plating, substantially as described."

No. 23,634. RUSSELL WILDMAN, of Danbury, Conn., for an "Improvement in brick machines."

"The advantages secured by this improvement is the reducing of the friction. I am not confined to any particular form of mould, the one shown, which forms the hollow block, has been long known, and can be seen in Foster's Patent, dated July 22nd, 1856. Also, in Buck's Patent, dated Dec. 9, 1856. The toggle power also is common in most kind of presses; also, the slide cut-off in the feed may be seen in Isaac Harman's Patent, dated Aug. 12, 1856. Therefore, I disclaim the above described parts, separately considered from their connection; but what I do claim as new in the above described machine, and desire to secure by Letters Patent, is, 1st, the vibrating arm B, when constructed, combined, and operated substantially as described. 2nd, I claim the vibrating feed, when constructed, arranged, and operated in combination with the mould *m*, substantially as herein set forth."

No. 23,635. C. W. WILLIAMS, of Port Jarvis, N.Y., for an "Improvement in gates for canal locks."

"I do not claim broadly the employment or use of the balls *g*, for they have been used for similar or analogous purposes; but having thus described my invention, what I do claim as new, and desire to secure by Letters Patent, is,—1st, the rods C, C, and rack D, applied to the gate B, B, for the purpose set forth. 2nd, having the journals *c* of the gates, fitted in oblong slots *d* of pullcys *e*, which are placed in suitable bear-

ings or boxes *f*, and arranged substantially as shown, to admit of the sagging of the gates, and the close fitting of the same when closed, for the purpose specified. 3rd, securing the bearings or boxes *f* to the lock A by means of the rods *h*, the boxes being attached to slides *i*, and arranged substantially as shown, so that the boxes may be adjusted as occasion may require. 4th, operating the wickets H, H, by means of the gearing, arranged as described, whereby either wicket may be operated from one and the same crank shaft *q*."

No 23,636. Wm. H. Wilson, of Summerfield, Ohio, for an "Improvement in plows."

"What I claim, and desire to secure by Letters Patent, is, the arrangement of the subsoil shovel W, the common shovel M, coulter C, and brace A, the whole being constructed as described for the purposes set forth."

No. 23,637. C. Winter, of Piqua, Ohio, for an "Improved adding machine."

"Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is, 1st, the arrangement of the lever *c*, spring *d*, shaft *h*, wheels *m*, *n*, and stops *e* and *f*, in the manner herein set forth and for the purpose specified. 2nd, the arrangement of ratchet wheel *k*, bevel wheels *j* and *i*, pawls *s* and *z*, cord *o*, and pulley P, in the manner and for the purpose substantially as described."

No. 23,638. Wm. Zeller, of Lebanon county, Pa., for an "Improved mode of applying and constructing horse-power machines."

"Having thus fully described my invention, I do not claim the cog wheels or gearing used; but what I claim is, the construction of the horse-power machine herein described, as shown in Figs. 1 and 2, by which it is made to drive a reaping machine or stationary power, when the whole is constructed, arranged, and operated substantially as and for the purposes described."

No. 23,639. Henry Belfield, of Philadelphia, Pa., assignor to himself and Justice Cox, of same place, for an "Improvement in hanging bells."

"I claim, and desire to secure by Letters Patent, the lever G, its spring dog *h*, and spring *f*, in combination with the bell-crank lever F, its hammer H, and spring *n*, the whole of the parts being arranged in respect to each other and to the bell C, substantially as and for the purpose set forth. Second, the bracket B, with its four legs and projection *b*, for holding the bell, the said bracket being arranged in respect to and in combination with the levers G and F, and their respective springs, substantially in the manner specified."

No. 23,640. John F. Bodine, of Williamstown, N. J., assignor to himself, Wm. H. Bodine, and Joel A. Bodine, of same place, for an "Improvement in revolving plugs for manufacturing bottles and jars."

"What I claim as my invention, and desire to secure by Letters Patent, is, the large ring bearings *a*, *a*, formed on and near the circumference of the turning plate D, and fitting in ring grooves *b*, *b*, formed in the plug C, and capping plate E, substantially as and for the purposes set forth."

No. 23,641. Harrison Fitts, of Somerset, Mich., assignor to himself and Nelson Furrel, of Addison, Mich., for an "Improvement in machines for cleaning grain."

"The particular improvement which constitutes my said invention, and which I claim as having been originally and first invented by me, the combination of the adjustable piece K with the concave and rubber, substantially as and for the purposes set forth."

No. 23,642. J. F. Greene, of Brooklyn, N.Y., assignor to Saml. B. Tobey, of Providence, R.I., for an "Improvement in obtaining fibres from waste felted fabrics."

"What I claim as my invention, and desire to secure by Letters Patent, is, subjecting the felts to be disintegrated to the succession and combined action of steam and picking, substantially as described, the steam having the effect either to unfelt or so loosen the hold which the fibres have on each other in felted fabrics that they can be drawn apart, of sufficient length to be advantageously employed in the manufacture of other felts or other fabrics."

No. 23,643. J. F. Greene, of Brooklyn, N. Y., assignor to Saml. B. Tobey, of Providence, R.I., for an "Improvement in machinery for disintegrating waste felt fabrics."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination of the steaming apparatus and the picker, substantially as described for steaming the felt, as it is passed to the picker to be disintegrated as set forth."

No. 23,644. Hezekiah Johnston, of Collinsville, Ill., assignor to himself and Richd. Withers, of same place, for an "Improvement in machines for cutting corn stalks, &c., on ground preparatory to ploughing."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arranging and combining the curved frame A^1 with the knives E, E, and the guides J, J, in the manner described for the purpose specified."

No. 23,645. Chas. Miller and Thompson W. Decker, of New York, N. Y., assignors to T. W. Decker, aforesaid, for an "Improved machine for cutting files."

"Having thus described our invention, we claim, and desire to secure by Letters Patent, 1st, arranging the gage-rest M to oscillate a fulcrum (*t*) located in relation to the cutting chisel, substantially as shewn, so that by moving the arm of said rest laterally by means of the screw N, the bed C and blank (*a*) may be adjusted to correspond with the cutting edge of the chisel, as herein set forth. 2nd, hinging the frame E, which carries the chisel and its appurtenances to the frame A, by a joint at (*f*), so that the rest M may readily follow the curve of the file blank, and with the chisel be thrown back when desired, all as herein shown and described."

No. 23,646. T. H. Peavey, of Montville, Me., assignor to himself and C. G. C. Collins, of Portland, Me., for an "Improvement in machines for wringing clothes."

"Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is, I claim the arrangement of the rollers C and D with the rollers A and B, when the same are constructed and operated in the manner and for the purpose herein described."

No. 23,647. John I. Sigler, of Martin's Ferry, Ohio, assignor to himself and W. M. Griffith and Co., of same place, for an "Improvement in threshing machines."

"Having thus fully described the nature of my improvements in machinery for threshing and cleaning grain, and shown the operation thereof, what I claim therein as new, and desire to secure by Letters Patent, are, first, the series of rollers E^1, E^{11}, E^{111}, etc., provided with fingers or projections a, a^1, a^{11}, etc., in combination with the slat device b, b^1, b^{11}, the fingers working in the spaces between the slats, and being used for the purpose of carrying the straw from the threshing cylinder to the place of discharge H, and at the same time so tossing it as to secure an effectual separation of the grain therefrom, the slat device b, b^1, etc., being employed for the purpose of supporting the body of the straw between the impulses of the fingers a, a^1, etc., and also for the purpose of preventing the straw from winding on the rollers E, E^1, etc. Secondly, I claim the application of the oscillatory motion to the fingered shaft R, by means of which I secure an agitation inwardly towards the fan G in addition to the throw towards the place of discharge M, for the purpose of more effectually freeing the apertures near the tail of the riddle K from obstruction, the required motion being obtained by means of the pinion *h*, rack segment Q, and arm X, or their equivalents."

No. 23,648. Orrin D. Vosmus, of Boston, Mass., assignor to himself and Edwd. W. Serrell, of Greenfield, Mass., for an "Improved method of arranging galvano-electro helices for magnetizing the driving wheels of locomotives."

"I do not claim, broadly, the application of electricity or magnetism to cause adhesion of the wheels of locomotives; neither do I claim a helix applied to a locomotive wheel, as this has before been done, but, it is believed, proved nearly or entirely valueless, whereas, in my invention I have succeeded by the use of a curved helix, as set forth, in obtaining the point of greatest magnetic effect at the point of contact between the wheel and the track; therefore, what I claim as my

invention, and desire to secure by Letters Patent, is, a curved helix applied to the wheels of a locomotive engine in substantially the manner specified, whereby the point of greatest magnetic effect is the point of contact between the wheels and the track. And, in combination with the helix aforesaid, I claim adjusting the said helix in the manner and for the purposes specified."

No. 23,649. Benjn. Douglas, of Middletown, Conn., for himself and as administrator of the estate of Wm. Douglas, deceased, late of said Middletown, for an "Improvement in pumps."

"Having thus fully described our invention of the method of fastening the lower part of the pump cylinder to the basis on which it rests, what is claimed herein as our invention, and desired to be secured by Letters Patent is, the combination of the lugs B and C, within the flange a^2, and the conical set nut A, substantially as described, for a fastening of the lower end of the pump cylinder."

Re-issues.

Cullen Whipple, of Providence, R. I., assignor to the New England Screw Company, for an "Improvement in machinery for making wood screws, &c."—Patented 7th December, 1852; ante-dated 7th June, 1852.—Re-issued 12th April, 1859.

"What is claimed under this Patent as the invention of the said Cullen Whipple, is, in combination with a mandrel which carries chuck or griping jaws, an automatic mechanism for closing said jaws upon the blank, keeping them closed to hold the blank while being dressed, and then opening them to release the dressed blank, arranged and operating in such manner to leave the mandrel (during the time that the blank is being acted on by the cutter) free from endwise pressure by the chucking mechanism. Also, the combination of togle-levers carried by the mandrel; a stop or holdfast, also carried by the mandrel to lock and hold the toggle levers when pushed beyond a straight line, and griping jaws with shanks having sufficient elasticity to maintain a firm hold of the jaws upon the blank when the toggle levers have passed a straight line, substantially as herein set forth."

Cullen Whipple, of Providence, R.I., assignor to the New England Screw Company, for an "Improvement in machinery for making wood screws, &c."—Patented 7th December, 1852; ante-dated 7th June, 1852.—Re-issued 12th April, 1859.

"What is claimed under this Patent as the invention of the said Cullen Whipple, is, a feeding punch, and mechanism for causing it to approach within different distances of the griping jaws adapted to receiving and holding screw blanks in variable positions and of different lengths, in combination with a suitable tool holder and cutting tool, substantially as herein set forth."

Cullen Whipple, of Providence, R. I., assignor to the New England Screw Company, for an "Improvement in machinery for making wood screws, &c."—Patented 7th December, 1852; ante-dated 7th June, 1852.—Re-issued 12th April, 1859.

"What is claimed under this Patent as the invention of the said Cullen Whipple, is, the spring discharging punch, in combination with the mandrel and griping jaws, when the punch and spring are both carried by the mandrel, substantially as herein set forth."

Cullen Whipple, of Providence, R. I., assignor to the New England Screw Company, for "Improved machinery for making wood screws."—Patented 7th December, 1852; ante-dated 7th June, 1852.—Re-issued 12th April, 1859.

"What is claimed under this Patent as the invention of the said Cullen Whipple, is, first, the feeder composed of a sectional trough with a close bottom and open top, into which the blank drops and arranges itself before a traversing rod, which pushes it into the griping jaws, as described. Second, the combination of an adjustable automatic feeding punch, and a spring discharging punch with an intermediate trough or equivalent means for bringing the blank into line with the two punches, substantially as herein set forth. Third, the arrangement of a spring discharging punch, with its end far enough within the end of the grooves in the griping jaws to leave an opening for admitting the end of a blank, and guiding it against the end of the discharging punch, thereby rendering the chucking more certain, substantially as herein set forth."

George P. Gordon, of New York, N. Y., for an "Improvement in printing presses."—Patented 13th July, 1858.—Re-issued 12th April, 1859.

"Claims:—Having thus fully described my invention, what I claim as new is, 1st, the combination and arrangement of the feed table, the fly or pile board, the platen and bed, with the set or sets of independent revolving nippers or grippers, for the purposes described. 2nd, I claim the fly-board, with its adjustable gauge or guide, in combination with the grippers or nippers, to insure the even piling of the sheets of paper, or their equivalents, whatever the size of the sheet may be. 3rd, I claim the vibrating double cam for throwing off and on the impression. 4th, I claim two or more distributing rollers having a lateral motion upon a main distributor, which shall move independent of and in an opposite direction to each other, and thus alternately cross and re-cross each other's distribution, for the purpose of giving a uniform inking to the form. Also the two distributions given to the inking rollers upon one cylinder, for each impression (heretofore patented by me), in combination with the rotating reciprocating bed, with the spring extensions attached, all of which is herein described and set forth."

George P. Gordon, of New York, N. Y., for "Automatic grippers for carrying sheets of paper in printing presses."—Patented 13th July, 1858.—Re-issued 12th April, 1859.

"Claims:—Having thus fully described my invention, what I claim as new is, 1st, one or more sets of grippers, nippers, or fingers, to revolve independent in themselves upon an axis, for the purpose of carrying the sheets of paper to the place of impression, or for carrying the sheet after it has received the impression to its place of deposit upon the pile-board or fly-board, or for either or both of these purposes, thus receiving and piling the sheets of paper in an even and regular heap, by the acts of my automatic grippers, or independent revolving nippers, or their equivalents. 2nd, I claim the combination of the independent revolving grippers, with the vibrating feed-board, or its equivalent. 3rd, I claim the combination of the independent revolving grippers, with a pile or fly-board, to be used as described, or in some equivalent way. 4th, I claim the combination of the independent revolving grippers with a feed board, and a pile or fly board, or their quivalents, substantially as herein described and set forth."

Thomas B. Burrall, of Geneva, N. Y., for an "Improvement in harvesters."—Patented 18th March, 1856.—Re-issued 12th April, 1859.

"What I claim as my invention, and desire to secure by Letters Patent, is, first, the shoe piece *v* and rack 14, to adjust the height of the outer end of the finger board, substantially as and for the purposes specified. I also claim the shaft (*f*), passing across the end of and nearly at right angles to the shaft (1) of the main wheel (*a*), when fitted in such a manner that its pinion *i* can be thrown into and out of gear with the face wheel K, for the purposes and substantially as specified."

Theodore Heermans, of Mitchellsville, Tenn., for an "Improvement in coffee roasters."—Patented 18th January, 1859.—Re-issued 12th April, 1859.

"What I claim as new, and desire to secure by Letters Patent, is, 1, the within-specified arrangement of the plates or shelves D, D^1, for the purposes set forth. 2, the combination of a window or windows, in a coffee roaster, with agitating or elevating plates or shelves, substantially as and for the purposes set forth."

Design.

Garrettson Smith and Henry Brown, of Philadelphia, Pa., assignors to Hayward, Bartlett, and Co., of Baltimore, Md., for a "New stove design."

"We claim the design, configuration, and arrangement of the several ornaments in bas-reliefs, as above set forth and shown in the annexed drawing, as a new stove design."

List of Specifications published during the week ending 29th April, 1859.

No.	Price.	Subject-Matter.
		1855 (*Disclaimer*).
431	4*d.*	Ordnance.
		1858.
2123	6*d.*	Pianoforte frames.
2124	1*s.* 1 1*d.*	Surface condensors.
2125	3*d.*	Machinery for washing, churning, color mixing, &c.
2126	3*d.*	Hooped petticoats.
2128	7*d.*	Sewing machine.
2129	6*d.*	Smiths' forges
2130	10*d.*	Apparatus for printing shawls, &c.
2131	3*d.*	Apparatus for indicating the speed of ships and other vessels.
2132	3*d.*	Filters for purifying air and liquids.
2133	3*d.*	Artificial horsehair.
2134	7*d.*	Manufacture of steel, &c.
2135	10*d.*	Winnowing machinery.
2136	5*d.*	Machine for tilling and preparing land.
2137	7*d.*	Manufacture of pipes for water, gas, &c.
2138	3*d.*	Flues, boiler furnaces, &c.
2139	3*d.*	Manufacture of iron and steel.
2140	9*d.*	Colour printing presses.
2141	1*s.* 4*d.*	Floating docks.
2142	5*d.*	Atmospheric engine.
2143	3*d.*	Consumption of smoke.
2144	7*d.*	Preventing the explosion of steam boilers.
2145	6*d.*	Manufacture of pile fabrics, &c.
2146	3*d.*	Waterproofing leather, woven fabrics, and other materials, &c.
2147	9*d.*	Apparatus for preventing the explosion of steam boilers.
2148	3*d.*	Construction of spinning cards.
2149	1*s.* 3*d.*	Fire-arms and cartridges.
2150	10*d.*	Steam engines.
2151	5*d.*	Packing pins for sale.
2152	6*d.*	Locomotive engines.
2153	1*s.* 9*d.*	Steam cultivators, &c.
2154	3*d.*	Separation of iron and steel from grindstone sands.
2155	3*d.*	Lilliputian fire-arms.
2156	9*d.*	Apparatus for applying power to the cultivation of the soil.
2157	4*d.*	Purifying natural phosphates of lime.
2158	6*d.*	Transformative garments.
2159	3*d.*	Manufacture of knife blades.
2160	3*d.*	Neckcloth or tie, &c.
2161	5*d.*	Engraving and printing for the ornamentation of china and earthenware.
2162	4*d.*	Manufacture of steel.
2163	3*d.*	Cigar holders and tobacco pipes.
2164	3*d.*	Clocks, watches, chronometers, &c.
2165	9*d.*	Press-wheel rollers or clod crushers, &c.
2166	3*d.*	Binding or covering books.
2167	3*d.*	Tobacco pipes.
2168	3*d.*	Coiling or securing telegraph cables.
2169	7*d.*	Shaff for dressing millstones.
2170	3*d.*	Fixing pastel pictures.
2173	6*d.*	Propelling steam boats.
2175	7*d.*	Sewing machines.
2176	3*d.*	Fire escape, &c.
2179	3*d.*	Manufacture of coats, riding habits, &c.
2182	7*d.*	Application of motive power to machinery.
2184	3*d.*	Sewers.
2186	10*d.*	Lifting and lowering ships' anchors.
2667	3*d.*	Manufacture of articles from talc and other silicates of magnesia.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2*d.* each, or 3*d.* free by post:—

Warrington (*The Museum and Library*).
Waterford (*Town Hall, The Mall*).
Wednesbury (*Board of Health Offices*).
Wexford (*Mechanics' Institute, Crescent Quay*).
Wigan.
Wolverhampton (*School of Practical Art, Darlington Street*).
Wolverton (*Railway Station*).
Yarmouth, Norfolk (*Public Library, South Quay*).
York (*Lower Council Chamber, Guildhall*).

The Commissioners' publications have also been presented to the following Public Offices, Seats of Learning, British Colonies, and Foreign States:—

Public Offices, Institutions, &c.

Admiralty, Department of the Surveyor of the Navy.
——— Steam Branch.
——— Deptford Dockyard.
——— Woolwich ditto.
——— Chatham ditto.
——— Sheerness ditto.
——— Portsmouth ditto.
——— Devonport ditto.
——— Pembroke ditto.
Artillery Institute, Woolwich.
Board of Trade, Whitehall.
Ordnance Office, Pall Mall.
——— Small Arms Factory, Enfield.
War Office, Pall Mall.
Government School of Mines, &c., Jermyn St., Piccadilly.
Dublin Castle, Dublin.
Rolls Office, Chancery (Four Courts), Dublin.
Office of Chancery, Edinburgh.
East India House. Military Stores, Leadenhall Street.
Incorporated Law Society, Chancery Lane, London.

Seats of Learning.

Cambridge University.
Trinity College, Dublin.
Queen's College, Galway.
University College, London.

British Colonies.

Malta.
Cape of Good Hope.
Mauritius.
India—Bengal.
North-West Provinces.
Madras.
Bombay.
Ceylon.
Victoria—Patent Office, Melbourne.
Parliamentary Library, Melbourne.
New South Wales.
South Australia.
Tasmania.
New Zealand.
Newfoundland.
Canada—Quebec.
Toronto.
New Brunswick.
Prince Edward Island.
Antigua.
Barbados.
Jamaica.
Trinidad.
British Guiana.

Foreign States.

Austria—Handels Ministerium, Vienna.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE REFERENCE INDEX of PATENTS, pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

Free Patent Museum and Library, South Kensington.

NUMBERS of VISITORS for the Week ending 30th April, 1859.

Day of Month.	Day of Week.	Morning.	Evening.	Total.
April 25*	Monday -	520	820	1340—Wet.
„ 26	Tuesday -	958	805	1763—Fine.
„ 27	Wednesday	420	414	834— „
„ 28	Thursday	146	251	397—Showery.
„ 29	Friday -	337	280	617—Fine.
„ 30	Saturday -	160	70	230—Wet.
	Total -	2541	2640	5181

* Easter week. Museum open till 6 o'clock, and every evening during the week.

Total number of visitors since the period of free daily admission (12th May, 1858) to 30th April, 1859, —93,304.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS. —This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of *2l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of *9l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.
BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 557. FRIDAY, MAY 6, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

911. To DAVID DOIG, of the city of Manchester, Engineer, for the invention of "Improvements in the construction of gas lamps."—A communication from abroad, by William Gilbert Ginty, of Rio de Janeiro, in the empire of Brazil.

On his petition, recorded in the Office of the Commissioners on the 12th day of April, 1859.

967. To JOZÉ LUIS, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for the invention of "An improved machine for raising water."—A communication from abroad by M. Dupré, of No. 10, Rue Mogador, Paris, in the empire of France.

969. To WILLIAM PROSSER, of No. 24, Dorset Place, Dorset Square, in the county of Middlesex, Gentleman, for the invention of "Improvements in apparatus employed in the production of light."

971. To JOHN WHITAKER, of Bedford Mill Iron Works, near Leigh, in the county of Lancaster, Agricultural Machine Maker, for the invention of "Improvements in mowing machines."

973. To MARC ANTOINE FRANÇOIS MENNONS, of the British and Foreign Patent Offices, No. 39, Rue de l'Echiquier, Paris, in the empire of France, for the invention of "An improved disinfecting compound." — A communication from W. E. Lÿnen, a person resident at Marseilles, France.

975. To JOSEPH IZOD, of No. 58, High Street, Hoxton, in the county of Middlesex, Wholesale Dealer in Tobacconists' Fancy Goods, for the invention of "A safety cigar, vesuvian, or fusee box or case."

977. To JOHN FREER, of Rothley, in the county of Leicester, Agricultural Implement Maker, for the invention of "Improvements in machines for planting grain and seed, and an improved seed feeder and meter for planting machines."

979. To ALEXANDER DALRYMPLE, of Sheffield, in the county of York, Tailor, for the invention of "Improvements in the mode of covering crinoline, and in machines used in connection therewith."

981. To FREDERICK EDWARDS and WILLIAM EDWARDS, of the city of Coventry, Machinists, for the invention of "Improvements in looms for weaving ribbons and other like goods."

983. And to JAMES BOYDELL, of Gloucester Crescent, Regent's Park, for the invention of "Improvements in the apparatus applied to the wheels of locomotive traction and other carriages to facilitate the draught."

On their several petitions, recorded in the Office of the Commissioners on the 18th day of April, 1859.

985. To PETER REYNOLDS, of Belfast, in the county of Antrim, Ireland, and JAMES REYNOLDS, of the same place, Engineers and Machinists, for the invention of "Improvements in machinery or apparatus for hackling flax and other fibrous materials."

987. To ISAAC DUTTON, of Tipton, in the county of Stafford, Whitesmith, and ROBERT MARTIN, of Dudley, in the county of Worcester, Coke Merchant, and THOMAS PHILLIPS, of Dudley aforesaid, Coke Merchant, for the invention of "New or improved machinery for preventing accidents in coal or other mines, by the drawing of skips or cages over their pullies."

989. To OLIVER MAGGS, of Bourton, in the county of Dorset, for the invention of "Improvments in cheese presses."

991. And to ALFRED VINCENT NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Mechanical Draughts-

man, for the invention of "Improved machinery for weaving seamless bags or other articles with hemispherical or regular or irregular ends or forms."—A communication from abroad by John Pender, of the United States of America.

On their several petitions, recorded in the Office of the Commissioners on the 19th day of April, 1859.

---

993. To Job Wotton, of Birmingham, in the county of Warwick, Manufacturer, for the invention of "An improvement or improvements in raising or shaping metals."

995. And to Alexander William Williamson, of University College, for the invention of "Improvements in obtaining extracts from the liquorice root."

On both their petitions, recorded in the Office of the Commissioners on the 20th day of April, 1859.

---

999. To André Felix Vanhulst, of Brussels, in the kingdom of Belgium, for the invention of "An improved kiln for drying malt."

1001. To Thomas Dawson and John Avery, of No. 32, Essex Street, in the county of Middlesex, for the invention of "Improvements in pencil-cases, watch seals and keys, toothpicks, and other like articles of jewellery, lockets, penknife handles, porte-monnaies, and other like articles."

1003. To John Alison, of Hainault Forest, Essex, Gentleman, for the invention of "An improved instrument for extirpating thistles, docks, and other deep-rooted weeds."

1005. To David Auld, of Glasgow, in the county of Lanark, North Britain, Engineer, for the invention of "Improvements in machinery or apparatus for supplying steam boilers with water."

1007. To Edwin Lewthwaite, of Halifax, in the county of York, Clock and Watch Maker, and George Ambler, of Queenshead, near Halifax, aforesaid, Clock and Watch Maker, for the invention of "Improvements in clocks, watches, chronometers, and other time-keepers."

1009. To George Roberts and John Bridges, of No. 20, Ponsonby Place, Vauxhall Bridge Road, in the county of Middlesex, for the invention of "Improvements in the manufacture of candles."

1011. And to John Henry Pepper, of Morton House, Kilburn Priory, in the county of Middlesex, for the invention of "Improvements in apparatus for showing stereoscopic pictures."

On their several petitions, recorded in the Office of the Commissioners on the 21st day of April, 1859.

1013. To Robert Gray, of Sheffield, in the county of York, Crinoline Manufacturer, for the invention of "Improvements in crinoline skirts."—A communication from abroad by Johnathan Hobson, of New York, in the United States of America.

1015. To John Edwards, of No. 77, Aldermanbury, in the city of London, for the invention of "Improvements in the manufacture of buttons."

1017. To James Gillies, of Glasgow, in the county of Lanark, North Britain, Wood Turner, for the invention of "Improvements in branding or marking wood for casks, barrels, and other purposes."

1019. To William Dicks, of Leicester, Boot Manufacturer, and William Hopwell, also of Leicester, Machinist, for the invention of "Improvements in machinery for making screws, and applying them in fixing the soles of boots and shoes."

1021. To Pierre François Mutel, Gas Burner Maker, and Lucien Henri Blanchard, Gentleman, both of Paris, France, for the invention of "Improvements in gas burners."

1023. To William Gibson, of St. Leonards Road, in the county of Middlesex, Engineer, for the invention of "Improvements in steering apparatus."

1025. To John Marshall, junior, of Selby, in the county of York, Gentleman, for the invention of "Improvements in filtering and depurating fluids."

1027. And to Frederick Colwell Maguire, of Stamford, in the county of Lincoln, Gentleman, for the invention of "Certain improvements in the utilization of sewage manure."

On their several petitions, recorded in the Office of the Commissioners on the 23rd day of April, 1859.

1029. To William Pool Balfern and Murdoch McKay, both of Hammersmith, county of Middlesex, Soap Manufacturers, for the invention of "The manufacture of sweet figged soft soap."

1031. To George Ward, of Blackburn, in the county of Lancaster, Gold Patent Thread Manufacturer, for the invention of "Improvements in machinery or apparatus for making healds."

1033. To Thomas Aldridge Weston, of King's Norton, in the county of Worcester, Accountant, for the invention of "A new or improved pulley."

1035. To James Holmes, of Street, Somerset, Accountant, for the invention of "Improvements in applying eyelet holes to boots and shoes and in binding boots and shoes."

1037. To Edward Humphrys, of Deptford, for the invention of "Improvements in steering apparatus."

1039. To Henry Columbus Hurry, of Wolverhampton, in the county of Stafford, Civil Engineer, for the invention of "Improved means of and apparatus for obtaining motive power."

1041. And to Samuel Lawrence Taylor, of Cotton End, in the county of Bedford, Agricultural Engineer, for the invention of "Improvements in agricultural implements in obtaining motive power for actuating such implements, and in apparatus connected with the application of steam power."

On their several petitions, recorded in the Office of the Commissioners on the 25th day of April, 1859.

1043. To Herbert Allman, of Mornington Place, Hampstead Road, London, Consulting Engineer, for the invention of "Certain improvements in the construction of window-blind mountings, and in apparatus connected therewith."

1045. To William Edward Newton, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in the manufacture of nitric acid, and its application for the production of artificial nitrous or nitric salts."—A communication from abroad by Madame Lefebvre, of Paris, in the empire of France.

1047. To William Marshall, of Leith Walk, in the county of Mid-Lothian, North Britain, Engineer, for the invention of "Improvements in steam engines."

1049. To Richard Archibald Brooman, of No. 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improvements in steam boilers."—A communication from abroad by Theodore Nicolas Meynier and Louis Albert Le Bleu, of Paris.

1051. And to John Henry Johnson, of No. 47, Lincoln's Inn Fields, in the county of Middlesex, and of No. 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in machinery or apparatus for grinding and polishing knives and other articles of cutlery and tools."—A communication from abroad by James Dodge, of Waterford, Saratoga county, state of New York, United States of America.

On their several petitions, recorded in the Office of the Commissioners on the 26th day of April, 1859.

1053. To George Pearson, of Bugbrook, near Weedon, in the county of Northampton, Contractor, for the invention of "Improvements in apparatus for cutting and shaping trenails."

1055. To Henry Richardson Fanshawe, late of Messrs. Silver and Company's Works, North Woolwich, now of No. 13, Russell Place, Old Kent Road, in the county of Surrey, India Rubber Manufacturer, for the invention of "Improved apparatus or mechanism for drawing-off, filtering, and guaging liquids in butts, barrels, casks, and such like vessels, preserving the contents from deterioration from contact with atmospheric air."

1057. To James Randal Smith, of Glasgow, in the county of Lanark, North Britain, Gentleman, for the invention of "Improvements in obtaining motive power."

1059. To Charles Hamp, of Harrow Road, in the county of Middlesex, for the invention of "Certain improvements in locks."

1061. To Thomas Lacey, of Grafton Street, in the city of Westminster, Gas Engineer, for the invention of "Improvements in gas regulators."

1063. And to Thomas Gauntley the elder, of the High Pavement, in the town of Nottingham, Lace Manufacturer, for the invention of "Improvements in the manufacture of fringes."

On their several petitions, recorded in the Office of the Commissioners on the 27th day of April, 1859.

Inventions protected for Six Months by the Deposit of a Complete Specification.

Notice is hereby given, that the petition of

1075. William McIntyre Cranston, of No. 11, New Broad Street, London, Agent, praying for Letters Patent for the invention of "A grass cutting machine,"—a communication from abroad by Walter Abbot Wood, of Hoosick Falls, county of Rensselaer, state of New York, America,—was deposited and recorded in the Office of the Commissioners on the 29th day of April, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Notice is hereby also given, that the petition of

1110. Jedediah Morse, of the state of Massachusetts, of the United States of America, praying for Letters Patent for the invention of "An improved power printing press," was deposited and recorded in the Office of the Commissioners on the 3rd day of May, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

And Notice is also hereby given, that the petition of

1111. Lyman Reed Blake, of the state of Massachusetts, of the United States of America, praying for Letters Patent for the invention of "A new and useful or improved machine for sewing a sole on a boot or shoe," was deposited and recorded in the Office of the Commissioners on the 3rd day of May, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Patents Sealed.

List of Letters Patent which passed the Great Seal on the

6th May, 1859.

2482. Alfred Fryer, of Manchester, in the county of Lancaster, Sugar Refiner, for an invention of "An improved method of supplying the tenders of locomotive engines and of supplying boilers with water."—Dated 6th November, 1858.

2490. John Platt, of Oldham, in the county of Lancaster, Mechanical Engineer, for an invention of "Improvements in machinery or apparatus for preparing, spinning, and doubling cotton and other fibrous materials."—Dated 6th November, 1858.

2494. Arthur Hyde Dendy, of 27, Fortess Terrace, Kentish Town, in the county of Middlesex, Esquire, Master of Arts, for an invention of "Improvements in the construction of breakwaters or wave screens, applicable also in constructing bridges, roadways, piers, jetties, landing stages, and other structures."—Dated 8th November, 1858.

2496. Thomas Mac Sweney, of 25, Rood Lane, in the city of London, for an invention of "Improvements in steering apparatus."—Dated 8th November, 1858.

2497. William Hale, of 6, John Street, Adelphi, in the county of Middlesex, for an invention of "Improvements in rockets."—Dated 8th November, 1858.

2502. Edward Ellis Allen, of Brompton Row, in the county of Middlesex, Engineer, for an invention of "Improved machinery or apparatuses for working the propellers of vessels."—Dated 9th November, 1858.

2504. John Farmerley Dickson, of No. 6, Russel Street, Litchurch, near Derby, in the county of Derby, Engineer, for an invention of "Improvements in the construction of railway chairs, and other details connected with the permanent way of railways."—Dated 9th November, 1858.

2505. John Louis Jullion, Paper Maker, of Stoneywood Works, Aberdeen, N. B., for an invention of "Improvements in the manufacture of paper."—Dated 9th November, 1858.

2507. Andrew Henderson, of Gloucester Place, Portman Square, in the county of Middlesex, Master Mariner, for an invention of "Improvements in vessels and in applying rudders thereto."—Dated 9th November, 1858.

2508. Joseph Felix, of No. 54, Rue Croix Nivert, at Grenelle, near Paris, Mechanician, for an invention of "Improvements in castors for furniture

and other similar purposes."—Dated 9th November, 1858.

2515. Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for an invention of "Improvements in electric telegraphing." — Dated 9th November, 1858.

2516. Rowland Mason Ordish, of Great George Street, Westminster, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in constructing the permanent ways of railways." —Dated 9th November, 1858.

2522. Edward Humphrys, of Deptford, Engineer, for an invention of "Improvements in steam engines and boilers."—Dated 10th November, 1858.

2528. John Blethyn, of Swansea, in the county of Glamorgan, Engineer, for an invention of "Improvements in the manufacture of fuel."—Dated 11th November, 1858.

2531. Frederick Herbert Maberly, of Stowmarket, in the county of Suffolk, Master of Arts, for an invention of "Improvements in the construction of ships of war, and other vessels, their machinery and appurtenances."—Dated 11th November, 1858.

2535. James Rae, of Alpha Road, New Cross, in the county of Kent, for an invention of "Improvements in cisterns suitable for containing water for household uses."—Dated 11th November, 1858.

2545. James Wadsworth, of Salford, in the parish of Manchester, and county of Lancaster, Machinist, for an invention of "Improvements in the construction of moveable or adjustable heels for boots and shoes, and of spurs adapted thereto, and to be used therewith."—Dated 13th November, 1858.

2555. Alonzo Buonaparte Woodcock and John Macmillan Dunlop, both of Manchester, for an invention of "Improvements in covering rollers, shafts, and tubes of any figure or material with elastic shells or covers of vulcanized india rubber or other elastic substance, and in turning or grinding the surfaces of such elastic covers or shells."—Dated 13th November, 1858.

2566. William Clark, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for an invention of "Improvements in colouring, preserving, and desiccating wood and marble, and in apparatus for the same."—A communication from Francois Casult, residing at Marseille, in the empire of France. — Dated 15th November, 1858.

2567. William Clark, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for an invention of "A new mode of advertising." — A communication from Messieurs Berson and Beaujanot, both residing abroad.— Dated 15th November, 1858.

2599. Charles Cowper, of No. 20, Southampton Buildings, Chancery Lane, in the county of Middlesex, Patent Agent, for an invention of "Improvements in assorting and separating combed fibres, and in machinery for that purpose."—A communication from M. Ziegler, residing at Guebwiller, in France.—Dated 18th November, 1858.

2675. Jozé Luis, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for an invention of "A safe guard against burglars."—A communication from Serge Krotkoff, a foreigner now residing abroad.— Dated 25th November, 1858.

2683. Jozé Luis, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for an invention of "A new sort of drawers or trowsers for ladies or children."—A communication from Celina Gobert, a foreigner now residing abroad. — Dated 26th November, 1858.

291. Michael Loam, of Treskerby House, Truro, Cornwall, for an invention of "Improvements in machinery for raising sewage and other waters and matters."—Dated 1st February, 1859.

303. Isaac Clements, of Birmingham, in the county of Warwick, Warehouse Clerk, for an invention of "A new or improved method of manufacturing curtain rings."—Dated 2nd February, 1859.

391. James Grimes, of 6, Osborn Street, Whitechapel, Pewterer and Beer Engine Manufacturer, for an invention of "Improvements in beer engines."—Dated 11th February, 1859.

527. John Leigh, of the city of Manchester, in the county of Lancaster, Surgeon, for an invention of "Improvements in the purification of coal gas."—Dated 28th February, 1859.

569. Horatio Leonard, of the state of Massachusetts, of the United States of America, for an invention of "An improvement in the manufacture of paraffine candles."—Dated 3rd March, 1859.

628. Nathan Washburn, of the state of Massachusetts, of the United States of America, for an invention of "A new and useful or improved machine for rolling tires for wheels."—Dated 11th March, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 4th May*, 1859.)

1057. William Bulmer, of Middlesboro', in the county of York, Agent for the Manufacture of Bricks and Tiles, and Isaac Sharp, of the same place, Land Agent, for an invention of "Improvements in the manufacture of bricks, tiles, and other articles, from plastic substances."—Dated 5th May, 1856.

1068. Richard Archibald Brooman, of 166, Fleet Street, in the city of London, Patent Agent, for an invention of "A method of treating guano and other matters containing uric acid, and the manufacture from the products arising from such treatment as well as from uric acid of new colouring matters, and the fixing and application thereof." —A communication.—Dated 6th May, 1856.

1071. William Joseph Curtis, of 1, Sebbon Street, Islington, Civil Engineer, for an invention of "Improvements in carriages to run on rail or tram ways and common roads."— Dated 7th May, 1856.

1102. Richard Archibald Brooman, of 166, Fleet Street, in the city of London, Patent Agent, for an invention of "An improvement in cranes." —A communication from Camille Raymond, Neustadt.—Dated 9th May, 1856.

FOREIGN PATENTS.

FRANCE.

CURRENT LIST of PATENTS of Invention and Certificates of Addition.

1859.

(Communicated by His Excellency the Minister of Agriculture, Commerce, and Public Works.)

NOTE.—The duration of a Patent is fifteen years, except where determined by that of a previously existing foreign Patent.*

1129. JOHN HENRI JOHNSON, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in sounding apparatus, being also applicable to life-buoys."—Dated 9th March, 1859.—(English Patent, expiring 28th February, 1873.)

1130. JEAN HENRI CHAUDET, of 42, Rue de la Santé, Paris, a Certificate of Addition to his Patent of 4th August, 1856, for "A process for ungreasing wool and cloth."—Dated 10th March, 1859.

1131. VACHON and LACHAUD, represented by Bos-Darnis, of 36, Rue de l'Echiquier, Paris, for "Utilizing the heat obtained from animal and vegetable substances."—Dated 10th March, 1859.

1132. ANTOINE LAROZE, of 8, Rue d'Enghein, Paris, for "Purifying and assimilating phosphate of fossil lime."—Dated 10th March, 1859.

1133. ANTOINE LAROZE, of 8, Rue d'Enghien, Paris, for "Rational and anti-putrid manure."—Dated 10th March, 1859.

1134. BENJAMIN GAUTRON, represented by Richard, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 2nd December, 1856, for "Improvements in hydro-extractors worked by centrifugal power."—Dated 10th March, 1859.

1135. MELCHIOR COLSON, represented by Richard, of 45, Rue St. Sébastien, Paris, for "Machines for lowering and raising workmen in mines."—Dated 10th March, 1859.

1136. AUGUSTE HUBERT STANISLAS TRÈVE, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 5th March, 1859, for "Improvements in electric cables."—Dated 10th March, 1859.

* For the French Patent Law see No. 228 of this Journal.

1137. CHARLES EUGÈNE DE VENDEUVRE, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 25th November, 1858, for "A system of stoves for drying and baking ceramic products."—Dated 10th March, 1859.

1138. DUHAY née DU GOLBERG, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "A tissue for the manufacture of bonnets, flowers, tassels, &c."—Dated 10th March, 1859.

1139. MARIE MAXIME SIGEAN, of 71, Rue du Temple, Paris, a Certificate of Addition to his Patent of 23rd October, 1858, for "A spring for fastening purses."—Dated 11th March, 1859.

1140. JOSEPH DROT, of 101, Rue du Temple, Paris, for "Double watch-keys."—Dated 11th March, 1859.

1141. JULES VINCENT, of 25, Rue St. Paul, Paris, for "Improvements in bookbinding."—Dated 11th March, 1859.

1142. LOUIS ALFRED NOIROT, of Rue de Rivoli, Paris, a Certificate of Addition to his Patent of 18th February, 1856, for "A mathematical measure."—Dated 11th March, 1859.

1143. PIERRE ROULLET, of Chemin de Ronde de la Barrière de Grenelle, Paris, for "Wood and iron floors."—Dated 11th March, 1859.

1144. JULES MUTET, represented by Simard, of 34, Rue Dauphine, Paris, a Certificate of Addition to his Patent of 18th November, 1852, for "Improvements in weaving, &c."—Dated 11th March, 1859.

1145. PIERRE MARIE TOUBOULIC, represented by Breteau, of 12, Rue Lepelletier, Paris, for "A system of railways called 'aeropost or velopost railways."—Dated 11th March, 1859.

1146. JEAN JULES CAUDÈRES, represented by Barrault, of 33, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 22nd October, 1857, for "An accordeon called 'Pian-organ.'"—Dated 11th March, 1859.

1147. VITRY and DURAIN, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "A machine for printing stained paper with several colours"—Dated 11th March, 1859.

1148. LOUIS PUECH, of 24, Place de la Madeline, Paris, for "A camera-obscura for photography."—Dated 11th March, 1859.

1149. JEAN BAPTISTE DELLESTABLE, of 81, Rue du Bac, Paris, for "Improvements in umbrellas."—Dated 11th March, 1859.

1150. ISIDORE JOSEPH HEMBISE, represented by Dreyfous, of 54, Rue de Bondy, Paris, for "Economical tubular floors and partition-walls of plaster."—Dated 11th March, 1859.

1151. ANDRÉ FIRMIN PHILIPPE BAS, represented by Dreyfous, of 54, Rue de Bondy, Paris, for "Fireplaces for southern climates."—Dated 11th March, 1859.

1152. BERTRAND LOUIS OLLIVIER, domiciled with Lepin, of 19, Rue St. Dominique St. Germain, Paris, for "Stoppering bottles containing gaseous and other liquids."—Dated 11th March, 1859.

1153. CUSIN, senr. and junr., and TRAVERS, senr., domiciled with Chansel, of 8, Rue Baillif, Paris,

for "Improvements in machines for weaving silk figured stuffs."—Dated 12th March, 1859.

1154. Jean Charles Mivois, of 66, Rue Chapon, Paris, for "Placard-indicators for writing desks."—Dated 12th March, 1859.

1155. Henri Désiré Krayl, represented by Amouroux, of 333, Rue St. Martin, Paris, for "A cigar-case."—Dated 12th March, 1859.

1156. Couvreux and Combe, represented by Amouroux, of 333, Rue St. Martin, Paris, for "A crane with a moveable mast."—Dated 12th March, 1859.

1157. Couvreux and Combe, represented by Amouroux, of 333, Rue St. Martin, Paris, for "A dredging engine with inclined slings."—Dated 12th March, 1859.

1158. Louis François Aléxandre Arson, of 40, Rue de Bourgogne, Paris, for "Applying steam directly to extracting gas obtained by distilling vegetable, mineral, or animal substances."—Dated 12th March, 1859.

1159. Nicolas Toscovitch, represented by Pelez, of 10, Rue de Mogador, Paris, for "A double-action screw propeller."—Dated 12th March, 1859.

1160. Joseph Plantier, of 17, Rue Vivienne, Paris, for "A process for washing and sweeping wood and metals."—Dated 12th March, 1859.

1161. Frédéric Gotthold Milisch, of 17, Rue Portefoin, Paris, for "Fastening bracelets."—Dated 12th March, 1859.

1162. Jules Séguin, of 4, Rue de Gravelle, Gravelle, département de la Seine, for "Using tides as a motive power."—Dated 12th March, 1859.

1163. Pinaud and Meyer, represented by Gagnage, of 93, Chaussée du Maine, Petit Montrouge, a Certificate of Addition to their Patent of 2nd August, 1858, for "Disinfecting gall."—Dated 12th March, 1859.

1164. Victor Forquenot, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Lubricating journals and pivots of carriages and machines."—Dated 12th March, 1859.

1165. Charles Perrard, of St. Ismier, département de l'Isère, for "A process for utilizing the waste heat of kilns for lime, cement, and plaster."—Dated 8th March, 1859.

1166. Alphonse Joly, of Grenoble, département de l'Isère, a Certificate of Addition to his Patent of 23rd October, 1858, for "A system of fixed signals worked by electricity, &c."—Dated 10th March, 1859.

1167. Riol alias Constant, domiciled with Bex, of La Foubelle, commune de St. Saury, département du Cantal, for "Manufacture of glass pipes for the conveyance of water."—Dated 11th March, 1859.

1168. Joseph Aldebert, of La Butte, commune de Junier, département du Lot, for "A machine for boring rocks."—Dated 12th March, 1859.

1169. Frédéric Fischer, represented by Berveiler, Metz, département de la Moselle, a Certificate of Addition to his Patent of 18th August, 1858, for "Manufacture of bricks, artificial stones, &c. from schist and bituminous marl and clay."—Dated 12th March, 1859.

1170. Félix Lefebvre, of Berneuil, département de l'Oise, a Certificate of Addition to his Patent of 19th April, 1856, for "A thrashing machine."—Dated 14th March, 1859.

1171. Dalbanne and Petit, of Auxerre, département de l'Yonne, for "A liqueur, called 'Lamartine's elixir.'"—Dated 14th March, 1859.

1172. Benoist Richard, of 54, Rue du Glayeul, Elbeuf, département de la Seine Inférieure, for "Moveable paddle wheels and fixed cylinders."—Dated 12th March, 1859.

1173. Nicolas Charles Plantrou, of Oissel, département de la Seine Inferieure, for "A cotton card."—Dated 12th March, 1859.

1174. Armand Paris, of Aulnay, département de la Charente Inférieure, for "A plough for cultivating vineyards."—Dated 14th March, 1859.

1175. Charles Mathieu Teyssonneau, of 11 et 13, Rue St. Siméon, Bordeaux, département de la Gironde, for "An improved tool for closing all kinds of vessels."—Dated 14th March, 1859.

1176. Lacroix, Laroche, and Lacroix, of La Couronne, département de la Charente, for "Manufacture of ribbon-paper, called 'pulp ticken.'"—Dated 11th March, 1859.

1177. Eugène Pasquier, represented by Rollet, of Rue du Cours d'Ormesson, Chalons, département de la Marne, a Certificate of Addition to his Patent of 30th December, 1857, for "Improvements in machines for drying wool."—Dated 15th March, 1859.

1178. Joseph Couvers, of 4, Quai de Bondy, Lyon, département du Rhône, for "A tap with a reversed rotary clack valve."—Dated 14th March, 1859.

1179. Josephine Vignet, of 1, Impasse Savoie, Lyon, département du Rhône, for "A winter and summer skirt, with flounces and basquines."—Dated 14th March, 1859.

1180. Louis Bousquet and Co., of 91, Quai Pierre Seize, Lyon, département du Rhône, for "Clay gas retorts."—Dated 16th March, 1859.

1181. Raymond Albin Cahuzac, of Albi, département du Tarn, for "A continuous limekiln with a central hearth under a crenellated vault."—Dated 16th March, 1859.

1182. Lobis and Bernard, of 205, Rue Ste. Catherine, Bordeaux, département de la Gironde, for "A machine for filling syphons."—Dated 17th March, 1859.

1183. Louis Henri Rousseau, of 78, Rue Vieux Chemin de Rome, Marseille, département des Bouches du Rhône, for "Engines worked by regenerated steam."—Dated 12th March, 1859.

1184. Sartre, Delille, and Viollet, of 14, Rue du Dragon, Marseille, département des Bouches du Rhône, a Certificate of Addition to their Patent of 7th April, 1857, for "A process for preserving steam boilers."—Dated 15th March, 1859.

1185. Sauve and Magaud, of 50, Rue Vacon, Marseille, département des Bouches du Rhone, for "Puzzle locks."—Dated 15th March, 1859.

1186. Charles and Emile Boniface, of Sotteville-lez-Rouen, département de la Seine Inférieure, for "Applying lactoleine to spinning wool."—Dated 15th March, 1859.

1187. Tournier and Co., of Moirans, département de l'Isère, for "A kind of creel."—Dated 16th March, 1859.

1188. Xavier Fluhr, of Mulhouse, département du Haut Rhin, for "A direct mode of applying single condensors to vertical and horizontal steam-engines."—Dated 16th March, 1859.

1189. Salot alias Perpignan, of 11, Rue Trois Faucons, Avignon, département de la Vaucluse, for "Globes with central fire." — Dated 17th March, 1859.

1190. Louis Victor Thuillier, of 26, Rue aux Juifs, Rouen, département de la Seine Inférieure, for "Finishing dyed and unscoured stuffs."—Dated 17th March, 1859.

1191. Pierre Laberic, of Mazamet, département du Tarn, a Certificate of Addition to his Patent of 6th April, 1858, for "A machine for finishing cloth, &c."—Dated 17th March, 1859.

1192. Pierre Pourret, of Rue Henry IV., Bordeaux, département de la Gironde, a Certificate of Addition to his Patent of 24th December, 1857, for "A system of glass stoppers, &c."—Dated 17th March, 1859.

1193. Aléxandre Eugène Tardy, of Chartres, département d'Eure et Loire, a Certificate of Addition to his Patent of 19th April, 1858, for "A kind of blinds, called 'telegraphic blinds.'"—Dated 17th March, 1859.

1194. Pierre Boulanger, of Fallou, département de la Haute Saône, for "A system of charring wood."—Dated 18th March, 1859.

1195. Pierre Dupré, of Chateaubriant, département de la Loire Inférieure, for "A flour mill."—Dated 18th March, 1859.

1196. Auguste Rivière, of Carcassonne, département de l'Aude, for "Pincers for mustachoes."—Dated 18th March, 1859.

1197. Cosson, senr., and Lepault, of Nouzon, département des Ardennes, for "Hinge plates and hinges of carriages made without soldering."—Dated 18th March, 1859.

1198. Auguste Moreau, of Chateaubriant, département de la Loire Inférieure, for "A machine for cutting sugared gum paste."—Dated 18th March, 1859.

1199. Herbaux-Rohart, of Roubaix, département du Nord, for "An inodorous apparatus applicable to privies and night-stools."—Dated 18th March, 1859.

1200. Constantin and Lognon, of Aubin, département de l'Avignon, for "A system of hydraulic pumps."—Dated 16th March, 1859.

1201. Charles Delmas, of 2, Rue Thomassin, Lyon, département du Rhône, a Certificate of Addition to his Patent of 21st September, 1858, for "An apparatus for wetting postage stamps by pressure."—Dated 18th March, 1859.

1202. Antoine Martin, of 5, Rue Thomassin, Lyon, département du Rhône, for "Improvements in sets of teeth."—Dated 19th March, 1859.

1203. Philippe Bouc, of La Charrière, and Louis Pierre, of Mort, département des Deux Sèvres, a Certificate of Addition to his Patent of 21st March, 1857, for "A motor for carriages."—Dated 21st March, 1859.

1204. Nicolas Waldeck, of 8, Rue Halleboule, Strasbourg, département du Bas Rhin, for "A perpetual almanack."—Dated 11th March, 1859.

1205. François Ménaille, of Strasbourg, département du Bas Rhin, for "Manufacture of saddle bows of bulls' pizzles."—Dated 12th March, 1859.

1206. Charles Damien, of Valenciennes, département du Nord, for "Venetian blinds."—Dated 22nd March, 1859.

1207. Alfred Fondeur Daire, of Amiens, département de la Somme, for "Hermetic axles."—Dated 18th March, 1859.

1208. Joseph Depoilly, of Escarbotin, département de la Somme, for "Improvements in locks."—Dated 18th March, 1859.

1209. Jean Hippolyte Chrysostôme Nourry, of Courtezon, département de la Vaucluse, for "A scutcher for silk mills." — Dated 19th March, 1859.

1210. Louis Félix Adolphe Lambert, of Meleux, département de Seine et Marne, for "A match case."—Dated 22nd March, 1859.

1211. Ferdinand Verdier, of Sauveterre de Guyenne, département de la Gironde, for "Improvements in the striking work of clocks." — Dated 21st March, 1859.

1212. Arnaud Gibert, of 63, Rue des Joliblierès, Bordeaux, département de la Gironde, a Certificate of Addition to his Patent of 3rd January, 1859, for "A railway break."—Dated 21st March, 1859.

1213. Junius Bizet-Pireyze, of Thiers, département du Puy de Dôme, a Certificate of Addition to his Patent of 30th March, 1858, for "Manufacture of lining plates of knives."—Dated 16th March, 1859.

1214. Léon Guittart, of 37, Rue des Amidonniers, Toulouse, département de la Haute Garonne, for "A motor."—Dated 21st March, 1859.

1215. Jean Baptiste Porte, of 6, Rue des Capucins, Lyon, département du Rhône, for "Lithographic printing on soft felt and other hats."—Dated 21st March, 1859.

1216. Jean Baptiste Sarry, of 45, Cours Morand, Lyon, département du Rhône, a Certificate of Addition to his Patent of 19th December, 1856, for "A machine for throwing silk and other textile substances."—Dated 22nd March, 1859.

1217. Abdon Delpech, of Agen, département de Lot et Garonne, for "A system applicable to shooting guns for guiding the shot." — Dated 22nd March, 1859.

1218. François Menais, of 50, Rue du Grand-Cansera, Bordeaux, département de la Gironde, for "An amalgama of meta's, called 'mastic metals.'"—Dated 23rd March, 1859.

1219. Jean Laraumandy, of 103, Avenue de Saxe, Lyon, département du Rhône, for "An hydro-aero-motive engine." — Dated 23rd March, 1859.

1220. Piérre Nau, of Berson, département de la Gironde, for "Using iron and steel."—Dated 23rd March, 1859.

1221. Camilly De Baecker, domiciled with Launoy-Lefebvre, of 55, Rue Basse, Lille, département du Nord, a Certificate of Addition to his Patent of 14th March, 1859, for "An apparatus for planting beans and other seeds."—Dated 23rd March, 1859.

1222. Joseph Moret-Bailly, of Latour du Miex, département du Jura, for "Improvements in metal foot coverings, as patented 19th March, 1857."—Dated 19th March, 1859.

1223. Oudinot and Delarbre, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Manure."—Dated 12th March, 1859.

1224. Jaloureau, of 17, Rue de Douai, Paris, a Certificate of Addition to his Patent of 30th December, 1857, for "Manufacture of pipes."—Dated 12th March, 1859.

1225. Fiege, Truchard, and Co., represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Ornamenting lamps."—Dated 12th March, 1859.

1226. John Fielden, represented by Tolhausen, of 35, Boulevart Bonne Nouvelle, Paris, for "Improvements in constructing and winding up bobbins of cotton, flax, silk, wool, or other filamentous substances."—Dated 12th March, 1859.—(English Patent, 6th September, 1872.)

1227. Charles Jean Marie Lavigne, of 61, Rue de Grenelle, Grenelle, a Certificate of Addition to his Patent of 8th March, 1855, for "Apparatus and instruments for amusing children."—Dated 14th March, 1859.

1228. Marie Henri Joseph Argoud, of 8, Place de la Corderie, Paris, for "A system of moderator lamps with moveable cups."—Dated 14th March, 1859.

1229. François Philippe Pin, of 32, Rue Sedaine, Paris, for "Folding tables."—Dated 14th March, 1859.

1230. Philippe Antoine Mathieu, domiciled with Dr. Tampier, of 7, Rue de la Boule Rouge, Paris, for "Water dust baths."— Dated 14th March, 1859.

1231. Adolphe Xavier Laplace, of 9, Rue de la Vielle Estrapade, Paris, for "Submarine boats."—Dated 14th March, 1859.

1232. Louis François Xavier Barthélemy de la Fléchelle, of 27, Rue Lamartine, Paris, for "Revolving smoking pipes with several charges."—Dated 14th March, 1859.

1233. Henri Rovin, represented by Damourette, of 66, Rue St. Lazare, Paris, a Certificate of Addition to his Patent of 21st June, 1858, for "An harvesting and mowing machine."—Dated 14th March, 1859.

1234. Jean Pierre Dardier, represented by Amouroux, of 333, Rue St. Martin, Paris, for "Cutting gloves."—Dated 14th March, 1859.

1235. Louis Mathieu, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Obtaining mists of medicamental waters or other liquids."—Dated 14th March, 1859.

1236. Augustin Castellvi, represented by Mathieu, of 45. Rue St. Sébastien, Paris, for "Railway breaks."—Dated 14th March, 1859.

1237. The Company l'Alliance, represented by Mathieu, of 45, Rue Sébastien, Paris, a Certificate of Addition to his Patent of 10th July, 1858, for "Improvements in magneto-electric machines."—Dated 14th March, 1859.

1238. Segismond Leoni, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Manufacture of objects, surfaces, and parts of machinery and apparatus, &c. from talc and other silicates of magnesia."—Dated 14th March, 1859.—(English Patent, expiring 24th November, 1872.)

1239. Mesdames Egrefeuil, represented by Egrefeuil, of 5, Rue Coquenard, Paris, for "A box for bonbons."—Dated 14th March, 1859.

1240. Marie Balthazar Dulac, of 42, Rue du Faubourg du Temple, Paris, for "A system of labels."—Dated 14th March, 1859.

1241. François Théophile Moison, domiciled with Cressent, of 147, Rue du Faubourg St. Denis, Paris, for "A system of cranes."—Dated 14th March, 1859.

1242. Lauzanne, senr. and junr., of 24, Rue de la Poterie, Paris, for "Improvements in coffee mills."—Dated 14th March, 1859.

1243. Pierre Marmay, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "An alimentary substance, and preparing the same."—Dated 14th March, 1859.

1244. Joseph Pomeyrol, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Jointed mountings of canes, umbrellas, parasols, horse whips, &c."—Dated 14th March, 1859.

1245. Cabasson, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, a Certificate of Addition to his Patent of 28th September, 1855, for "A system of envelope papers, &c."—Dated 14th March, 1859.

1246. François Joseph Wallet, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in constructing and ornamenting glass, especially for lighting apparatus."—Dated 14th March, 1859.

1247. Albert Cyprien Carpentier, of 19, Rue du Grand-Prieuré, Paris, for "An apparatus for stretching thread."—Dated 15th March, 1859.

1248. Victor Armand Prou, of 29, Rue de Sèvres, Paris, for "An hydro-atmospheric lever for working switches and signal disks on railways, by themselves."—Dated 15th March, 1859.

1249. Wright, senr. and junr., represented by Sautter, of 14, Boulevart Montmartre, Paris, for "Improvements in machines and apparatus used in preparing tissues and other substances for fixing eyes and hooks thereon."—Dated 15th March, 1859.—(English Patent, expiring 9th September, 1872.)

1250. Charles Emmanuel, of 17, Rue Dugay-Trouin, Paris, a Certificate of Addition to his Patent of 15th March, 1858, for "A motor called dynamic battery."—Dated 15th March, 1859.

1251. Edmond Armand Louis d'Argy, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "A system of rings for curtains, &c."—Dated 15th March, 1859.

1252. Isidore Hayem, of 28, Rue de Cléry, Paris, for "A kind of cravat and collar."—Dated 16th March, 1859.

1253. Thomas Piatti, of 6, Rue du Croissant, Paris, for "Cushions."—Dated 16th March, 1859.

1254. François Philippe Pin, of 32, Rue Sedaine, Paris, a Certificate of Addition to his Patent of 14th March, 1859, for "A kind of folding table."—Dated 16th March, 1859.

1255. Alexandre Giacobbi, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 21st August, 1858, for "A controlling or registering apparatus for public carriages."—Dated 16th March, 1859.

1256. Joseph Doreau, of 6, Rue du Grand Hurleur, Paris, for "A kind of stereoscope."—Dated 16th March, 1859.

1257. Louis Alexandre Levert, of 22, Rue du Chevaleret, Gare d'Ivry, for "A distilling apparatus for charring wood in piles, in forests, &c."—Dated 16th March, 1859.

1258. Prosper Alexandre, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Grates with moveable bars."—Dated 16th March, 1859.

1259. Gastal, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Globes of oil and other lamps, with external relief ornaments."—Dated 16th March, 1859.

1260. George Guillaume Saussner, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Pastel pencils called 'creta-polycolor pencils.'"—Dated 16th March, 1859.

1261. Charles Rochaz, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Breech-loading fire-arms."—Dated 16th March, 1859.

1262. Alexis Maupoix, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A thrashing machine and horse gin."—Dated 16th March, 1859.

1263. John Aspinall, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Improvements in refining sugar."—Dated 16th March, 1859.

1264. Nicolas Alexis Grumel, of 13, Rue Montorgueil, Paris, for "Dyeing cotton with black colours."—Dated 16th March, 1859.

1265. Mrs. Gérard and Son, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in saws."—Dated 16th March, 1859.

1266. Lion, Grenouville, and Co., of 11, Rue du Grand Chautier, Paris, for "Looped fabrics of one single piece."—Dated 16th March, 1859.

1267. Blanquart de Bailleul and Rives, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "An apparatus for amalgamating precious metals."—Dated 16th March, 1859.

1268. Mrs. Schlose and Brother, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "So-called invisible clasps and arrangements in portemonnaies, pocket-books, and similar objects."—Dated 16th March, 1859.

1269. Corsel and Co., of 40, Rue de l'Echiquier, Paris, for "Apparatus for spinning in general."—Dated 16th March, 1859.

1270. Jules Rival, of 55, Rue Montmartre, Paris, a Certificate of Addition to his Patent of 22nd May, 1858, for "A manometer indicating the specific weight, and combined with a regulator."—Dated 17th March, 1859.

1271. Georges Guillaume Amatus Luer, of 19, Place de l'Ecole de Médecine, Paris, for "A canula, with its extensible appendix, to be used in tracheotomy."—Dated 17th March, 1859.

1272. Favelier and Miss Potet, of 48, Rue Charlot, Paris, for "A system of buckles with internal cap and tongues."—Dated 17th March, 1859.

1273. Gustave Frey, of 12, Quai des Bateliers, Strasbourg, département du Bas Rhin, for "Improvements in letter scales."—Dated 19th March, 1859.

1274. Léon Cabias, senr. and junr., of 42, Rue des Lices, Avignon, département de la Vaucluse, a Certificate of Addition to his Patent of 19th January, 1858, for "Manufacture of inextensible straps and leather."—Dated 22nd March, 1859.

1275. Charles Corsat, of Annonay, département de l'Ardêche, for "A kneading machine for making bread."—Dated 23rd March, 1859.

1276. Charles Perrin, of Vuillafans, département du Doubs, for "A system of pumps with hollow rods and pistons."—Dated 23rd March, 1859.

1277. Charles Guffroy, of 27, Quai de la Basse-Deûle, Lille, département du Nord, a Certificate of Addition to his Patent of 14th September, 1857, for "Improvements in smoke-consuming fireplaces."—Dated 24th March, 1859.

1278. Joseph Buisneau, represented by Bouillon, of 2, Quai de Billy, Paris, for "A kind of bottle-stand."—Dated 17th March, 1859.

1279. Maret Marquis de Bassano, represented by Kann, of 65, Rue de la Verrerie, Paris, for "A machine for compressing coal."—Dated 17th March, 1859.

1280. Victor Delperdange, represented by Ulliel, of 3, Rue Cadet, Paris, for "A reflector for lanterns or street lamps."—Dated 17th March, 1859.

1281. Boccard alias Boccardo, domiciled with Leroy, of 8, Rue de Ménars, Paris, a Certificate of Addition to his Patent of 24th March, 1858, for "A bronze compound obtained by an alloy of zinc and red copper."—Dated 17th March, 1859.

1282. Hippolyte Charlon, of 2, Rue Boursault, Paris, for "A system of lighting."—Dated 17th March, 1859.

1283. François Charles Mongin, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 8th January, 1859, for "Manufacture of saws."—Dated 17th March, 1859.

1284. Jean Baptiste Henri Vignier, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A machine for polishing stoppers, flacons, and other vessels."—Dated 17th March, 1859.

1285. Sculfort and Meurice, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A boring machine with gearings."—Dated 17th March, 1859.

1286. Louis Lemaignen, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 2nd November, 1858, for "An economical process for manufacturing cloth."—Dated 17th March, 1859.

1287. James Doherty, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Improvements in buttons or fastenings of dresses."—Dated 17th March, 1859.—(English Patent, expiring 7th April, 1872.

1288. Adolph Fliniaux, of 27, Rue des Martyrs, Paris, for "Manure."—Dated 17th March, 1859.

1289. Jean Henry Gueury, of 22, Rue Corbeau, Paris, for "A counting apparatus for games at billiards."—Dated 18th March, 1859.

1290. Maurier Félix Perfumo, of 2, Rue de la Rivière, Grenelle, for "Preparing oil for lubricating machinery."—Dated 18th March, 1859.

1291. John Emes, represented by Castelbon, of 15, Passage des Petites Ecuries, Paris, for "Portable beds, which may be converted into sofas, chairs, or arm-chairs."—Dated 18th March, 1859.

1292. Antoine Ferdinand Fabritius, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in coach-building."—Dated 18th March, 1859.

1293. Delarivière and Martin, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in the construction of cocks."—Dated 18th March, 1859.

1294. Paul Alexandre Baudet, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Closing bottles."—Dated 18th March, 1859.

1295. Pierre Pinson, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Manufacture of wheel tyres of railway carriages and of other circular pieces."—Dated 18th March, 1859.

1296. Enoch Fielding, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Preserving the shape of thread bobbins by using adherent substances."—Dated 18th March, 1859.

1297. Molinos and Pronnier, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to their Patent of 12th November, 1855, for "A system of boilers for locomotives, &c."—Dated 18th March, 1859.

1298. Gustave Keller, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 8th February, 1856, for "Travelling bags."—Dated 18th March, 1859.

1299. Georges Moser, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A plate with an indicating dial, applicable to all clockworks."—Dated 18th March, 1859.

1300. Eugène Coanet, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "An instrument for taking the measure of the hand for gloves."—Dated 18th March, 1859.

1301. Alphonse Alexandre Julien Bonnin, of 59, Rue de Grenelle St. Germain, Paris, a Certificate of Addition to his Patent of 25th March, 1858, for "A cock with eccentric packings."—Dated 19th March, 1859.

1302. Félix Joseph Faucon, of 44, Rue Caumartin, Paris, a Certificate of Addition to his Patent of 20th March, 1858, for "An apparatus for consuming gas and smoke."—Dated 19th March, 1859.

1303. Neustadt and Bonnefond, the former of 71, Rue de Chabrol, the latter of 7, Rue de Bruxelles, Paris, for "A system of taps."—Dated 19th March, 1859.

1304. Sloat and Thomas, represented by Fringant, of 12, Rue de Provence, Paris, for "Improvements in sewing machines."—Dated 19th March, 1859.—(American Patent, expiring 7th September, 1872.)

1305. Tredoulut, senr., and Malvesin, senr., of 29, Rue Réaumur, Paris, for "Heads of dolls of vulcanized india rubber."—Dated 19th March, 1859.

1306. Toussaint and Brossard, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in steel springs."—Dated 19th March, 1859.

1307. James Wetherilt, represented by Barrault, of 29, Boulevart St. Martin, Paris, for "Improvements in locks."—Dated 19th March, 1859.—(English Patent, expiring 1st March, 1873.)

1308. Louis Noël Winderling, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in artificial teeth and sets of teeth."—Dated 19th March, 1859.

1309. Etienne Buot, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Protecting vines in plains from frosts in spring."—Dated 19th March, 1859.

1310. Auguste Amédée Bellain, of 27, Rue Michel-le-Comte, Paris, for "Improvements in boiling apparatus for boxes containing preserved food."—Dated 19th March, 1859.

1311. Gillot Brothers, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 2nd December, 1858, for "A hook-clasp, &c."—Dated 19th March, 1859.

1312. Bourget and Doyen, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Relief printing of silk plush."—Dated 19th March, 1859.

1313. François Philippe Ferro, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 15th January, 1859, for "Manufacture of pulp."—Dated 19th March, 1859.

1314. François Marchal, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "An apparatus, called 'obturator,' for preventing any excess in steam pressure, applicable to locomotives and fixed engines."—Dated 19th March, 1859.

1315. Jean Baptiste Molozay, of 40, Rue St. Maur, Paris, for "An apparatus for rubbing."—Dated 19th March, 1859.

1316. Marie Maxime Sigean, of 71, Rue du Temple, Paris, for "Clasps for bags, portemonnaies, &c."—Dated 21st March, 1859.

1317. Agathon Ruffier-Danche, of 28, Petite Rue St. Pierre Amelot, Paris, a Certificate of Addition to his Patent of 16th March, 1858, for "A

kind of portemanteau."—Dated 21st March, 1859.

1318. Thomas Guinier, of 23, Rue de Grenelle, St. Honoré, Paris, a Certificate of Addition to his Patent of 6th January, 1853, for "Improvements in waterclosets, &c."—Dated 21st March, 1859.

1319. Charles Auguste Boisset, of 246, Rue du Faubourg St. Antoine, Passage du Génie, Paris, for "Iron Venetian blinds with moveable blades, which may be worked from the inside of apartments without opening the window."—Dated 21st March, 1859.

1320. Jean Clair Ancelle, domiciled with Thévenard, of 11, Rue Notre Dame des Victoires, Paris, for "A manipulator for injured workmen."—Dated 21st March, 1859.

1321. Pierre Alliot, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in drain pipes."—Dated 21st March, 1859.

1322. Desforges and Dufour, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in metallic chairs."—Dated 21st March, 1859.

1323. Sarazin and Vincent, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A machine for working skins for hats, sheaths, bookbinding, &c."—Dated 21st March, 1859.

1324. André François Emile Robert, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Manufacture of balloons which cannot be disinflated."—Dated 21st March, 1859.

1325. Thomas Bailey, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Mechanical movement applicable to loading fire-arms, and to other purposes."—Dated 21st March, 1859.

1326. James Spence, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in the manufacture of steel, and in furnaces employed thereat."—Dated 21st March, 1859.

1327. Joseph Staal, of Rue d'Orléans, Batignolles, a Certificate of Addition to his Patent of 24th December, 1858, for "Inodorous apparatus closed hermetically."—Dated 21st March, 1859.

1328. Jacques Aillaud and Co., of 87, Boulevart Chave, Marseille, département des Bouches du Rhône, for "Toe-topic, or means of destroying corns."—Dated 17th March, 1859.

1329. Pierre Garraud, of Lacouronne, département de la Charente, for "Mechanism for regulating the motion in looms."—Dated 21st March, 1859.

1330. Thomas Scott, of 34, Rue d'Ebeuf, Rouen, département de la Seine Inférieure, a Certificate of Addition to his Patent of 2nd March, 1859, for "A condensor with plain surfaces."—Dated 22nd March, 1859.

1331. Charles Horblin, of 17, Route de Bordeaux, Faubourg St. Cybard, for "Twisted and woven gauze-wire."—Dated 22nd March, 1859.

1332. Victor Doat, of Alby, département du Tarn, for "A mechanical automotor."—Dated 23rd March, 1859.

1333. François Bourrel, of 31, Rue St. Rome, Toulouse, département de la Haute Garonne, for "Plaited hats and caps."—Dated 23rd March, 1859.

1334. Danion and Co., of Lambezellie, département du Finistère, for "An oscillating steelyard."—Dated 24th March, 1859.

1335. Danion and Co., of Lambezelle, département du Finistère, for "An oscillating steelyard."—Dated 24th March, 1859.

1336. Joseph Toussaint Caussemille, of 12, Boulevart de la Gare, Marseille, département des Bouches du Rhône, for "Applying banana and abaca textile substances to the manufacture of oil bags."—Dated 24th March, 1859.

1337. Arsène Olivier, of Valence, département de la Drôme, a Certificate of Addition to his Patent of 27th November, 1858, for "Improvements in drawing raw silk."—Dated 24th March, 1859.

1338. Louis Jean Baptiste Nicolle, of Tonnerre, département de l'Yonne, for "An aerial motor or means of utilizing the wind for propelling locomotives."—Dated 25th March, 1859.

1339. Antoine Edouard Chilliat, represented by Barrault, of 33, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 7th March, 1859, for "A continuous system of twisting silk and of whirls."—Dated 21st March, 1859.

1340. Pierre Louis Alexis Boillot, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "A kind of wax, and its manufacture."—Dated 21st March, 1859.

1341. Claude François Neyret, of 12, Rue Michel le Comte, Paris, for "Barret watch-keys."—Dated 22nd March, 1859.

1342. Louis André Narcisse Billard, of 102, Rue du Temple, Paris, for "A system of keys and heads of keys."—Dated 22nd March, 1859.

1343. Mathieu alias Plessy, represented by Arrault, of 4, Rue de l'Empereur, Montmartre, for "Improvements in dyeing and printing cotton and other tissues."—Dated 22nd March, 1859.

1344. Jules Amand Marie Bretonnière, domiciled with Dubois, of 60, Rue de Chaillot, Paris, for "Conveying vessels across an isthmus or a portion of land without using a canal."—Dated 22nd March, 1859.

1345. Henri Bosshart, of 87, Rue de Ménilmontant, Paris, for "An apparatus for collecting power and a motor."—Dated 22nd March, 1859.

1346. François Buvert, domiciled 26, Rue de Lille, Paris, for "An apparatus for protecting persons from flames in fires."—Dated 22nd March, 1859.

1347. Louis Ansoult, of 12, Rue de Paris, Belleville, for "A machine for preparing cream and ices."—Dated 22nd March, 1859.

1348. Auguste Constantin Aimable Bertrand, domiciled with Dreyfous, of 54, Rue de Bondy, Paris, for "A kind of cigaret paper."—Dated 22nd March, 1859.

1349. Jacques Mathys, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A

sewing machine called 'Sourdine.'"—Dated 22nd March, 1859.

1350. Dollier Brothers, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to their Patent of 14th September, 1857, for "A mixture for reviving and polishing varnished leather, &c."—Dated 22nd March, 1859.

1351. Dollier Brothers, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Stoppers and adherent brushes for flacons or vessels containing varnish or other products."—Dated 22nd March, 1859.

1352. François Martin, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 8th April, 1858, for "A machine for splitting hides."—Dated 22nd March, 1859.

1353. Charles François Mongin, of 11, Rue des Juifs, Paris, a Certificate of Addition to his Patent of 8th January, 1859, for "Manufacture of saws."—Dated 23rd March, 1859.

1354. Sylvain Nadaud, of 5, Rue Villedo, Paris, for "Applying borate."—Dated 23rd March, 1859.

1355. Henry Meidinger, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 22nd November, 1858, for "An absolutely steady electrical battery."—Dated 23rd March, 1859.

1356. Augustin Lejeune, of 57, Rue de la Mare, Belleville, for "Reading and stamping machine with free punches."—Dated 23rd March, 1859.

1357. Jean Louis Bertin, represented by Daubréville, of 60, Boulevart de Strasbourg, Paris, for "Mounting bars of rests for windows and balconies."—Dated 23rd March, 1859.

1358. Denis Isidore Gion, of 7, Rue de la Paix, Paris, for "Metal pieces for dental prothesis, mounted with pierced mineral teeth, and fixed on the remaining teeth by means of wooden pins."—Dated 23rd March, 1859.

1359. Fauconnier and Durand, of 15, Avenue Parmentier, Paris, for "A machine for pugging and beating beton or earth work in the construction of walls, houses, dikes, &c."—Dated 23rd March, 1859.

1360. Pierre Labat, represented by Dreyfous, of 54, Rue de Bondy, Paris, a Certificate of Addition to his Patent of 10th December, 1856, for "Improvements in the composition and manufacture of buckles."—Dated 23rd March, 1859.

1361. Claude Arnoux, of 8, Rue de Tournon, Paris, for "An arrangement for introducing jointed carriages into the railway service."—Dated 23rd March, 1859.

1362. Edouard Armand Louis d'Argy, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in percussion lights."—Dated 23rd March, 1859.

1363. Elisa Blanchard, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 29th January, 1858, for "Combinations in lamps."—Dated 33rd March, 1859.

1364. George Laurent Koch, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in photographic apparatus."—Dated 23rd March, 1859.

1365. Benoist Joseph Gosteau-Bondy, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, a Certificate of Addition to his Patent of 10th May, 1850, for "A candlestick containing matches, &c."—Dated 23rd March, 1859.

1366. Jean Marchal, of 200, Rue d'Allemagne La Villette, for "Lace coverings of flacons, called 'ameristic flacons.'"—Dated 24th March, 1859.

1367. Gaspard Aubebt Schwickardi, of 59, Rue de Cléry, Paris, for "So-called 'hygienic feet-warmers.'"—Dated 24th March, 1859.

1368. Amélie Goutard Thévenot, of 19, Rue Neuve Ménilmontant, Paris, for "A kind of tournure."—Dated 24th March, 1859.

1369. Tournaire and Cochet, of 63, Rue St. Maur Popincourt, Paris, for "A sugar rasp."—Dated 24th March, 1859.

1370. Louis Lequeu, of 71, Rue du Faubourg St. Antoine, Paris, a Certificate of Addition to his Patent of 25th March, 1858, for "A machine for spinning cane."—Dated 24th March, 1859.

1371. Nicolas Basset, domiciled with Roquelaine, of 62, Rue Notre Dame de Lorette, Paris, for "A peculiar process for defecating and discolouring must, juice, and sugar substances without using animal charcoal, being applicable to sugar works, refining, and distilling."—Dated 24th March, 1859.

1372. Séraphin Macle, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Preparing purified lac dye."—Dated 24th March, 1859.

1373. Conrad Rauschenbach, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in the manufacture of pins."—Dated 24th March, 1859.

1374. James Merrill, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in breech-loading fire-arms."—Dated 24th March, 1859.

1375. Delarivière and Martin, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in fixed and portable hydraulic pumps."—Dated 24th March, 1859.

1376. Théophile François Pincon, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 31st July, 1858, for "A system of horse collars, &c."—Dated 24th March, 1859.

1377. Louis Mathieu, of 82, Rue de l'Ecole de Médicine, Paris, a Certificate of Addition to his Patent of 14th March, 1859, for "A process for obtaining a mist of medicamental and other waters."—Dated 24th March, 1859.

1378. Michel Keller, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 2nd June, 1858, for "Improvements in the manufacture of artificial marble."—Dated 24th March, 1859.

1379. Lerouge and Bouquié, of 6, Rue Laffitte, Paris, for "A machine for making blocks for sleepers."—Dated 24th March, 1859.

1380. Riotto and Daniel, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "A tube for protecting the points of pencils and pens." Dated 25th March, 1859.

1381. Charles Marien Rouillier, of 24, Rue St. Bernard, Paris, for "Manufacture of glue."—Dated 25th March, 1859.

1382. Antoine Laroze, of 8, Rue d'Enghien, Paris, a Certificate of Addition to his Patent of 10th March, 1859, for "Purifying and assimilating phosphate of fossil lime."—Dated 25th March, 1859.

1383. Maxime Renon, of 68, Rue de Rivoli, Paris, for "A projecting apparatus."—Dated 25th March, 1859.

1384. Benoit Dupont, of 12, Rue de la Pompe, Paris, for "A gold case."—Dated 25th March, 1859.

1385. Séraphine Volat, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 11th April, 1857, for "Improvements in tournure petticoats."—Dated 25th March, 1859.

1386. Charles François Bailly, of 61, Quai de l'Ecole, Paris, a Certificate of Addition to his Patent of 3rd November, 1858, for "A machine for washing and drying linen."—Dated 26th March, 1859.

1387. Petin, Gaudet, and Co., represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Manufacture of cranked axles."—Dated 26th March, 1859.

1388. Théophile Redeuil, represented by Barrault, of 33, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 3rd May, 1858, for "Manufacture of sanitary biscuit."—Dated 26th March, 1859.

1389. Julek Brossard, of 15, Rue de Sèze, Lyon, département du Rhône, for "Finishing shawls by means of cold water and pressure."—Dated 25th March, 1859.

1390. Pierre Théophile Berton, of 3, Rue de Bouillon, Angers, département de Maine et Loire, for "A mechanism for covering and uncovering plank-wings of windmills."—Dated 26th March, 1859.

1391. Michel Alleyme, of Nantua, département de l'Ain, for "Flattening massive and compact points of horn for the manufacture of combs."—Dated 28th March, 1859.

1392. Heitz and Flieg, of Thann, department du Haut Rhin, for "A double turbine (by superposition and juxtaposition)."—Dated 23rd March, 1859.

1393. Joseph Gervais, of Auxerre, département de l'Yonne, for "A system of hydraulic pressure."—Dated 25th March, 1859.

1394. Antoine Coudert, of Firminy, département de la Loire, for "A process for straightening axles of railway carriages without removing the wheels."—Dated 26th March, 1859.

1395. Paul Raquet, of 25, Rue de la Monnaie, Troyes, département de l'Aube, for "A scraping machine."—Dated 26th March, 1859.

1396. Jean Louis Laplanche, of Place du Pilori, Nantes, département de la Loire Inférieure, for "Moulding foot coverings of gutta percha combined with leather."—Dated 28th March, 1859.

1397. Stanislas Ludet, of Aussonce, département des Ardennes, for "A system of templets."—Dated 29th March, 1859.

1398. Xavier Misdon, of Vannoz, département du Jura, for "An open-worked beating machine, with a moveable grate for separating balls and grain from straw, and ventilator for cleaning corn, &c."—Dated 25th March, 1859.

1399. Gaspard François Devarenne, of Méru, département de l'Oise, for "Counters."—Dated 26th March, 1859.

1400. Alexandre Gressy, senr. and junr., of Carnac, département du Morbihan, for "Working varech in all seasons."—Dated 26th March, 1859.

1401. Philippe Patard, of Laversines, département de l'Oise, for "An hydraulic and atmospheric engine."—Dated 26th March, 1859.

1402. Cochut and Marandon, of Tauxierès, département de la Marne, for "A thrashing mill." Dated 26th March, 1859.

1403. Pierre Louis Tavernier, of Evreux, département de l'Eure, a Certificate of Addition to his Patent of 14th September, 1857, for "A universal sowing machine."—Dated 28th March, 1859.

1404. Jacques Raymond, of La Bastide, banlieue de Bordeaux, département de la Gironde, for "A system of oblique keels for vessels."—Dated 28th March, 1859.

1405. Alfred Raymondière, of 1, Rue Beausejour, Nantes, département de la Loire Inférieure, for "Bars of furnaces."—Dated 29th March, 1859.

1406. Théodore Ulmer, of 66, Rue des Trois Conils, Bordeaux, département de la Gironde, a Certificate of Addition to his Patent of 12th August, 1858, for "A system of axles with graduated journals and cylinder boxes."—Dated 29th March, 1859.

1407. Pierre Joseph Demarne, of 76, Rue Tilsit, Marseille, département des Bouches du Rhône, for "Beds with elastic bottoms, and without mattresses."—Dated 25th March, 1859.

1408. John Davis, represented by Zacharie, of 40, Rue de Bourbon, Lyon, département du Rhône, a Certificate of Addition to his Patent of 3rd May, 1858, for "Improvements in cornets à pistons, &c."—Dated 28th March, 1859.

1409. Servant Devienne and Co., of 21, Rue des Capucins, Lyon, département du Rhône, for "A kind of quilting."—Dated 29th March, 1859.

1410. Servant Devienne and Co., of 21, Rue des Capucins, Lyon, département du Rhône, for "Lined fabrics of lace-work."—Dated 29th March, 1859.

1411. Jacques Lacombe, of 29, Chemin du Sacré-Cœur, Lyon, département du Rhône, for "A suspension knee for the navy."—Dated 29th March, 1859.

1412. Claude François Boulanger, of Fallon, département de la Haute Saône, for "A continuous pressing machine."—Dated 30th March, 1859.

1413. Joseph Hugand, of Charlieu, département de la Loire, a Certificate of Addition to his Patent of 6th November, 1856, for "A sewing and embroidering machine."—Dated 30th March, 1859.

1414. Pierre Frédéric Boyer, of 10, Faubourg du Pont, Béziers, département de l'Hérault, for "Improvements in portable boilers for scalding vines for the purpose of destroying pyralidae."—Dated 28th March, 1859.

PRUSSIA.*

List of Patents Delivered and Annulled between the 1st March and 15th April, 1859.

(*Communicated by the Minister of Commerce and Public Works.*)

1. Patents Delivered.

1. W. Spindler, of Berlin, for an "Apparatus for lustring dyed silk."—5 years.—Dated 6th April, 1859.

2. H. F. Eckert, of Berlin, for "A machine for gathering potatoes."—5 years.—Dated 8th April, 1859.

3. T. Fanter, of Berlin, for "A combined veneer-cutting and planing machine."—5 years.—Dated 28th March, 1859.

2. Patents Annulled.

1. J. H. F. Prillwitz, of Berlin, for an imported invention of "An apparatus for pressing peat."—Dated 28th January, 1858.—Annulled 17th March, 1859.

2. J. G. Hofmann, of Breslau, for "A machine for cutting substances used in the manufacture of paper."—Dated 2nd November, 1857.—Annulled 21st April, 1859.

3. F. Timpe, of Rheine, for "A brick-machine."—Dated 30th July, 1858.—Annulled 3rd Jannary, 1859.

* For the Prussian Patent Law, see Nos. 313 and 329 of this Journal.

Erratum in Journal of 3rd May.

For No. "154" read No. "144."

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. I.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in each Series. Edited by Bennet Woodcroft, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions, &c. By Simon Sturtevant. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*

2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By John Rovinson (*Letters Patent, granted A.D.* 1612.) Price 4*d.*

3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether Nicholas Page or Sir Nicholas Halse was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent, Nos.* 33 *and* 85, *respectively dated* 8*th April*, 1626, *and* 23*rd July*, 1635.) Price 2*d.*

4. Dud Dudley's Metallum Martis; or iron made with pit-coale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated* 22*nd February*, 1620, *and* 2*nd May*, 1638. Price 8*d.*

5. Description of the nature and working of the patent Water-scoop Wheels invented by William Wheler, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated* 24*th June*, 1642.) Price 2*s.*

6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) Edward Somerset, Lord Marquis of Worcester, &c. &c. (*Stat.* 15 *Car. II c.* 12. *A.D.* 1663.) Price 4*d.*

7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By Thomas Savery. (*Letters Patent, No.* 347, *dated* 10*th January*, 1696.) Price 1*s.*

8. The Miner's Friend; or an engine to raise water by fire described, &c. By Thomas Savery. (*Letters Patent, No.* 356, *dated* 25*th July*, 1698, *and Stat.* 10 *&* 11 *Will, III. c.* 31, *A.D.* 1699.) Price 1*s.*

9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By John Allen, M.D. (*Letters Patent, No.* 513, *dated* 7*th August*, 1729.) Price 8*d.*

10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By Jonathan Hulls. (*Letters Patent, No.* 556, *dated* 21*st December*, 1736.) Price 8*d.*

11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By Samuel Sutton, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated* 16*th March*, 1744.) Price 1*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. Curtis for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

A FREE LIBRARY and READING ROOM, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

NOTE.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Limerick.
Liverpool (*Free Public Library, Duke Street*).
——— (*Royal Institution*).
London (*British Museum*).
——— (*Society of Arts, John Street, Adelphi*).
Macclesfield (*Useful Knowledge Society*).
Maidstone.
Manchester (*Chetham Hospital*).
——— (*Free Library, Camp Field*).
Montrose.
Newark, Nottingham (*Mechanics' Institute, Middle Gate*).
Newcastle-upon-Tyne (*Literary and Philosophical Society*).
Newport, Monmouth (*Commercial Room, Town Hall*).
Northampton.
Norwich (*Free Library, St. John's, Maddermarket*).
Nottingham (*Corporation Rooms, St. Peter's Church side*).
Oxford (*Public Free Library, Town Hall*).
Paisley (*Government School of Designs, Gilmour Street*).
Plymouth (*Mechanics' Institute, Princess Square*).
Preston (*Dr. Shepherd's Library, the Institution, Avenham*).
Reading (*Literary, Scientific and Mechanics' Institution, London Street*).

Rotherham (*Board of Health Offices, Howard Street*).
Salford (*Peel Park*).
Sheffield (*Free Library, Surrey Street*).
Shrewsbury (*The Public Museum, College Street*).
Southampton (*Corporation Library, Audit House*).
Stirling (*Burgh Library, Town House, Broad Street*).
Stockport (*Court House, Vernon Street, Warren Street*).
Sunderland (*Corporation Museum, Athenæum, Fawcett Street*).
Tiverton.
Wakefield (*Mechanics' Institution, Barston Square*).
Warrington (*The Museum and Library*).
Waterford (*Town Hall, The Mall*).
Wednesbury (*Board of Health Offices*).
Wexford (*Mechanics' Institute, Crescent Quay*).
Wigan.
Wolverhampton (*School of Practical Art, Darlington Street*).
Wolverton (*Railway Station*).
Yarmouth, Norfolk (*Public Library, South Quay*)
York (*Lower Council Chamber, Guildhall*).

The Commissioners' publications have also been presented to the following Public Offices, Seats of Learning, British Colonies, and Foreign States:—

Public Offices, Institutions, &c.

Admiralty, Department of the Surveyor of the Navy.
——— Steam Branch.
——— Deptford Dockyard.
——— Woolwich ditto.
——— Chatham ditto.
——— Sheerness ditto.
——— Portsmouth ditto.
——— Devonport ditto.
——— Pembroke ditto.
Artillery Institute, Woolwich.
Board of Trade, Whitehall.
Ordnance Office, Pall Mall.
——— Small Arms Factory, Enfield.
War Office, Pall Mall.
Government School of Mines, &c., Jermyn St., Piccadilly.
Dublin Castle, Dublin.
Rolls Office, Chancery (Four Courts), Dublin.
Office of Chancery, Edinburgh.
East India House, Military Stores, Leadenhall Street.
Incorporated Law Society, Chancery Lane, London.

Seats of Learning.

Cambridge University.
Trinity College, Dublin.
Queen's College, Galway.
University College, London.

British Colonies.

Malta.
Cape of Good Hope.
Mauritius.
India—Bengal.
North-West Provinces.
Madras.
Bombay.
Ceylon.
Victoria—Patent Office, Melbourne.
Parliamentary Library, Melbourne.
New South Wales.
South Australia.
Tasmania.
New Zealand.
Newfoundland.
Canada—Quebec.
Toronto.
New Brunswick.
Prince Edward Island.
Antigua.
Barbados.
Jamaica.
Trinidad.
British Guiana.

Foreign States.

Austria—Handels Ministerium, Vienna.
Bavaria—Königliche Bibliothek, Munich.
Belgium—Ministère de l'Intérieur, Brussels.
France—Bibliothèque Impériale, Conservatoire des Arts et Métiers, Hôtel de Ville. } Paris.
Gotha—Ducal Friedenstein Collection.
Hanover—Ministerium des Innern, Hanover.
Netherlands—Ministère de l'Intérieur, The Hague.
Prussia—Handels Ministerium, Berlin.
Russia—Bibliothèque Impériale, St. Petersburg.
Sardinia—Ufficio delle Privative, Turin
Saxony—Polytechnische Schule, Dresden.
Sweden—Stockholm.
United States—The Patent Office, Washington.

Wurtemberg—Bibliothek des Musterlagers, Stuttgart.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size, Price 6*d*.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.
BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 558. TUESDAY, MAY 10, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

2962. FREDERICK WILLIAM TURNER, of Foxhole Colliery, Swansea, in the county of Glamorgan, Mechanical Engineer, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "Improvements in steam engines, condensers, and steam boilers, and in promoting combustion in the furnaces of the same."

As set forth in his petition, recorded in the said office on the 27th day of December, 1858.

2989. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, has given the like notice in respect of the invention of "Improvements in washing and drying machinery and apparatuses."—A communication from S. Charles, residing at Paris.

2990. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, has given the like notice in respect of the invention of "Improvements in revolving fire-arms."—A communication from L. F. Devisme, residing at Paris.

2991. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, has given the like notice in respect of the invention of "Improvements in machines for embroidering."—A communication from B. G. Dutel, residing at St. Quentin, France.

2992. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, has given the like notice in respect of the invention of "Improvements in machinery for splitting or dividing hides, skins, leather, and other like materials."—A communication from F. Martin, residing at Paris.

As set forth in his respective petitions, recorded in the said office on the 30th day of December, 1858.

3001. And MATTHEW DIGBY WYATT, of Guildford Street, Russell Square, in the county of Middlesex, Architect, has given the like notice in respect of the invention of "Improvements in tiles and tessaræ and other wall coverings, and in the means of securing the same to walls and buildings."

As set forth in his petition, recorded in the said office on the 31st day of December, 1858.

---

1. And JOHN TALBOT PITMAN, of the American and European Patent Offices, 67, Gracechurch Street, London, has given the like notice in respect of the invention of "An improved mode of making and fittings bungs to casks and other vessels."—A communication.

3. And ALBAN ANDERSON, of Lancaster, Fairfield County, Ohio, United States of America, has given the like notice in respect of the invention of "An improvement in governors for machinery."

4. And BENOÎT JOSEPH GOSTEAU, of 2, Rue Sainte Appoline, Paris, in the empire of France, and of 45, Essex Street, Strand, London, Merchant, has given the like notice in respect of the invention of "An improved gridiron, which may form a complete cooking-apparatus."

5. And JOSEPH EUGÈNE DROUOT, Baker, of 2, Rue Ste. Appoline, Paris (empire of France), and of 45, Essex Street, Strand, London, has given the like notice in respect of the invention of "Improvements in bakers' ovens."

12. And PIERRE EMMANUEL GUÉRINOT, of 60, Boulevart de Strasbourg, Paris, Mechanician Jeweller, has given the like notice in respect of the invention of "Improvements in the application of an apparatus to railway locomotives, waggons,

and carriages, for the purpose of lessening the effect of concussion in the event of collision."

17. And JAMES HARRIS, of Hanwell, in the county of Middlesex, Engineer, has given the like notice in respect of the invention of "Improvements in apparatuses for regulating the pressure and flow of steam, water, and other fluids."

19. And GEORGE SKINNER, of Stockton-on-Tees, county of Durham, Earthenware Manufacturer, and JOHN WHALLEY, of South Stockton-on-Tees, county of York, Earthenware Manufacturer, have given the like notice in respect of the invention of "Improvements in the manufacture of ornamental and other tiles, and other similar articles."

22. And ALEXANDRE LOUIS LÉVÈQUE, of Paris, France, Gentleman, has given the like notice in respect of the invention of "An improved apparatus for subduing or stopping run-away or restive horses."

23. And JOSEPH BOND MORGAN, of Liverpool, in the county of Lancaster, Cotton Broker, has given the like notice in respect of the invention of "Improvements in propelling navigable vessels."

As set forth in their respective petitions, all recorded in the said office on the 1*st day of January*, 1859.

---

24. And JOZÉ LUIS, of the British and Foreign Office for Patents, No. 1 B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, has given the like notice in respect of the invention of "New economical candles." — A communication from Adolphe Michaut, residing at Montpelier, in the empire of France.

30. And JACOB FURNIVAL, of Leamington, in the county of Warwick, THOMAS FURNIVAL, of Cobridge, JOHN DERBYSHIRE, of Longton, and FRANCIS JOSEPH EMERY, of Burslem, all in the county of Stafford, have given the like notice in respect of the invention of "Improvements in apparatus for supporting articles of china and earthenware in kilns and ovens."

As set forth in their respective petitions, both recorded in the said office on the 3*rd day of January*, 1859.

---

33. And JOHN BARNETT JOYCE, of Bradford, in the county of York, Machine and Tool Maker, has given the like notice in respect of the invention of "Improvements in means, machinery, or apparatus applicable to wool combing."

34. And WILLIAM HOOD, of 68, Upper Thames Street, in the city of London, Iron Merchant, has given the like notice in respect of the invention of "Improvements in racks and water cisterns for stables."

35. And ALFRED BEDBOROUGH, of the town and county of the town of Southampton, Architect and Surveyor, has given the like notice in respect of the invention of "An improved chimney cowl and ventilator."

As set forth in their several petitions, all recorded in the said office on the 4*th day of January*, 1859.

---

39. And JAMES HOWARD, of Bedford, Agricultural Implement Maker, has given the like notice in respect of the invention of "An improved construction of lever-neck plough."

40. And ROBERT RUMNEY, of Manchester, in the county of Lancaster, Manufacturing Chemist, and WILLIAM STEVENSON MACDONALD, of the same place, Mechanic, have given the like notice in respect of the invention of "Improvements in printing and dyeing woven fabrics, and yarns or threads."

As set forth in their respective petitions, all recorded in the said office on the 5*th day of January*, 1859.

---

51. And WILLIAM SPENCE, of 50, Chancery Lane, in the county of Middlesex, Patent Agent, has given the like notice in respect of the invention of "Improvements in the mode of taking photographic pictures on wood." — A communication from Charles B. Boyle, residing in the United States of America.

As set forth in his petition, recorded in the said office on the 7*th day of January*, 1859.

---

60. And HENRY HARDEN, of Dundalk, in the county of Louth, Ireland, Locomotive Superintendent to the 'Dublin and Belfast Junction Railway Company,' has given the like notice in respect of the invention of "Improvements in fire-bars for steam boiler and other furnaces."

As set forth in his petition, recorded in the said office on the 8*th day of January*, 1859.

---

100. And ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "A new or improved metallic alloy."

101. And ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "An improvement or improvements in the manufacture of cast steel."

As set forth in his petitions, both recorded in the said office on the 12*th day of January*, 1859.

---

121. And THOMAS SAMPSON, of Calle Cartaños, No. 8, Barcelona, Spain, has given the like notice in respect of the invention of "Improvements in apparatus for feeding steam boilers with water."

As set forth in his petition, recorded in the said office on the 13*th day of January*, 1859.

---

132. And ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "Improvements in the manufacture of cast steel."

134. And ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "An improvement or improvements in the manufacture of cast steel."

As set forth in his petitions, both recorded in the said office on the 15*th day of January*, 1859.

---

141. And WILLIAM EDWARD NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "An improvement in sewing machines."—A communication from Elias Howe, junior, of Brooklyn, in the United States of America.

As set forth in his petition, recorded in the said office on the 17*th day of January*, 1859.

234. And William Edward Newton, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "An improvement in life preserving vests."—A communication from T. A. Delano, residing in the United States of America.
As set forth in his petition, recorded in the said office on the 25th day of January, 1859.

253. And William Crowther, of Leeds, in the county of York, Manufacturing Chemist, has given the like notice in respect of the invention of "Improvements in the manufacture of prussiates of potash, or soda, and in recovering a useful material therefrom."
As set forth in his petition, recorded in the said office on the 27th day of January, 1859.

310. And Henry Constantine Jennings, of No. 8, Great Tower Street, in the city of London, Practical Chemist, has given the like notice in respect of the invention of "Improvements in the manufacture of paper and artificial parchment, and of gelatine, applicable to the sizeing of the same, and other purposes."
As set forth in his petition, recorded in the said office on the 3rd day of February, 1859.

332. And Nathaniel Greenhalgh, of Bolton, in the county of Lancaster, Cotton Spinner, and William Shaw, of the same place, Cotton Spinner, and James Mallison, junior, of the same place, Yarn Agent, have given the like notice in respect of the invention of "Certain improvements in the treatment and preparation of yarns or threads previously to dyeing."
As set forth in their petition, recorded in the said office on the 5th day of February, 1859.

443. And Henry Young Darracott Scott, of Brompton Barracks, Chatham, in the county of Kent, Captain in the Royal Engineers, has given the like notice in respect of the invention of "An improvement in the manufacture of cement."
As set forth in his petition, recorded in the said office on the 17th day of February, 1859.

594. And William Gossage, of Widnes, in the county of Lancaster, Chemist, has given the like notice in respect of the invention of "Improvements in the treatment of certain ores of copper for the extraction of metals therefrom."
As set forth in his petition, recorded in the said office on the 7th day of March, 1859.

715. And George Gregg, of Sheffield, in the county of York, Currier, has given the like notice in respect of the invention of "Improvements in currying or manufacturing leather."
As set forth in his petition, recorded in the said office on the 21st day of March, 1859.

939. And Ebenezer Partridge, of Stourbridge, in the county of Worcester, Engineer and Ironfounder, has given the like notice in respect of the invention of "An improvement in the manufacture of 'pipe' boxes for cart and wagon axles."
As set forth in his petition, recorded in the said office on the 14th day of April, 1859.

961. And John Sidebottom, of Broadbottom, near Mottram, in the county of Chester, Cotton Spinner and Manufacturer, has given the like notice in respect of the invention of "Improvements in the construction of tubes and partial tubes, and in machinery or apparatus for placing them on the spindles of machines used in spinning, doubling, winding, and warping, also improvements in machinery for making such tubes and partial tubes."
As set forth in his petition, recorded in the said office on the 16th day of April, 1859.

988. And Alexander William Williamson, of University College, London, has given the like notice in respect of the invention of "Improvements in making extracts from liquorice root."
As set forth in his petition, recorded in the said office on the 19th day of April, 1859.

997. And Lucius Phelps Porter, of New York, has given the like notice in respect of the invention of "Improvements in knitting machinery."—A communication from abroad by Joseph R. Kilbourn and Edward E. Kilbourn, of Norfolk, in the county of Litchfield and state of Connecticut.
As set forth in his petition, recorded in the said office on the 20th day of April, 1859.

1005. And David Auld, of Glasgow, in the county of Lanark, North Britain, Engineer, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for supplying steam boilers with water."

1009. And George Roberts and John Bridges, of No. 20, Ponsonby Place, Vauxhall Bridge Road, in the county of Middlesex, have given the like notice in respect of the invention of "Improvements in the manufacture of candles."
As set forth in their respective petitions, both recorded in the said office on the 21st day of April, 1859.

1017. And James Gillies, of Glasgow, in the county of Lanark, North Britain, Wood Turner, has given the like notice in respect of the invention of "Improvements in branding or marking wood for casks, barrels, and other purposes."

1023. And William Gibson, of St. Leonards Road, in the county of Middlesex, Engineer, has given the like notice in respect of the invention of "Improvements in steering apparatus."
As set forth in their respective petitions, both recorded in the said office on the 23rd day of April, 1859.

1047. And William Marshall, of Leith Walk, in the county of Mid-Lothian, North Britain, Engineer, has given the like notice in respect of the invention of "Improvements in steam engines."
As set forth in his petition, recorded in the said office on the 26th day of April, 1859.

1057. And James Randal Smith, of Glasgow, in the county of Lanark, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in obtaining motive power."
As set forth in his petition, recorded in the said office on the 27th day of April, 1859.

1075. And William McIntyre Cranston, of No. 11, New Broad Street, London, Agent, has given the like notice in respect of the invention of "A grass cutting machine."—A communication from abroad by Walter Abbot Wood, of Hoosick Falls, county of Rensselaer, state of New York, America.
As set forth in his petition, recorded in the said office on the 29th day of April, 1859.

1110. And Jedediah Morse, of the state of Massachusetts, of the United States of America, has given the like notice in respect of the invention of "An improved power printing press."

1111. And Lyman Reed Blake, of the state of Massachusetts, of the United States of America, has given the like notice in respect of the invention of "A new and useful or improved machine for sewing a sole on a boot or shoe."
As set forth in their respective petitions, both recorded in the said office on the 3rd day of May, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

List of Letters Patent which passed the Great Seal on the

10th May, 1859.

2258. John Saxby, Engineer, of Brighton, Sussex, for an invention of "Improvements in apparatus for working signals on railways."—Dated 11th October, 1858.

2518. John Corner, of 15, Artillery Place, and 16, City Road, Finsbury Square, London, Boot and Shoe Manufacturer, for an invention of "Improvements in machinery for making metallic screw rivets, and for uniting with them parts of boots, shoes, portmanteaus, leather hose, buckets, harness, and other leathern articles."—Dated 10th November, 1858.

2520. William Garnett Taylor, of Ashby-de-la-Zouch, in the county of Leicester, for an invention of "Improvements in removing the fur from skins, and preparing said skins for tanning."—Dated 10th November, 1858.

2524. Abraham James Brooks, of Southsea, in the county of Hants, Solicitor, for an invention of "An improvement in screw propellers."—Dated 10th November, 1858.

2527. Charles Tiot Judkins, of No. 32, York Road, Lambeth, in the county of Surrey, Engineer, for an invention of "Improvements in gas regulators."—Dated 10th November, 1858.

2534. Thomas Gray, of Bride Lane, in the city of London, for an invention of "An improvement in separating wool and animal fibres from vegetable fibres contained in mixed fabrics."—Dated 11th November, 1858.

2542. George Tomlinson Bousfield, of Loughborough Park, Brixton, in the county of Surrey, for an invention of "An improved apparatus for illustrating conic sections and the lines of the globe."—Dated 12th November, 1858.

2546. William Ashton, of Preston, in the county of Lancaster, and Thomas Cartmell, of the same place, Engineers, for an invention of "Improvements in air pumps, part of which improvements is also applicable to the pistons of other pumps and of steam engines."—Dated 13th November, 1858.

2560. Thomas Robert Butcher, Frederick Stevens, William Thomas Johnson, and Theophilus Jarvis, of Frome, in the county of Somerset, Pianoforte Action Manufacturer, for an invention of "Improvements in the hammer rails of pianofortes."—Dated 15th November, 1858.

2588. Michael Scott, of 3, Stanhope Terrace, Hyde Park Gardens, in the county of Middlesex, for an invention of "Improvements in the construction of breakwaters, parts of which are applicable in making other structures."—Dated 17th November, 1858.

2594. John Platt, of Oldham, in the county of Lancaster, Mechanical Engineer, and Harry Chubb, of Brecknock Crescent, Camden Town, in the county of Middlesex, Gentleman, for an invention of "Improvements in machinery or apparatus for making bricks or tiles."—Partly a communication from abroad.—Dated 17th November, 1858.

2604. John Leslie, of Conduit Street, St. George's Hanover Square, in the county of Middlesex, for an invention of "Improvements in the manufacture of gas."—Dated 18th November, 1858.

2630. Thomas Stokes Cressey, of High Street, Homerton, in the county of Middlesex, for an invention of "Improvements in machinery used in the manufacture of casks."—Dated 19th November, 1858.

2666. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improved machinery for making bolts and rivets."—Dated 24th November, 1858.

2692. William Richards, of the Gas Works, Barcelona, in the kingdom of Spain, Engineer, but now of Harpur Street, Red Lion Square, in the county of Middlesex, for an invention of "Improvements in the construction of gas meters."—Dated 26th November, 1858.

2700. Hugh Lee Pattinson, of Stotes Hall, Jesmond, Newcastle-upon-Tyne, for an invention of "Improvements in utilizing the heat of slags of iron and other works."—Dated 27th November, 1858.

2784. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Certain improvements in grain and grass harvesting machines."—Dated 4th December, 1858.

2792. John Dawson, of Holbeck, in the parish of Leeds, in the county of York, Machine Maker, for an invention of "Improvements in machinery or apparatus for raising the nap on woollen cloths."—Dated 6th December, 1858.

2964. Richard Hornsby, junior, of Spittlegate Iron Works, Grantham, in the county of Lincoln, for an invention of "Improvements in ploughing and tilling land by steam power, and in apparatu employed therein."—Dated 27th December, 1858.

380. Benjamin Burrows, of Leicester, for an invention of "Improvements in looms for weaving narrow fabrics."—Dated 10th February, 1859.

570. William Tucker, of the state of Massan chusetts, of the United States of America, for an invention of "An improvement in bit stocks or augur handles."—Dated 3rd March, 1859.

580. John Leigh, of the city of Manchester, in the county of Lancaster, Surgeon, for an invention of "Improvements in the purification of coal gas."—Dated 5th March, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 7th May, 1859, inclusive.*)

5th May.

1088. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "An improved construction of rotary pump."—A communication.—Dated 8th May, 1856.

1287. Alfred Watson and Alfred Hamlyn Williams, of Cornhill, in the city of London, Stationers, for an invention of "An improvement in bottles, flasks, and other like receptacles for liquids."—Dated 31st May, 1856.

6th May.

1113. Bartholomew Beniowski, of Bow Street, Covent Garden, in the county of Middlesex, Esquire, for an invention of "Improvements in typographical composition, and in the manufacture of logotypes to be used therein."—Dated 10th May, 1856.

7th May.

1076. Louis Guillaume Perreaux, of 16, Rue M. le Prince, in the city of Paris, in the empire of France, Engineer, for an invention of "An improved valve."—Dated 8th May, 1856.

1095. Ferdinand Potts, Tube Manufacturer, of Birmingham, in the county of Warwick, and Thomas Vann, Wire Worker, of Cheapside, Birmingham, in the same county, for an invention of "Certain machinery for ornamenting, floating, burnishing, and polishing metallic tubes, part of which machinery is also applicable for performing the like operation upon other metallic surfaces."—Dated 9th May, 1856.

1099. William Basford, of No. 16, Talbot Road, Kentish Town, in the county of Middlesex, for an invention of "Improvements in apparatus for purifying coal gas."—Dated 9th May, 1856.

1101. George Simpson, of Leather Lane, London, for an invention of "Improvements in rotary knife-cleaning machines."—Dated 9th May, 1856.

FOREIGN PATENTS.

FRANCE.

CURRENT LIST of PATENTS of Invention and Certificates of Addition.

1859.

(Communicated by His Excellency the Minister of Agriculture, Commerce, and Public Works.)

NOTE.—The duration of a Patent is fifteen years, except where determined by that of a previously existing foreign Patent.*

1415. PIERRE ETIENNE BRISSON, of 21, Rue du Boulon, Orléans, département du Loiret, for "A suspension mill in which alone the upper millstone is revolving."—Dated 31st March, 1859.

1416. CHARLES MARÉ, of 98, Quai de la Fosse, Nantes, département de la Loire Inférieure, for "Closing all kinds of vessels for preserving food or other substances."—Dated 31st March, 1859.

1417. CAMION Brothers, of Vivier au Court, département des Ardennes, for "An eccentric movement in presses for making small iron articles."—Dated 1st April, 1859.

1418. CHARLES LEROY and DURAND, of La Maison-Blanche, 25, Route de Fontainebleau, Gentilly, for "Treatment of fat substances."—Dated 26th March, 1859.

1419. DOMINIQUE BOCCASINI, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Manufacture of coke from lignite."—(Austrian Patent, expired 20th November, 1873.)—Dated 26th March, 1859.

1420. GIBUS and Son, of 40, Rue Beaubourg, Paris, for "A kind of plaited silk hats."—Dated 26th March, 1859.

1421. JOSEPH DELEUIL, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Colouring and drying wood."—Dated 26th March, 1859.

1422. CHRISTOPHE ADRIEN THIRY, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in apparatus for galvanizing and tinning iron."—Dated 26th March, 1859.

1423. JOSEPH DELEUIL, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in garden seats."—Dated 26th March, 1859.

1424. ALLMAYER and SCHLOSS, represented by Dreyfous, of 54, Rue de Bondy, Paris, for "A portemonnaie called 'gold regulator.'"—Dated 26th March, 1859.

1425. FRÉDÉRIC DREYFOUS, of 28, Rue du Sentier, Paris, for "Manufacture of mixed fabrics with designs obtained by means of printed and cut-out tissues which are inserted into the weft."—Dated 26th March, 1859.

1426. GUSTAVE AUGUSTE BESSON, of 7, Rue des Trois Couronnes, Paris, a Certificate of Addition to his Patent of 18th January, 1855, for "Improvements in brass instruments."—Dated 26th March, 1859.

1427. FRANÇOIS BARTHÉLEMY LOUBATIÈRES, domiciled 18, Rue St. Honoré, Grand Hôtel Atlantique, Paris, for "Economical oil-cloth."—Dated 28th March, 1859.

1428. ALPHONSE ALEXANDRE GEORGE, of 59, Rue Saintonge, Paris, a Certificate of Addition to his Patent of 27th December, 1858, for, "Feeding steam-boilers, &c."—Dated 28th March, 1859.

1429. WELDON and WEIL, represented by Perpigna, of 42, Rue Neuve St. Augustin, Paris, for "An improved machine for making buttons."—Dated 28th March, 1859.

1430. DE MIRANDOL, of Nogent sur Marne, for "Ornamenting mirrors by means of decorative and artistic painting, drawing, engraving, lithography, and photography."—Dated 28th March, 1859.

1431. ANTOINE BERTAUDIN, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in the manufacture of teeth of weavers' combs."—Dated 28th March, 1859.

1432. THUILLIER and STAUDINGER, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in blanc-stamp presses, dies, punching machines, &c."—Dated 28th March, 1859.

1433. HIPPOLYTE MILLET, represented by Le Blanc, 2, Rue Ste. Appoline, Paris, for "Improvements in working horn for making buttons and similar articles."—Dated 28th March, 1859.

1434. EMMANUEL JULIEN CHARLES HAVOUIS, of 24, Rue St. Germains, Charonne, for "Improvements in felt hats."—Dated 28th March, 1859.

1435. HUGUIS CHAMPONNOIS, of 8, Rue de la Jussienne, Paris, a Certificate of Addition to his Patent of 13th December, 1858, for "Extracting sugar from beetroot and other sugar plants, &c."—Dated 28th March, 1859.

1436. MARIÉ DUMAS DUCAU, of 81, Boulevart Montparnases, Paris, for "A system of lithographic rollers."—Dated 28th March, 1859.

1437. CERF-MAYER, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A machine for crushing solid ink and all kinds of tinctorial substances to be sold in powder."—Dated 28th March, 1859.

1438. GUILLAUME EDOUARD PELLERIN, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his

* For the French Patent Law see No. 228 of this Journal.

Patent of 19th April, 1858, for "An hydraulic closing for sewers, &c."—Dated 28th March, 1859.

1439. Pierre François Toly, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 6th August 1858, for "Improvements in apparatus for obtaining, drying, and superheating steam."—Dated 28th March, 1859.

1440. Jean Marie Benoit, of 26, Rue Penthièvre, Paris, for "A case for smoking pipes."—Dated 29th March, 1859.

1441. Jean Baptiste Badinier, of 12, Rue du Parc, Vaugirard, for "A sort of cracknel."—Dated 29th March, 1859.

1442. Jean Baptiste Deplasse, with Desruisseaux, of 22, Rue de Cléry, Paris, for "Weaving looped fabrics."—Dated 29th March, 1859.

1443. Opperman and Foret, of 8, Rue de Ménars, Paris, for "Economical iron bridges."—Dated 29th March, 1859.

1444. Etienne Martel, of 7, Rue de Nemours, Paris, for "Improvements in cast copper nails."—Dated 29th March, 1859.

1445. Richard Knight, represented by Basset, of 14, Boulevart Montmartre, Paris, a Certificate of Addition to his Patent of 21st November, 1856, for "Improvements in apparatus for making gaseous liquids."—Dated 29th March, 1859.

1446. Choumara and Echard, the former of Montmartre, the latter of 142, Rue St. Lazare, Paris, for "A sewing machine."—Dated 29th March, 1859.

1447. Durand and Pradel, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Machines worked by means of air and fluids compressed through fulminating gases."—Dated 29th March, 1859.

1448. Durand and Pradel, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "A kind of pavement for boulevarts, alleys, foot-pavements."—Dated 29th March, 1859.

1449. Messager alias Messager-Abit, represented by Barrault, of 33, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 17th January, 1859, for "Manufacture of carpets, &c."—Dated 29th March, 1859.

1450. Jean Victor Lucas, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Manufacture of common prussiate of potash and cyanuret of potassium."—Dated 29th March, 1859.

1451. Guinon, Marnas, and Bonnet, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to their Patent of 31st March, 1858, for "Obtaining and applying a product called 'French purple,' &c."—Dated 29th March, 1859.

1452. Taverne Brothers, represented by Mathieu, of 55, Rue St. Sébastien, Paris, for "Improvements in the manufacture of scales."—Dated 29th March, 1859.

1453. Goudenove and Féret, of 60, Rue Neuve St. Augustin, Paris, for "Candle tubes for gas-lights."—Dated 29th March, 1859.

1454. François Joseph Antoine Zœgger, of 70, Rue St. Victor, Paris, for "Manufacture of ribbons for all kinds of orders."—Dated 30th March, 1859.

1455. Edmond Désiré Pesier, domiciled with Dubois, of 21, Rue Jacob, Paris, a Certificate of Addition to his Patent of 28th February, 1859, for "Modifications in the manufacture of sugar."—Dated 30th March, 1859.

1456. François Pradier, of 83, Rue du Bac' Paris, for "A system of taps."—Dated 30th March, 1859.

1457. Constant Jouffroy Duméry, of 26, Boulevart de Strasbourg, Paris, for "Improvements in steam generators."—Dated 30th March, 1859.

1458. Lecampion, Théroulde, and Laurot, of 67, Rue Caumartin, Paris, for "Manufacture of soda from wrack."—Dated 30th March, 1859.

1459. Bouillon, Muller, and Co., of 33, Rue de Chabrol, Paris, for "A drying calorifere stove."—Dated 30th March, 1859.

1460. Henri Jérémie Christen, of 6, Rue Neuve d'Orléans, Montrouge, a Certificate of Addition to his Patent of 11th September, 1858, for "Improvements in fire-engines and other pumps."—Dated 30th March, 1859.

1461. Henri Jérémie Christen, of 6, Rue Neuve d'Orléans, Montrouge, a Certificate of Addition to his Patent of 11th June, 1856, for "A compressing machine."—Dated 30th March, 1859.

1462. Victor Benjamin Constant Vannier, represented by Bonneville, of 39, Rue de l'Echiquier, Paris, for "A gilding process."—Dated 30th March, 1859.

1463. François Frédéric Dumarchey, represented by Bonneville, of 39, Rue de l'Echiquier, Paris, for "A machine for breaking stones and other substances."—Dated 30th March, 1859.

1464. Sébastien Ley, of 2, Rue de la Fidélité, Paris, a Certificate of Addition to his Patent of 8th December, 1858, for "A system of gas burners."—Dated 30th March, 1859.

1465. Sébastien Ley, of 2, Rue de la Fidélité, Paris, a Certificate of Addition to his Patent of 20th December, 1858, for "A gas carburator."—Dated 30th March, 1859.

1466. Jean Victor Carbon, of 53, Rue Bourbon Villeneuve, Paris, a Certificate of Addition to his Patent of 1st May, 1858, for "Trusses."—Dated 30th March, 1859.

1467. Claude Villard, represented by Mathieu, of 35, Rue St. Sébastien, Paris, for "Improvements in the manufacture of garden seats and similar objects."—Dated 30th March, 1859.

1468. Raymond de Mendiri, of Issoire, département du Puy de Dôme, a Certificate of Addition to his Patent of 15th March, 1858, for "A mould for making cigarets."—Dated 12th March, 1859.

1469. Ernest Wœhner, of Savenne, département du Bas Rhin, for "A stone-cutting machine."—Dated 28th March, 1859.

1470. Gabriel Guichard, of La Viotte, banlieu de Besançon, département du Doubs, for "A

system of ratchet file-cutter."—Dated 31st March, 1859.

1471. Pierre Moreaud, of Tocaate St. Apre, département de la Dordogne, for "An aerostatic apparatus."—Dated 31st March, 1859.

1472. Chaland, Benoit, and Co., domiciled with Renaud, of 3, Rue la Bombarde, Lyon, département du Rhône, a Certificate of Addition to their Patent of 9th June, 1858, for "Manure for mending clay soil, &c."—Dated 31st March, 1859.

1473. Pierre Bonnet, of Beaucaire, département du Gard, for "A desk, called 'orpheon desk.'"—Dated 31st March, 1859.

1474. Paul Louis Armand Cappeau, of 55, Rue St. Marc, Avignon, département de la Vaucluse, for "Obtaining the colouring principle of madder."—Dated 1st April, 1859.

1475. Paul Louis Armand Cappeau, of 55, Rue St. Marc, Avignon, département de la Vaucluse, for "A madder product called 'flower garancine.'"—Dated 1st April, 1859.

1476. Michel Gautier, of 31, Rue du Cornet, Angers, département de Maine et Loire, for "A stop for cocks of fire-arms."— Dated 1st April, 1859.

1477. Edouard Bauthière-Paquet, domiciled with Louis Watelle, of 14, Rue de Tournay, Lille, for "A system of benches for glass pots in stretching furnaces."—Dated 2nd April, 1859.

1478. Edouard Cuttier, of St. Brice, département de la Marne, for "A system of bobbin holders."—Dated 1st April, 1859.

1479. Jules Alphonse Valois, of Evreux, département de l'Eure, for "A kneading machine."—Dated 1st April, 1859.

1480. Auguste Aubert, of La Villette, département de la Loire Inférieure, for "Improvements in scissors, sectors, and shears."—Dated 2nd April, 1859.

1481. Edme Montenot, of Ampeilly le Sec, département de la Côte d'Or, for "A sowing machine combined with a hoe."—Dated 2nd April, 1859.

1482. Théophile Poncet, of St. Laurent en Grandvaux, département du Jura, for "A digging harrow."—Dated 2nd April, 1859.

1483. Claude Bernier, of Place de l'Homme de la Roche, Lyon, département du Rhône, for "A churn."—Dated 2nd April, 1859.

1484. Lanet, Imbert, and Co., of St. Julien en Jarrét, département de la Loire, for "A modification in vertical boilers."—Dated 2nd April, 1859.

1485. Henri Duinat, of Rue Ste. Anne, Maison Heldin, Lyon, département du Rhône, for "A loom for making two pieces of double-piled plush at the same time."—Dated 2nd April, 1859.

1486. Jean Marie Bidon, of 11, Rue St. Marcel, Lyon, département du Rhône, for "A registering and regulating apparatus for fabrics."—Dated 2nd April, 1859.

1487. Monnet and Dury, of Rue des Fossés Baraban, Lyon, département du Rhône, for "Means of preparing a colouring substance, called 'harmaline.'"—Dated 2nd April, 1859.

1488. Richard Brothers, of St. Chamond, département de la Loire, for "A kind of bobbin for lace."—Dated 4th April, 1859.

1489. Faure and Tillon, of 6, Rue des Arts, St. Etienne, for "A mechanism for applying grooved silk stuffs to plain velvet ribbons made on looms for double pieces."—Dated 4th April, 1859.

1490. Laval and Gravier, of Nîmes, département du Gard, for "Improvements in high warp velvet."—Dated 31st March, 1859.

1491. Ferdinand Ladreyt, of Montélimar, département du Drôme, a Certificate of Addition to his Patent of 6th April, 1858, for "A planing machine, &c."—Dated 31st March, 1859.

1492. Beck and Quidet, of 21, Rue Patalier, Elbeuf, département de la Seine Inférieure, a Certificate of Addition to his Patent of 14th March, 1855, for "An undulating frizing machine with various movements."—Dated 1st April, 1859.

1493. Merlent and Fialon, of 3, Rue Ville Verte, Aix, département des Bouches du Rhône, for "Impervious unsized hats of double felt."—Dated 1st April, 1859.

1494. Louis Isidore Bastard-Lanoy, represented by Blanchet, of Beauvais, département de l'Oise, for "Application of sculpture in the manufacture of fans."—Dated 2nd April, 1859.

1495. Pierre Moussy-Teysset, of 1, Rue du Grand Moulin, St. Etienne, département de la Loire, a Certificate of Addition to his Patent of 27th September, 1858, for "So-called 'escapement locks.'"—Dated 4th April, 1859.

1496. Louis Léon Ramally, of Autun, département de Saône et Loire, for "A system of lamps for lighting carriages, and for domestic purposes."—Dated 5th April, 1859.

1497. Louis Jean Baptiste Maximilian Sagette, of Saints-en-Puisage, département de l'Yonne, a Certificate of Addition to his Patent of 29th April, 1856, for "Improvements in ploughs."—Dated 5th April, 1859.

1498. Joseph Antoine Dalmas, of 44, Rue Haute Rotonde, Marseille, département des Bouches du Rhône, a Certificate of Addition to his Patent of 21st April, 1858, for "Inodorous closets, &c."—Dated 1st April, 1859.

1499. Balthazard-Sabin Papillon, of Belford, département du Haut Rhin, for "An economical smoke-consuming fire-grate."—Dated 2nd April, 1859.

1500. Zénon Kaeppelin, of Thann, département du Haut Rhin, for "Improvements in fly frames."—Dated 2nd April, 1859.

1501. Prosper Guérin, of Alais, département du Gard, for "A machine for moulding hollow tiles, bricks, and brick pavements."—Dated 4th April, 1859.

1502. Gallois-Foucault, of St. Martin, Ile de Ré, département de la Charente Inférieure, for "Automatic bells for preventing collisions at sea, and for buoys."—Dated 4th April, 1859.

1503. Louis Victor Molard, of Manouviller, département de la Meurthe, for "A machine for crushing willows."—Dated 5th April, 1859.

1504. Mathieu Blacet, of 7, Rue de Lyon, St. Etienne, département de la Loire, for "Improvements in Davy's safety lamps."—Dated 5th April, 1859.

1505. Augustin Morel, of Roubaix, département du Nord, for "A safety cleaning apparatus."—Dated 6th April, 1859.

1506. Maximilien Corneby, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "An apparatus for distilling essence of turpentine, and for obtaining colophony."—Dated 30th March, 1859.

1507. Pierre François Millot, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "An hydraulic wheel with a reservoir." — Dated 30th March, 1859.

1508. Louis Christopher and Jules Tornier, of 21, Quai d'Austerlitz, Paris, for "An hydraulic machine."—Dated 31st March, 1859.

1509. William Rédgrave, represented by Rowlanck, of 224, Rue de Rivoli, Paris, for "Improvements in travelling caps."—Dated 31st March, 1859. —(English Patent, expiring 26th March, 1873.)

1510. Jean Baptiste Augustin Camus, of 8, Rue Vendôme, Paris, for "A kind of cigar and match case."—Dated 31st March, 1859.

1511. Ernest Georges Xavier Boileau, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Arrangements in steam apparatus for marine and other engines." — Dated 31st March, 1859.

1512. Antoine Roy, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in the manufacture of cartridges for breech-loading fire-arms."—Dated 31st March, 1859.

1513. Henry Adolphe Archereau, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 11th August, 1856, for "Improvements in conglomerating coal." —Dated 31st March, 1859.

1514. Moissant and Co., represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 10th April, 1858, for "Extracting oil for lighting and lubricating, and hydro-carburetted gas from natural bitumen of the West Indies."—Dated 31st March, 1859.

1515. Charles Joseph Emile Pavy, domiciled Hôtel du Louvre, Paris, a Certificate of Addition to his Patent of 6th December, 1858, for "An economical granary."—Dated 31st March, 1859.

1516. Louis Prosper Reynaud and Jules Peuchant, of 107, Rue de Montreuil, Paris, for "A wrench."—Dated 31st March, 1859.

1517. Joseph Louis Tenting, domiciled with Moinier, of 11 et 13, Rue de Marseille, La Villette, for "Improvements in axles of railway carriages." —Dated 1st April, 1859.

1518. Théodore Antoine Musset, of 64, Rue Ménilmontant, Paris, for "Mounting blinds."—Dated 1st April, 1859.

1519. Louis Théodore Le Bailly, of 26, Rue des Rosiers, Paris, for "Improvements in gas-burners."—Dated 1st April, 1859.

1520. Stanislas Hoga, William Peter Piggott, and Septimus Beardomore, represented by Sautter, of 14, Boulevart Montmartre, Paris, for "Improvements in electric telegraphs." —Dated 1st April, 1859.—(English Patent, expiring 17th November, 1872.)

1521. James Davis, represented by Amouroux, of 333, Rue St. Martin, Paris, for "Improvements in machines worked by air, gas, or steam."—Dated 1st April, 1859.—(English Patent, expiring 6th July, 1872.)

1522. Henry Cartwright, represented by Amouroux, of 333, Rue St. Martin, Paris, for "Improvements in the construction of steam engines."— —Dated 1st April, 1859.—(English Patent, expiring 3rd April, 1872.)

1523. Alexandre Taylor, represented by Amouroux, of 333, Rue St. Martin, Paris, for "Improvements in the construction of pianos and other musical instruments." — Dated 1st April, 1859.

1524. Georges Lutz, represented by Amouroux, of 333, Rue St. Martin, Paris, for "A machine for making coal cakes."—Dated 1st April, 1859.

1525. Louis Martin Systermans, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Self-acting railway signals."—Dated 1st April, 1859.

1526. Pierre Benoist Léopold Charpentier, of 17, Rue Gaillon, Paris, for "A machine for sawing and breaking sugar."—Dated 1st April, 1859.

1527. Francis Wrigley, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "A self-acting coupling apparatus." — Dated 1st April, 1859.—(English Patent, expiring 1st November, 1872.)

1528. Louis Auger, represented by Barrault, of 333, Boulevart St. Martin, Paris, for "Improvements in tobacco pouches."—Dated 1st April, 1859.

1529, Jules Gilbert Bernard, of 54, Rue de Seine, Paris, for "A kind of writing materials."— Dated 1st April, 1859.

1530. E. Chabrier and Co., of 23, Rue Olivier St. Georges, Paris, for "Making roads of compressed asphalt."—Dated 1st April, 1859.

1531. François Joseph Laurent Steger, of 40, Boulevart de Sébastopol, Paris, for "A grate for steam boilers."—Dated 1st April, 1859.

1532. Henri Adolphe Corbin, of 6, Rue d'Isly, Paris, for "A system of stereoscopes with combined mirrors and lenses."—Dated 1st April, 1859.

1533. Emile Peltier, represented by Dreyfous, of 54, Rue de Bondy, Paris, a Certificate of Addition to his Patent of 12th February, 1858, for "Manufacture of metal boxes and vessels for preserved food."—Dated 1st April, 1859.

1534. Alfred Edme Egrot, of 266, Rue du Faubourg St. Martin, Paris, a Certificate of Addition to his Patent of 30th August, 1855, for "An apparatus for making extracts of drugs."—Dated 1st April, 1859.

1535. Jules Guyot, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 31st March, 1856,

for "Manufacture of straw mats for protecting vines and plants, &c."—Dated 1st April, 1859.

1536. Louis Joseph Fouchée, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "An apparatus for melting grease and other offals of slaughter-houses."—Dated 1st April, 1859.

1537. Emile Constant Martin, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 31st January, 1859, for "Purifying natural lime."—Dated 1st April, 1859.

1538. Pierre Etienne Jacquemin, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "A mechanical arrangement for transforming motion, being applicable especially to agricultural machines."—Dated 1st April, 1859.

1539. Pierre Etienne Jacquemin, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in harvesters."—Dated 1st April, 1859.

1540. Jean Delmas, of 16, Rue Galande, Paris, for "Closing shutters of shops."—Dated 2nd April, 1859.

1541. Alexandre Auguste Périer and Louis Antoine Possoz, domiciled with Descours, of 1, Rue de Provence, Paris, a Certificate of Addition to their Patent of 26th February, 1859, for "Improvements in the manufacture of sugar."—Dated 2nd April, 1859.

1542. Félix Pagella, represented by Herpst, of 39, Rue de l'Echiquier, Paris, for "Hinged buttons."—Dated 2nd April, 1859.

1543. John Piddington, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Improvements in making butter, and in apparatus employed thereat."—Dated 2nd April, 1859.—(American Patent, expiring 8th February, 1873.)

1544. Joseph Douis Edouard Klein and Jules Parfait Roger, of 46, Boulevart Pigalle, Montmartre, for "A rotary vice, applicable to the manufacture of foot-coverings, &c."—Dated 2nd April, 1859.

1545. John Wallace Duncan and James Eglinton Anderson Gwynne, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in apparatus for obtaining and condensing steam, said apparatus being also applicable to other purposes."—Dated 2nd April, 1859.—(English Patent, expiring 18th March, 1873.)

1546. Isidore Démée, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "A frame for cutting photographic proofs."—Dated 2nd April, 1859.

1547. Jules Pacôme Alfred Havard, of 7, Cité du Wauxhall, Paris, for "A portable apparatus for filtering water for armies and households."—Dated 2nd April, 1859.

1548. Jean Baptiste Courtois-Delétang, with Boblique, à la Villette, a Certificate of Addition to his Patent of 31st January, 1857, for "Manufacture of three colours from three mineral substances, to be employed in oil or water-colours."—Dated 2nd April, 1859.

1549. Thomas Wheeler, represented by Tolhausen, of 35, Boulevart Bonne Nouvelle, Paris, for "Improvements in machines for washing, wringing, or drying, pressing, and mangling linen, &c."—Dated 2nd April, 1859.

1550. Louis Jean Baptiste Letestu, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A machine for making packing-cases."—Dated 2nd April, 1859.

1551. Joseph Blackwood-Beasley, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Improvements in fire-arms."—Dated 2nd April, 1859.—(English Patent, expiring 18th September, 1872.)

1552. Adolphe Casimir Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in dyeing and finishing yarns and tissues."—Dated 2nd April, 1859.

1553. Louis Lechatelier, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 11th August, 1858, for "Manufacture of aluminium."—Dated 2nd April, 1859.

1554. H. Petin, Gaudet, and Co., represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in the manufacture of guns for land service and the navy."—Dated 2nd April, 1859.

1555. Jean Ducournau, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 21st November, 1857, for "Improvements in apparatus for crushing stones, ores, &c."—Dated 2nd April, 1859.

1556. Stehelin and Co., represented by Baltz, of Bitschwiller, département du Haut Rhin, a Certificate of Addition to their Patent of 9th July, 1858, for "An apparatus for throwing twisting and other machines out of gear."—Dated 5th April, 1859.

1557. François Crouvezier, of Bechicourt-le-Château, département de la Meurthe, for "A saw for cutting off trees near the ground."—Dated 5th April, 1859.

1558. Martin, Alçuch, and Victor Pelletan, of 1, Place Fondandège, Bordeaux, département de la Gironde, a Certificate of Addition to their Patent of 2nd March, 1858, for "A colouring liquid."—Dated 6th April, 1859.

1559. Gilbert Perreul, of Moulins, département de l'Allier, a Certificate of Addition to his Patent of 29th January, 1858, for "A machine for thrashing corn, peeling and preparing flax and hemp."—Dated 6th April, 1859.

1560. Mordan, Milland, and Co., of 8, Rue de Treiul, St. Etienne, département de la Loire, for "Improvements in tackles used in looms."—Dated 7th April, 1859.

1561. Jules Nicolas Poivret, of 25, Rue du Palais de Justice, Troyes, département de l'Aube, a Certificate of Addition to his Patent of 11th July, 1854, for "A circular knitting frame."—Dated 7th April, 1859.

1562. Béjot-Gandel and Guérin, represented by Blandin, of Maçon, département de Saône et Loire, a Certificate of Addition to their Patent of 9th November, 1858, for "A system of lift and force pumps."—Dated 8th April, 1859.

1563. Jean Baptiste Victor Autier, of Amiens, département de la Somme, for "Using carbonized and alkaline agents for promoting the power of discolouring agents in bleaching textile substances and paste, for bleaching wood and other ligneous and grass plants, for extracting their cellulose, finally for bleaching and purifying the residues obtained in the manufacture of oil."—Dated 4th April, 1859.

1564. Guillaume Crégut, of 353, Boulevart National, Marseille, département des Bouches du Rhône, for "A portable flour-mill."—Dated 5th April, 1859.

1565. Raymond Rouge, of Brugnières, département de la Haute Garonne, a Certificate of Addition to his Patent of 17th August, 1858, for "A machine for obtaining perpetual motion."—Dated 6th April, 1859.

1566. Jean Dominique Napoléon Rambaud, of 23, Rue des Charpennes, Villeurbanne, département du Rhône, for "A ferruginous mordant, called 'green mordant.'"—Dated 6th April, 1859.

1567. Charles Renault, of 12, Rue Dauphine, Bordeaux, département de la Gironde, for "Using debased spirits for lighting streets."—Dated 6th April, 1859.

1568. Louis Kessler, of Metz, département de la Moselle, a Certificate of Addition to his Patent of 8th April, 1858, for "Improvements in the manufacture of fluoric acids."—Dated 6th April, 1859.

1569. François Agnilas Laurent, of 8, Rue des Auffiers, Marseille, département des Bouches du Rhône, for "A diving-bell for submarine works."—Dated 6th April, 1859.

1570. Jules Eugène Roussel, of Longis, département de la Seine et Marne, for "An improved rocking plough."—Dated 6th April, 1859.

1571. Lodi-Montaigne, of 33, Rue de Lyon, Bordeaux, département de la Gironde, for "A screw transmission chain."—Dated 7th April, 1859.

1572. Etienne Dupuy and Emile Etienne and Labat, junr., of Villandraut, département de la Gironde, for "A system of distilling and purifying resinous substances."—Dated 8th April, 1859.

1573. André Moreau, of Bessac, département des Deux Sêvres, for "A hand harvester for cutting corn along the furrows."—Dated 9th April, 1859.

1574. François Prosper Chatel, of Rue de Rivoli, Hâvre, département de la Seine Inférieure, for "A machine for moulding bricks, crushing clay, and making mortar."—Dated 4th April, 1859.

1575. Auguste Joseph Robert, of 5, Rue de l'Arbalite, Reims, département de la Marne, for "Improvements in Lefaucheux' guns."—Dated 7th April, 1859.

1576. Frédéric Giroud d'Argoud, of 41, Rue du Commerce, Lyon, département du Rhône, a Certificate of Addition to his Patent of 13th April, 1858, for "A system of mills with spheroid millstones, of kneading troughs, and of bread ovens."—Dated 9th April, 1859.

1577. Jean Windsor, of Section de Moulins-Lille, Lille, département du Nord, for "Improvements in machines for preparing substances for spinning."—Dated 9th April, 1859.

1578. Julien Tortel, of Romans, département de la Drôme, for "A machine for straightening, cutting, and pumicing skins for tawing and glove making."—Dated 7th April, 1859.

1579. Théophile Augé, of Auxerre, département de l'Yonne, for "A frame for making trellis-work." Dated 7th April, 1859.

1580. Jean Nicolas Maurice, of 19, Rue St. Rémy, Epernay, département de la Marne, for "A machine for fixing wire hooks on bottles of champagne."—Dated 9th April, 1859.

1581. Auguste Casimir Lehot, domiciled with Rolland, of 15, Rue Vilaine, Caen, département du Calvados, for "A mode of dragging carriages."—Dated 9th April, 1859.

1582. Maudière, of Nouzon, department des Ardennes, for "A machine for polishing fire-irons."—Dated 11th April, 1859.

1583. Etienne Jean Baptiste Mignan, of Lépiné, département de la Marne, for "An hydraulic engine applicable to lift and force pumps."—Dated 11th April, 1859.

1584. Jean Rousseau, of Ambares, département de la Gironde, a Certificate of Addition to his Patent of 12th April, 1858, for "Manufacture of bungs and staves."—Dated 11th April, 1859.

1585. Jules Lecointe, of St. Quentin, département de l'Aisne, a Certificate of Addition to his Patent of 14th April, 1858, for "A system of injection and distribution of hydraulic pressure in presses for making beetroot sugar."—Dated 11th April, 1859.

1586. Jules Lecointe, of St. Quentin, département de l'Aisne, a Certificate of Addition to his Patent of 14th April, 1858, for "A system of injection and distribution of hydraulic pressure in presses for making beetroot sugar."—Dated 11th April, 1859.

1587. Jules Lecointe, of St. Quentin, département de l'Aisne, a Certificate of Addition to his Patent of 14th April, 1858, for "A system of injection and distribution of hydraulic pressure in presses for making beetroot sugar."—Dated 11th April, 1859.

1588. Didier Leloup, of 3, Rue St. Paul, Verdun, département de la Meuse, for "A system of presses."—Dated 12th April, 1859.

1589. Evrard, of Douai, département du Nord, for "A lubricating apparatus applicable to revolving arbors."—Dated 12th April, 1859.

1590. Paul Alexandre Geslin, of 3, Rue de Vendôme, Paris, for "A system of locks."—Dated 4th April, 1859.

1591. Félix Antoine Sédillon, of 8, Rue de Paradis au Marais, Paris, a Certificate of Addition to his Patent of 12th October, 1857, for "A so-called 'friction machine.'"—Dated 4th April, 1859.

1592. Thomas Preston, represented by Basset, of 14, Boulevart Montmartre, Paris, a Certificate of Addition to his Patent of 6th November, 1858, for "Improvements in the manufacture of short nap fabrics on warping frames."—Dated 4th April, 1859.

1593. Jules Nicolas Plançon, of 30, Rue Moret, Paris, a Certificate of Addition to his Patent of

28th September, 1857, for "A machine for making buttons."—Dated 4th April, 1859.

1594. Nicolas Jules Plançon, of 146, Rue St. Maur, Paris, a Certificate of Addition to his Patent of 6th June, 1856, for "Improvements in the manufacture of paper buttons."—Dated 4th April, 1859.

1595. Jacques Henri Marie Maissiat, of the Ecole de Médecine, Paris, a Certificate of Addition to his Patent of 18th February 1857, for "A machine for planting seeds, and especially corn."—Dated 4th April, 1859.

1596. Auguste Emile Joseph Caron, of 22, Rue Neuve Coquenard, Paris, for "A crushing apparatus."—Dated 4th April, 1859.

1597. Marie Rosalie Joséphine Journaux, of 11, Rue d'Arcole, Paris, a Certificate of Addition to his Patent of 18th December, 1856, for "A sewing machine."—Dated 4th April, 1859.

1598. François H. Bell, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Improvements in self-priming apparatus for fire-arms."—Dated 4th April, 1859.

1599. Jean Baptiste Heiller, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A process of cleaning thread of all kinds of textile and filamentous substances."—Dated 4th April, 1859.

1600. Nicolas Donatien Bourgueil, of 11, Rue des Filles du Calvaire, Paris, a Certificate of Addition to his Patent of 31st August, 1854, for "A crystal salt-cellar with two columns."—Dated 5th April, 1859.

1601. Eugène Antoine Bauzon, of 2, Rue des Couronnes, La Chappelle, St. Denis, for "A system of rakes."—Dated 5th April, 1859.

1602. François Ramonet, of 19 et 20, Rue Jessaint, La Chapelle St. Denis, for "A system of pumps."—Dated 5th April, 1859.

1603. Frederick William Gerhard, with Bishop, of 30, Rue de Rambuteau, Paris, for "Extracting aluminium."—Dated 5th April, 1859.—(English Patent, expiring 8th October, 1872.)

1604. Salomon Millaud, Samson Levy, and Jean Baptiste Alphonse Chevallier, the former two of 43, Boulevart St. Martin, the latter of 27, Quai St. Michel, Paris, for "Manure."—Dated 5th April, 1859.

1605. Hippolyte Bourdon, of 58, Rue de Provence, Paris, a Certificate of Addition to his Patent of 9th June, 1858, for "Apparatus for converting water into fuel."—Dated 5th April, 1859.

1606. Alphonse Louis Hippolyte Féru, of 70, Rue St Jacques, Paris, for "A scarifying apparatus."—Dated 5th April, 1859.

1607. Pierre Ernest River, represented by Bonnet, of 43, Rue Neuve St. Geneviève, Paris, for "A self-feeding fireplace for heating steam boilers by means of coal-dust."—Dated 5th April, 1859.

1608. Théophile Jacques Guillaume Steppe, represented by Fringant, of 10, Rue de Provence, Paris, for "Manufacture of lace of coloured thread."—Dated 5th April, 1859.

1609. François Joseph Bertinchamps, represented by Fringant, of 10, Rue de Provence, Paris, for "A system of iron stop-planks with slides, applicable to constructions, frameworks, &c."—Dated 5th April, 1859.

1610. Henri Justinian Newcome, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Improvements in apparatus for heating buildings, for ventilating, drying linen, hot-air stoves, or kitchen stoves."—Dated 5th April, 1859.—(English Patent, expiring 31st January, 1873.)

1611. Olympe Bonhomme, née Payen, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Manufacture of a stuff for making herbs and Delport reeds, called "frivolines.'"—Dated 5th April, 1859.

1612. Antoine Laroze, of 8, Rue d'Enghein, Paris, a Certificate of Addition to his Patent of 31st May, 1858, for "Counters."—Dated 5th April, 1859.

1613. Jean Henry Genixe, of 6, Rue Ste. Marie Blanche, Montmartre, for "A system of moveable keys for ladders."—Dated 5th April, 1859.

1614. Simon Davey and Adolphe Ludovic Chanu, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to their Patent of 22nd November, 1858, for "A composition for working mines, quarries, and extensive railway works."—Dated 5th April, 1859.

1615. Emamond Guer, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 29th January, 1859, for "A mechanical means of instantaneously extinguishing burners fed by liquid gas."—Dated 5th April, 1859.

1616. Anthony Bessemer, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Improvements in the manufacture of iron and steel and in apparatus used thereat."—Dated 5th April, 1859.

1617. Lauro Cecconi, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Improvements in horns, trumpets, and other wind instruments."—Dated 5th April, 1859.

1618. Alfred Labbé, domiciled 99, Rue St. Lazare, Paris, a Certificate of Addition to his Patent of 16th March, 1857, for "Machines for making horse-shoes."—Dated 6th April, 1859.

1619. George Hamilton and William Henry Nash, represented by Sautter, of 14, Boulevart Montmartre, Paris, for "Improvements in locks and keys."—Dated 6th April, 1859. — (English Patent, expiring 5th October, 1872.)

1620. Désiré Nicolas Mauclère, of Val d'Osne, département de la Haute Marne, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 14th February, 1859, for "A process of heating drying kilns and rooms by means of the gas of blast furnaces used by radiation of heating surfaces in metal tubes."—Dated 6th April, 1859.

1621. Franz Anton Lohage, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in the manufacture of alloys of aluminium."—Dated 6th April, 1859.

1622. Louis François Clément Breguet, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 22nd October, 1856, for "A printing apparatus for electric telegraphs."—Dated 6th April, 1859.

1623. Jean Martin Férafiat, of 17, Rue Phélippeaux, Paris, for "Improvements in toys."—Dated 6th April, 1859.

1624. Louis George Ganser and Louis Drouhin, represented by Dreyfous, of 54, Rue de Bondy, Paris, for "A rotary steam-engine."—Dated 6th April, 1859.

1625. Pierre Ernest Couillard and Henri Adolphe Archereau, the former of 1, Rue Laffitte, the latter domiciled with Pocholle, of 16, Rue Neuve St. Eustache, Paris, for "Treatment of ceramic substances."—Dated 6th April, 1859.

1626. Eugène Théodore Moualhier, represented by Layssard, of 17, Rue Notre Dame de Nazareth, Paris, for "An apparatus with a double air-current applicable to various industrial purposes."—Dated 6th April, 1859.

1627. Jean Baptiste Abel Duchesse, represented by D'Aubréville, of 60, Boulevart de Strasbourg, Paris, "A kind of boxes for anti-caritic powder."—Dated 6th April, 1859.

1628. Jules César Poulain, represented by Claès, of 23, Boulevart de Strasbourg, Paris, for "Improvements in apparatus for breaking off slubbings."—Dated 6th April, 1859.

1629. Emile Victor Lemaignen, represented by Claès, of 23, Boulevart de Strasbourg, Paris, for "A process for dyeing cloth and woollen stuffs."—Dated 6th April, 1859.

1630. Louis Heuzé, represented by Claès, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 8th April, 1858, for "A kind of Venetian blinds." — Dated 6th April, 1859.

1631. Pierre Henry, domiciled with Théroude, of 5, Rue de Montmorency, Paris, for "A kind of garden borders of baked clay, called 'geopeptic borders."—Dated 6th April, 1859.

1632. Jean Gourbeyre, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in the manufacture of trousers."—Dated 6th April, 1859,

1633. Auguste Colas, of 21, Rue Vieille St. Germain, Courbevoie, a Certificate of Addition to his Patent of 7th April, 1858, for "A machine for shaping wood."—Dated 7th April, 1859.

1634. Louis Edouard Courvoisier, of 134, Rue de Rivoli, Paris, for "A crinoline sheath."—Dated 7th April, 1859.

1635. Auguste Mathieu, represented by Amouroux, of 333, Rue St. Martin, Paris, for "A mechanical templet."—Dated 7th April, 1859.

1636. Eugène Alpin Napoléon Cadet, of 5, Rue Grénégaud, Paris, a Certificate of Addition to his Patent of 13th March, 1855, for "A system of taps with clack valves and moveable pivots, and for improvements in taps." — Dated 7th April, 1859.

1637. Frédéric Dreyfous, represented by Lévy, of 28, Rue du Sentier, Paris, a Certificate of Addition to his Patent of 26th March, 1859, for "Manufacture of mixed fabrics, with designs obtained by means of printed and cut-out tissues, and which are inserted into the dyed weft of the fabrics."—Dated 7th April, 1859.

1638. Félix Tussaud, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Arrangements in propellors of steam vessels."—Dated 7th April, 1859.

1639. François Ducros, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Increasing the power imparted to machinery."—Dated 7th April, 1859.

1640. Jean Bergeron, of Fléac, département de la Charente, a Certificate of Addition to his Patent of 30th November, 1858, for "An apparatus for distilling wine and other alcoholic substances." — Dated 7th April, 1859.

1641. Alexandre Jacob Herche, of Louviers, département de l'Eure, a Certificate of Addition to his Patent of 18th September, 1858, for "A thrashing machine."—Dated 8th April, 1859.

1642. Bertrand Mandille, of Mont de Marsan, département des Landes, for "A kneading machine worked by compressed air." — Dated 8th April, 1859.

1643. Pierre Moreaud, of St. Apre, département de la Dordogne, for "A wheel-ring."—Dated 9th April, 1859.

1644. Pierre Muller, of Sédan, département des Ardennes, a Certificate of Addition to his Patent of 27th July, 1857, for "A system of weaving."—Dated 13th April, 1859.

1645. Alphonse Fabre and Jules Barnouin, of 30, Rue Rangueil, Nîmes, département du Gard, for "A motor worked by the wind."—Dated 9th April, 1859.

1646. Antoine Ripert, of 4, Rue Silvabelle, Marseille, département des Bouches du Rhône, a Certificate of Addition to his Patent of 25th January, 1858, for "A safety break for carriages."—Dated 11th April, 1859.

1647. Pierre and Auguste Buisson, of St. Maime, département des Basses Alpes, for "A kind of tiles, called 'ceiling-tiles.'"—Dated 12th April, 1859.

1648. Jean Baptiste Machet, of Rue du Commerce, Epernay, département de la Marne, for "A screw-jack for drawing off wine." — Dated 12th April, 1859.

1649. François Vouillon, of Louviers, département de l'Eure, a Certificate of Addition to his Patent of 31st December, 1858, for "Manufacture of woollen yarns for warps and wefts."—Dated 12th April, 1859.

1650. François Monneyres, of Prairie au Duc, Nantes, département de la Loire Inférieure, for "A regulator of thrashing machines." — Dated 13th April, 1859.

1651. Auguste Pin, of Castelnaudary, département de l'Aude, for "So-called 'hydraulic paintings.'"—Dated 13th April, 1859.

1652. Jules Brossard, of 15, Rue de Sèze, Lyon, département du Rhône, for "A safety signalling apparatus."—Dated 11th April, 1859.

1653. Jean Vallantin and Hermann Steinberg, of Angoulême, département de la Charente, for "Manufacture of elastic sugar."—Dated 11th April, 1859.

1654. Pierre Gavazzi, represented by Marillier and Charles Buisson, of 21, Place Tholozan, Lyon, département du Rhône, for "An apparatus for cleaning silk."—Dated 12th April, 1859.

1655. Favier and Alibert, of 10, Place Marengo, St. Etienne, département de la Loire, a Certificate of Addition to their Patent of 14th April, 1858, for "A loom for obtaining terry fabrics without dead beat."—Dated 13th April, 1859.

1656. Barthélemy Bayard, of Rive-de-Gier, département de la Loire, a Certificate of Addition to his Patent of 9th April, 1858, for "Manufacture of shovels."—Dated 14th April, 1859.

1657. Pierre Boulicault, of Nolay, département de la Côte d'Or, for "A system of lighting by means of the essence of purified turpentine."—Dated 12th April, 1859.

1658. Jean Laurent, of Moulins, département de l'Allier, for "A system of pumps."—Dated 12th April, 1859.

1659. Denis Nefflier and Pierre Blandin, of Rue Johannin, Dijon, département de la Côte d'Or, for "A slide and cylinder for selling postage stamps."—Dated 12th April, 1859.

1660. Pierre Gidéon Déperche, of Saintes, département de la Charente Inférieure, for "A boiler for distilling."—Dated 13th April, 1859.

1661. Antoine Gaud, of 17, Rue du Loup, Bordeaux, département de la Gironde, a Certificate of Addition to his Patent of 28th November, 1857, for "A system for using beds on railways."—Dated 14th April, 1859.

1662. Durand and Crozet, of 11, Rue de la Bourse, St. Etienne, département de la Loire, a Certificate of Addition to their Patent of 21st August, 1858, for "Manufacture of undoubled velvet applied to looms for weaving several pieces at once."—Dated 14th April, 1859.

1663. Claude Joseph Périnel, of Entre Deux Guiers, département de l'Isère, a Certificate of Addition to his Patent of 11th February, 1858, for "Manufacture of wheel tyres for railway and other carriages."—Dated 15th April, 1859.

1664. Jean Faure and Charles Brunet, the former of 13, Trottoi d'Amerval, the latter of 13, Rue de l'Hospice, Nancy, département de la Meurthe, a Certificate of Addition to their Patent of 23rd April, 1858, for "A double action lift, and force pump."—Dated 15th April, 1859.

1665. Pierre Auguste Georgene, of Autun, département de Saône et Loire, for "A lime kiln with long flames."—Dated 15th April, 1859.

1666. Alexandre Joseph Guilloteau, domiciled with Mignon, of 38, Place du Théâtre, Lille, département du Nord, a Certificate of Addition to his Patent of 31st January, 1859, for "A system of furnaces for fixed and moveable steam-engines and other industrial purposes."—Dated 15th April, 1859.

1667. Mrs. Daniel and Son, of 14, Rue de Paradis, Marseille, département des Bouches du Rhône, a Certificate of Addition to their Patent of 19th April, 1858, for "A piston with a cylinder bore."—Dated 15th April, 1859.

1668. Auguste Acanthe Boudouresque and Jean Baptiste Romégas, of 84, Cours Lieutand, Marseille, département des Bouches du Rhône, a Certificate of Addition to his Patent of 4th December, 1857, for "Double butterfly gas-burners, &c."—Dated 16th April, 1859.

1669. Martial Victor Mouterde-Billion, of Route de Génas, Villeurbane, département du Rhône, for "A kind of oil-cup with a wick."—Dated 15th April, 1859.

1670. Louis Jules Lavergne, of La Porte de la Tranchée, Poitiers, département de la Vienne, for "A press with a triple eccentric, lever, and regulator."—Dated 15th April, 1859.

1671. Antoine Claveloux, domiciled with Sollier, of 10, Rue St. Dominique, Lyon, département du Rhône, for "A system of iron-work for assembling bedsteads and castors."—Dated 16th April, 1859.

1672. Charles Simon, of Charleville, département des Ardennes, for "Manufacture of nails by machinery and by a cold process,"—Dated 16th April, 1859.

1673. Constant Guerin, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in using and applying crape, tulle, &c."—Dated 7th April, 1859.

1674. Ernest Stelzl, of 45, Rue Fontaine-au-Roi, Paris, a Certificate of Addition to his Patent of 26th April, 1858, for "A process of painting without causing smell."—Dated 7th April, 1859.

1675. Claude Larpent, of 39, Rue de Longchamps, Paris, for "A machine for crushing stones."—Dated 7th April, 1859.

1676. Edouard Delcambre, of 14, Rue du Télégraphe, Montmartre, for "Artificial guttapercha flowers."—Dated 7th April, 1859.

1677. Charles François Thibault, of 34, Rue du Rendezvous, St. Mandé, for "A water-gauge."—Dated 7th April, 1859.

1678. Jean Charles Schroder, domiciled with Gibert, of 53, Rue Vivienne, Paris, for "Treatment of molasses for extracting the sugar therefrom."—Dated 7th April, 1859.

1679. Jean Baptiste Diéudonné Lesur, of 112, Route d'Italie, Gentilly, for "Improvements in the manufacture of candles."—Dated 7th April, 1859.

1680. Renard Brothers, domiciled with Jules Duchesnay, Asnières, for "Preparing and using a red colouring substance."—Dated 8th April, 1859.

1681. Seraphin Adolphe Lemaire, of 10, Faubourg, Montmartre, Paris, for "Designs resembling sculpture, and obtained by means of pressure."—Dated 8th April, 1859.

1682. Léopold Jean Baptiste Roche, of 32, Rue Bellefond, Paris, for "A so-called 'Duchesse busk.'"—Dated 8th April, 1859.

1683. Pierre Perron, of 14, Rue Vivienne, Paris, for "A process for moulding chocolate."—Dated 8th April, 1859.

1684. Bernard Hippolyte Chameroy, of 162, Faubourg St. Martin, Paris, for "Tubular soldering on pipes."—Dated 8th April, 1859.

1685. Joseph Antoine Jean Horloger Redier, of 16, Cours des Petites Ecuries, Paris, a Certificate of Addition to his Patent of 4th December, 1857, for "Enamelled dials."—Dated 8th April, 1859.

1686. Armand Benoist Joseph Jean, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A system of mutual commercial advertisements."—Dated 8th April, 1859.

1687. Pierre Sabatier and Jean Thomas Mourié, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Manufacture of cast-steel objects, and chiefly wheel tyres of railway carriages by means of crucibles."—Dated 8th April, 1859.

1688. Adolphe Julien Chomette, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A thermo-syphon for heating hothouses, workshops, &c."—Dated 8th April, 1859.

1689. Marie Nicolas Victor Klein, of 16, Rue Vavin, Paris, a Certificate of Addition to his Patent of 16th April, 1858, for "A machine for marking and cutting pasteboard."—Dated 9th April, 1859.

1690. Eugène Goddier, of 34, Rue du Faubourg St. Martin, Paris, a Certificate of Addition to his Patent of 25th November, 1858, for "Applying talc or mica to various purposes."—Dated 9th April, 1859.

1691. Charles Pietroni, represented by Carini, of 4, Boulevart des Italiens, Paris, for "Manufacture of soap from neutral alkali by steam."—Dated 9th April, 1859.

1692. Michel Félix Guenault, of 48, Rue de la Ferme des Mathurins, Paris, a Certificate of Addition to his Patent of 26th June, 1857, for "Improvements in fire-arms."—Dated 9th April, 1859.

1693. Jacques Bernard Dominateur Cogiola, of 10, Rue Montmartre, Paris, for "A vegetable liqueur, called 'Figaro liqueur.'"—Dated 9th April, 1859.

1694. James Childs, represented by Sautter, of 14, Boulevart Montmartre, Paris, for "Improvements in using heat in the manufacture of artificial gums, teeth, and other articles composed of combined gutta percha and sulphur."—Dated 9th April, 1859.—(English Patent, expiring 21st January, 1873.)

1695. Jean Pierre Philippe, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 10th April, 1858, for "A machine for opening boxes of preserved food, sardines, and other articles."—Dated 9th April, 1859.

1696. Eugène François Novion, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A simplified and improved melophonium."—Dated 9th April, 1859.

1697. Benjamin Goodfellow, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in steam engines."—Dated 9th April, 1859.

1698. Georges Kugler, Boniface Plaz, and Jacob Rexroth, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in sewing machines."—Dated 9th April, 1859.

1699. Louise Jenny Pamèla Lefebvre née Blanche, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Manufacture of nitric acid, and applying the same to the production of artificial nitre beds."—Dated 9th April, 1859.

1700. Félix Aroux, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 14th July, 1857, for "A sowing machine with multiple wheels."—Dated 9th April, 1859.

1701. Félix Aroux, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 27th January, 1859, for "Improvements in the method of sowing."—Dated 9th April, 1859.

1702. Jean François Quétel, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 1st December, 1858, for "Improvements in machines for planing and grooving inlaid floors."—Dated 9th April, 1859.

1703. Louis Adolphe Faure, of 44, Rue des Marais St. Martin, Paris, a Certificate of Addition to his Patent of 4th July, 1855, for "A kind of pump."—Dated 9th April, 1859.

1704. Guillaume Jacques Dorso, of 8, Rue de Bagneux, Paris, a Certificate of Addition to his Patent of 25th September, 1858, for "Improvements in railway plant."—Dated 9th April, 1859.

1705. Louis Cyrille Bureau, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "A system of heating and ventilating fire-places of machines."—Dated 9th April, 1859.

1706. André Hoffman, domiciled with Richard, of 53, Rue Vivienne, Paris, for "A system of pianos which get never out of tune."—Dated 9th April, 1859.

1707. Alfred Antoine Paulin Mallet, of 12, Boulevart du Combat, Belleville, for "Improvements in the manufacture of tubes of bituminous paper."—Dated 9th April, 1859.

1709. Paul Briolay, of 12, Rue de Rambuteau, Paris, a Certificate of Addition to his and Sénéchal's Patent of 16th September, 1858, for "A break."—Dated 11th April, 1859.

1709. Leonard Dinlasportas and Paul Louis Belnet, the former of 3, Rue de Montreuil, the latter of 12, Rue St. Bernard, Paris, for "A system of illustrated funeral railings."—Dated 11th April, 1859.

1710. Louis Jacques Durand, of 29, Rue St. Nicolas d'Antin, Paris, for "Improvements in water and gas inlets."—Dated 11th April, 1859.

1711. Anne Célénie Villeminot née Neuville, of 71, Rue Lemerier, Batignolles, for "Winding up filamentous substances on cylinders, one above the other, by means of a differential movement."—Dated 11th April, 1859.

1712. Henry Bayley and John Greaves, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Improvements in machines for twisting and doubling fibrous substances."—Dated 11th April, 1859.—(English Patent, expiring 9th April, 1872.)

1713. Jules Cuisset, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "A reflector level, with a reservoir, blade pendulum and signal sight."—Dated 11th April, 1859.

1714. Dominique Artige, of 43, Rue de Grenelle, Grenelle, a Certificate of Addition to his Patent of 17th November, 1858, for "Improvements in grease-boxes of railway carriages, &c."—Dated 11th April, 1859.

1715. Marie Catherine Chatelain née Poignant, of 31, Rue du Jour, Paris, for "Cosmetic compounds for preventing the loss of hair, &c."—Dated 11th April, 1859.

1716. François Joseph Adam, of 5, Rue du Grand Chantier, Paris, for "Using paper resembling minerals, as passe-partout."—Dated 11th April, 1859.

1717. Aléxis Marie Edmond Lefaure, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Improvements in revolvers."—Dated 11th April, 1859.

1718. Aléxis Marie Edmond Lefaure, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A lever hook for taking out cartridges from breech-loading guns."—Dated 11th April, 1859.

1719. Louis Breton, of 6, Rue Garancière, Paris, for "A signal mast for railways."—Dated 12th April, 1859.

1720. Léon Pierre Debain, of 132, Boulevart Montparnasse, Paris, for "A diaphragmatic apparatus with a direct action, applicable to navigation, pumps, to compressing gas, &c."—Dated 12th April, 1859.

1721. Léon Pierre Debain, of 132, Boulevart Montparnasse, Paris, for "A generating apparatus utilizing compressed air, water, alcohol, ammonia, and other fluids."—Dated 12th April, 1859.

1722. Louis Sautter and Co., represented by Basset, of 14, Boulevart St. Martin, Paris, a Certificate of Addition to Balancie's Patent of 23rd August, 1858, for "Inalterable metallic coatings on glass for reflectors, mirrors, &c."—Dated 12th April, 1859.

1723. Auguste Lasgouttes and Co., Boulevart des Recollets, Lodère, département de l'Hérault, for "A carding machine with continuous slubbings."—Dated 14th April, 1859.

1724. Jean Baptiste Marchandin, of Gamaches, département de la Somme, for "A moveable or fixed screw thrashing machine."—Dated 16th April, 1859.

1725. Ferdinand Gobet, of Bernerain, département du Nord, for "A compensating regulator for regulating the speed of any motive power."—Dated 19th April, 1859.

1726. Edmond Guyot-Dannecy, of 46, Fossés de l'Intendance, Bordeaux, département de la Gironde, for "A therapeutic spoon, with compartments and cover."—Dated 18th April, 1859.

1727. Pierre Antoine Quantin, of 27, Allées des Noyers, Bordeaux, département de la Gironde, for "Extracting stones."—Dated 18th April, 1859.

1728. Pierre François Levache, of 12, Rue du Petit Bouvreuil, Rouen, département de la Seine Inférieure, for "A kind of rein."—Dated 12th April, 1859.

1729. Nicolas Schlumberger and Co., of Guebwiller, département du Haut Rhin, for "Improvements in turbines, reaction wheels, ventilators, and motors in general."—Dated 15th April, 1859.

1730. Nicolas Schlumberger and Co., of Guebwiller, département du Haut Rhin, for "Improvements in drawing cotton, wool, flax, and other filamentous substances."—Dated 15th April, 1859.

1731. Alexandre Jules Lemrez, of 2, Place Martainville, Rouen, département de la Seine Inférieure, for "Glue for assembling the ends of straps."—Dated 15th April, 1858.

1732. Meunier-Bourdat, senr. and junr., Cyrille Guélin, and Jean Pierre Garrel, of Voiron, département de l'Isère, for "A machine for doubling the motive power of water."—Dated 15th April, 1859.

1733. François Alexandre Tavelet, of Montivilliers, département de la Seine Inférieure, for "A system of so-called 'progressive pivots,' whereby the motive power, and the production of works moved by waterfalls, may be increased."—Dated 16th April, 1859.

1734. François Alexandre Tavelet, of Montivilliers, département de la Seine Inférieure, for "A system of water inlets applicable to all hydraulic wheels."—Dated 16th April, 1859.

1735. Frédéric Honoré Desliens, of Meny, département de l'Oise, for "A mechanical lathe with a treble chariot and slide mandrel for making needle-cases."—Dated 16th April, 1859.

1736. Louis Kessler, of Metz, département de la Moselle, a Certificate of Addition to his Patent of 14th June, 1858, for "Preparing and using fluoride of potassium."—Dated 18th April, 1859.

1737. François Leblanc, of Neuville-sur-Saône, département du Rhône, for "A railway break worked by the weight of trains."—Dated 18th April, 1859.

1738. Michel Mignot, of 1, Rue de Savoie, Lyon, département du Rhône, for "A system of gas-heating and complete smoke-consuming apparatus."—Dated 19th April, 1859.

1739. Gallois-Foucault, of St. Martin, Ile de Ré, département de la Charente Inférieure, for "A mechanical press applicable to the manufacture of wine, cyder, to pressing fodder, tobacco, and all articles to be packed up."—Dated 19th April, 1859.

1740. Raymondière, département de la Loire Inférieure, for "Glueing leather and other articles by means of gutta percha in powder, without using any solution of chemical products."—Dated 19th April, 1859.

1741. Charles Jacquard, of Sédan, département des Ardennes, for "Improvements in stereoscopes."—Dated 19th April, 1859.

1742. François Maystre, of 10, Rue Vaubecour, Lyon, département du Rhône, for "A mould for making cigarets."—Dated 20th April, 1859.

7143. Charles Cyprien Jouan, of Louviers, département de l'Eure, for "A thrashing machine."—Dated 20th April, 1859.

1744. Edme Jules Maumené and Victor Rogelet, domiciled at 22, Rue Colbert, Reims, département de la Marne, for "A system of working a kind of potash."—Dated 20th April, 1859.

1745. Léon Barroux, of Chaumont, département de la Haute Marne, a Certificate of Addition to his Patent of 7th September, 1858, for "Iron roads."—Dated 20th April, 1859.

1746. Louis Gustave de Laurés, of 4, Place des Marchés, Reims, département de la Marne, a Certificate of Addition to his Patent of 4th March, 1857, for "Cloth without wrong sides napped on circular hosiery frames."—Dated 21st April, 1859.

1747. Pruneau, of Saint Fargeau, département de l'Yonne, for "A sowing machine."—Dated 21st April, 1859.

1748. Frédéric Calais, of 3, Rue du Renard St. Sauveur, Paris, for "A system of weaving with horizontal and vertical warps."—Dated 12th April, 1859.

1749. Léon Jean Emile Dupont, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 10th January, 1859, for "Separating grits from chaff."—Dated 12th April, 1859.

1750. Amélie Erhard née Demenge, of 93, Rue Richelieu, Paris, for "Improvements in bonnets."—Dated 12th April, 1859.

1751. Léonard Wray, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Improvements in compounds for coating and insulating telegraph wires."—Dated 12th April, 1859.—(English Patent, expiring 12th October, 1872.)

1752. George Price and William Darvis, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "Improvements in steam engines, boilers, and apparatus belonging thereto."—Dated 12th April, 1859.—(English Patent, expiring 2nd September, 1872.)

1753. Henri Désiré Quidet, domiciled with Bordet, of 6, Rue Mont Faucon, Paris, for "Improvements in the manufacture of cloth for billiard tables."—Dated 13th April, 1859.

1754. Pierre Hippolyte Gustave Bérard, of 333, Rue St. Denis, Paris, for "Trusses, suspensories, &c., rendered impervious by means of collodion."—Dated 13th April, 1859.

1755. Pierre Augustin Sautreuil, domiciled at Rue du Bouloi, Hotel du Nord, Paris, a Certificate of Addition to his Patent of 31st May, 1855, for "A machine for making inlaid floors."—Dated 13th April, 1859.

1756. Alexandre Cousin, of 82, Rue des Gravilliers, Paris, for "Improvements in trusses."—Dated 13th April, 1859.

1757. Nores, Autier, Auvray, Desvarannes, and Simon, domiciled with the former, Rue Joubert, Paris, for "A system of railway sleepers."—Dated 13th April, 1859.

1758. Alexandre Désiré Eugène Boucher and Adrien Muller, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to their Patent of 27th July, 1854, for "Mechanical processes for tinning and zinking."—Dated 13th April, 1859.

1759. Dominique Hilaire Prestat, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 27th May, 1857, for "Fixing rails on railways."—Dated 13th April, 1859.

1760. François Begon, of 6, Rue de Jarente, Paris, for "A mechanism for cauterization."—Dated 13th April, 1859.

1761. Louis Edme Golaz, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A system of pneumatic closing."—Dated 13th April, 1859.

1762. William Malam, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Improvements in apparatus for manufacturing gas."—Dated 13th April, 1859.—(English Patent, expiring 6th October, 1872.)

1763. John Stainthorp, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A machine for moulding candles."—Dated 13th April, 1859.

1764. Félix Delisle, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A cock with forced water, applicable to gas and steam pipes."—Dated 13th April, 1859.

1765. Ducrot, represented by Philippe Ducrot, of 56, Rue du Faubourg St. Denis, Paris, for "A bird fan."—Dated 13th April, 1859.

1766. Eugène Simonnar and Pierre Auguste Gasseau, the former of Batignolles, the latter of 17, Avenue Millaud, Rue de Lyon, Paris, for "A submarine exploring apparatus."—Dated 13th April, 1859.

1767. Nicolas Joseph Grivot, with Dreyfous, of 54, Rue de Bondy, Paris, for "An apparatus for treating potatoes in fecula works."—Dated 14th April, 1859.

1768. Jean Jacques Monnié, represented by Dreyfous, of 54, Rue de Bondy, Paris, a Certificate of Addition to his Patent of 11th August, 1858, for "A machine for dry rubbing floors and brick pavements."—Dated 14th April, 1859.

1769. Thomas Guinier, of 23, Rue de Grenelle St. Honoré, Paris, a Certificate of Addition to his Patent of 17th May, 1858, for "Improvements in cocks and other objects used in the distribution of water."—Dated 14th April, 1859.

1770. Charles Urbain Varin, of 3, Rue du Jardinet, Paris, for "A kind of flower vases."—Dated 14th April, 1859.

1771. Joseph Souqière, alias Emile, of 33, Rue St. Victor, Paris, for "Distilling coal."—Dated 14th April, 1859.

1772. Théodore W. Phinney, represented by Fleischmann, of 27, Boulevart des Italiens, Paris, for "Improvements in propelling vessels."—Dated 14th April, 1859.

1773. Marie Adèle Maillet, née Brunet, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in the manufacture and composition of liqueurs."—Dated 14th April, 1859.

1774. Henri Adolphe Archereau, with Petit, of 12, Rue du Temple, Paris, for "Utilizing the power of steam and gas by means of moveable diaphragms."—Dated 14th April, 1859.

1775. Charles Radcliffe, represented by Gough, of 238, Rue de Rivoli, Paris, for "A machine for wetting woollen and other tissues."—Dated 14th April, 1859.

1776. Charles Auguste Barrière, represented by Ricordeau, of 23, Boulevart de Strasbourg, for "A system of closing bottles."—Dated 14th April, 1859.

1777. Jules Firmin Ricquier, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A syphoid cock for obtaining sparkling beverages."—Dated 14th April, 1859.

1778. Alfred René Dalifol, represented by Barrault, of 33, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 7th January, 1859, for "An annealing furnace, with fixed crucibles."—Dated 14th April, 1859.

1779. Jeanne Elizabeth Sophie Achet, née Robert de Massy, represented by Barrault, of 33, Boulevart St. Martin, Paris, a Certificate of Addition to her Patent of 25th February, 1859, for "A system and means of stopping horses."—Dated 14th April, 1859.

1780. Jean Jacques Taxile de la Fenestre, represented by Barrault, of 33, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 29th January, 1859, for "A wet process for extracting carbon from peat and other fuel."—Dated 14th April, 1859.

1781. Augustin Marie Herland, represented by Barrault, of 33, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 31st July, 1858, for "Mounting straps on drums and pulleys."—Dated 14th April, 1859.

1782. Henri Galis, domiciled with Courot, of 5, Rue de Cléry, Paris, a Certificate of Addition to his Patent of 21st October, 1858, for "A system of steam carriages."—Dated 15th April, 1859.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

List of Patents, with Claims annexed, issued from the United States Patent Office, for the week ending 19th April, 1859, and each bearing that date.

No. 23,650. Jonathan Amory, of West Roxbury, Mass., for an "Improvement in steam-boiler furnaces."

"What I claim as my invention, and desire to secure by Letters Patent, is, the method of increasing the combustion and protecting the combustion curves, substantially as described."

No. 23,651. Abraham Bartholf, of New York, N. Y., for an "Improvement in device for converting alternate circular motion into direct circular motion."

"What I claim as my invention, and desire to secure by Letters Patent is, the dog C, spring D, and lever E, combined and arranged relatively to each other, and applied to the wheel A, or its equivalent, substantially as herein described."

No. 23,652. A. C. Barstow, of Providence, R.I., for an "Improvement in burial cases."

"Having thus described my improvements, I shall state my claim, as follows:—What I claim as my invention, and desire to secure by Letters Patent, is, constructing a metallic burial case, with the ogee shaped ends as described, whereby great reduction in weight and economy in the manufacture is secured, and at the same time all the space required afforded. Second, I also claim forming the metallic case, with the overlapping strengthening ribs, as described."

No. 23,653. Mellen Battel, of Albany, N. Y., for an "Improvement in furnace for heating tire."

"Having thus described my invention, I claim as an improved article of manufacture, a furnace for heating tire, composed of an annular body A, fire space B, central tube C, with cover or damper D, therein, to regulate the draft, extension E, rod F, crane G, top H, and otherwise constructed as herein shown and described, for the purpose specified."

No. 23,654. T. L. Baylies, of Richmond, Ind., for an "Improved anchor tripper."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement and combination of the tripping bar B, shaft C, and cams *j*, *k*, substantially as and for the purpose herein shown and described."

No. 23,655. Abner M. Beardsley, of Elkhart, Ind., for an "Improved machine for filing saws."

"Having described the operation of the implement in connection with the description of the construction of the same, I will now point out the new elements and arrangements of parts contained therein. I do not claim a swinging frame, either for supporting the file or the file carriage; neither do I claim lifting the swinging frame and file, so as to clear the teeth of the saw, by means of a spring or any device so that the saw can be fed beneath the file as each tooth is sharpened; but I claim, and desire to secure by Letters Patent, first, the arrangement of the swinging frame of the file carriage upon the adjusting plate E, so that it can be turned over and supported upon the bed plate A, in the manner and for the purposes described and shown in Fig. 6, of the drawings. Second, the arrangement of the cheek pieces N, upon the adjusting plate E, between the arms of the swinging frame for the purpose of bracing the latter against the thrusts of the file carriage, while said frame is free to rise and fall as described. Third, the arrangement of the gauging screw M, in the cross piece H, of the swinging frame, by which the teeth are filed to a uniform depth, without interfering with the rising of the file carriage to conform to the taper of the file, as described. Fourth, the arrangement of the seats *a*, *a*, at each end of the bed plate A, whereby the implement may be supported directly upon the clamp of the saw, for the purposes described."

No. 23,656. Douglas Bly, of Rochester, N.Y., for "Improvements in artificial legs."

"I am aware that straps from the shoulders have been used, both elastic and otherwise, for the purpose of retaining the artificial limb in its place, and this I do not claim. But what I claim as new, and desire to secure by Letters Patent, is, the use of an elastic strap or apparatus from the shoulders or upper part of the body, when attached to the artificial leg in such a manner that its contractile power is exerted in connection with the backward motion of the shoulders to produce the forward motion of the foot, substantially as herein set forth."

No. 23,657. Benjn. Bradbury, of Abington, Illinois, for an "Improvement in washing machines."

"What I claim and desire to secure by Letters Patent, is, the arrangement herein described of the levers *h*, *e*, *e*, and pitman *f*, moving the dashers *d* over the concave of the box C, the whole constructed and operating as specified."

No. 23,658. Chas. K. Bradford, of Lynn, Mass., for an "Improvement in faucets."

"Having thus fully described my said improvement in faucets, and particularly ascertained the manner in which the same is, or may be constructed, I shall state my claim as follows:—What I claim as my invention, and desire to secure by Letters Patent, is, the faucet, constructed as described, to be operated by applying pressure directly to the head of the case; said case for this purpose being provided with an outside elastic diaphragm, forming the head thereto, and combined with a valve rod, arranged in relation to the case internally, so that the ends of said rod terminate respectively at, and are secured to the valve and diaphragm, as set forth."

No. 23,659. Wm. H. Bramble, of Springfield, Ohio, for an "Improved bedstead."

"Having thus fully described the nature and object of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, first, the combination of an under and upper section, united to each other by springs and links, so that the upper section may have a free vertical and horizontal motion, substantially as described. I also claim, in combination with a bedstead made of two sections, as described, the making of the posts of the upper section shorter than the supports of the under section, so that said upper section, when placed on the lower one, shall be entirely clear of the floor, as set forth. I also claim the combination of the loose slats, springs, and webbing, when said webbing runs longitudinally or lengthwise of the bedstead, in the manner and for the purpose stated."

No. 23,660. John Broughton, of New York, N.Y., for an "Improvement in governors for steam engines."

"What I claim as my invention, and desire to secure by Letters Patent, is, effecting the connection between the ball arms G, G, and the central rod J, by means of two levers H, H, and two links K, K, the whole being applied and operating substantially as herein set forth."

No. 23,661. Peter G. Brown, of Schenectady, N.Y., for an "Improved lubricator."

"I claim the combination of the reservoir A, provided with a discharging aperture *c*, valve F, having a receiving aperture *d* in it, and air-chamber H, or the equivalents thereof, when said air-chamber is arranged to control or assist the discharge, substantially as specified. I likewise claim giving to the valve, constructed and arranged as above described, which conveys the oil from the reservoir to the discharging aperture, an intermittent revolving motion, in one and the same direction, for and by the action of the handle I, or its equivalent, in either direction of the travel of the latter, or in reverse directions thereof, essentially as herein set forth."

No. 23,662. Geo. Clay, of New York, N. Y., for an "Improved lock."

"What I claim as my invention, and desire to secure by Letters Patent, is, the within-specified construction and arrangement of the following parts, for united operation in a lock, viz., right and left double-walled case A, *t*, *t*, sliding right and left, key hole guard plates *d*, *d*, e^1, e^1, right and left forked bars *e*, *e*, *s*. *s*, main and auxilliary tumblers D, D, f^1, f^1, and bolt D, a^*, all for the purpose set forth."

No. 23,663. Wm. E. Cooper, of Dunkirk, N. Y., for an "Improvement in R. R. car brake."

"Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement of the bell cord E, pulleys *h*, *h*, and *n*, and movable pulley block F, with the brake cord I, the same being connected and operated substantially in the manner herein set forth, for the purpose of setting all of the brakes in the entire train simultaneously and from any point within the train, as is fully described."

No. 23,664. Rienza Daniels, of Almena, Mich., for an "Improvement in journal boxes."

"What I claim as my invention, and desire to secure by Letters Patent, is, the axle *c*, *d*, furnished with a screw tapped arm arm *c*, and having toothed and plain sections *a*, *a*, *a*, E, *b*, *b*, of a journal arranged and clamped upon it, in combination with the internally toothed journal box A, B, B, and with rods *m*, *m*, toothed and plain sections of friction rollers D, D, arranged and clamped on them, all in the manner described, and for the purpose set forth."

No. 23,665. B. Wells Dunklee, of Boston, Mass., for an "Improvement in cooking range."

"What I claim is, the arrangement of the two induction flues A, B, the gauge throats, their plates or bars, and the flues around and between the two ovens, a single damper and its opening being placed over the middle flue and with respect to the two flues, as specified."

No. 23,666. Geo. Esterly, of White Water, Mich., for an "Improvement in harvesting machines."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, 1st, the adjusting of the rake Q i y means of the sector O suspended by journals or trunions *s*, *s*, and secured in the desired position by set screws *n* and bars *n*, *n*, or their equivalents, in combination with the adjustable platform L, whereby the rake and platform may be adjusted to suit the height the grain is being cut. 2nd, the segment plate U with the curved flanch *j*×, for the purpose of carrying the rake backwards, as described. 3rd, the use of the pendent rod or bar *f*×, provided with the rollers *g*×, *h*×, in combination with the flanch *j*×, for the purpose specified. I do not claim the guard finger T; but I claim, 4thly, attaching the guard finger T to the bearing W, in the manner described, whereby it may be adjusted, for the purpose specified."

No. 23,667. Jonah Ellis, of (near) Warrington, England, for an "Improvement in machine for quarrying stone, &c."—Patented in England, 6th December, 1855.

"Having thus fully described the nature and object of my invention, I would state that I lay no claim to the parts herein described when taken separately; but what I do claim as new, and desire to secure by Letters Patent, is, a portable apparatus designed for cutting grooves in rock or other mineral substances, for the purpose of quarrying the same in blocks, and consisting of supports B, B, which are fastened to the rock, and sustain an adjustable bed plate D and screw shaft E, upon which bed plate and screw shaft a tool stock and adjustable cutter is made to traverse between two previously drilled or open spaces which form the extremities of the proposed cut, substantially as herein described and represented."

No. 23,668. Robt. G. Eunson, of New York, N. Y., for an "Improved water cooler for steam engines."

"I do not wish to confine myself in the use of my decalorator, to cooling the condensing water of steam engines, but contemplate its application to all operations of cooling, for which it is fitted; nor do I confine myself to the cylindrical form of my present arrangement; nor do I claim my decalorator, broadly, as a tubular device, for cooling the condensing water of steam engines, by means of a stream of sea water outside of the tubes; but what I claim as my invention, and desire to secure by Letters Patent, is, the use or employment of a decalorator, such as is described, or its equivalent, when the series of very small horizontal tubes are so arranged in respect to the current of water outside of the tubes, that the centre of each tube, in one row, shall be opposite, or nearly opposite to the centre of the space between the tubes in the next row, in combination with supporting and directing tube plate, such as are described, and for the purposes set forth. I also claim the use or employment of tubes arranged in rows, as described, in combination with the tube plates and shell of the decalorator, when so arranged that the current of cold water is made to flow across the tubes, being directed by the tube plates from side to side or from top to bottom, and from bottom to top, of the shell and around the tubes, being made to encircle them by its current, in consequence of their arrangement in rows, as described, and at the same time progress lengthwise of the shell and tubes, in a direction contrary to the stream of fresh water inside of the tubes, for the purposes set forth."

No. 23,669. Daniel Fitzgerald, of New York, N. Y., for a "Fireman's ladder."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the applying the tanks A, B, or their equivalent, to ladders, with or without water, to elevate and hold said ladders, substantially as above described. 2d, conveying the water thro' a long distance, by an elongated pipe E, or its equivalent, connected with the apparatus, substantially as described. 3rd, managing the curved or jointed pipes Q, R, by means of the lever H, or its equivalent, in the manner above described."

No. 23,670. Perry G. Gardiner, of New York, N. Y., for an "Improvement in moulds for steel castings."

"Having thus described my improvements, what I claim therein as my invention, and for which I desire Letters Patent, is, 1, the constructing the mould with a cup or reservoir, for holding all the melted metal for the casting, closed, and opened at the entrance of the sprue by the movable

plug or stopper, as described. 2, the spherical hollow chamber *d*, and air escape passage $d^{(1)}$, and self-acting plug *f*, to permit the rarified air to pass from the mould and to escape, and to shut off the external air from the mould, operating in the manner and for the object described. 3 I claim the combination and arrangement of the two cups, the sprue, the figure *o*, the tool or casting and air vents or passages, so as to form a bent tube, by which the casting is filled from the bottom, and the external air excluded, as described. 4, I claim the use of the moulds in a state of intense heat, never less than 500° of Fahrenheit, and generally at a much higher temperature, for the purpose of producing, as nearly as practicable, a vacuum within the mould; but I do not claim the mere heating or warming of the moulds to produce a smooth casting, that having been a common practice heretofore."

No. 23,671. P. F. Geisse, of Wellsville, Ohio, for an "Improved oven for cooling castings."

"I am aware that ovens for raising the temperature after the wheels have been put into them have been used, therefore I do not claim an oven of itself as new; I am also aware that a current of air has been allowed to pass through the hubs of car wheels when introduced into a case not susceptible of having its temperature raised, therefore I do not claim this as new; but what I do claim as new, and desire to secure by Letters Patent is, the pipe *d*, connecting the eyes or hubs of the wheels with flue E, and plate *c*, for causing the current of air to pass through the eyes only of the hubs in cooling, in combination with the heating oven A and pits B, operating as described and for the purposes set forth."

No. 23,672. Isaac H. Giffing, of New York, N.Y., for an "Improved mode of attaching casters to trunks."

"I do not claim the roller or strap separately, as they have been used on trunks for many years; what I do claim is, the method herein described of constructing and attaching casters to trunks."

No. 23,673. James C. Gilbert, of Leeds Junction, Me., for an "Improvement in yoke ring attachment for the pole of ox carts."

"Having thus described my invention, what I claim is, the above-described arrangement of the backing bearer *f*, and the engaging notch *e* of the spring slider D, with respect to and to operate with the draft hook C, substantially in manner as herein-before specified."

No. 23,674. Othniel Gilmore, of Raynham, Mass., for an "Improved machine for smoothing soles of boots and shoes."

"What I claim as my invention is, the improved manufacture of sole smoothing or reducing wheel, made with the convex grinding annulus *a*, a concentric heel recess B, and acute angled edges *b*, *c*, arranged substantially as described."

No. 23,675. Porter A. Gladwin, of Bristol, Mass., for an "Improvement in attaching cords to window sash."

"I do not rely upon a spring acting as such, independent of the cord attached thereto, nor do I wish to claim it; but what I do claim is, the employment of the slotted tension spring or plate D, in combination with the cord G and pulley C, in the manner as and for the purpose described."

No. 23,676. Wm. P. Goolman, of Dublin, Ind., for an "Improvement in windlasess."

"The following is what I claim as new and of my invention, and desire to secure by Letters Patent:—1st, in the described combination with a winding drum or capstan, of any suitable form, I claim the application of a reel D, operated by the traction of the entering cable, to take up the slack from the said drum or capstan, as explained. 2nd, in combination with the said reel and capstan, I claim the adjustable idle pulley G, operating as set forth, to maintain the needful traction of the cable against the reel, or vary it, as may be found needful."

No. 23,677. Geo. P. Gordon, of New York, N.Y., for an "Improvement in printing presses."

"Having fully described my 'printing press,' what I claim as my invention, and desire to secure by Letters Patent, is, 1st, the combination of one or more sets of revolving grippers, with the finger stops, or their equivalents, for the purpose of piling the sheets of paper in an even and regular heap or pile, substantially as described. 2nd, I claim the combination of a vibrating feed board, with the rotating or revolving platen, for the purpose of feeding the sheets of paper regularly and with precision at each rotation of the platen. 3rd, I claim the combination of a rotating reciprocating bed, with a revolving platen, all of which is fully described."

No. 23,678. Jackson Gorham, of Bairdstown, Geo., for an "Improved bench-plane stock."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, constructing the plane stock of a central wooden portion *a*, *a*, secured between metal side plates *b*, *b*, provided with flanches *h*, *h*, the part a^1 being permanently secured between the plates *b*, *b*, and the part *a* rendered adjustable between said plates, by set screws $a\times$, $a\times$, substantially as and for the purpose set forth."

No. 23,679. Edwd. Gottheil, of Galveston, Texas, for an "Improvement in cotton gins."

"Having thus fully described my machine, what I claim therein as new, and desire to secure by Letters Patent, is, First, the method of feeding the cotton bolls to the rollers (*b*) by means of a blast issuing from a slotted or perforated tube, or its equivalent, substantially as herein set forth. I do not claim creating a blast of air to issue from the periphery of the brush cylinders, by means of wings within them, by their own velocity; but I claim, secondly, the arrangement of the two cylindrical brushes (*d*), in combination with the rollers (*b*), when the former are so constructed that a blast from an independent source may be forced through slots or perforations in their peripheries, substantially as and for the purposes set forth. Thirdly, I claim the comb (*e*) in combination with the blast pipe (*z*), for gathering the lint off the upper brush roller, and discharging it into its receptacle, in the manner set forth."

No. 23,680. Josiah M. Grumman, of Brooklyn, N.Y., for an "Improved surveyor's chain."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1, the method of making civil engineers' and surveyors' chains of a peculiar form of link, as before described and shown. 2, the arrangement of spring, balance, and level in the same tube or covering, with the arrangements for adjusting, as before described and shown. 3, the method of allowing for the variation of the temperature by a scale of variation on the chain, with the adjusting slide and clamp, as before described and shown, so that the chain may be virtually shortened or lengthened to meet the temperature. 4, the use of the spring catch, by means of which the balance and level is detached from the end link, and attached to any other link in the chain at the pleasure of the operator. 5, the method of attaching the thermometer to the end bar of the chain, as before described and shown."

No. 23,681. Isaac W. Hakes, jr., and A. H. Hakes, of Norwich, Conn., for "Improvements in bustles."

"Having described my invention, I claim as an improved article of manufacture, a 'bustle' provided with front holding straps (*a*, a^1), and spring E, when otherwise constructed, as herein shown and described."

No. 23,682. B. F. Harrington and U. B. Burris, of Missouri City, Mo., for an "Improvement in cooling and feeding material to mills."

"Having thus fully described our improvement, what we claim as new, and desire to secure by Letters Patent, is, 1st, the spiral chambers, E, E, for the purpose of creating currents of air for keeping the stones cool, substantially in the manner described. 2nd. the combination of the spiral buckets, with the spiral chambers, when both are constructed and arranged in the manner and for the purpose herein fully set forth."

No. 23,683. Alexr. L. Holley, of New York, N.Y., for an "Improvement in chairs for rail roads."

"Having thus described my said invention, what I claim therein, and desire to secure by Letters Patent, is, the combination of the splice C, and the bracket D, (the said splice and bracket being either the same piece or separate pieces), with the foot of the rail *e*, acting as a tension piece, or with a separate tension piece B, in the manner and for the purposes substantially as described."

No. 23,684. Alexr. L. Holley, of New York, N.Y., for an "Improvement in variable cut-off gear for steam engines."

"I disclaim the method described of moving the supplementary valve *e*, the same being in use; I disclaim the use of a supplementary steam piston as the sole mover of a valve. I claim such a combination of the motion of an

eccentric, or its equivalent, with the motion of a steam piston for moving a valve, as will effect a variable cut-off of the induction steam, without interfering with a free exhaust, substantially in the manner herein-before described."

No. 23,685. BENNET HOTCHKISS, of New Haven, Conn., for an "Improvement in variable cut-off gear for steam engines."

"I am aware that that the valve has been tripped so as to cut off the steam at any definite portion of the stroke of the piston, by an adjustable inclined plane and lever, when the inclined plane was adjusted and fixed by hand, as in the Patent of F. E. Siekles; I, therefore, do not claim the use of the inclined plane and lever, to trip the valve, as such as my invention; but what I claim as my invention, and desire to secure by Letters Patent, is, the combination of the sliding bar (E), with the sliding collar (F), when constructed, arranged, and made to control the time of the cut-off by the operation of the governor or regulator only, substantially as herein described."

No. 23,686. WM. H. HOVEY, of Springfield, Mass., for an "Improvement in corn shellers."

"I claim the arrangement and combination of the endless elevator E, the spout B, the spring presser G, and the shelling cylinder F, in the manner described. I also claim the arrangement and combination of the grated trough D with the elevator E, and the mechanism for removing the kernels from the cobs, and separating both kernels and cobs, as described, such mechanism consisting mainly of the presser G, the shelling cylinder F, and the grid or bar H, arranged and co-operating as specified. I also claim the combination and arrangement of the guide hopper or receiver L, with the shelling mechanism, the grated trough D, and the elevator E, in the manner and for the purpose specified."

No. 23,687. JAMES J. JOHNSTON, of Alleghany, Pa., for an "Improvement in corn shellers."

"Having thus described the nature, construction, and operation of my invention, what I claim as of my invention, and desire to secure by Letters Patent of the United States, is, the combination and arrangement of the disks or shelling wheels (*c* and *d*), with the guard (*j*), guide (*h*), and spring or press plate (*k*), constructed and operating in the manner and for the purpose specified."

No. 23,688. GEO. KENNY, of Milford, N.H., for an "Improved combined stump extractor and press."

"Having described my combined stump extractor and press, what I claim therein as new, and desire to secure by Letters Patent, is first, the combination of the main frame *u*, *u*, anchor frame *r*, *r*, canting frame B, D, with the shaft *a* and the devices for working it, the whole being constructed and combined substantially as and for the purposes set forth. I also claim the main frame and windlass device above described, in combination with the removable pressing frame and box, substantially as and for the purpose set forth."

No. 23,689. SAML. KIMBALL and WM. SAWYER, of Boxford, Mass., for an "Improvement in apparatus for drying shoe-pegs and grain."

"Having fully described our improved drying apparatus, what we claim, and desire to secure by Letters Patent, is, the arrangement of the steam pipes *f*, *f*, *f*, &c., with the main cylinder C, covered with wire gauze or perforated sheet metal, in whatever manner the steam may be introduced into said pipes, in combination with the floats K, K^{1}, K^{11}, K^{111}, constructed and operating in the manner above set forth. Also the arrangement of the steam pipes *f*, *f*, *f*, &c., with the main cylinder *c*, covered with wire gauze or perforated sheet metal, without the floats K, K^{1}, K^{11}, K^{111}, constructed and operating substantially in the manner above set forth."

No. 23,690. A. C. LANING, of Wilkesbarre, Pa., for an "Improvement in pumps."

"Having thus described my invention, what I claim as new, and desire by Letters Patent, is, the stationary pipe or tube A, valve chamber B, and reciprocating cylinder C, combined and arranged substantially as and for the purpose set forth."

No. 23,691. DAVID LOCKE, of Lexington, Mo., for an "Improvement in brick machines."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the elevated layer of tempered clay *d*, arranged or formed substantially as shown, in connection with the traveling plates or cutters *p*, *q*, and pressure plates *r*, arranged to operate substantially as and for the purpose set forth."

No. 23,692. H. H. LOW, of Galena, Ill., for an "Improved shingle machine."

"I do not claim a vertical reciprocating frame E, containing the bolt from which the shingles are sawed, for such device has been used and may be seen in the machine formerly patented by me, and previously alluded to; but having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, 1st, operating the vertically-reciprocating and balance frame E from the saw or power shaft B, through the medium of the pulleys *c*, *e*, and gearing *g*, *h*, *i*, *j*, arranged with the slide bar I, arm H, and the springs *n*, *n*^{1}, and spring stop J, substantially as and for the purpose set forth."

No. 23,693. JOHN R. MARSTON, of New York, N. Y., for an "Improvement in cob and grain mill."

"What I claim as my invention, and desire to secure by Letters Patent, is, the set bolt *j*, with its nut or its equivalents, the slot *h* in the shell of the cob cutter, and the collar *i* on the shaft, for the more practicable and reliable mode of retaining the cutters of the cob mill in their proper places, substantially as and for the purposes set forth."

No. 23,694. JAMES F. MONROE, of Fitchburgh, Mass., and E. P. MONROE, of New York, N. Y., assignors to E. P. Monroe aforesaid, for an "Improved egg beater."

"What we claim as new, and desire to secure by Letters Patent, is, the two beaters I and J, constructed of wires *i* and *j*, and arranged in the adjustable frame A in such a manner that the same, by means of pinions F and G, and by the bevel wheel D, receive a rapid rotary motion in opposite directions, substantially as and for the purpose specified."

No. 23,695. JOHN D. MURPHY, of Baltimore, Md., for an "Improvement in iron carriage wheel."

"I am aware that combined cast and wrought iron wheels have been constructed before, and I therefore wish to be distinctly understood as disclaiming the invention and construction of such wheels, broadly considered; but having described my invention, what I claim therein as new, and desire to secure by Letters Patent, is, a combined wrought and cast iron wheel, when the several parts composing said wheel are constructed in the form and arranged and combined in the order as and for the purposes shown and described. I also claim leaving the entire rim *d* of the tread of the wheel open at one place, as shown at *d*^{1}, until after the hub is cast, in combination with the mode of inserting and fastening the spokes into the rim or tread of the wheel *d*, as and for the purposes above described."

No. 23,696. ISAAC W. NORCROSS and FREDK. M. NORCROSS, of Lowell, Mass., for an "Improvement in skates."

"We do not claim attaching the runner to the foot stand by means of springs, as we are aware that such is not new, it being the subject of the United States Patent, No. 22,895; but what we do claim is, an improved mode of arranging and applying the springs, each being a continuation of the runner, and to extend laterally and longitudinally with reference to and to be fastened at the toe and heel of the foot stand, as shown on the drawings and as heretofore specified."

No. 23,697. WM. G. OLIVER, of Buffalo, N.Y., for an "Improvement in applying electricity in dental operations."

"I am aware that electricity has been applied as an anesthetic agent in dental operations, and do not broadly claim the application of such an agent; but what I do claim as of my invention, and desire to secure by Letters Patent, is, the employment in producing local anesthesia in dental operations of an apparatus, in which only non-metallic conductors are brought into contact with the parts being operated upon as herein-before set forth."

No. 23,698. GEO. W. PARSHALL, of Middlefield, N.Y., for an "Improvement in R. R. car couplings."

"What I claim as my invention, and desire to secure by Letters Patent, is, I claim the construction and combination of the head piece M, tongue R, wheel O, and pin D, arranged and operating as described, and set forth for the purpose specified."

No. 23,699. JOSEPH R. PAYSON, of Covington, Ky., for an "Improvement in sash-cord fastener."

"I do not claim broadly a sash-cord fastener, nor do I claim the neck *c*, and eye *d*, separately considered: but I claim the

cylindrical ring *a*, in combination with the opening *b*, neck *c*, and eye *d*, substantially as herein described and for the uses and purposes mentioned."

No. 23,700. Saml. Pevice, of Cambridgeport, Mass., for an "Improvement in weighing scales."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination and arrangement of the two poise slides A, B, and the fulcrum block C, substantially in the manner and for the purposes herein specified."

No. 23,701. James L. Perry, of Mansfield, and Melzer Burt, of Norton, Mass., for an "Improved fluid measurer."

"We claim the fluid measurer, constructed substantially in manner and to operate with respect to a barrel or reservoir, as specified, that is to say, as made of a close vessel A, induction and eduction faucets, and a tell-tale valve and valve opening, or equivalent, combined and arranged essentially as set forth, the valve serving to indicate when the case may be full of liquid, the induction faucet allowing the flowage and interruption thereof, of liquid into the case, and the eduction faucets determining the amount of flowage out of the case, as described."

No. 23,702. Philander Perry, of Troy, N. Y., for an "Improvement in mills for grinding, crushing, &c."

"I do not claim, broadly, or irrespective of arrangement, the placing of two pairs of grinding stones, or plates, on one shaft, for that has been previously done; but having thus described my invention, what I claim as my invention, and desire to secure by Letters Patent, is, the within specified arrangement for effecting the combination, in one machine of the within described grinding mill, cob crusher, corn sheller, and straw cutter, all for the purpose set forth."

No. 23,703. Bradford S. Pierce, of New Bedford, and Mason R. Pierce, of Mansfield, Mass., for an "Improvement in machines for making drain pipes."

"Having thus described our improvement in pipe machines, what we claim, and desire to secure by Letters Patent, is, the arrangement of the mixing apparatus, pressing and core relieving devices above the platform, for conveying the moulds, in the manner and for the purpose specified. Also, the arrangement of the core socket upon the revolving disk to receive the core and the mould with a provision for discharging the core through the platform, all in the manner and for the purpose specified."

No. 23,704. Wm. S. Pratt, of Brooklyn, N. Y., for an "Improvement in journal boxes."

"What I claim as my invention, and desire to secure by Letters Patent, is, the rollers D, D, placed between the rollers C, C, in the position and for the purposes specified."

No. 23,705. H. Purlier Jesse Harlan and E. C. Cheek, of Cincinnati, Ohio, for an "Improvement in car couplings."

"What we claim as our invention, and desire to secure by Letters Patent, is, the employment of the tripping pin (*b*, *d*,) in combination with the latch lever (*f*, *g*,) arranged and operating substantially as described, for the purposes set forth."

No. 23,706. Washburn Race and S. R. C. Mathews, of Seneca Falls, N. Y., for an "Improvement in hydrants."

"What we claim as our invention, and desire to secure by Letters Patent, is, the combination and arrangement of the parts herein described, consisting of the cap K, having within its socket the spring *j*, or its equivalent, stem attachment H, interior tube D, conical valve F, and closed seat G, whereby the valve is kept in place by the force of the spring *j*, and operated free from the external pressure of the water, substantially as and for the purpose set forth."

No. 23,707. Saml. Ray and Moses R. Shalters, of Alliance, Ohio, for an "Improvement in harvesting machines."

"We do not claim, broadly, the attaching of the finger bar F to the machine, by means of a joint to enable the finger bar to be raised or folded upward against the machine for this has been previously done; but having thus described our invention, what we do claim as new, and desire to secure by Letters Patent, is, 1st, attaching the finger bar E to the machine, by means of the plate G, one end of which is pivoted to the machine as at *l*, and the other end connected with the finger bar by joints *k*, *k*, the above parts being in connection with a jointed connecting rod *i*, to admit of the folding and turning of the finger bar, substantially as described. 2nd, placing the driver's seat J on the springs *r*, fitted in the hollow standards *p*, *p*, *q*, substantially as and for the purpose set forth."

No. 23,708. T. Reeve and M. B. Swezey, of Brooklyn, N. Y., for an "Improved folding seat."

"Having thus described our invention, what we claim as new, and desire to secure by Letters Patent, is, the seat B, attached to the end piece A of the pew or settee by the pin *b* of the bar *c* and the slot *a* in the end piece, and provided with the hinged back F and support E, the whole being arranged substantially as and for the purpose set forth."

No. 23,709. Willard Rhoads, of Baltimore, Md., for an "Improvement in snow ploughs for railroads."

"I claim the projecting flange *a*, in combination with the vertical sides *b*, in the construction of the R. R. track clearers."

No. 23,710. Silas C. Salisbury, of New York, N. Y., for an "Improvement in machines for tempering and moulding plastic materials."

"What I claim as my invention and improvement in the tempering and pressing of plastic material is, the employment of a series of two or more cylinders and the intervening guard blocks, in combination with a cylinder of larger diameter, provided with flanges on its ends, so that the periphery of the larger cylinder with its flanges, and the opposing surfaces of the series of cylinders and guard blocks, shall constitute the walls of a channel, in which the plastic material, on its passage to the die or mould, is worked, tempered, and pressed, as set forth. I claim giving to the surface of the cylinder *b* a greater velocity than the surface of the large cylinder A, for the purposes set forth. I claim forcing the plastic material into the die, between the cutting edges *s*, *s*, by the pressure of a coat or layer of plastic material formed on and adhering to the periphery of the large cylinder, as set forth."

No. 23,711. Jacob Rupertus, of Philadelphia, Pa., for an "Improvement in revolving fire-arm."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the safety tube E, constructed, applied, and operating substantially as and for the several purposes herein specified. 2nd, producing the necessary movements of the safety tube E by means of a forked or toothed lever I, a spring J, or its equivalent, and a tooth *u* on the tumbler, the whole being applied and operating substantially as herein described."

No. 23,712. Cornelius Scofield, of Trumbull, Conn., for an "Improvement in attaching the rail of carriage seats."

"I am well aware that rails have heretofore been attached to carriage seats by arms attached to seats in a manner very similar to mine, and each provided with jaws which project over the rail, so that screws may be placed in those parts of the jaws before the rail, in order to secure the same; in this case, however, it was necessary to remove a large number of screws, in order to be able to remove the rail. I do not claim, therefore, the manner of securing the rail to the seat by means of arms and screws; but having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement of the arms *a*, the ends of which form half-round recesses *d*, in combination with the arms C, and thumb-screw *k*, for the purpose of supporting the rail and securing the same to the seat, in the manner substantially as set forth."

No. 25,713. C. A. Schultz, of New York, N. Y., for an "Improvement in steam valves."

"Claim.—The combined arrangement of the spiral springs, and their inclosing columns, with the plate C, as and for the purposes above described."

No. 23,714. Chas. Schott and James C. Baldwin, of Nashville, Tenn., for an "Improvement in excavating machines."

"What we claim, and wish to secure by Letters Patent, is, the combination and arrangement of lever D, with its connection with bucket A, for loading and unloading, in the manner set forth."

No. 23,715. J. W. Sener, of Fredericksburg, Va., for an "Improvement in tea and coffee pot."

"Having thus fully described my invention, what I claim and desire to secure by Letters Patent, is, the safety apparatus herein-before described, the same consisting in the combination of the tube G with the cap H and valve J, constructed and operating as and for the purpose specified."

No. 23,716. S. B. Sexton, of Baltimore, Md., for an "Improvement in stoves."

"I do not claim any of the parts of this stove, separately considered; but I claim the covered fuel cylinder H, in combination with the chambers A, B, B¹, flues C and D, and dampers *a* and *b*, together with the rear casing R, constituting a cold air chamber, the arrangement being as set forth."

No. 23,717. Alexr. Shannon, of New York, N. Y., for an "Improvement in treatment of india-rubber."

"I do not claim the admixture of cork or other vegetable matter with caoutchouc or similar gums, neither do I claim treating india rubber with sulphur, as that has been used in connection with metallic compounds, &c.; but what I claim as my invention, and desire to secure by Letters Patent, is, the method herein set forth of treating caoutchouc so to combine therewith cork or its equivalent, substantially as set forth."

No. 23,718. Benjn. R. Smith, of Philadelphia, Pa., for an "Instrument for ascertaining the direction of sounds in fog, &c."

"Having thus fully described the nature and object of my invention, what I claim as new, and desire to secure by Letters Patent, is, a reflector made of suitable material, and of such a form or shape that it will collect all the rays or waves of sound entering it to a focus, when it may be pointed towards the direction from whence the sound comes, for the purpose of ascertaining the direction of the source of such sound, and conversely of throwing off from a reflector, in parallel lines, if need be, the sound of a bell, or whistle, which may be placed at the focus of the said reflector, substantially as described."

No. 23,719. Wm. Smith, of Pittsburgh, Pa., for "Improvements in coal-oil retorts."

"I am aware that shafts exposed to heat have been made hollow, and water or air conducted through them for keeping them cool; I, therefore, do not claim this broadly; but having thus described my invention, I claim as new in the construction of coal-oil retorts, and desire to secure by Letters Patent, is, the making of the agitating arms *h* hollow, and to communicate with the hollow shaft D, for the purpose of cooling them, by means of the current of air or water passing through the said shaft, substantially as herein set forth."

No. 23,720. Wm. H. Smith, of Newport, R.I., for an "Improvement in stoves."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement of the partitions F, F¹, in combination with the partitions K, and the openings *a*, *a*¹, for the purpose of forcing the hot air to circulate around and in front of the ash box, substantially as and for the purpose specified."

No. 23,721. Erastus Stebbins, of Chicopee, Mass., for an "Improvement in stop cocks."

"What I claim, and desire to secure by Letters Patent, is, the arrangement and combination of the collar I, flexible washer H, metallic washer G, as and for the purpose described. Also the chambered nut or valve L, having apertures M, as and for the purpose described."

No. 23,722. Nathan P. Stevens, of Keene, N. H., for an "Improvement in brake heads for railroad cars."

"What I claim as new, and desire to secure by Letters Patent, is, 1st, suspending the brake heads D to the ends of the transverse brake bar A by the journals and boxes, substantially in the manner and for the purpose set forth. 2nd, I claim forming cogs or protuberances on the peripheries of the journal sleeves C, and interposing strips of rubber G between them and the ends of the grooves in the journal box cap, in which the said cogs or protuberances move for causing a greater pressure to be extended on the lower than on the upper portions of the shoes E, as described."

No. 23,723. Geo. D. Stellson, of Rochester, N. Y., for an "Improvement in excavating machines."

"Having thus fully described the nature and object of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, in combination with an endless belt of digging hoes, a presser wheel that acts independent of the weight of the machine for driving them into the ground, as described."

No. 23,724. Robt. Stott, of Baton Rouge, La., for an "Improvement in governors for sugar mills."

"I do not claim broadly the use of a weight when acting through eccentric movements to secure an uniform force, and allow the subject to move under that force; but I claim, in combination, the caps S, S, the bolts V, the plates X and Z, when actuated on by the employment of a weight, or its equivalent, through an eccentric movement, when made and arranged substantially as and for the purpose set forth."

No. 23,725. Geo. C. Taft, of Worcester, Mass., for an "Improved wrench."

"Having described my improved double-acting screw wrench, what I claim therein as new, and desire to secure by Letters Patent, is, the rosette *a*, with its female screw *o*, in combination with the stationary screw *b*, traversing male screw *f*, and sliding jaw *g*, *h*, with its female screw *p*, substantially as and for the purposes set forth."

No. 23,726. Wm. P. Trowbridge, of Washington, D. C., for an "Improved apparatus for deep-sea sounding and method of conveying and paying out line for other purposes."

"What I claim is, the mode of conveying and extending a line across or through a given space by means of a weight or projectile, the line being compactly coiled within a tube or case which is attached to the weight or projectile, and moves along with it, and is discharged from the case or holder as the weight or projectile advances while one end of the line is retained at the starting point, substantially as herein described. I do not limit my claim to the particular manner of coiling the line herein described, or to any one mode of giving motion to the same, which may be the force of gravity, the propelling power of a rocket, or cannon, or other motive power."

No. 23,727. A. P. Tutton, of Reading, Pa., for an "Improvement in railroad car brakes."

"I am aware that shoes have been placed between the wheels of a truck, and so connected by levers that they could be pressed simultaneously against the treads of the wheels. I do not claim, therefore, simply the employment or use of shoes placed between the wheels, at each side of a truck, to act upon the treads of the wheels, irrespective of the connecting of the shoes, to act as described. I claim, therefore, as new, and desire to secure by Letters Patent, connecting the two shoes E, E, between the wheels B, at each side of a truck, by means of racks B, *b*, and a pinion F, whereby the shoes, when brought in contact with the treads of the wheels, are made, by the action of the wheels, to move simultaneously in opposite directions, and bind or wedge between the wheels, to stop the same, substantially as described."

No. 23,728. Michael Van Debogert, of Binghamton, N. Y., for an "Improved washing machine."

"Having fully set out the construction and operation of my invention, what I claim as new, and desire to secure by Letters Patent, is, 1st, subjecting the articles to be washed to the combined action of the fluted or roughened surfaces of the tub and cylinder, the two surfaces moving, in part, in opposite, and in part, in the same directions with each vibration of the cylinder, as herein set forth. 2d, I claim the arrangement of the means for gearing and ungearing the wheels, as herein recited, whereby I am enabled to give vibratory motion to both of the rubbing surfaces, as herein described."

No. 23,729. Richd. Van Velthoven, of Philadelphia, Pa., for an "Improvement in grates for furnaces."

"I claim, and desire to secure by Letters Patent, the frames G and G¹, with the bars I, forming the hinged rear of a furnace grate, in combination with the releasing and retaining cam K, operated by the rod O, or its equivalent, and the projecting bracket J, with its chain or equivalent; the whole being arranged substantially and for the purpose herein set forth."

No. 23 730. JACOB V. A. WEMPLE, of Chicago, Ill., for an "Improvement in harvesters."

"Having described my invention, and the operation thereof, what I claim as new, and desire to secure by Letters Patent, is, the guard rod W, to separate the falling grain from that which lies on the platform, while the rake is passing down, and lay hold thereof; and also to prevent the grain from falling on the rake;—arranged and operated substantially in the manner described."

No. 23,731. J. W. WETMORE, of Erie, Pa., for an "Improvement in railroad chairs."

"What I claim as my invention, and desire to secure by Letters Patent, is, notching the caps of the adjacent ends of H or T rails, as at *f*, and the adaptation of a chair A, to surround the two ends or joint within the shoulders of the notches, the chair forming the bearing surface for its length, and its leaves being bent under the base of the rail, and resting on the tie, substantially as set forth."

No. 23,732. CULLEN WHIPPLE, of Providence, R. I., for an "Improvement in machines for combing fibrous materials."

"What I claim as my invention, and desire to secure by Letters Patent is,—1st, arranging the series of gill combs *a*, *a*, *a*, *a*, with a hot chest, or its equivalent, in such manner that said combs can be alternately sheathed and protruded from between heated plates, in the manner substantially as described for the purposes specified. 2nd, I claim the combination of the stationary heated chest T with the movable jaw D, the two so combined operating to hold the fibrous substance firmly while the front end is being combed. 3rd, I claim arranging the series of fine screen combs *b*, *b*, with the heated chest T, substantially in the manner described for the purposes specified. 4th, I claim the arrangement and combination of the revolving cylinder C, for first combing the front end of the sliver, the series of fine screen combs *b*, *b*, for combing the back end of the sliver, and the nippers *k*, for drawing the sliver through the screen combs and delivering it upon the apron, the whole combination as arranged operating to draw and comb the wool or other fibrous material in a straight line and to deliver it in a position to be formed into a continuous sliver, substantially as described."

No. 23,733. EDWD. WHITELEY, of Boston, Mass., for an "Improvement in steam boilers."

"Claim.—What I claim as my invention, and desire to secure by Letters Patent, is, the water tubes *f* within the space E, surrounding the boiler, arranged and operating in the manner substantially as set forth."

No. 23,734. W. L. WILLIAMS, of New York, N. Y., for an "Improved machine for splitting fire-wood."

"I am aware that endless feeding chains have been previously used for feeding blocks of wood to be split to the splitting knives, and I do not claim broadly such device, irrespective of the lateral movement herein described, for chains for this purpose may be seen in my patented machine previously alluded to. The knife D has also been used, and may be seen in the above-mentioned machine, I therefore do not claim the knife D. But having described my invention, what I claim as new, and desire to secure by Letters Patent, is,—1, the employment or use of the endless feeding chains I, I, when arranged as shown, or in any suitable way, so as to have the usual rotating movement around their pulleys *h*, h^1, and also the lateral movement, for the purpose specified. 2, the endless feeding chains I, I, in combination with the yielding rollers *j*, *j*, for the purpose of permitting the lateral movement of the chains, as set forth. 3, the yielding pawls h^{11}, h^{11}, in connection with the yielding rods b^1, b^1, in shafts e^1 and spurs f^1, arranged substantially as described, to permit of the yielding of the blocks of wood while being split, as described."

No. 23,735. JAMES WILSON, C. GREEN, and WM. WILSON, jr., of Wilmington, Del., for an "Improved double-seaming machine."

"Having thus described our improvement, what we claim as our invention, and desire to secure by Letters Patent, is, the combination of the discs E and D, and the burring pulley H, the pearing down pullies I, the double burring pullies K, and the finishing pulley L, in the manner and for the purpose substantially as above described."

No. 23,736. JAMES WILSON, C. GREEN, and WM. WILSON, jr., of Wilmington, Del., for an "Improved machine for corrugating sheet metal."

"Having thus described our improvement, what we claim as our invention, and desire to secure by Letters Patent, is, the arrangement of the upper and lower heads, the forming rollers H, H, together with the rollers which support the cylinder to be corrugated, at the requisite angle, substantially as above described."

No. 23,737. D. A. WOODBURY, of Rochester, N. Y., for an "Improved variable cut-off gear for steam engines."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of the rocker J, and its variable slide I, and the inclined or toggle-like connecting rods H. H^1, in combination with the eccentric M, or its equivalent, and the arms G, G^1, on the valve shafts, substantially as herein described."

No. 23,738. GILBERT YATES, of West Dresden, N. Y., for an "Improved mode of opening and closing farm gates by hand."

"I am aware that it is not new for persons to open and close farm and other gates without leaving their carriages, and that many devices for opening and closing gates in this way have been previously devised. One of these plans is found in the Patent of Webber, granted in 1855. I do not, therefore, wish to be understood as claiming to be the first to construct farm gates, in such a manner as that they can be opened by pulling upon a cord or chain on one side, and then closed by pulling on a similar cord or chain on the other side; but having described my improved device for opening and closing farm and other gates, what I claim as my invention, and desire to secure by Letters Patent, is, the combination of the levers or arms , G^1, with the connecting arms H, H^1, vibrating, connecting, and unlatching piece I, and cords *c*, I^1, I^{11}, when arranged and combined with the gate and posts, substantially as and for the purposes herein set forth."

No. 23,739. GEO. W. ZEIGLER, of Tiffin, Ohio, for an "Improved automatic fan."

"Having thus described the construction and operation of my improvement, I claim the combination of the levers B, B, supporting the bedstead with the escapement wheel F, lever E, pendulum and fan, together with the parts connecting the same, for operating the fan from the weight of the occupant of the bed, as described."

No. 23,740. FRANCIS BASCHNAGEL, of Wenham, Mass., assignor to the Beverly Rubber Company, of Beverly, Mass., for an "Improvement in restoring waste vulcanized rubber."

"What I claim as my invention, and desire to secure by Letters Patent, is, the process above described, that is, boiling waste vulcanized rubber in water after it has been reduced to a finely divided state, for the purpose of restoring the same to a plastic, gummy, or elastic state, fit to be used again in the manufacture of india-rubber fabrics and substances, as above set forth."

No. 23,741. THOS. BAXTER, of Petersburg, Va., assignor to Wm. H. Baxter, of same place, for an "Improvement in hydraulic presses."

"What I claim as my invention, and desire to secure by Letters Patent, is, the making the cylinders of hydraulic presses in a manner substantially as described."

No. 23,742. RICHD. BENNETT, of Redditch, England, assignor to J. F. Milward, of New York, N. Y., for "Improvements in needle wrappers."—Patented in England, 7th May, 1857.

"What I claim as my invention, and desire to secure by Letters Patent, is, the employment, in combination with the outer wrapper A, of an inner wrapper *b*, with an attached piece *e* through which the needles are stuck, in the manner described. And I also claim the employment, in combination with such inner wrapper, of a loop *a* secured to the outer wrapper A, substantially as herein specified."

No. 23,743. TRUMAN COOK, of Washington, D. C., assignor to A. Thomas Smith, of same place, for an "Improvement in holding keys for strap connection for engines."

"I do not claim, generally, the principle of securing keys, for the purposes herein stated, as various devices have been resorted to with the hope of obtaining this object; but what I do claim therein, and desire to secure by Letters Patent, is, the notches A, F, in the key, as shown in Figures 1 and 4, the hole C in the gib, the notch D at the side of the said hole, the bolt I, with its peculiarly-formed head B, and the combination and arrangement of these parts, substantially upon the principle and in the manner as herein set forth."

No. 23,744. SHERMAN McLEAN, of Royalton, N. Y., assignor to the American Trades Company, of New York, N. Y., for an "Improved saw jointer."

"What I claim as my invention in the foregoing is, the arrangement and adjustment of the file in the tool or file carrier, so constructed that, when the flat side of the long arm of the tool is pressed against the side of the saw blade it will present the file exactly at right angles to the angular edges of the teeth, and, being passed along over them, will square and make uniform their edges, the saw blade being placed when the instrument is in use between the long and short arms of the saw jointer, as above described."

No. 23,745. H. W. ROWLAND and E. FORBIS, of Newport, Ohio, assignors to themselves and Washington Witherow, of same place, for an "Improvement in mole plow."

"What we claim as our invention, and desire to secure by Letters Patent, is, pivoting the carriage (A) to the beam (B) near its forward end, as represented, and in combination therewith the curved coulter (i) pivoted to the beam (B) and friction rest (c), all arrand and operating in the manner herein set forth."

No. 23,746. JOHN P. SCHENKL, of Worcester, Mass., assignor to himself and E. A. Dana, of Boston, Mass., for an "Improvement in the chamber of ordnance and other fire arms."

"Having thus described my invention, what I disclaim and claim is as follows:—I do not claim the invention claimed and described in the United States Patent numbered 21,802; but I do claim the combination of an intercepting reducer leader *p* with the secondary barrel or auxiliary charge chamber, and a projectile suitably adapted to the gun or piece of ordnance."

No. 23,747. O. M. STILLMAN and S. WILCOX, jr., of Westerly, R. I., for an "Improved thermostat for steam boilers."

"We do not claim immersing in the superheating steam bars composed of two metals, and controlling the heat by the deflection of the same, as this, or an equivalent use of such apparatus, is well known, and has been described in Dr. Ure's Dictionary of Arts; neither do we claim enclosing within the superheated steam a tube or vessel containing air, and allowing the contraction and expansion of the fluid to regulate the supply of heat to the steam, as this device, or its equivalent, has been before known; but, having now fully described our apparatus, what we claim as our invention, and desire to secure by Letters Patent, is, regulating the flow of the products of combustion to the superheater by the difference in pressure between the superheated steam and that of saturated steam, substantially in the manner herein described, and for the purpose set forth."

RE-ISSUES.

ELIAKIM B. FORBUSH, of Buffalo, N. Y., for an "Improvement in grain and grass harvesters."—Patented 20th July, 1852. — Re-issued 8th July, 1856.—Re-reissued 19th April, 1859.

"Having described my combined reaping and mowing machine, what I claim therein as new, and desire to secure by Letters Patent, is, first, the device for adjusting the cutting apparatus, which may be raised or lowered without changing the height of the main frame, in combination with the finger bar, either with or without the removable platform, substantially in the manner specified. Second, the combination of the inner projecting ends of the main frame, with the adjustable cutting apparatus, substantially in the manner and for the purpose specified. Third, supporting the clamp and finger bar by means of the slotted iron frames K, K, and locking bolts *i*, *i*, in combination with the cross pieces T, T^1, of the main frame, substantially as described." Fourth, the mould board L, constructed and arranged substantially in the manner and for the purpose set forth. Fifth, extending or widening out the upper part of the guard finger, substantially as represented by the overhanging bars *m*, *m*, in combination with the central bar n^1, in the manner and for the purposes specified. Sixth, arranging the three-pronged fingers above described, so that they mutually brace each other in front of the finger bar, as set forth, and are also braced and supported at each end of the cutter bar by the projections J and m^{111}, substantially in the manner and for the purpose specified. Seventh, the raking apparatus constructed and operating in the manner substantially as described. Eighth, the movable fulcrum upon which the rake is suspended and operated, in the manner substantially as described."

ELIAKIM B. FORBUSH, of Buffalo, N. Y., for an "Improvement in grain and grass harvesters."—Patented 18th March, 1856.—Re-issued 19th April, 1859.

"Having described my combined grain and grass harvester, what I claim therein as new, and for which I desire to secure Letters Patent, is, first, the manner of constructing and uniting the inner-rear corner of the main frame, so as to depress or drop the shoe and cutting apparatus, and serve as a continuation of the shoe for treading down the stubble and mown grass, in the manner and for the purposes specified. Second, the combination of the guide stirrup B, B, with the front of the main frame so as to permit the draft pole P to play above and below the front of the main frame, substantially as described. Third, connecting the draft pole to the machine by the oscillating pendent, substantially as and for the purposes described. Fourth, so connecting the draft pole to the machine as that the draft shall be from the axle or centre line of the driving and supporting wheel, in connection with the rear extension of the pole, in the manner and for the purposes specified. Fifth, the combination of the extended finger bar with the adjusting shoe E, and adjustable hinge runner *q*, substantially as described, for the purpose specified. Sixth, the combination of the main frame draft pole P, guide stirrups B, and adjustable shoe E, arranged with each other in the manner and for the purpose, substantially as specified. Seventh, the adjusting shoe E, constructed and operating in the manner above set forth. Eighth, the arrangement of the caster wheels *d* and *d*, *d*, with adjustable connecting bars in relation to the finger-bar platform and frames of the machine, in the manner and for the purpose substantially as described."

HAMILTON E. SMITH, of Philadelphia, Pa., for "Improved washing machines."—Patented 26th October, 1858.—Re-issued 19th April, 1859.

"Claims.—First, the vessel B, with its yielding valved diaphragm J, and the perforated diaphragm I, or its equivalent, in combination with a pipe G, communicating with the vessel at a point above, and the pipe H, at a point below the said diaphragm, and both pipes communicating with any suitable heating apparatus, substantially as and for the purpose set forth. Second, the reciprocating plunger C, with its enlarged end, constructed as set forth, namely, with the recess *m*, flanch *n*, and perforations *p*, in combination with the yielding diaphragm J, for the purpose specified. Third, providing the plunger C with an upper enlargement *q*, concave on the under side, and arranged in respect to the lower plunger, substantially as and for the purpose set forth."

DESIGN.

G. SMITH and H. BROWN, of Philadelphia, Pa., assignors to North, Chase, and North, of same place, for a "Design for stoves."

"What we claim as our invention, and desire to secure by Letters Patent, is, the design and configuration of the mouldings and ornaments, as herein described, forming an ornamental design for stoves."

ADDITIONAL IMPROVEMENTS.

ORLANDO L. CASTLE, of Upper Alton, Ill., for an "Improved arithmometer for addition."—Patented 2nd November, 1858.—Additional Improvement, dated 19th April, 1859.

"I do not claim the use of any particular kind or arrangement of keys; but I claim the combination of the rocker, keys, and shifting pawl, in any equivalent manner, and for the purposes set forth."

SIMON W. DRAPER and R. M. DRAPER, of South Dedham, Mass., for an "Improvement in machines for dressing mill stones."— Patented 15th May, 1856. — Additional Improvement, 19th April, 1859.

"What we claim as new, and desire to secure by Letters Patent, is, the bed piece A, with the cam B, bar or lever C, and rods *p*, *p*, attached, provided with springs *r*, in combination with the frame or carriage D, with pick shaft *i* attached, provided with the forked arm *o*, the whole being arranged to operate as and for the purpose set forth."

List of Specifications published during the week ending 7th May, 1859.

No.	Price.	Subject-Matter.
1499	4*d.*	(1858 *Disclaimer.*) Treating sewage and other matters, &c.
2013	3*d.*	Submarine electric telegraphs.
2171	3*d.*	Dress fastenings, &c.
2172	1*s.* 5*d.*	Manufacture of paper bags, &c.
2174	1*s.* 5*d.*	Arranging and moving fire-bars.
2177	7*d.*	Cornets, trumpets, &c.
2178	3*d.*	Folding and cutting lace, &c.
2180	3*d.*	Electric telegraphs.
2181	1*s.* 4*d.*	Construction of screw ships or vessels.
2183	1*s.* 3*d.*	Furnaces for heating iron and steel, &c.
2185	3*d.*	Portable fire escape.
2187	7*d.*	Electric telegraphs.
2188	3*d.*	Electric telegraph cables.
2189	3*d.*	Telegraphic cables.
2190	7*d.*	Manufacture of looped fabrics.
2191	3*d.*	Production of printing surfaces from engraved plates.
2192	5*d.*	Submarine electric telegraph cables.
2193	3*d.*	Ploughs.
2194	1*s.* 4*d.*	Looms for weaving carpets and other fabrics.
2195	1*s.*	Gas burner.
2196	10*d.*	Wheels.
2197	3*d.*	Blocks or surfaces for printing.
2198	10*d.*	Pianoforte action.
2199	3*d.*	Governor for marine and other steam engines.
2200	6*d.*	Fagot or fire lighter.
2201	3*d.*	Transfer printing and ornamenting on glass, &c.
2202	5*d.*	Preventing explosion of boilers.
2203	3*d.*	Manufacture of sulphate of copper
2204	3*d.*	Looms for weaving figured fabrics.
2205	9*d.*	Application of sails and keels to boats and vessels.
2206	7*d.*	Machinery for roving, slubbing, or spinning cotton, &c.
2207	10*d.*	Iron and steel, &c.
2208	3*d.*	Electric telegraph cables.
2209	9*d.*	Straightening rails and wrought-iron bars.
2210	7*d.*	Steam engines.
2211	5*d.*	Projectiles.
2212	11*d.*	Locks.
2214	3*d.*	Weaving.
2220	3*d.*	Preventing incrustation in steam boilers.
2221	5*d.*	Omnibuses, &c.
2227	3*d.*	Facilitating the traction of locomotives, &c.
2232	3*d.*	Preservation of wood.
2234	1*s.* 4*d.*	Cutting and stamping press.
2238	7*d.*	Machinery for spinning wool, mohair, &c.
2240	6*d.*	Spring-hook catch or fastening.
2243	3*d.*	Metallic alloy for the manufacture of fire arms and ordnance.
2776	11*d.*	Pressure and fluid level indicators.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. 1.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in each Series. Edited by Bennet Woodcroft, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions, &c. By Simon Sturtevant. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By John Rovinson (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether Nicholas Page or Sir Nicholas Halse was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent, Nos.* 33 *and* 85, *respectively dated* 8*th April*, 1626, *and* 23*rd July*, 1635.) Price 2*d.*
4. Dud Dudley's Metallum Martis; or iron made with pitcoale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated* 22*nd February*, 1620, *and* 2*nd May*, 1638. Price 8*d.*
5. Description of the nature and working of the patent Waterscoop Wheels invented by William Wheler, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated* 24*th June*, 1642.) Price 2*s.*
6. An exact and true definition of the stupendous Watercommanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) Edward Somerset, Lord Marquis of Worcester, &c. &c. (*Stat.* 15 *Car. II c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By Thomas Savery. (*Letters Patent, No.* 347, *dated* 10*th January*, 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By Thomas Savery. (*Letters Patent, No.* 356, *dated* 25*th July*, 1698, *and Stat.* 10 *&* 11 *Will, III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By John Allen, M.D. (*Letters Patent, No.* 513, *dated* 7*th August*, 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By Jonathan Hulls. (*Letters Patent, No.* 556, *dated* 21*st December*, 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By Samuel Sutton, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated* 16*th March*, 1744.) Price 1*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. Curtis for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

A FREE LIBRARY and READING ROOM, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

NOTE.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Limerick.
Liverpool (*Free Public Library, Duke Street*).
——— (*Royal Institution*).
London (*British Museum*).
——— (*Society of Arts, John Street, Adelphi*).
Macclesfield (*Useful Knowledge Society*).
Maidstone.
Manchester (*Chetham Hospital*).
——— (*Free Library, Camp Field*).
Montrose.
Newark, Nottingham (*Mechanics' Institute, Middle Gate*).
Newcastle-upon-Tyne (*Literary and Philosophical Society*).
Newport, Monmouth (*Commercial Room, Town Hall*).
Northampton.
Norwich (*Free Library, St. John's, Maddermarket*).
Nottingham (*Corporation Rooms, St. Peter's Church side*).
Oxford (*Public Free Library, Town Hall*).
Paisley (*Government School of Designs, Gilmour Street*).
Plymouth (*Mechanics' Institute, Princess Square*).
Preston (*Dr. Shepherd's Library, the Institution, Avenham*).
Reading (*Literary, Scientific and Mechanics' Institution, London Street*).
Rochdale (*Commissioners Room, Smith Street*).
Rotherham (*Board of Health Offices, Howard Street*).
Salford (*Peel Park*).
Sheffield (*Free Library, Surrey Street*).
Shrewsbury (*The Public Museum, College Street*).
Southampton (*Corporation Library, Audit House*).
Stirling (*Burgh Library, Town House, Broad Street*).
Stockport (*Court House, Vernon Street, Warren Street*).
Sunderland (*Corporation Museum, Athenæum, Fawcett Street*).
Tiverton.
Wakefield (*Mechanics' Institution, Barston Square*).
Warrington (*The Museum and Library*).
Waterford (*Town Hall, The Mall*).
Wednesbury (*Board of Health Offices*).
Wexford (*Mechanics' Institute, Crescent Quay*).
Wigan.
Wolverhampton (*School of Practical Art, Darlington Street*).
Wolverton (*Railway Station*).
Yarmouth, Norfolk (*Public Library, South Quay*).
York (*Lower Council Chamber, Guildhall*).

The Commissioners' publications have also been presented to the following Public Offices, Seats of Learning, British Colonies, and Foreign States:—

Public Offices, Institutions, &c.

Admiralty, Department of the Surveyor of the Navy.
——— Steam Branch.
——— Deptford Dockyard.
——— Woolwich ditto.
——— Chatham ditto.
——— Sheerness ditto.
——— Portsmouth ditto.
——— Devonport ditto.
——— Pembroke ditto.
Artillery Institute, Woolwich.
Board of Trade, Whitehall.
Ordnance Office, Pall Mall.
——— Small Arms Factory, Enfield.
War Office, Pall Mall.
Government School of Mines, &c., Jermyn St., Piccadilly.
Dublin Castle, Dublin.
Rolls Office, Chancery (Four Courts), Dublin.
Office of Chancery, Edinburgh.
East India House, Military Stores, Leadenhall Street.
Incorporated Law Society, Chancery Lane, London.

Seats of Learning.

Cambridge University.
Trinity College, Dublin.
Queen's College, Galway.
University College, London.

British Colonies.

Malta.
Cape of Good Hope.
Mauritius.
India—Bengal.
North-West Provinces.
Madras.
Bombay.
Ceylon.
Victoria—Patent Office, Melbourne.
Parliamentary Library, Melbourne.
New South Wales.
South Australia.
Tasmania.
New Zealand.
Newfoundland.
Canada—Quebec.
Toronto.
New Brunswick.
Prince Edward Island.
Antigua.
Barbados.
Jamaica.
Trinidad.
British Guiana.

Foreign States.

Austria—Handels Ministerium, Vienna.
Bavaria—Königliche Bibliothek, Munich.
Belgium—Ministère de l'Intérieur, Brussels.
France—Bibliothèque Impériale, Conservatoire des Arts et Métiers, Hôtel de Ville. } Paris.
Gotha—Ducal Friedenstein Collection.
Hanover—Ministerium des Innern, Hanover.
Netherlands—Ministère de l'Intérieur, The Hague.
Prussia—Handels Ministerium, Berlin.
Russia—Bibliothèque Impériale, St. Petersburg.
Sardinia—Ufficio delle Privative, Turin
Saxony—Polytechnische Schule, Dresden.
Sweden—Stockholm.
United States—The Patent Office, Washington.
The Astor Library, New York.
The State Library, Albany.
The Franklin Institute, Philadelphia.
The Free Library, Boston.
The Philadelphia Library Company.
Wurtemberg—Bibliothek des Musterlagers, Stuttgart.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

Free Patent Museum and Library, South Kensington.

NUMBERS of VISITORS for the Week ending 7th May, 1859.

Day of Month.	Day of Week.	Morning.	Evening.	Total.
May 2	Monday -	273	505	778—Fine.
„ 3	Tuesday -	291	420	711— „
„ 4	Wednesday	186	111	297— „
„ 5	Thursday*	181	—	181— „
„ 6	Friday -	139	—	139— „
„ 7	Saturday -	237	—	237— „
	Total -	1307	1036	2343

* The Museum closes at 5 o'clock.

Total number of visitors since the period of free daily admission (12th May, 1858) to 7th May, 1859, —95,647.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS. —This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.
BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(Registered for transmission abroad.)

No. 559. FRIDAY, MAY 13, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

790. To WALTER BROWN, of Bolton-le-Moors, in the county of Lancaster, Clog Manufacturer, for the invention of "Improvements in manufacturing clog soles, and in the machinery employed therein."
On his petition, recorded in the Office of the Commissioners on the 30th day of March, 1859.

834. To THOMAS WILLIAMS, of Aberdaron, in the county of Caernarvon, Engineer, and JOHN HOBSON FULLER, of 70, Hatton Garden, in the county of Middlesex, Tool Manufacturer, for the invention of "Improvements in screw stocks and dies."
On their petition, recorded in the Office of the Commissioners on the 2nd day of April, 1859.

838. To CHARLES FELTON KIRKMAN, of Argyll Street, Regent Street, London, Gentleman, for the invention of "Improvements in the manufacture of cocoa nut fibre yarn and matting."
On his petition, recorded in the Office of the Commissioners on the 4th day of April, 1859.

848. To ANDREW SHANKS, Engineer, No. 6, Robert Street, Adelphi, Westminster, for the invention of "Certain improvements in machinery for forging and stamping metals."

856. And to THOMAS SCOTT, of Dundee, in the county of Forfar, North Britain, Gentleman, for the invention of "Improvements in preparing, treating, or manufacturing fibrous materials, and in the apparatus employed therein."
On both their petitions, recorded in the Office of the Commissioners on the 5th day of April, 1859.

886. To THOMAS SPENCER, of No. 192, Euston Road, Euston Square, London, Analytical and Consulting Chemist, for the invention of "Improvements in the economical treatment of refuse or waste matter containing sulphur."
On his petition, recorded in the Office of the Commissioners on the 9th day of April, 1859

898. To BENJAMIN BAUGH, Manager of Thomas Clutton Salt's Enamel Works, Bradford Street, Birmingham, in the county of Warwick, for the invention of "Certain improved arrangements for working fly presses by steam, water, or other power."

900. And to WILLIAM SCHOFIELD, of 13, Thomas Street, Stamford Street, Blackfriars Road, London, Mineral Water Manufacturer, for the invention of "An improved effervescing lemonade."
On both their petitions, recorded in the Office of the Commissioners on the 11th day of April, 1859.

926. To RICHARD COLEMAN, of Chelmsford, in the county of Essex, Agricultural Implement Manufacturer, for the invention of "Improvements in agricultural implements."

930. And to JOHN AMBROSE COFFEY, of 4, Providence Row, Finsbury, in the county of Middlesex, Engineer, for the invention of "Improvements in apparatus for heating liquids."
On both their petitions, recorded in the Office of the Commissioners on the 13th day of April, 1859.

934. To JOHN GILLETT, of Upper Brailes, in the county of Warwickshire, Agricultural Implement Maker, for the invention of "An improved mill used for grinding, crushing, and reducing bones and other mineral and vegetable substances."

936. To THOMAS BIRD, of the city of Manchester, in the county of Lancaster, Engineer, for the invention of "Improvements in the application and use of a certain natural product or products in the manufacture of pickers for looms, drawing rollers

for spinning machinery, cop tubes, and for steps and bushes generally where lubrication is required."

938. To JOSEPH BEATTIE, of Lawn Place, South Lambeth, in the county of Surrey, Engineer, for the invention of "Improvements in the means of preventing locomotive engines and carriages in motion on railways leaving or running off the rails."

940. To WILLIAM BARNES and SAMUEL PICKERING, both of 127, Brick Lane, Spitalfields, and JOHN ROBERTS, of William Street, Limehouse, all in the county of Middlesex, for the invention of "Improvements in retarding and stopping railway locomotives and trains."

942. To WILLIAM SINNOCK, of Brompton, in the county of Kent, Ropery Engineer, for the invention of "Improvements in submarine and subterranean electric telegraph cables, and in machinery for the manufacture thereof."

944. And to LINDLEY JOHN HIGHAM, of New York, in the United States of America, Gentleman, now residing at Edmund Place, in the city of London, for the invention of "Improvements in billiard tables."

On their several petitions, recorded in the Office of the Commissioners on the 14th day of April, 1859.

---

948. To JOHN CHAPMAN, of Wolverhampton, in the county of Stafford, Ironmaster, for the invention of "An improvement or improvements in the manufacture of angle iron."

950. And to ROBERT BOOT, of Hill Street, in the county of Surrey, Leather Dresser, for the invention of "Improvements in treating sheep or other pelts, so as to give them the appearance of rough calf."

On both their petitions, recorded in the Office of the Commissioners on the 15th day of April, 1859.

---

952. To HENRY BARROW, of Birmingham, in the county of Warwick, Saddler, for the invention of "A new or improved fastening for fastening trunks, boxes, and articles of dress, and for such other purposes as the same is or may be applicable to."

954. To JOHN GLASGOW and SAMUEL HAND, of the city of Manchester, in the county of Lancaster, for the invention of "An improved variable circular motion applicable to slotting, shaping, and planing machines, or similar purposes."

956. To WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for the invention of "Improvements in apparatus for separating metals from their ores and other matters." — A communication from abroad by Henri François Toussaint, Chemist, and Louis Napoleon Langlois, Civil Engineer, both of Paris.

958. To JOHN HAMILTON, of No. 8, Exchange Square, Glasgow, in the county of Lanark, North Britain, Engineer, for the invention of "Improvements in apparatus for regulating prime movers driven by water."

960. To HENRY HARRISON, of the firm of Joseph Harrison and Sons, of Blackburn, in the county of Lancaster, Machine Makers, for the invention of "Certain improvements in looms for weaving."

962. To HENRY HUSSEY VIVIAN, of Swansea, M.P., for the invention of "Improvements in smelting copper."

964. To GEORGE BISHOP CORNISH, of New York, in the United States of America, Master Mariner, for the invention of "Improvements applicable to fog horns."

966. And to JOHN MOULE, of Seabright Place, Hackney Road, in the county of Middlesex, for the invention of "A new compound liquid for illuminating purposes."

On their several petitions, recorded in the Office of the Commissioners on the 16th day of April, 1859.

---

968. To ROBERT WARRY, Armourer-Serjeant, of the 3rd Depôt Battalion, Chatham, for the invention of "Improvements in breech-loading ordnance and its projectiles."

970. To GEORGE PORTER, of the city of London, Smith and Gas-Fitter, for the invention of "Improvements in valves or cocks."

972. To JOSEPH SEAMAN, of Linslade, in the county of Buckingham, Engineer, for the invention of "Improvements in agricultural implements for working or cultivating the soil."

974. To JOHN CRAWFORD WILSON, of Wood Street, in the city of London, Warehouseman, for the invention of "A reversible shawl cloak."

978. To JOSEPH MORTON and HENRY SHAW MORTON, trading under the style or firm of Morton and Son, of Sheffield, in the county of York, Stove Grate Manufacturers, for the invention of "Improvements in hearth-plates or ash-pans."

980. To GEORGE COLLER, of Harlow, in the county of Essex, for the invention of "An improved mowing machine."

982. And to WILLIAM PARSONS, of Pontar-Tawe, near Swansea, in the county of Glamorgan, Tin Plate Manufacturer, for the invention of "Improvements in preparing sheet iron and other metal sheets for japanners and other uses."

On their several petitions, recorded in the Office of the Commissioners on the 18th day of April, 1859.

---

986. To CHRISTOPHER BATTY, of Manchester, in the county of Lancaster, Collector, for the invention of "An improved means or apparatus for effecting instantaneous communication on railways between passengers and officials."

990. And to JOHN WILLIAM MATTHEWS, of High Street, Poplar, in the county of Middlesex, Hat Manufacturer, for the invention of "An improvement in the manufacture of hats and other coverings for the head."

On their several petitions, recorded in the Office of the Commissioners on the 19th day of April, 1859.

---

992. To QUIN BECK, of the firm of James Meharg and Co., of Belfast, in the county of Antrim, Manufacturers, for the invention of "Improvements in stoves."—A communication from abroad by James Cherry, of Vermont, U.S.

994. To JOHN MORRIS JOHNSON and EDMUND JOHNSON, of Castle Street, Holborn, for the invention of "Improvements in the production of ornamental surfaces suitable for advertisement

tablets, plates for shop fronts, and for other uses."

996. And to HENRY RAWSON, of Leicester, for the Invention of "Improvements in machinery for combing wool and other fibres."

On their several petitions, recorded in the Office of the Commissioners on the 20th day of April, 1859.

1000. To EDWARD COTTAM, of Pimlico, in the county of Middlesex, Engineer, for the invention of "Improvements in apparatus employed for cutting or sawing metals and other substances."

1002. To JAMES NAPIER, Gentleman, Partick, near Glasgow, in the county of Lanark, Scotland, for the invention of "Improvements in producing figures or representations upon glass."

1004. To JOHN DAVIES, of Tetbury, in the county of Gloucester, Machinist, for the invention of "A new or improved apparatus for ringing door bells, and a bolt to be used with the same apparatus, and for other purposes to which the said bolt is or may be applicable."

1006. To RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Editor of the Mechanics' Magazine, and Patent Agent, for the invention of "Improvements in knitting frames." — A communication from abroad, by Madame Henriette Louise Armande Hammerlin, of Paris.

1008. To EDWARD CLARK, of New York, in the United States of America, but now of Morley's Hotel, in the city of Westminster, Gentleman, for the invention of "Improvements in sewing machinery."—A communication from abroad, by Isaac Merritt Singer, of New York aforesaid.

1010. And THOMAS SEAVILLE TRUSS, of Darlington, in the county of Durham, Civil Engineer, for the invention of "Improvements in the construction of pipes, and in the mode of joining the same."

On their several petitions, recorded in the Office of the Commissioners on the 21st day of April, 1859.

1014. To CHARLOTTE MANSEL, of Plymouth, in the county of Devon, for the invention of "A folding travelling case."

1016. To JOHN ARMSTRONG, of Sunderland, in the county of Durham, Timber Merchant, for the invention of "Improvements in drying and preserving timber."

1018. To JOHN ANGUS, of Glasgow, in the county of Lanark, North Britain, Saddlers' Ironmonger, for the invention of "Improvements in saddles."

1020. To PIERRE LEONARD MARC DEBAIN, of Paris, France, Gentleman, for the invention of "Improved means for transmitting motive power to ships, pumps, and other arrangements by which the displacement of fluids is effectuated."

1022. To PIERRE LEONARD MARC DEBAIN, of Paris, France, Gentleman, for the invention of "Improvements in making heat subservient for producing motive power."

1024. To RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, Patent Agent, for the invention of "An improvement in the manufacture of woollen cloth."—A communication from Louis Victor Lemaignen, residing at Liseux, France.

1026. And to WILLIAM MOXON, of Parliament Street, in the city of Westminster, Contractor, and JOSEPH JEFFREY BENNETT, of Homer Terrace, Victoria Park, in the county of Middlesex, Civil Engineer, for the invention of "Improved apparatus for raising or lifting and lowering heavy bodies."

On their several petitions, recorded in the Office of the Commissioners on the 23rd day of April, 1859.

1028. To WILLIAM STEVENSON, of Johnstone, in the county of Renfrew, North Britain, Manager to George Houston and Company, for the invention of "Improvements in spinning, doubling, and manufacturing cotton and other fibrous materials."

1030. To JAMES HIGGIN, of the city of Manchester, in the county of Lancaster, Manufacturing Chemist, for the invention of "Improvements in treating madder, and plants of the same family, and preparations therefrom."

1032. To JOHN OWEN, Designer, and HINDLE DUCKWORTH, Manager, of Blackburn, in the county of Lancaster, for the invention of "Improvements in machinery or apparatus for leasing yarns."

1034. To THOMAS BUCKHAM, of Gloucester, in the county of Gloucester, Civil Engineer, for the invention of "An improvement in railway switches."

1036. To AUGUSTUS WILLIAM GADESDEN, of 56, Leman Street, Goodman's Fields, for the invention of "Improvements in producing solutions of sugar."

1038. To WILLIAM EDWARD NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in sewing machines."—A communication from abroad by Robert Halsted Morford and Anthony Denton Morford, of New York.

1040. And to WILLIAM WARNE, JOHN AMERICUS FANSHAWE, JAMES ARCHIBALD JAQUES, and THOMAS GALPIN, all of Tottenham, in the county of Middlesex, India Rubber Manufacturers, for the invention of "Improved compounds applicable for packing the joints of steam or other pipes, which compounds are also applicable for packing or lining parts of machinery in general, or parts of ships, bridges, tanks, or railways."

On their several petitions, recorded in the Office of the Commissioners on the 25th day of April, 1859.

1042. To THOMAS HOLT, of Lower Place, in the parish of Rochdale and county of Lancaster, Engineer, and JOHN BROWN, of Oxford Street, Well Field, in the same parish and county, Agent, for the invention of "Improvements in apparatus, or an improved apparatus, for heating water for the supply of steam boilers, which improvements or apparatus are also applicable in some cases for the prevention of incrustation in steam boilers."

1046. To ROBERT MAIN, of Birkenhead, in the county of Chester, Carriage Builder, for the invention of "Improvements in wheels for carriages."

1048. To RICHARD ARCHIBALD BROOMAN, of No. 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improvements in vulcanizing and coloring caoutchouc, and in the preparation of caoutchouc paints and colors."

—A communication from abroad by Theophile Julien Laballe, of Paris.

1050. And to JOHN HENRY JOHNSON, of No. 47, Lincoln's Inn Fields, in the county of Middlesex, and of No. 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in machinery or apparatus for combing wool and other fibrous substances."—A communication from abroad by Cullen Whipple, of the city and county of Providence, in the state of Rhode Island, United States of America.

On their several petitions recorded in the Office of the Commissioners on the 26th day of April, 1859.

1052. To JEAN MARIE CIROUX, of Brussels, in the kingdom of Belgium, Merchant, for the invention "Improvements in lamp-glasses and shades, applicable to gas-burners, light-houses and railway-signals."

1054. To JOSEPH HYDE, of Hollingworth, near Mottram, in the county of Chester, Engineer, for the invention of "Certain improvements in steam-boilers."

1058. To ROBERT JAMES LAING, of the Independent Gas Works, Haggerstone, in the county of Middlesex, Engineer, for the invention of "Improvements in wet gas-meters."

1060. To JAMES HOLROYD, of Leeds, in the county of York, Cloth Finisher, for the invention of "Improvements in machinery used for finishing woollen and other cloths."

1062. And to Sir THOMAS TASSELL GRANT, K.C.B., of No. 20, Chester Terrace, Regent's Park, in the county of Middlesex, for the invention of "Improvements in ships' cooking apparatus."

On their several petitions, recorded in the Office of the Commissioners on the 27th day of April, 1859.

1066. To RICHARD JONES, of the New Kent Road, in the county of Surrey, for the invention of "An improved safety-lamp."

1068. To NICOLAS LIBOTTE, Mechanician, of No. 33, Boulevard St. Martin, Paris, empire of France, for the invention of "A steam brake for mines, which may also be worked by hand."

1072. To JOHN WHEAT, of Hinckley, in the county of Leicester, for the invention of "Certain improvements in drilling-machines employed for agricultural purposes."

1074. And to ARTHUR BOYLE, of Birmingham, in the county of Warwick, Tool Maker, for the invention of "Improvements in the manufacture of certain parts of umbrellas and parasols."

On their several petitions, recorded in the Office of the Commissioners on the 28th day of April, 1859.

1078. To HENRY BOSSHARD, of Paris, in the empire of France, Engineer, for the invention of "An improved mechanism for obtaining and imparting motive power."

1080. And to SIMON DE CAZENAVE, of No. 189, Regent Street, in the county of Middlesex, for the invention of "An improved lubricating compound."

On both their petitions, recorded in the Office of the Commissioners on the 29th day of April, 1859.

Inventions protected for Six Months by the Deposit of a Complete Specification.

Notice is hereby given, that the petition of

1158. JOZÉ LUIS, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, praying for Letters Patent for the invention of "A self-regulating horse machine,"—a communication from abroad by P. Isaac Garin, No. 10, Rue Mogador, Paris, in the empire of France,—was deposited and recorded in the Office of the Commissioners on the 9th day of May, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

And notice is hereby also given, that the petition of

1161. GEORGE GIBSON BUSSEY, of Dunn's Passage Factory, 485, New Oxford Street, in the county of Middlesex, Manufacturer of Leather Goods, praying for Letters Patent for the invention of "An improved contrivance for carrying cartridges and to facilitate using them," was deposited and recorded in the Office of the Commissioners on the 9th day of May, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

12th May, 1859.

2547. JOHN COURAGE, of Horsleydown, in the county of Surrey, Brewer, and FREDERICK BENNETT, of Holywell, in the county of Flintshire, Smelter, for an invention of "Improvements in furnaces for reducing and smelting ores, scoria, slag, and waste."—Dated 13th November, 1858.

2548. JAMES TAYLOR, of Birkenhead, Engineer, for an invention of "Improvements in portable steam engines."—Dated 13th November, 1858.

2551. LOUIS PETRE, of Hatton Garden, in the county of Middlesex, Glass Silverer, for an invention of "Improvements in the application of glass to ornamental and useful purposes."—Dated 13th November, 1858.

2552. ISAAC LIVERMORE, of 5, Shrubland Grove East, Queen's Road, Dalston, in the county of Middlesex, for an invention of "An improvement in the manufacture of shuttlecocks."—Dated 13th November, 1858.

2557. MATTHEW PULLAN, of Horsforth, near Leeds, in the county of York, Bleacher, for an invention of "Improvements in machinery for drying yarns and other materials."—Dated 13th November, 1858.

2558. JOHN ADDY HOPKINSON, of Huddersfield, in the county of York, Engineer, for an invention of "Improvements in steam boilers."—Dated 13th November, 1858.

2562. George Davies, of No. 1, Serle Street, Lincoln's Inn, in the county of Middlesex, and No. 28, St. Enoch Square, in the city of Glasgow, Civil Engineer and Patent Agent, for an invention of "Improvements in the process of finishing piled fabrics, and in apparatus employed in such process."—A communication from a Foreigner residing abroad.—Dated 15th November, 1858.

2568. John Golding Bunting, of the city of Saint John, in the Province of New Brunswick, in British North America, but at present at the Office for Patents, No. 4, Trafalgar Square, Charing Cross, in the county of Middlesex, for an invention of "A mechanical horse-tamer or brake."—Dated 15th November, 1858.

2569. John Brennand, of Manchester, in the county of Lancaster, Calico Printer, for an invention of "Improvements in the method of effecting the locomotion of carriages, which improvements are also applicable to other similar purposes."—Dated 16th November, 1858.

2571. Joseph Constant Boisneau, of Chatellerault, in the French empire, Engineer, for an invention of "An improved horse-mill or gear."—Dated 16th November, 1858.

2572. Alfred Isidore Honoré Parent, of Paris, in the French empire, Manufacturer, for an invention of "An improved manufacture of buttons, and the apparatus employed therein."—Dated 16th November, 1858.

2573. James Samuel, of Great George Street, in the city of Westminster, Civil Engineer, for an invention of "Improvements in sleepers or bearers for rails."—Dated 16th November, 1858.

2575. Charles James Clowes Perry, of Williamstown, in the colony of Victoria, Member of the Legislative Assembly, for an invention of "An instrument to be used chiefly on board ship for approximating, in certain cases, the course of an approaching vessel, either in the day or night, and the relative angle of both ships' courses, in order to avoid a collision, to be called 'Perry's anti-collision dial.'"—Dated 16th November, 1858.

2587. John Robertson, of Saint Ninians, in the county of Stirling, North Britain, Gentleman, for an invention of "Improvements in musical instruments."—Dated 17th November, 1858.

2641. Daniel Evans, of Chobham Cottages, New Town, Stratford, in the county of Essex, for an invention of "Improvements in tubular steam boilers and fire places, or furnaces used therewith."—Dated 20th November, 1858.

2649. Francois Alphonse Theroulde, of 67, Rue Caumartin, Paris, for an invention of "Improvements in obtaining salts and products from the ashes of marine plants."—Dated 22nd November, 1858.

2669. James Syson Nibbs, of the Manor of Aston, in the county of Warwick, Lamp and Chandelier Manufacturer, for an invention of "Improvements in lighting, heating, and ventilating."—Dated 24th November, 1858.

2702. George Bowden Sander, of High Holborn, in the county of Middlesex, for an invention of "Improvements in jugs."—Dated 27th November, 1858.

2723. Daniel Evans, of Chobham Cottages, New Town, Stratford, in the county of Essex, and George Jones, of Charlotte Place, Upper Kennington Lane, in the county of Surrey, Engineers, for an invention of "Improvements in pumps and water guages."—Dated 29th November, 1858.

2736. Robert Henry Bow, of Edinburgh, in the county of Mid-Lothian, North Britain, Civil Engineer, for an invention of "Improvements in railway chairs and fastenings."—Dated 1st December, 1858.

2752. John Lewis, of Elizabeth, in the county of Essex, and state of New Jersey, United States of America, for an invention of "Improvements in means for attaching sails to the yards of ships or vessels."—Dated 1st December, 1858.

2779. Jean Baptiste Antoine Monnier, of Nemours (Seine et Marne), France, for an invention of "Improvements in actuating railway brakes."—Dated 4th December, 1858.

18. Isaac Wood, of Charing Cross, for an invention of "Improvements in cutting and finishing corks, and in machinery used for such purposes."—A communication from abroad by Henry F. Cox and Alexander Millar, of New York.—Dated 1st January, 1859.

86. Robert Hawthorn and William Hawthorn, both of the town and county of Newcastle-upon-Tyne, Engineers, for an invention of "Improvements in apparatus for promoting combustion and preventing smoke in coal burning locomotives and other steam boiler furnaces."—Dated 11th January, 1859.

137. James Montgomery, of the city of New York, in the United States of America, for an invention of "Improvements in the construction of the hulls of steam and other vessels, and in the feed water, heaters, boilers, water gauges, condensers, engines, and propelling machinery appertaining to the former, a portion of which improvements (with the exception of those on the hull) are applicable to analogous useful purposes."—Dated 17th January, 1859.

205. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improved machinery for cutting files."—A communication from Milton D. Whipple, of the United States of America.—Dated 22nd January, 1859.

435. John James Russell, of Wednesbury, in the county of Stafford, for an invention of "Improvements in machinery used for heating and welding the edges of the plates used in the manufacture of cylinders and other articles."—Dated 16th February, 1859.

437. Jules Seguin, Doctor of Medicine, of 4, Grande Rue de Gravelle à St. Maurice (Seine), France, for an invention of "Improvements relating to the employment of moving power arising from the tides, and its application to manufactur-

ing, agricultural, and other purposes."—Dated 16th February, 1859.

568. William Score, of 9, Osborne Terrace, Clapham Road, in the county of Surrey, Chemist, for an invention of "Improvements in the manufacture of soap."—Dated 3rd March, 1859.

577. Charles Roper Mead, of 176, Great Dover Street, in the Borough of Southwark, Gas Engineer, for an invention of "Improvements in water gas meters."—Dated 4th March, 1859.

615. John Scott Russell, of Great George Street, Westminster, for an invention of "Improvements in building ships and other vessels."—Dated 9th March, 1859.

630. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "An improved construction of steam engine, applicable also to the raising of water."—A communication from abroad by Samuel Huse, of the United States of America.—Dated 11th March, 1859.

642. Alfred Tylor, of Warwick Lane, Newgate Street, for an invention of "Improvements in apparatus for regulating the supply of water to water-closets and other vessels."—Dated 14th March, 1859.

705. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improvements in propelling vessels."—A communication from abroad by Theodore W. Phinney, of Newport, Rhode Island.—Dated 19th March, 1859.

729. Sir Peter Fairbairn, of Leeds, in the county of York, Knight, and Robert Newton, of Leeds aforesaid, Commercial Traveller, for an invention of "Straightening and separating the fibres of silk waste, and laying them in parallel lengths preparatory to combing or dressing."—Dated 22nd March, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 11th May*, 1859, *inclusive.*)

9th May.

1105. Richard Archibald Brooman, of 166, Fleet Street, in the city of London, Patent Agent, for an invention of "Improvements in machinery for manufacturing tubes and pipes; applicable also to the rolling of rods and bars."—A communication.—Dated 10th May, 1856.

1124. Hiram Tucker, of the state of Massachusetts, of the United States of America, for an invention of "An improved spring sacking or foundation for a bed, mattrass, or other like article."—Dated 13th May, 1856.

1162. William Henderson, of Dunkeld, Perthshire, Gardener to His Grace the Duke of Athol, for an invention of "Improvements in the manufacture of brooms."—Dated 16th May, 1856.

1255. Charles Cowper, of No. 20, Southampton Buildings, Chancery Lane, in the county of Middlesex, for an invention of "Improvements in the treatment of coal, and in the purification, desiccation, and agglomeration of coal, and in machinery and apparatus for such purposes."—A communication.—Dated 26th May, 1856.

10th May.

1206. Alexander Allan, of the town and county of Perth, North Britain, Engineer, and Thomas Hunt, of Crewe, in the county of Chester, Engineer, for an invention of "Improvements in the construction of locomotive and other steam-engine and carriages, and in the rolling stock of railways."—Dated 21st May, 1856.

1246. Robert Adam Whytlaw and Alexander Mitchell the younger, both of Glasgow, in the county of Lanark, North Britain, Manufacturers, for an invention of "Improvements in weaving."—Dated 24th May, 1856.

1270. Lemuel D. Owen, of Southampton Street, London, in the county of Middlesex, Engineer, for an invention of "Improvements in the manufacture of artificial stone."—A communication.—Dated 28th May, 1856.

11th May.

1185. John Wilkes, of Birmingham, in the county of Warwick, Manufacturer, and Thomas Wilkes, of Birmingham aforesaid, Manufacturer, and Gilbert Wilkes, of Birmingham aforesaid, Manufacturer, for an invention of "A new or improved manufacture of rollers or cylinders for printing fabrics."—Dated 19th May, 1856.

1201. Alexandre Henri Dufresne, of 39, Rue de l'Echiquier, Paris, in the empire of France, and of 4, South Street, Finsbury, London, for an invention of "An improved process of gilding and ornamenting steel and other metals."—Dated 21st May, 1856.

928. Uriah Scott, of Camden Town, in the county of Middlesex, Engineer, for an invention of "Improvements in metal fittings for furniture."—Dated 18th April, 1856.

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

FOREIGN PATENTS.

BELGIUM.*

List of Patents of Invention Delivered on the 21st April and 5th May, 1859.†

(*Communicated by the Belgian Government.*)

(For previous List, see No. 555 of this Journal.)

5858. J. F. Henneuse, of Brussels, for "An apparatus for removing snow."—Dated 5th May, 1858.

7201. J. J. Lixhon, of Liége, for "A decimal balance."—Dated 4th March, 1859.

7217. A. Pelletier, of Brussels, for "A railway break."—Dated 7th March, 1859.

7344. C. S. Lerouge and F. Bouquié, represented by A. Picard, for an imported invention of "Fixing railway sleepers."—Dated 2nd April, 1859.—(French Patent, 24th March, 1858.)

7347. P. J. Meslin, represented by Depuichault, of Schaerbeek, for an imported invention of "Improvements in screw-presses."—Dated 2nd April, 1859.—(French Patent, 7th December, 1858.)

7355. E. Libotte and G. Planche, of Gilly, for "A single-action parachute."—Dated 5th April, 1859.

7357. J. Vallod, of Schaerbeek, a Patent of Improvement for "Additions to apparatus for lubricating railway carriages."—Dated 5th April, 1859.—(Original Patent, 28th June, 1855.)

7359. A. Baillot, of St. Josse-ten-Noode, for "An apparatus for closing Venetian blinds."—Dated 5th April, 1859.

7360. F. Sievers, represented by A. de Vos-Verraert, of Brussels, for "Improvements in saddles."—Dated 10th April, 1859.

7363. Y. Hamilton and W. Nash, represented by A. Anoul, of Ixelles, for an imported invention of "Improvements in locks and keys."—Dated 7th April, 1859.—(English Patent, 5th October, 1858.)

7364. E. Dumont, of Liége, a Patent of Improvement for "Improvements in gas carburators."—Dated 5th April, 1859.—(G. Jeanne's Original Patent, 4th March, 1858.)

7365. B. J. Jean and J. Boucher, of St. Ghislain, for "A process for preserving beer-yeast."—Dated 21st April, 1859.

7366. P. Vandevoorde, of Lokeren, for "A metrical measure."—Dated 7th April, 1859.

7367. A. R. André, of Charleroi, for "A machine for manufacturing bolts and rivets by the hot and cold process."—Dated 8th April, 1859.—(Original Patent, 13th December, 1858.)

7368. Ch. Laigneaux, represented by V. Laigneaux, of Mons, for "A kind of bricks for copings of walls."—Dated 8th April, 1859.

7369. J. Chaineux, of Wandre, a Patent of Improvement for "Additions to his breech-loading revolver."—Dated 8th April, 1859.—(Original Patent, 4th June, 1858.)

7370. P. F. Joly, represented by O. Daillencourt, of Brussels, a Patent of Improvement for "Additions to his apparatus for obtaining, drying, and superheating steam."—Dated 9th April, 1859.—(Original Patent, 12th August, 1858.)

7371. A. Bessemer, represented by Biebuyck, of Brussels, for an imported invention of "Improvements in the manufacture of iron and steel, and in apparatus used thereat."—Dated 9th April, 1859.—(French Patent, 5th April, 1859.)

7372. C. Mayer, represented by Biebuyck, of Brussels, for an imported invention of "A machine for crushing solid inks and other tinctorial substances."—Dated 9th April, 1859.—(French Patent, 28th March, 1859.)

7373. H. Jackson, represented by A. Anoul, Ixelles, for an imported invention of "Improvements in the manufacture of lubricating substances."—Dated 9th April, 1859.—(English Patent, 26th July, 1858.)

7374. P. J. Cools, of Koekelberg, for "Composing a waterproof coating, called 'tar lac.'"—Dated 9th April, 1859.

7375. J. W. Duncan and J. E. Gwynne, represented by O. Daillencourt, of Brussels, for an imported invention of "Improvements in apparatus for obtaining and condensing steam."—Dated 9th April, 1859.—(English Patent, 18th March, 1859.)

7376. J. E. Spanoghe, of Antwerp, for "A system of pumps for taverns."—Dated 9th April, 1859.

7377. F. Blanckart, of Liége, a Patent of Improvement for "Modifications in his breech-loading fire-arms with Lefaucheux' cartridges."—Dated 11th April, 1859.—(Original Patent, 1st June, 1858.)

7378. F. Martin, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "A machine for splitting hides."—Dated 11th April.—(Original Patent, 28th December, 1858.)

7379. P. J. B. and L. E. Depoully, represented by H. Biebuyck, Brussels, for an imported invention of "A mode of preparing indigo for fast blue dyeing."—Dated 11th April, 1859.—(Original Patent, 17th February, 1859.)

7380. J. M. Ciroux, represented by D. de Vos Verraert, Brussels, for "A kind of glasses and shades applicable to all lamps."—Dated 11th April, 1859.

7381. J. Le Duc, represented by X. Raclot, Brussels, for a Patent of Improvement for "A chain-stitch sewing machine."—Dated 11th April, 1859.—(Original Patent, 21st May, 1858.)

* For the Belgian Patent Law, see Nos. 292 and 348 of this Journal.

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

7382. E. DE CARANZA, represented by X. Raclot, of Brussels, for "New apparatus and new substances which contain more gases than coal, for gas-lighting."—Dated 11th April, 1859.

7383. J. F. DAMSEAUX, of Verviers, for "Modifications in warping-frames."—Dated 12th April, 1859.

7384. A. DESSART, of Limbourg, for "A process for sizing warps of woollen fabrics."—Dated 12th April, 1859.

7385. F. RAURIFE, of Liége, for "A system of straps of flat-plaited wire, or of raw or galvanized copper wire."—Dated 12th April, 1859.

7386. F. ROBYNS, of Montigny-sur-Sambre, for "A liquid for destroying bugs and other insects."—Dated 12th April, 1859.

7388. ED. DAVELING-D'ELHONGNE, of Bruges, for "A portable printing press for obtaining proof-sheets."—Dated 13th April, 1859.

7389. T. J. DEFRAITEUR, of Petit-Rechain, for "A heating box applicable to cylinder machines used in fulling cloth."—Dated 14th April, 1859.

7390. E. J. MOUALHIER, represented by D. de Vos-Verraert, of Brussels, for an imported invention of "A tubular apparatus with a double current of air."—Dated 12th April, 1859.—(French Patent, 6th April, 1859.)

7392. L. WRAY, represented by J. Piddington, of Brussels, for an imported invention of "Improved compounds for coating and insulating electric telegraph wires."—Dated 12th April, 1859.—(English Patent, 12th October, 1858.)

7393. F. FAY, of Brussels, for "Improvements in hardening vulcanized india rubber for dental surgery."—Dated 12th April, 1859.

7394. V. DORÉ, represented by A. Hennelle, of Brussels, for an imported invention of "A system of knuckle joints for water, gas, and other pipes."—Dated 12th April, 1859.—(French Patent, 18th February, 1859.)

7395. V. B. C. VANNIER, represented by A. Hennelle, of Brussels, for "A process of gilding."—Dated 13th April, 1859.

7398. J. C. SCHRODER, represented by H. Biebuyck, of Brussels, for an imported invention of "Treatment of molasses for extracting the sugar therefrom."—Dated 13th April, 1859.—(French Patent, 7th April, 1859.)

7399. L. DE KEIRSSCHIETER, of Iseghem, for "A machine for making steel combs for weaving."—Dated 14th April, 1859.

7400. CH. PIETRONI, represented by X. Raclot, of Brussels, for an imported invention of "Manufacture of soap from neutral alkali by steam."—Dated 14th April, 1859.—(French Patent, 9th April, 1859.)

7401. L. J. E. DUPONT, represented by O. Daillencourt, Brussels, a Patent of Improvement for "Modifications in his apparatus for separating grits from chaff."—Dated 14th April, 1859.—(Original Patent, 23rd March, 1859.)

7402. F. WILLIAMES, of Châtelet, for "A system of parachutes for mines."—Dated 14th April, 1859.—(Original Patent, 5th May, 1859.)

PATENTS DELIVERED ON THE 5TH MAY, 1859.

7391. G. PRICE and W. DAWES, represented by J. Piddington, Brussels, for an imported invention of "Improvements in steam boilers, and in apparatus belonging thereto."—Dated 12th April, 1859.—(English Patent, 2nd September, 1858.)

7403. A. JACQMART, of Montigny-sur-Sambre, for "A system of grates of furnaces for heating and puddling iron."—Dated 15th April, 1859.

7404. A. JACQMART, of Montigny-sur-Sambre, for "A system of restoring twyers of blast furnaces."—Dated 16th April, 1859.

7405. N. LIBOTTE, represented by J. Gochet, of Gilly, a Patent of Improvement for "Modifications in his system of parachutes for mines."—Dated 16th April, 1859.—(Original Patent, 23rd June, 1858.)

7407. N. J. ANDRIEN, of Liége, for "A smoke-consuming apparatus applicable to chimneys."—Dated 15th April, 1859.

7408. V. GOFFINET, of Liége, for "A system of spiral bridges and semi-circulars for fancy and soldiers' fire-arms."—Dated 18th April, 1859.

7409. H. A. ARCHEREAU, of Marcinelle, for "Using the power of water and other aeriform steam by making it act on moveable sides or diaphragms."—Dated 18th April, 1859.

7410. T. BEKKER, of Liége, a Patent of Improvement for "Modifications in Bylandt's revolving fire-arms."—Dated 16th April, 1859.

7411. CH. RADCLIFFE, represented by A. Callès, of Molembeek St. Jean, for an imported invention of "A machine for wetting wool and tissues."—Dated 16th April, 1859.—(French Patent, 14th April, 1859.)

7412. J. B. F. MASSON, represented by J. Piddington, Brussels, for an imported invention of "Improvements in the manufacture of thin tin sheets."—Dated 16th April, 1859.—(English Patent, 23rd March, 1859.)

7413. J. MITCHELL, represented by A. Callès, of Molembeek St. Jean, for an imported invention of "Improvements in the manufacture of woollen and other yarns."—Dated 16th April, 1859.—(English Patent, 8th October, 1858.)

7414. Baron H. DE BONHOME, for "A thrashing machine."—Dated 15th April, 1859.

7415. L. LE CHATELIER, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "Manufacture of aluminium."—Dated 15th April, 1859.—(Original Patent, 8th September, 1858.)

7416. GUINON, MARNAS, and BONNET, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "Manufacturing and applying a product called 'French purple.'"—Dated 15th April, 1859.—(Original Patent, 3rd May, 1858.)

7417. J. DUCOURNAN, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "A machine for crushing stones and ores."—Dated 15th April, 1859.—(Original Patent, 6th February, 1859.)

7418. Mrs. LEFEBVRE, née Branchu, represented by H. Biebuyck, of Brussels, for an imported invention of "Manufacture of nitric acid, and obtaining

thereby artificial saltpetre beds." — Dated 15th April, 1859.—(French Patent, 9th April, 1859.)

7419. D. N. Manclère, represented by H. Biebuyck, of Brussels, for an imported invention of "Heating stoves and other drying rooms by means of the gas of blast furnaces." — Dated 15th April, 1859.—(French Patent, 14th February, 1859.)

7420. Ch. H. Raub and A. Lunel, represented by H. Biebuyck, of Brussels, for an imported invention of "An apparatus for subduing horses."—Dated 15th April, 1859. — (French Patent, 9th April, 1859.)

7421. B. Goodfellow, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in steam engines."—Dated 15th April, 1859.—(French Patent, 9th April, 1859.)

7422. N. J. Grivot, represented by X. Raclot, of Brussels, for an imported invention of "An apparatus for washing potatoes and cleaning them of stones for fecula works."—Dated 15th April, 1859. —(French Patent, 14th April, 1859.)

7423. L. J. Ganser and L. Drouhin, represented by X. Raclot, of Brussels, for "A rotary steam engine." — Dated 15th April, 1859. — French Patent, 6th April, 1859.)

7424. Ed. Pesier, represented by De Vos-Verraert, Brussels, a Patent of Improvement for "Using alcohol for removing impurities from syrup."—Dated 15th April, 1859.—(Original Patent, 2nd April, 1858.)

7425. P. Sabatier and J. T. Mourié, of Brussels, for an imported invention of "Manufacture of articles of cast-steel, and especially of wheel-tyres." —Dated 15th April, 1859. — (French Patent, 8th April, 1859.)

7426. Th. Picha, of Ghent, for "A system of pavement of cement-beton."—Dated 16th April, 1859.

7427. A. L. Gerard, of Liége, a Patent of Improvement for "A system of chimneys for preventing fires."—Dated 19th April, 1859.—(Original Patent, 21st October, 1858.)

7428. J. J. Gilis, of Braine-le-Comte, for "A locomotive-break."—Dated 19th April, 1859.

7429. V. Bonauguere, of Malines, for "A stove heated by lighting gas." — Dated 21st April, 1859.

7432. Gaspard-Heuse, represented by F. Bailleux, of Liége, for "Manufacture of barrels for fancy guns."—Dated 22nd April, 1859.

7433. A. Heron, of Liége, for "An electro-galvanic apparatus for extracting teeth without causing pain."—Dated 22nd April, 1859.

7434. A. Pliers, of Liége, a Patent of Improvement for "Modifications in his pistols."—Dated 22nd April, 1859. — (Original Patent, 28th March, 1859.)

7435. A. Leblanc, represented by L. Duru, of Brussels, for an imported invention of "Improvements in dyeing and finishing yarns and tissues." Dated 18th April, 1859.—(French Patent, 2nd April, 1859.)

7436. M. Castay, represented by O. Daillencourt, of Brussels, for an imported invention of "A system of jointed metallic bridges with lozenges, circumferences, and semi-circumferences." — Dated 18th April, 1859.—(French Patent, 22nd November, 1858.)

7437. J. Fielden, represented by F. Anthoine, of Brussels, for an imported invention of "Improvements in constructing or winding up bobbins used in weaving filamentous substances." Dated 19th April, 1859.—(English Patent, 14th September, 1858.)

7438. Th. Wheeler, represented by F. Anthoine, Brussels, for an imported invention of "A machine for washing, wringing, or drying, pressing, and mangling linen, &c." — Dated 19th April, 1859.—(English Patent, 14th July, 1858.

7439. F. Watkins, represented by A. Anoul, Ixelles, for an imported invention of "Improvements in machines for making bolts, nails, and rivets."— Dated 19th April, 1859.— (English Patent, 15th July, 1857.)

7440. F. Michel, represented by Gilleau, Ixelles, for "Shoeing horses without using nails."— Dated 20th April, 1859.

7441. P. L. M. Debain, represented by D. de Vos-Verraert, Brussels, for an imported invention of "A diaphragmatic apparatus for propelling vessels and other machines, displacing fluids."—Dated 20th April, 1859.—(French Patent, 12th April, 1859.)

7443. Count A. D'Adhémar, represented by A. Crooy, of Brussels, for "A wet process for obtaining hydro-carburet from peat and other fuel." —Dated 20th April, 1859.—(French Patent, 14th April, 1859.)

7444. J. E. S. Achet, née Robert de Massy, represented by A. Crooy, Brussels, a Patent of Improvement for "Modifications in his mode of stopping horses."—Dated 20th April, 1859.—(Original Patent, 3rd March, 1859.)

A FREE LIBRARY and READING ROOM, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

NOTE.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Limerick.
Liverpool (*Free Public Library, Duke Street*).

Tiverton.
Wakefield (*Mechanics' Institution, Barston Square*).
Warrington (*The Museum and Library*).
Waterford (*Town Hall, The Mall*).
Wednesbury (*Board of Health Offices*).
Wexford (*Mechanics' Institute, Crescent Quay*).
Wigan.
Wolverhampton (*School of Practical Art, Darlington Street*).
Wolverton (*Railway Station*).
Yarmouth, Norfolk (*Public Library, South Quay*).
York (*Lower Council Chamber, Guildhall*).

The Commissioners' publications have also been presented to the following Public Offices, Seats of Learning, British Colonies, and Foreign States:—

Public Offices, Institutions, &c.

Admiralty, Department of the Surveyor of the Navy.
——— Steam Branch.
——— Deptford Dockyard.
——— Woolwich ditto.
——— Chatham ditto.
——— Sheerness ditto.
——— Portsmouth ditto.
——— Devonport ditto.
——— Pembroke ditto.
Artillery Institute, Woolwich.
Board of Trade, Whitehall.
Ordnance Office, Pall Mall.
——— Small Arms Factory, Enfield.
War Office, Pall Mall.
Government School of Mines, &c., Jermyn St., Piccadilly.
Dublin Castle, Dublin.
Rolls Office, Chancery (Four Courts), Dublin.
Office of Chancery, Edinburgh.
East India House, Military Stores, Leadenhall Street.
Incorporated Law Society, Chancery Lane, London.

Seats of Learning.

Cambridge University.
Trinity College, Dublin.
Queen's College, Galway.
University College, London.

British Colonies.

Malta.
Cape of Good Hope.
Mauritius.
India—Bengal.
North-West Provinces.
Madras.
Bombay.
Ceylon.
Victoria—Patent Office, Melbourne.
Parliamentary Library, Melbourne.
New South Wales.
South Australia.
Tasmania.
New Zealand.
Newfoundland.
Canada—Quebec.
Toronto.
New Brunswick.
Prince Edward Island.
Antigua.
Barbados.
Jamaica.
Trinidad.
British Guiana.

Foreign States.

Austria—Handels Ministerium, Vienna.
Bavaria—Königliche Bibliothek, Munich.

Wurtemberg—Bibliothek des Musterlagers, Stuttgart.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE REFERENCE INDEX of PATENTS, pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. 1.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in each Series. Edited by BENNET WOODCROFT, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions, &c. By SIMON STURTEVANT. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By JOHN ROVINSON (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether NICHOLAS PAGE or Sir NICHOLAS HALSE was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent, Nos.* 33 *and* 85, *respectively dated 8th April*, 1626, *and 23rd July*, 1635.) Price 2*d.*
4. DUD DUDLEY'S Metallum Martis; or iron made with pit-coale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated 22nd February*, 1620, *and 2nd May*, 1638. Price 8*d.*
5. Description of the nature and working of the patent Water-scoop Wheels invented by WILLIAM WHELER, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated 24th June*, 1642.) Price 2*s.*
6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) EDWARD SOMERSET, Lord Marquis of WORCESTER, &c. &c. (*Stat.* 15 *Car. II. c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By THOMAS SAVERY. (*Letters Patent, No.* 347, *dated 10th January*, 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By THOMAS SAVERY. (*Letters Patent, No.* 356, *dated 25th July*, 1698, *and Stat.* 10 *&* 11 *Will. III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By JOHN ALLEN, M.D. (*Letters Patent, No.* 513, *dated 7th August*, 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By JONATHAN HULLS. (*Letters Patent, No.* 556, *dated 21st December*, 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By SAMUEL SUTTON, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated 16th March*, 1744.) Price 1*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.
BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 560. TUESDAY, MAY 17, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

29. WILLIAM RENTON, of Leeds, in the county of York, Cloth Dresser, THOMAS RENTON, of Leeds aforesaid, Millwright, and WILLIAM BINNS, of Leeds aforesaid, Cloth Finisher, have given notice at the Office of the Commissioners of their intention to proceed with their application for Letters Patent for the invention of "Improvements in raising the nap or pile of textile fabrics."

As set forth in their petition, recorded in the said office on the 3rd day of January, 1859.

36. And CHARLES DE FOREST, of Leicester Square, in the county of Middlesex, Gentleman, has given the like notice in respect of the invention of "An improvement in the manufacture of springs for carriages and other uses."—A communication from Charles Goodyear, junior, residing at New York, in the United States of America.

As set forth in his petition, recorded in the said office on the 4th day of January, 1859.

47. And WILLIAM RENTON, of Leeds, in the county of York, Cloth Dresser, THOMAS RENTON, of Leeds aforesaid, Millwright, and WILLIAM BINNS, of Leeds aforesaid, Cloth Finisher, have given the like notice in respect of the invention of "Improvements in finishing woollen and other fabrics."

48. And JOHN ASPINALL, of Great Tower Street, in the city of London, Civil Engineer, has given the like notice in respect of the invention of "Improvements in machines for the manufacture of bolts, rivets, and spikes."

As set forth in their respective petitions, both recorded in the said office on the 6th day of January, 1859.

54. And JEAN JOSEPH FLORENCE, of Paris, France, Merchant, has given the like notice in respect of the invention of "Improvements in reels or spooling-wheels."

As set forth in his petition, recorded in the said office on the 7th day of January, 1859.

67. And WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, has given the like notice in respect of the invention of "Improvements in purifying natural phosphates of lime."—A communication from Emile Constant Martin, residing at Paris, in the empire of France, formerly Banker.

69. And JOHN THOMAS FORSTER, of Holland Road, Kensington, in the county of Middlesex, Gentleman, has given the like notice in respect of the invention of "Improvements in bed berths, applicable for bunks, hammocks, cots, and other fixed and moveable sleeping places."

70. And WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in steam engines and steam generators."—A communication from abroad by Louis Arnier, of Marseilles, in the empire of France.

As set forth in their respective petitions, all recorded in the said office on the 8th day of January, 1859.

72. And ROBERT DAWSON CLEGG, of Manchester, in the county of Lancaster, has given the like notice in respect of the invention of "Improvements in signalling apparatus."

78. And THOMAS HARRIS TOMS, of Staining Lane, in the city of London, has given the like notice in respect of the invention of "The employment of certain materials for the production of raised ornamental figures or devices upon textile fabrics."

As set forth in their respective petitions, both recorded in the said office on the 10th day of January, 1859.

79. And EUGENIO AGNENI, of 29, Devonshire Street, Queen's Square, Bloomsbury, in the county of Middlesex, an Historical Painter, native of

Rome, has given the like notice in respect of the invention of "Increasing particularly the effect of decorative pictures, landscapes, drawings, and prints, through looking-glasses."

81. And JOHN BIERS the younger, of No. 38, Rochester Road, Kentish Town, in the parish of Saint Pancras, in the county of Middlesex, Coach Maker, has given the like notice in respect of the invention of a "Self-acting carriage wheel break."

84. And DAVID EDWARD HUGHES, of New York, but now residing at Northampton Square, in the county of Middlesex, Telegraphic Engineer, has given the like notice in respect of the invention of "An improved mode of insulating electrical conducting wires."

85. And BERNARD JOSEPH RUBENSTEIN, late of Paris, and now of London, Dentist, has given the like notice in respect of the invention of "Improvements in dentistry."

87. And CHARLES WILLIAM SIEMENS, of John Street, Adelphi, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in supports for electric telegraphic line wires, and in tools or apparatus to be used in the construction of such supports, part of which improvements are applicable to the joining of pipes and other articles."

89. And NICHOLAS PROCTER BURGH, of Sheerness, Engineer, has given the like notice in respect of the invention of "Improvements in steam engines."

As set forth in their respective petitions, all recorded in the said office on the 11th day of January, 1859.

---

96. And SAMUEL CANNING and HENRY CLIFFORD, both of Leadenhall Street, in the city of London, Engineers, have given the like notice in respect of the invention of "Improvements in machinery for paying out and for recovering or picking up submarine telegraph ropes, cables, or chains."

97. And THOMAS ELWELL, of Paris, in the empire of France, Engineer, has given the like notice in respect of the invention of "Improvements in governors for steam engines and other motive power engines."

98. And WILLIAM MCNAUGHT, of Manchester, in the county of Lancaster, Engineer, and WILLIAM MCNAUGHT, of Rochdale, in the county of Lancaster, Engineer, have given the like notice in respect of the invention of "Improvements in steam engines and in apparatus connected therewith."

103. And CHARLES BESLAY, of 52, Rue Saint Sebastien, Paris, in the empire of France, Engineer, has given the like notice in respect of the invention of "Improvements in coating or covering iron or steel with tin, zinc, or lead, or alloys of those metals by electrial deposit."

As set forth in their respective petitions, all recorded in the said office on the 12th day of January, 1859.

---

108. And HENRY CRITCHLEY, of Bury, in the county of Lancaster, Engineer, and SOLOMON ELSTON, of the same place, Engineer, have given the like notice in respect of the invention of "Certain improvements in pistons for steam engines or other purposes."

112. And DANIEL LANCASTER BANKS, of Kennington, in the county of Surrey, Engineer, has given the like notice in respect of the invention of "A method of constructing a travelling suspension rail or roadway, applicable among other uses as a bridge and lifting agent."

118. And THOMAS HERBERT, of the firm of Thomas Herbert and Company, of Nottingham, and EDWARD WHITAKER, also of Nottingham, have given the like notice in respect of the invention of "Improvements in the manufacture of warp lace."

As set forth in their respective petitions, all recorded in the said office on the 13th day of January, 1859.

---

129. And WILLIAM HENRY EDWARD MCKNIGHT, of Lydiard House, near Swindon, co. Wilts, has given the like notice in respect of the invention of "An upright-celled boiler, applicable to all heating purposes by hot-water or other fluid."

131. And DANIEL LANCASTER BANKS, of 3, Kennington Row, Kennington Park, in the county of of Surrey, Engineer, has given the like notice in respect of the invention of "Improvements in the method of constructing a travelling suspension rail or roadway to be used for the cultivation of land."

As set forth in their respective petitions, both recorded in the said office on the 15th day of January, 1859.

---

139. And PIERRE AMABLE DE SAINT SIMON SICARD, of Paris, in the French empire, Chemist, has given the like notice in respect of the invention of "An improved process and apparatus for converting cast iron into steel."

142. And EDWARD BROOKS, of 43, Edward Street, Dorset Square, in the county of Middlesex, Locksmith, has given the like notice in respect of the invention of "Improvements in locks."

As set forth in their respective petitions, both recorded in the said office on the 17th day of January, 1859.

---

167. And JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Certain improvements in the manufacture or production of lasts, boot-trees, and clogs, and in the machinery and apparatus employed in the production of such articles."—A communication from Jules Mathieu, residing at Paris, in the empire of France.

As set forth in his petition, recorded in the said office on the 19th day of January, 1859.

---

182. And HENRY SAGAR, of Broughton, near the city of Manchester, in the county of Lancaster, Bleacher and Dyer, and ALEXANDER SCHULTZ, of Paris, in the kingdom of France, and of the city of Manchester aforesaid, Chemist, have given the like notice in respect of the invention of "Improvements in producing pink shades on cotton fabrics or yarns."

As set forth in their petition, recorded in the said office on the 20th day of January, 1859.

---

183. And THOMAS RICHARDSON, of 20, New Bridge Street, Newcastle-on-Tyne, has given the like notice in respect of the invention of "Improvements in the manufacture of manure."

As set forth in his petition, recorded in the said office on the 21st day of January, 1859.

201. And David Moseley, of the Chapel Field Works, Ardwick, in the city of Manchester, Manufacturer of India-rubber and Gutta-percha, has given the like notice in respect of the invention of "Improvements in the manufacture of india-rubber thread."

As set forth in his petition, recorded in the said office on the 22nd day of January, 1859.

217. And Arthur Warner, of 31, Threadneedle Street, in the city of London, and William Tooth, of Sumner Street, Southwark, in the county of Surrey, have given the like notice in respect of the invention of "Improvements in the manufacture of iron and gases for such and other uses."

As set forth in their petition, recorded in the said office on the 24th day of January, 1859.

251. And Edward Thomas Hughes, of the firm of Hughes and Son, Patent Agents, 123, Chancery Lane, London, W.C., has given the like notice in respect of the invention of "Improvements in the manufacture of biscuits·"—A communication from Messrs. Pascal and Sirben, residing at Toulouse, département de la Haute Garonne, in the empire of France.

As set forth in his petition, recorded in the said office on the 27th day of January, 1859.

262. And Henry Watson, of High Bridge Works, Newcastle-upon-Tyne, has given the like notice in respect of the invention of "Improvements in the manufacture of knotter plates used in the manufacture of paper."

As set forth in his petition, recorded in the said office on the 28th day of January, 1859.

265. And Josiah Lane, of West Bromwich, in the county of Stafford, Machinist, has given the like notice in respect of the invention of "New or improved machinery for the manufacture of screws and for tapping nuts for screws."

269. And Henry Grissell, of Regent's Canal Iron Works, Eagle Wharf Road, in the county of Middlesex, Engineer, has given the like notice in respect of the invention of "Improvements in machinery for moving ships and vessels on slips or inclined ways."

As set forth in their respective petitions, both recorded in the said office on the 29th day of January, 1859.

367. And John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in fire arms."—A communication from William H. Bell, residing at the city and county of Washington, in the district of Columbia.

As set forth in his petition, recorded in the said office on the 9th day of February, 1859.

432. And Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "An improvement in the construction of brushes."—A communication from abroad by Ira W. Shaler, of United States of America.

As set forth in his petition, recorded in the said office on the 16th day of February, 1859.

757. And John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in fire-arms."—A communication from abroad, by Francis H. Bell, of the city and county of Washington, in the district of Columbia, in the United States of America.

As set forth in his petition, recorded in the said office on the 25th day of March, 1859.

845. And David Blair White, of Newcastle-on-Tyne, M.D., has given the like notice in respect of the invention of "Improvements in arranging ships and other pumps."

As set forth in his petition, recorded in the said office on the 4th day of April, 1859.

901. And James Anderson, of Liverpool, Lancashire, has given the like notice in respect of the invention of "Improvements in the construction of the furnaces of bakers' ovens for the purpose of consuming smoke, which improvements are also applicable to the consumption of smoke in other furnaces."

As set forth in his petition, recorded in the said office on the 11th day of April, 1859.

970. And George Porter, of the city of London, Smith and Gas Fitter, has given the like notice in respect of the invention of "Improvements in valves or cocks."

As set forth in his petition, recorded in the said office on the 18th day of April, 1859.

996. And Henry Rawson, of Leicester, has given the like notice in respect of the invention of "Improvements in machinery for combing wool and other fibres."

As set forth in his petition, recorded in the said office on the 20th day of April, 1859.

1003. And John Alison, of Hainault Forest, in the county of Essex, Gentleman, has given the like notice in respect of the invention of "An improved instrument for extirpating thistles, docks, and other deep rooted weeds."

As set forth in his petition, recorded in the said office on the 21st day of April, 1859.

1016. And John Armstrong, of Sunderland, in the county of Durham, Timber Merchant, has given the like notice in respect of the invention of "Improvements in drying and preserving timber."

1018. And John Angus, of Glasgow, in the county of Lanark, North Britain, Saddlers' Ironmonger, has given the like notice in respect of the invention of "Improvements in saddles."

As set forth in their respective petitions, both recorded in the said office on the 23rd day of April, 1859.

1040. And William Warne, John Americus Fanshawe, James Archibald Jaques, and Thomas Galpin, all of Tottenham, in the county of Middlesex, India Rubber Manufacturers, have given the like notice in respect of the invention of "Improved compounds applicable for packing the joints of steam or other pipes, which

compounds are also applicable for packing or lining parts of machinery in general, or parts of ships, bridges, tanks, or railways."

As set forth in their petition, recorded in the said office on the 25th day of April, 1859.

1042. And THOMAS HOLT, of Lower Place, in the parish of Rochdale and county of Lancaster, Engineer, and JOHN BROWN, of Oxford Street, Wellfield, in the same parish and county, Agent, have given the like notice in respect of the invention of "Improvements in apparatus, or an improved apparatus, for heating water for the supply of steam-boilers, which improvements or apparatus are also applicable in some cases for the prevention of incrustation in steam boilers."

As set forth in their petition, recorded in the said office on the 26th day of April, 1859.

1058. And ROBERT JAMES LAING, of the Independent Gas Works, Haggerstone, in the county of Middlesex, Engineer, has given the like notice in respect of the invention of "Improvements in wet gas meters."

As set forth in his petition, recorded in the said office on the 27th day of April, 1859.

1074. And ARTHUR BOYLE, of Birmingham, in the county of Warwick, Tool Maker, has given the like notice in respect of the invention of "Improvements in the manufacture of certain parts of umbrellas and parasols."

As set forth in his petition, recorded in the said office on the 28th day of April, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

14th May, 1859.

2564. WILLIAM GEORGE ARMSTRONG, of the borough and county of Newcastle-upon-Tyne, Civil Engineer, for an invention of "Improvements in the manufacture of ordnance."—Dated 15th November, 1858.

2583. CHARLES FRÉDERIC VASSEROT, of 45, Essex Street, Strand, London, Patent Agent, for an invention of "A flat clothes smoothing iron with moveable handles."—A communication from Francisque Rousserie, residing at Marseilles, in the empire of France.—Dated 17th November, 1858.

2584. JOSEPH HENRY TUCK, of Great George Street, Westminster, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in the mode of laying and securing telegraphic cables, and in apparatus for the same, and for carrying on other operations under water."—Dated 17th November, 1858.

2586. EDWARD WELCH, of 63, St. John's Square, Clerkenwell, Tobacco Manufacturer, for an invention of "Improvements in the manufacture of tobacco, and in apparatus therefor."—Dated 17th November, 1858.

2589. EDMUND MELLOR, of Rochdale, in the county of Lancaster, Engineer, for an invention of "Improvements in mules and other machinery for spinning cotton and other fibrous substances, whereby the cop will be built much firmer, and prevent snarles in the yarn."—Dated 17th November, 1858.

2591. JOHN BRENNAND, of Manchester, in the county of Lancaster, Calico Printer, for an invention of "An improvement in ploughs, and in other agricultural implements, and in the method of driving the same."—Dated 17th November, 1858.

2592. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for an invention of "Improvements in apparatus for the manufacture of lace and net."—A communication from Messieurs A. Grivel, junr., and I. F. V. Mouilleron, both residing in Paris.—Dated 17th November, 1858.

2598. SAMUEL RILEY, of Oldham, in the county of Lancaster, Stamp Distributor and Agent, for an invention of "Improvements in the manufacture of hats, bonnets, and caps."—Dated 18th November, 1858.

2601. Sir CHARLES TILSTON BRIGHT, of Harrow Weald, in the county of Middlesex, for an invention of "Improvements in insulators, and an improved mode of connecting insulators to posts and other supports."—Dated 18th November, 1858.

2603. HENRY STOTT, of Greetland, near Halifax, in the county of York, Cotton Warp Manufacturer, for an invention of "Improvements in warping mills, or apparatus connected therewith."—Dated 18th November, 1858.

2608. ELISHA THOMAS ARCHER, of Bridgefield House, Wandsworth, in the county of Surrey, Paper Manufacturer, for an invention of "Improvements in hat ventilators, and for appliances connected therewith."—Dated 18th November, 1858.

2612. WILLIAM STEPHENS HAYWARD, of Wittenham House, Abingdon, in the county of Berkshire, Gentleman, for an invention of "Improvements in the manufacture of a glutinous and viscous substance or dextrine, to be used in the manufacture of paper, and in dressing textile fabrics, by which greater tenaciousness, smoothness of surface, and body is obtained."—Dated 19th November, 1858.

2616. WALTER HANCOCK, of Upper Chadwell Street, in the county of Middlesex, Gentleman, for an invention of "Improvements in the manufacture of electric telegraph wires and cables."—Dated 19th November, 1858.

2618. HENRY HENSON HENSON, of 38, Parliament Street, in the city of Westminster, for an invention of "Improvements in waterproofing fabrics or materials."—Dated 19th November, 1858.

2619. William Ramscar and John Gray Scott, of the city of Manchester, in the county of Lancaster, for an invention of "Improvements in fire-arms."—Dated 19th November, 1858.

2620. Edmund Alfred Pontifex, of the firm of Pontifex and Wood, of Shoe Lane, in the city of London, Engineers and Coppersmiths, for an invention of "Improvements in external surface condensers."—Dated 19th November, 1858.

2621. Henry Bailey, of 35, Golden Square, in the county of Middlesex, Warehouseman, for an invention of "Improvements in heating razors."—Dated 19th November, 1858.

2622. William Clark, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for an invention of "Improvements in purifying natural phosphates of lime."—A communication from Emile Constant Martin, residing at Paris, in the empire of France, formerly Banker. —Dated 19th November, 1858.

2627. Arthur James Thorman, of 8, Lime Street, in the city of London, Ship Agent, for an invention of "Improvements in chain cables and chains."—Dated 19th November, 1858.

2654. Walter Ralston, of the city of Manchester, in the county of Lancaster, Engraver to Calico Printers, for an invention of "Improvements in embossing and finishing woven fabrics, and in the machinery or apparatus employed therein." — Dated 23rd November, 1858.

2655. William Henry Dawes, of Bromford Iron Works, West Bromwich, in the county of Stafford, Iron Master, for an invention of "An improvement in forge hammers, and in the anvils used with forge hammers and squeezers."—Dated 23rd November, 1858.

2730. August Emil Clemens Scheidel, of the firm of Gouda, Scheidel, and Company, of Frankfort on the Main, in Germany, and Watling Street, in the city of London, Manufacturers, for an invention of "Improvements in fastenings for belts, braces, garters, books, porte-monnaies, portfolios, pocketbooks; invoice, writing, and cigar cases, reticules, bags, and other similar articles or purposes."—A communication from P. F. Gouda, a Foreigner residing abroad.—Dated 30th November, 1858.

2764. George Edward Noone, of No. 28, Hodson St., Francis St., Newington Butts, in the county of Surry, Engineer, for an invention of "Certain improvements in machinery for generating gas from coal."—Dated 3rd December, 1858.

2773. Lawrence Wood Fletcher, of Bleaklow, near Bury, in the county of Lancaster, Spinner and Manufacturer, for an invention of "Improvements in the construction of electric telegraph cables."—Dated 4th December, 1858.

2944. Edward Fellows, of Canterbury, in the county of Kent, Clerk, for an invention of "An improved vent peg." — Dated 24th December, 1858.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 14th May, 1859, inclusive.*)

12th May.

1175. Richard Knight, of Foster Lane, in the city of London, for an invention of "Improvements in apparatus for aërating liquids."—Dated 17th May, 1856.

13th May.

1138. Uriah Scott, of Camden Town, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in public carriages and various parts of the same, which parts may be used separately and applied to vehicles of any description."—Dated 14th May, 1856.

1150. James Leck, of Glasgow, in the county of Lanark, North Britain, Bleacher, and Alexander Miller, of the same place, Singer, for an invention of "Improvements in singeing textile fabrics." —Dated 15th May, 1856.

1152. Hugh Greaves, of New Palace Yard, in the city of Westminster, Civil Engineer, for an invention of "Improvements in the permanent way of railways."—Dated 15th May, 1856.

14th May.

1251. William Hulse, of Birmingham, in the county of Warwick, Smith, for an invention of "An improvement or improvements in metallic and other bedsteads, which improvement or improvements may be applied to other articles of furniture and to framework generally."—Dated 26th May, 1856.

Note.—The duration of a Patent is fifteen years, except where determined by that of a previously existing foreign Patent.*

1783. Joseph Mitchell, represented by Gough, of 238, Rue de Rivoli, Paris, for "Improvements

* For the French Patent Law see No. 228 of this Journal.

in the manufacture of thread of wool and other filamentous substances."—Dated 15th April, 1859. —(English Patent, expiring 8th October, 1872.)

1784. Julien Bouquet Combe, of 23, Rue du Champ de Mars, Paris, for "Improvements in horse-shoes."—Dated 15th April, 1859.

1785. Appolin Nicolas Joseph Marnat, domiciled with Touaillon, of 8, Rue Coquillière, Paris, a Certificate of Addition to his Patent of 20th April, 1858, for "An apparatus for washing and drying corn."—Dated 15th April, 1859.

1786. Frederick Lows, represented by Sautter, of 14, Boulevart Montmartre, Paris, for "Improvements in disinfecting processes." — Dated 15th April, 1859.

1787. Bernard Aycard, represented by Castelbon, of 15, Passage des Petites-Écuries, Paris, a Certificate of Addition to his Patent of 17th March, 1858, for "An improved plough."—Dated 15th April, 1859.

1788. Augustin Jacques Rouault, of 325, Rue St. Martin, Paris, for "Improvements in trusses." —Dated 15th April, 1859.

1789. Albert François Delaunoy, of 13, Boulevart d'Arceuil, Montrouge, a Certificate of Addition to his Patent of 8th February, 1858, for "A continuous mode of lubricating fixed axles of wheels."—Dated 15th April, 1859.

1790. Achille Julien Boutolle, of 16, Rue du Faubourg St. Martin, Paris, for "A system of boxes."—Dated 15th April, 1859.

1791. Alexandre Balan, represented by Brandon, of 7, Rue des Moulins, Paris, a Certificate of Addition to his Patent of 10th March, 1858, for "An aerial railroad."—Dated 15th April, 1859.

1792. Antoine and Pour, represented by Brandon, of 7, Rue des Moulins, Paris, for "Improvements in mouth-pieces of wind instruments." — Dated 15th April, 1859.

1793. Joseph Louis Marcelin Sabatier, with Corin, of 4, Rue du Roi de Sicilé, Paris, for "Manufacture of an alimentary substance." — Dated 15th April, 1859.

1794. Jean François Durenne, of 11, Rue des Amandiers Popincourt, Paris, for "Cutting out axle guards and other articles of iron and sheet iron."—Dated 15th April, 1859.

1795. Meynier and Le Bleu, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "Improvements in fixed and moveable steam generators."—Dated 15th April, 1859.

1796. Guillaume Sauvage, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A kind of elastic carpet."—Dated 15th April, 1859.

1797. Pierre Hippolyte Gustave Bérard, of 323, Rue St. Denis, Paris, for "Rendering skins, and leather impervious."—Dated 16th April, 1859.

1798. Jean Charles Meunier, of 56, Rue Lafayette, Paris, a Certificate of Addition to his Patent of 19th April, 1858, for "A system of propulsion applicable to vessels with a variable line of floating."—Dated 16th April, 1859.

1799. François Herbepin, of 52, Boulevart de Strasbourg, Paris, for "Improvements in the manufacture of cocks for water and other pipes." —Dated 16th April, 1859.

1800. Jean François Margué, of 28, Rue des Moinceaux, Paris, for "A kind of half-boots, called 'gaiter half-boots.' "—Dated 16th April, 1859.

1801. Louis Jules Damote, represented by Dreyfous, of 54, Rue de Bondy, Paris, for "A machine for cutting the edges and fore edges of books."— Dated 16th April, 1859.

1802. Alexandre Louis Joseph d'Adhemar, with Delaire, of 6, Rue Blanche, Paris, for "Preserving, fire-proofing, and colouring wood."— Dated 16th April, 1859.

1803. Mrs. Francfort and Hesse, the former of 19, Rue de Cléry, the latter of 243, Rue St. Denis, Paris, for "Clasps for fastening."—Dated 16th April, 1859.

1804. Jean Victor Gallien, of 13, Grande Rue St. Mandé, Paris, for "A machine for the manufacture of type."—Dated 16th April, 1859.

1805. Robert Romaine, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in the construction and working of agricultural steam engines, and other locomotive engines."— Dated 16th April, 1859.—(English Patent, 25th September, 1872.)

1806. John Kent, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "An improved machine for making knittings or looped fabrics."— Dated 16th April, 1859.

1807. Antoine Charles Coulmont, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in the manufacture of finished and ornamental onyx."—Dated 16th April, 1859.

1808. Mazeline and Co., represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 9th November, 1857, for "A peculiar system of steam dredging machines." —Dated 16th April, 1859.

1809. Claude Paulvé, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in crushing-mills."—Dated 16th April, 1859.

1810. Louis Lambert Auguste Aubenas, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Vegetable tooth powder."—Dated 16th April, 1859.

1811. Louis François Clément Breguet, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to his Patent of 31st October, 1857, for "Improvements in electric clocks, &c."—Dated 16th April, 1859.

1812. Edmond Corne, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 9th November, 1858, for "Inodorous manure of cesspools."— Dated 16th April, 1859.

1813. Potalier and Leclercq, of 7, Rue de Vendôme, Paris, for "A kind of nosegay holder."— Dated 16th April, 1859.

1814. Louis Alexandre Charles Bertrand, of 35, Rue Ste. Croix de la Bretonnerie, Paris, for "Improvements in gold jewellery."—Dated 18th April, 1859.

1815. Edouard Guérin, represented by Daubréville, of 60, Boulevart de Strasbourg, Paris, a

Certificate of Addition to his Patent of 30th April, 1856, for "A self-acting apparatus for working railway breaks."—Dated 18th April, 1859.

1816. Eugène Gonou, of 109, Rue du Cherche Midi, Paris, for "An hydraulic clock, called 'gonometer.'"—Dated 18th April, 1859.

1817. Dennery and Bigot, the former of 25, Rue Corbeau, the latter of 16, Rue Folie Méricourt, for "Gilding and painting marble."—Dated 18th April, 1859.

1818. Louis Auger, represented by Barrault, of 33, Rue St. Martin, Paris, a Certificate of Addition to his Patent of 1st April, 1859, for "Improvements in tobacco pouches, &c."—Dated 18th April, 1859.

1819. Auguste Pellet, represented by Barrault, of 33, Rue St. Martin, Paris, a Certificate of Addition to his Patent of 18th February, 1858, for "Improvements in illustrating American leather, cloth, &c."—Dated 18th April, 1859.

1820. Pierre Aléxandre Cauzard, of 18, Rue de Beaume, Paris, for "A threefold bijou-seal."—Dated 18th April, 1859.

1821. Jean Marie Ciroux, represented by Fringant, of 10, Rue de Provence, Paris, for "A kind of glass shade applicable to lamps, gas-burners, light-houses, and railway-signals."—Dated 18th April, 1859.

1822. André Félix Vanhulst, represented by Fringant, of 10, Rue de Provence, Paris, for "A mechanical malt-kiln."—Dated 18th April, 1859.

1823. Félix Alexis Fulgence Leclerc, of 90, Rue du Faubourg du Temple, Paris, for "Chemical processes applicable to black, gilt, and other copper."—Dated 18th April, 1859.

1824. Auguste Blanche, of Puteaux, a Certificate of Addition to his Patent of 20th April, 1858, for "An apparatus for facilitating and accelerating hand impressions on designs on fabrics and paper."—Dated 18th April, 1859.

1825. Joseph Straub, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A double-action kneading machine."—Dated 18th April, 1859.

1826. Meynier and Le Bleu, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "An apparatus for washing all kinds of coal."—Dated 18th April, 1859.

1827. Antoine Vidal, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A washing apparatus."—Dated 18th April, 1859.

1828. Zéphérin Gaspard Alexandre Natan Pétrone Orioli, of 3, Rue du Pont-de-Lodi, Paris, for "A re-agent for bleaching, dyeing, disinfecting, and preserving organic substances."—Dated 18th April, 1859.

1829. Alexandre Ernest Crosnier, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "An apparatus for lighting matches."—Dated 18th April, 1859.

1830. Joseph Sharp Bailey, represented by Gardissal, of 29, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 20th July, 1858, for "Improvements in machines for combing wool, &c."—Dated 18th April, 1859.

1831. Jean Louis Pottet, of 3, Rue du Luxembourg, Paris, a Certificate of Addition to his Patent of 26th February, 1855, for "Improvements in fire-arms."—Dated 29th April, 1859.

1832. Carmien and Masson, of 28, Rue du Chateau d'Eau, Paris, for "Improvements in carriage axles."—Dated 19th April, 1859.

1833. Auguste Planger, domiciled with Onfroy, of 73, Boulevart d'Italie, for "A mode of finishing canvass for mattresses."—Dated 19th April, 1859.

1834. Marie Louise Party, of 61, Rue de Rivoli, Paris, for "Imitation of gold and silver embroideries, with various applications."—Dated 19th April, 1859.

1835. Eugène Brisset, of 13, Rue des Martyrs, Paris, for "Arrangements in frames for printing chromo-lithographs."—Dated 19th April, 1859.

1836. Jean Baptiste Turrel, of 110, Rue Montmartre, Paris, a Certificate of Addition to his Patent, of 11th December, 1856, for "An apparatus, called 'frame for raising blonds and other tissues.'"—Dated 19th April, 1859.

1837. William Barber Buddicorm, represented by Sautter, of 14, Boulevart Montmartre, Paris, for "Improvements in the means of obtaining a steady water-gauge in steam-boilers, being also applicable to other purposes."—Dated 19th April, 1859.—(English Patent, expiring 8th October, 1872.)

1838. Billard and Junior, of 8, Rue Cassette, Paris, for "Improvements in the manufacture of mineral teeth."—Dated 19th April, 1859.

1839. Joseph Binaepfel, represented by Brade, of 22, Rue Ste. Anne, Paris, for "A frame, with compartments for printing fabrics, paper hangings, &c."—Dated 19th April, 1859.

1840. Ira Dimock, represented by Gard, for "A machine for separating silk and other thread according to its size."—Dated 19th April, 1859.

1841. Sébastien Marchal, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in bezels for precious stones, and in their manufacture."—Dated 19th April, 1859.

1842. Alphonse Caron, of 20, Passage de l'Opéra, Paris, for "A system of fire-arms."—Dated 19th April, 1859.

1843. Bernard Bienfait, of 1, Rue Bourbon Villeneuve, Paris, a Certificate of Addition to his Patent of 1st December, 1858, for "A kind of legs of boots and half-boots."—Dated 19th April, 1859.

1844. Amédée Charles Herbet, of 8, Rue Ste Foix, Paris, for "Improved means and processes for goffering paper, pasteboard, and tissues, one side of which has been rendered waterproof."—Dated 20th April, 1859.

1845. François Charles Mongin, of 11, Rue des Juifs, Paris, for "A machine for grinding, rounding, and smoothing immediately all kinds of metal blades."—Dated 20th April, 1859.

1846. Bébiard and Constant, the former of 30, Rue des Fossés St. Bernard, the latter of 81, Rue de Charenton, Paris, for "A railway break."—Dated 20th April, 1859.

1847. François Cauchin, represented by Hallet, of 20, Rue des Amandiers Popincourt, Paris, for "Mounting fecula rasps, together with an apparatus for removing stones."—Dated 20th April, 1859.

1848. François Gouzé, of Blois, département de Loir et Cher, for "A specific for destroying eggs of bugs, and those insects themselves."—Dated 19th April, 1859.

1849. Joseph Antoine Dalmas, of 44, Rue Haute Rotonde, Marseille, département des Bouches du Rhône, a Certificate of Addition to his Patent of 20th April, 1858, for "Inodorous basins for closets."—Dated 19th April, 1859.

1850. Paul Minvielle, of 69, Boulevart National, Marseille, département des Bouches du Rhône, a Certificate of Addition to his Patent of 20th January, 1858, for "A steam burning apparatus for utilizing the whole or part of the steam of engines as fuel."—Dated 19th April, 1859.

1851. Félix Bernard, of Bourges, département du Cher, for "A screw jack without rack."—Dated 19th April, 1859.

1852. François Chambre, of Dournazac, département de la Haute Vienne, for "A harvesting machine."—Dated 19th April, 1859.

1853. Chelot-Lehugeur, of Condé sur Moireau, département du Calvados, a Certificate of Addition to his Patent of 4th May, 1858, for "A means of working reels."—Dated 22nd April, 1859.

1854. Charles Constant Noufflard, of Louviers, département de l'Eure, for "A machine for preparing the waste of cloth."—Dated 22nd April, 1859.

1855. Jacques Benet, of Carcassonne, département de l'Aude, for "A system of steam distribution."—Dated 22nd April, 1859.

1856. Joseph Beugniet, with Lormier, of Darnetal, département de la Seine Inférieure, a Certificate of Addition to his Patent of 8th July, 1858, for "Adding a spindle to the pincers of the cheeks of wool cards."—Dated 16th April, 1859.

1857. Théophile Grison, of Déville-les-Rouen, département de la Seine Inférieure, for "Manufacture of orchil carmine."—Dated 16th April, 1859.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

List of Patents, with Claims annexed, issued from the United States Patent Office, for the week ending 26th April, 1859, and each bearing that date.

No. 23,748. R. W. Belson, of Philadelphia, Pa., for an "Improvement in stoves."

"Claim.—What I claim as my improvement in gas-consuming cooking stoves is, the semicircular heater *a* turning upon the hollow axis *b* near to one side of the heater, arranged and combined with the stove in the manner set forth. I claim combining said heater by means of collar e^1 with the air chamber in rear of the fire back, as set forth."

No. 23,749. R. W. Belson, of Philadelphia, Pa., for an "Improvement in stoves."

"Claim.—What I claim as my improvement in gas-consuming cooking stoves is, the arrangement of the air heater *a*, sliding over the oven top and connected with the air passage *b*, in the manner and for the purposes set forth. I claim making the damper *t* and its shaft hollow, in the manner and for the purposes set forth."

No. 23,750. A. S. Blake, of Waterbury, Conn., for an "Improvement in animal traps."

"Having described my invention, I claim and desire to secure by Letters Patent as an improved article of manufacture, a trap, having its spring D attached below the jaws (*c*, *c*,) and the spring brought within or nearly within the diameter of the jaws, as and for the purpose herein shown and described."

No. 23,751. Albert D. Briggs, of Springfield, Mass., for an "Improved screw wrench."

"I make no claim to a nut and screw applied to the movable jaw and main bar of a wrench, and for the purpose of operating or moving the said jaw relatively to the stationary jaw; nor do I claim the invention or improvement which constitutes the subject of the said Patent of the said Merrick; nor do I claim the mode of operating the movable jaw, as shown in the Patent of D. H. Chamberlain, dated March 20, 1849, wherein the tubular handle has a screw formed within it, and rotates on the shank without having any longitudinal motion thereof, and furthermore, such rotary handle is not a separate and distinct thing with reference to the handle G, as herein-before described, as appertaining to my improved wrench. There are important differences between my improvement and the other inventions, as herein-before cited. What, therefore, I claim is, the application of the sleeve G to the nut F and the handle D, so as not only to be capable of turning with and rotating the nut but of moving longitudinally on the handle and with the nut, in accordance with the movement of the movable jaw E on the shank A."

No. 23,752. Geo. A. Brigham, of Marlborough, Mass., for an "Improvement in dishes for waxing thread."

"What I claim as new, and desire to secure by Letters Patent, is, the combination of the guard I, the dripper G, and the guides B, with the two wires D and D^1, to be placed in the dish to hold the thread, in the manner and for the purposes as set forth and described."

No. 23,753. John S. Brown and A. C. Greenleaf, of Indianapolis, Ind., for an "Improvement in sugar mills."

"What we claim, and desire to secure by Letters Patent, the combination and arrangement of the rods K, K, N, N, levers L, L, and bearings J, J, with the set screws O, O, when constructed and operated as and for the purposes set forth."

No. 23,754. Wm. W. Burgoyne, of Washington, D.C., for an "Improvement in steam engines."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the employment of the following elements in combination for the accomplishment of the within-described object, to wit; a water jacket D, D^1, open to the atmosphere, enclosing the fire chamber, piston chamber, and smoke stack, a steam evaporating plate B, forming the crown plate of the fire box, a supply pump H, for jetting in the water upon the evaporating plate, and a piston F, which is hung or arranged so as to reciprocate in the path of a circle or in a straight line, when operated upon by the evaporating steam, and in its movement operate the driving shaft of an engine, substantially as and for the purposes set forth. 2nd, the manner herein described of making steam between an intensely heated plate, piston, & the isolated or comparatively cool sides of the piston chamber, substantially as and for the purposes set forth."

No. 23,755. James L. Cathcart, of Georgetown, D.C., for "Improved marine governors for steam engines."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, regulating the supply of steam to marine steam engines, by means of a pendulum, arranged and operated in the manner substan-

tially as herein described, and for the purposes set forth."

No. 23,756. GEO. CHAMBERLIN and W. CHAMBERLIN, of Olean, N. Y., for an "Improvement in harvesting machines."

"Having thus fully described our machine, what we claim as our invention, and desire to secure by Letters Patent, is, the combination and arrangement of the gathering fingers I and knives H, with the reel L, arms M, receiver M^1, and dischargers N, when the several parts are constructed and operated as herein-before specified."

No. 23,757. DAVID CUMMING, of Sorrel Horse, Pa., for an "Improvement in devices for starting railroad cars."

"I do not claim the use of ratchet wheels or pawls; but having described the construction of my improved device, what I claim then as new, and desire to secure by Letters Patent, is, firstly, in combination with the ratchet wheels D, the ratchet bars E, arranged and operating as described, for the purpose set forth. 2nd, so arranging the ratchet bars E, with the sliding frame, to which the power is applied, as that said bars will be capable of slight play, up and down, when in clutch with their wheels, and will run entirely out of contact with said wheels, without the aid of other mechanism, as herein-before described for the purposes set forth."

No. 23,758. M. O. DAVIDSON, of New York, N. Y., for an "Improvement in mode of connecting and supporting railroad rails."

"What I claim, and desire to secure by Letters Patent, is, the use of a rail, having its lower web cut away for about 15 inches at the ends, in combination with the use of a bridge rail splice of a form suitable to receive and support securely the stem of the rail, after its lower web has been cut away, and of a length of about 30 inches, or of the distance from centre to centre of crop ties at the ends of the rails, substantially in the manner and for the purpose herein set forth."

No. 23,759. THOS. F. DE BRULER, of Rockport, Ind., for an "Improvement in cotton press."

"Having described the nature, construction, and operation of my improvements, and desiring to have the same secured by Letters Patent of the United States, what I claim is, the construction and arrangement of the eccentrically operated gear racks h, h, h, h^2, h^2, h^2, with the connecting rod or yoke X, X, Y, Y, Figs. 1 and 2, as described. I also claim the combination of the said devices with the plunger or follower n, n, n, substantially as set forth and described. I also claim the arrangement and combination of the traversing pinion P^2, with the sliding carriage q, q, r, r, S, S, and driving lever or arms W, W, W, W, substantially set forth and described."

No. 23,760. HENRY DUBOSQ, of Philadelphia, Pa., for an "Improved mode of connecting strung pear jewelry.

"Having thus described my improvement in strung pearl jewelry, what I claim therein as new, and desire to secure by Letters Patent, is, connecting the mother-of-pearl or plates of other material used to form the foundation on which the pearls are strung, substantially as described, for the purpose as set forth."

No. 23,761. SELAH DUSTIN, of Detroit, Mich., for "Low-water alarm for steam boilers."

"Having thus fully described the nature and object of my invention, and in what particulars it differs from other contrivances for a similar purpose, what I claim therein as new, and desire to secure by Letters Patent, is, in combination with a steam cylinder located inside of a steam boiler, and having two openings in it, a float and rod carrying or operating two valves, in equilibrio, and having no packed joints, substantially as described, by which means I avoid all undue pressure and friction, and render the float more sensitive to any variation of the height of the water of the water in the boiler, and thus obtain a more reliable indication or signal than by any of the heretofore essayed plans, as set forth."

No. 23,762. WILLARD C. ELLIS, of Springfield, Mass., for an "Improvement in breech-loading fire-arm."

"What I claim therefore, and desire to secure by Letters Patent, is, the cere E, having the double action of firing the pistol and unlocking the hook F; the lever P, in this or any other form, substantially the same, in combination with the lugs on the hammer, as shown in the drawings, or with lugs on the sides of the pistol frame; the cocking of the pistol by the act of breaking down the barrel, in the manner substantially as described."

No. 23,763. BENAIAH FITTS, of Worcester, Mass., for an "Improved method of adjusting the knives of rotary-cutter heads for planing wood."

"What I claim as new, and desire to secure by Letters Patent, is, placing the bolt F, F, Figure 2, or its equivalent, under the knife, to operate or adjust the knives, as set forth and described."

No. 23,764. TRUMAN FREEMAN, jr., of Providence, R. I., for an "Improvement in rotary pumps."

"I do not claim the cylindrical case, the drum moving on the axle, the fixed abutment, the flaps or pistons hinged to the rim of the drum and passing under the abutment, nor the raising of water by a rotary pump. What I claim and desire to secure by Letters Patent, is, the combination of the pistons H with the dogs Q, constructed as described, and arranged for conjoint operation with the cam I and pin K, substantially in the manner specified."

No. 23,765. LOCKWOOD GAIL and JOHN H. GAIL, of West Falls, N. Y., for an "Improved washing machine."

"What we claim as our invention, and desire to secure by Letters Patent, is, the arrangement of the vertical post F and lever E, with the rubber, the whole being constructed, arranged, and operated in the manner substantially as herein described."

No. 23,766. PERRY G. GARDINER, of New York, for an "Improvement in springs for R. R. cars and carriages."

"What I claim as my invention in the foregoing is, the construction of a spring, by confining the ends of the exterior blades in bearings in the ends or heads of a tension bar, without rivets, bolts, hinges, pins, or screws, arranged and operating in the manner and for the purposes described."

No. 23,767. J. W. GOODELL, of East Wallingford, Vt., for an "Improvement in steam-spading machines."

"I am aware that spades have been attached to rotating wheels or cylinders for the purpose of spading or turning the earth, and I do not claim separately such device; but I do claim as new, and desire to secure by Letters Patent, 1st, the wheels H provided with the spades I, in connection with the clearers J, and the rotating plates h, arranged for joint operation, substantially as and for the purpose set forth. 2nd, the attaching of the frame A, which contains the wheels H, to a traction engine by means of a universal joint B, in connection with the gearing E, D, and shaft C, substantially as shown, whereby the frame and the wheels H are allowed to conform to the inequalities of the ground, and the working parts driven direct from the engine."

No. 23,768. EDOUARD GUERIN, of Paris, France, for an "Improvement in self-acting apparatus for working railways brakes."

"Having thus described my invention, I declare that what I claim is the forked piece D, vertical lever L, provided with balance weight P, rod T, and collar M, when arranged substantially as and for the purpose set forth. I reserve to myself the right of varying or changing the forms, dimensions, proportions, of accessories and matters employed."

No. 23,769. STEPHEN R. HUNTER, of Cortlandt, N. Y., for an "Improvement in seeding machines."

"I am aware that rotary harrows have been previously devised and arranged in various ways, and that inclined or oblique teeth k, have been used, I therefore do not claim, irrespective of construction and adaptation, a rotary harrow; but I do claim as new, and desire to secure by Letters Patent, the seed-distributing cylinder K, with adjustable shell L, in combination with two or more seed boxes I, J, and rotary harrow H, substantially as and for the purpose set forth."

No. 23,770. DAVID KNOWLTON, of Camden, Me., for an "Improved steering wheel."

"What I claim as my improvement in the above described hand wheel for steering ships and other purposes, is the

metal rim or circle provided with sockets for the wooden arms or spokes of the wheel, substantially as described."

No. 23,771. WILLIAM E. LOCKWOOD, of Philadelphia, Pa., for an "Improvement in ladies' collar and cuffs."

"I claim, and desire to secure Letters Patent, as a new article of manufacture, embossed cuffs, collars, and other articles of wearing apparel made of a fabric composed of paper and thin muslin, or its equivalent pasted together, as set forth."

No. 23,772. NATHAN B. MARSH, of Cincinnati, O., for an "Improved water meter."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the combination of the two side or end measuring chambers A, A^1, B, B^1, middle piece or stationary cylinders C, C^1, independent reciprocation interior cylinders F, F^1, having septurns g, g^1, adjusting rods E, E^1, and valve box with its valves and passages, the former actuated by the reciprocating interior cylinders essentially as set forth, and the latter forming inlet and outlet communications with and from the measuring chambers, all for operation together substantially as specified. 2nd, supporting the reciprocating interior cylinders F, F^1, on projections formed by the extension inwards of the end flanges b, b, of the stationary cylinders C, C^1, and packing said reciprocating cylinders by the gaskets f, f, which make tight the joints of the stationary cylinders with the measuring chambers; said gaskets being cupped or bent internally as shown and described."

No. 23,773. THOS. J. MAYALL, of Roxbury, Mass., for an "Improvement in treatment of vulcanized rubber."

"Having thus described my improvements I shall state my claim as follows:—I do not claim the use of olive oil, in the compositions of what is commonly called hard rubber, as the oil in that composition is used for a different purpose and has different effects from that which it has in soft or flexible compositions, and is the subject of separate Letters Patent issued to me already, nor do I claim its use in compositions of which emery forms part, as that is a distinct subject, and requires a different treatment and is a distinct invention of my own. I have also invented a peculiar composition for forming gas tubing, in which I use olive oil, and I do not claim that use in this specification; but what I do claim and desire to secure by Letters Patent, is, the use of olive oil, in compositions of gutta percha and india rubber, substantially in the manner and for the purposes above described."

No. 23,774. RICHD. MONTGOMERY, of New York, N.Y., for an "Improved machine for corrugating sheet metal."

"I claim the combination of the bevel wheel h, and bevel pinions i, i, with the sleve n, projections k^1, k, m^1, m, and fork p, with the corrugated rolls H, H^1, and the device for raising and lowering the corrugated roll H, constructed and arranged in the manner above described, whereby a sheet of metal once entered between the rolls can be worked back and forth and gradually and evenly corrugated at one heat and by one attendand, as above set forth."

No. 23,775. HIRAM W. MOORE, of Jersey City, N.J., for an "Improvement in mode of chilling rims for locomotive wheels."

"I claim the hollow chilled rim whose inner and outer rims are not only united at the sides or ends thereof, but also united throughout the annulus by means of braces extending from one to the other for the purpose of strengthening the tread of the wheel and prevent it from cracking or breaking in, substantially as herein described."

No. 23,776. ENOCH E. MULLINER, of New York, N. Y., for an "Improvement in reefing sails."

"I do not claim, broadly, the invention of the bonnet, as that has been applied to jibs and lug sails; but what I claim as my invention, and desire to secure by Letters Patent is, the combination of the divided sail D, E, or F, G, with reef pennants (c), roller clews (b), pulleys (d), and yard or boom C, I, as and for the purposes herein shown and described."

No. 23,777. CHAS. NEAMES, of New Orleans, La., for an "Improvement in fastening slats on sugar cane and bagasse carriers, &c."

"What I claim as new, and desire to secure by Letters Patent, is, the arrangement and combination of the two jaws H and I, hinged together at L by means of hinge pin L, as and for the purpose shown and described."

No. 23,778. SAML. NICOLSON, of Boston, Mass., for an "Improvement in rails for street railroads."

"I claim making each bearer not only with a grooved upper surface, but with a projection or lip at bottom, for the purpose of producing uniformity of strength in the section of the rail, and of entering a corresponding groove in the stringer C, and supporting the rail and its spikes or bolts against lateral strains."

No. 23,779. SPENCER THOMAS PARMALEE, of Edinburgh, Scotland, for an "Improvement in manufacture of elastic belting."

"What I claim as my invention, and desire to secure by Letters Patent, is, submitting the belting while within the heating or vulcanizing chamber to pressure between the smooth surfaces of an endless metallic band, and one of two revolving metallic cylinders round which the said band passes, substantially as herein set forth."

No. 23,780. A. W. PAYNE, of Morris, N. Y., for an "Improvement in sharpening the calks of horse-shoes."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the rotary burrs or cutters B, B^1, one or more, in connection with the bearing plate or plates C, C^1, placed within a suitable frame or stock A, and arranged substantially as and for the purpose set forth."

No. 23,781. JAMES PUNDERFORD, of New Haven, Conn., for an "Improvement in waterproof leather hose."

"Having thus described my invention, I would have it understood that I am aware that it is not new to apply india rubber to cloth, nor to cement cloth to leather by india-rubber cement, nor is it new to cover with india rubber the interior of a hose made of a woven material; therefore, I do not claim such; but what I do claim as my invention is, the new or improved manufacture of rivetted leather hose, made with a waterproof lining applied to its inner surface, and extending between the joint or lapping where the rivets are inserted, substantially as described."

No. 23,782. DAVID RAMLER, of Union Deposit, Pa., for an "Improvement in machines for raking hay."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the adjustable side bars A, A, provided with the rake heads J, J, and teeth o, in connection with the rake head or shaft B, provided with teeth p, the above parts being arranged and combined substantially as shown and used with or without the dividers b^1, to operate as and for the purpose set forth."

No. 23,783. ISAAC REAMER and HENRY MILLER, of Conrad's Store, Va., for an "Improvement in corn harvesters."

"What we claim as our invention, and desire to secure by Letters Patent, is, 1st, the combination with the vertically adjustable upper guides G, G^1, of the vertically adjustable reel D, for action together, as herein set forth. 2nd, the reel D, constructed with tangentially set tie bars or guides K, K, as described, in combination with a platform on which the stalks fall parallel with the line of travel, substantially as and for the purposes set forth. 3rd, the combination with the frame A, knife C^2, of the under adjustable frame A^1, substantially as and for the purposes set forth. 4th, the manner herein shown and specified of connecting the platform E, with the frame of the machine, for the purpose set forth. 5th, providing the platform E with a slide back extension board n, in the manner and for the purposes set forth. 6th, the arrangement with oblique or diagonal set spring blade or cutter of a fixed obliquely-set carrying wheel C, in the manner and for the purpose set forth."

No. 23,784. JOHN C. REED, of Providence, R. I., for an "Improved stove polish mixer and scraper."

"I do not claim any of the parts of the article when used separately, but I do claim, and desire to secure by Letters Patent, the combination of the receptacle A, scraper B, and mixer (C), when arranged and operated as described."

No. 23,785. JACOB RINEK, of Easton, Pa., for an "Improvement in machines for laying hemp around wire in making rope."

"I lay no claim to perforated plates for guiding the strand and maintaining them apart, nor do I claim any one or more of the above-described parts, separately and independent

of the other; but I claim, and desire to secure by Letters Patent, the revolving yoke E, with its hollow spindle *c*, and one or more rollers *h*, arranged on and turning in the yoke, as set forth, when the said yoke and its appendages are combined with and arranged in respect to the two sets of bobbins *a*, *a*, containing the strands of hemp, the perforated guide plates I and J, and tube *m*, substantially as herein set forth."

No. 23,786. Isaac A. Sergeant, of Springfield, O., for an "Improved spring-bed bottom."

"What I claim as new and desire to secure by Letters Patent, is, 1st, the arrangement of the stretcher frame C, C^1, C^{11}, and rails B and D, secured and supported as described for the purpose set forth. 2nd, the supporting legs or stays F, and racks G, in the described combination with the stretcher frame C, C^1, C^{11}, for the purpose set forth. 3rd, the described arrangement of straps *d*, and knobs *e*, for the purpose explained."

No. 23,787. George Schuh, of Madison, Ind., for a "Machine for addressing newspapers, &c."

"I am aware that there have been previous arrangements for the like purpose of type forms brought under the action of a stamp by means of a slide moving by degrees and operating in connection with a slitted plate for securing to the document the desired impression, and that a traversing bed has been used to bring all the names, numbers, or addresses in the form successively under an aperture in the tympan, and causing the matter placed under the platen to receive the desired impression. Such I do not claim; but what I do claim here is, the combination with the hopper C, which contains the documents to be addressed, of the sliding gate K, provided with a heel or step, and operating to close the hopper discharge, and at intervals to open the same in such manner as to permit of a single document being deposited from the pile in the hopper in front of said heel for after traverse with the gate, substantially as and for the purposes specified. I also claim the combination of the inclined feeding channel E^1, main type channel E, and raised discharge channel *g*. I further claim, in connection with the feed bolt E^{11}, the angle lever *x*, or its equivalent, to aid the type in its course from the feed channel to the main channel of the machine. Likewise, I claim the employment of form boxes H, for use as described, at either end of the machine. Also, the combination with the traversing type or form of a notice bell, or its equivalent, for operation by the type at intervals, as described. Likewise, the combination with the bolster L, operating essentially as described, of the springs S^4, S^4, for relieving the type from the paper, and holding it on the bolster and type shifter G. And lastly, the document discharging fly X^1, when operated by the sliding gate K, essentially as described."

No. 23,788. Patrick Sharkey, of Brownsville, Miss., for an "Improvement in cotton scrapers."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, arranging the scrapers F, G, one forward of the other on guide blocks or runners D, E, of different lengths substantially as and for the purposes set forth. 2nd, the arrangement of a sleigh-runner shaped gauge with the short scraper F, substantially as and for the purposes set forth."

No. 23,789. Thomas Shaw, of Philadelphia, Pa., for an "Improvement in sewing machines."

"I do not claim broadly a needle bar to which a vertical as well as a horizontal motion is imparted by cams or their equivalents; but I claim and desire to secure by Letters Patent, the feed bar Q, attached to and carried solely by the by the spring *s*, operated vertically by the combined action of the rods F, F, and the aforesaid spring, and horizontally by the combined action of the independently adjustable screws *i*, and the same spring *s*, and regulated by the screw R, on the stationary bracket *g*, the whole of the above parts being arranged substantially as set forth."

No. 23,790. Thos. Silver, of Philadelphia, Pa., for an "Improvement in governor for regulating the speed of steam engines."—Patented in England, 23rd May, 1857.

"Having now fully described my invention, what I claim in its arrangements as a novelty, and desire to secure by Letters Patent, is, the combination of a spring with a momentum wheel, and adjustable speed limiting vanes, the whole constructed with the combination of the peculiarly adjusted sectors, pinion, and links as fully described and set forth."

No. 23,791. Walter C. Smith, of Georgetown, D. C., for an "Improved detective register for doors of railroad cars."

"What I claim as my invention, is, the detection of the opening and closing of car doors by means of the latch or key in combination with the two index or registering wheels operated substantially as herein set forth."

No. 23,792. Joseph E. Stanwood, of Malden, Mass., for an "Improved gas pipe cutter."

"I do not claim a pipe or rod cutter having a chisel with a screw or means of forcing such chisel toward the claw or pipe rest; but what I do claim is, my improved pipe or round rod cutter as provided with a rotary cutting wheel, to operate in conjunction with the claw or pipe rest as specified. I also claim the arrangement of the cutting wheel carrier in a recess C (formed in the claw block B), in combination with the arrangement of the adjustable screws *d*, *e*, and handle rod F, with respect to the said recess and the cutter wheel carrier, the whole being as specified."

No. 23,793. Frank Steinhart, of Dansville, N. Y., for an "Improvement in spring car couplings."

"Having thus described my improvements in car couplings what I claim therein as new, and desire to secure by Letters Patent, is, first, the combination of the radial fenders, or their equivalent, arranged as described, with the jaws of the nippers, for the purpose set forth. Second, constructing the bolt head with an open back and also with a longitudinal recess in its back, for the purpose described."

No. 23,794. Enos Stevens, of Barnet, Vt., for an "Improvement in machinery for accumulating and transmitting power."

"What I claim as my improvement, and desire to secure by Letters Patent, is, the endless chain E, C, forming the pendant loops E and C, supported by the wheels M and W, in combination with the weight C, W, T, suspended from a pulley supported by the loop E, and the weight or guide pulley G, P, and cord R, the whole arranged and operated, substantially as described."

No. 23,795. Francis Stock and John Stock, of San Jose, Cal., for an "Improvement in pump boxes."

"We do not claim the valve F, nor the valve C; nor do we claim any parts connected with the lower B, as novel; but having described our invention, what we do claim as new, and desire to secure by Letters Patent, is, the arrangement of the parts *j*, *k*, *l*, of the box D, in connection with the bolts or rods *p*, *p*, and valve E, substantially as herein shown and described."

No. 23,796. Thomas Stubblefield, of Columbus, Geo., assignor to himself and Peter Naylor, of New York City, for an "Improvement in stop cocks."

"Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is, the combination of the lever D, cap I, valve stem *a*, and spring *c*, when the cap I is provided with a semicircular opening into which fits the semicircular end H of lever D, for the purpose of forming a tight joint without packing, substantially as is herein described."

No. 23,797. James A. Faylor, of Cowlesville, N. Y., for an "Improved carpet fastener."

"What I claim as new, and desire to secure by Letters Patent, as a new and improved article of manufacture, is, the hooks *a* and pins *b*, arranged and operating in combination with the carpet, as described."

No. 23,798. George C. Taft, of Worcester, Mass., for an "Improved wrench."

"Having described my improved double-acting screw and rack wrench, what I claim therein as new, and desire to secure by Letters Patent, is, the screw-threaded rosette *a*, with its hole *o*, in combination with the stationary guide rod *b*, rack *n*, traversing male screw *f*, and sliding jaw *g*, *h*, with its female screw *p*, substantially as and for the purposes set forth."

No. 23,799. George Todd, of St. Louis, Mo., for an "Improvement in grinding mills."

"Having thus fully described my improved grinding mill, what I claim as my invention, and desire to secure by Letters Patent, is, securing the ears of the rim (*f*) of the stationary stone (A) between double series of upper an lower springs *m*, *m*, and (*k*, *k*,) whose elasticity is governed and controlled by the series of adjusting screws *n*, *n*, substantially in the manner and for the purpose herein set forth."

No. 23,800. Alfred R. Turner, of Malden, Mass., for an "Improvement in penholders."

"Having thus described my improvements, I shall state my claim as follows:—What I claim as my invention, and desire to have secured to me by Letters Patent, is, a penholder, constructed with the cover *b*, turning on a pivot or fulcrum, and acted upon by the bent spring *c*, substantially as described. And I also claim in combination with the above the sliding piece *f*, as set forth."

No. 23,801. John B. Wortendyke, of Godwinsville, N. J., for an "Improvement in lamp wicks."

"Having described my invention, I claim, and desire to secure by Letters Patent, as an improved article of manufacture, a lamp wick, composed of strands that have received a preparatory twist in one direction, are then spun in the contrary direction with and coiled upon a thread (*c*), and are then twisted together, all as herein shown and described."

No. 23,802. John Wood, of Brooklyn, N. Y., for an "Improvement in machines for cutting and folding wadding and paper."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, first, the receiving box V, provided with two compartments and fly boards d^1, connected with racks c^1, and with ratchets *h*, actuated by the arms k^1, and cam J, in connection with the wheel X, and adjustable pinion O++, substantially as and for the purpose set forth. Second, operating the knife gate D and plate P, by means of the lever O, provided with the sector racks *j*, which gear into the racks *k* of gate D and bar *l*, so that the knife and plate will be actuated or made to perform their respective functions alternately, as described. Third, the arrangement of gearing G, I, K, R, as shown and described, when used in connection with the lever O, for the purpose of operating the several parts automatically, as and for the purpose set forth."

No. 23,803. Abraham Yost, of New York, N. Y., for an "Improved refrigerator."

"What I claim, and desire to secure by Letters Patent, is, the combination and arrangement of compartments D and K, dampers *b* and J, and escape tubes L, substantially as and for the purposes herein above set forth."

No. 23,804. John Young, of West Galway, N. Y., for an "Improvement in the construction of railroads."

"I would remark, that I do not claim placing a rail upon a saddle, as this device is well known, many examples of which may be referred to; and I therefore disclaim such combination other than my own; but I claim constructing a rail and saddle as described, whereby I am enabled to securely hold and render solid the joints or ends of rails during the passage of cars, substantially as described. I also claim combining with said rail and saddle, as described, the straining arch E, key D, and strip F, for the purpose set forth and specified."

No. 23,805. Francis Baschnagel, of Wenham, Mass., assignor to the Beverly Rubber Company, of Beverly, Mass., for an "Improvement in restoring waste rubber."

"What I claim now as my invention, is, the above-described process, to wit; restoring waste vulcanized rubber, by reducing the same by grinding or otherwise to a finely divided state, and then submitting the same in a suitable vessel to the direct action of steam."

No. 23,806. K. Borren, of New York, N. Y., assignor to Peter Schneider, of same place, for an "Improved sofa bedstead."

"What I claim as new, and desire to secure by Letters Patent is, 1st, constructing a sofa bedstead with an interior drawer, which may be pulled and united with the sofa seat, so as to form one bed or couch, by the application of ways or grooves *a* to the inside of the sofa frame, substantially as described. 2nd, the horizontal rods F of the sofa frame, in combination with the stay F of the interior drawer, for the purpose of more securely guiding the said drawer, substantially as described. 3rd, providing the draw with two back pins *o*, *o*, in the manner and for the purpose substantially as described."

No. 23,807. Harry H. Evarts, of Chicago, Ill., assignor to himself and Phineas E. Merrihew, of same place, for an "Improvement in steam valves."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of the ports, cavities, and passages in the valve, substantially as herein described, in combination with a corresponding arrangement of the ports in the seat, whereby a single valve is made to perform its functions for the two cylinders of the engine, as herein set forth."

No. 23,808. Levi T. Howell, of Burlington, N. J., assignor to himself and De Witt C. Taylor, of Philadelphia, Pa., for an "Improved hinge."

"I do not desire to confine myself to any particular form of hinge, or to any particular mode of securing the same, nor do I claim broadly a hinge with notches and projections to render it self-locking, but I claim and desire to secure by Letters Patent, the projection *i* on one half of the hinge, said projection being inclined on one side and abrupt on the other, in combination with the spring bolt D and its notch *e*, when the said bolt is so fitted to the other half of the hinge, as to have a limited vertical but no turning movement therein, and when the whole of the parts are arranged for joint action, substantially as and for the purpose herein set forth."

No. 23,809. Clark Lane, of Hamilton, Ohio, assignor to Owens, Lane, Dyer, and Co., of said Hamilton, for an "Improvement in horse powers."

"The particular improvement which constitutes my said invention, and which I claim as having been originally and first invented by me, is, the construction and adaptation of the stay rods F, G, with the hooked stand plates I, I, and racks D, E, on the sweep C, or their equivalents, in combination, as set forth."

No. 23,810. Ralph S. Mershon, of Philadelphia, Pa., assignor to himself and John M. Harper, of said Philadelphia, for an "Improved regulator for timekeepers."

"Having thus fully described the nature of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, the application to watches, and such timepieces as have their vibrations governed by a balance and hair spring, of a compound regulator, composed of two or more movable segments, constructed and operating substantially as described. I also claim the combination of said compound regulator with a greater or lesser scale, the former fixed and the latter movable, but having a fixed indicator, and capable of being operated either in concert with or independently of each other, substantially as herein described."

No. 23,811. James E. Quinn, of Chicago, Ill., assignor to John M. Johnston, of said Chicago, for an "Improved joint for gas and water pipes."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of the rings *e* and *f* on pipe *d*, in combination with the opening *c*, in the socket *b*, forming the cement chamber *h*, *h*, for the purpose of joining pipes air and water tight by using cements in place of lead commonly used, the whole arranged substantially as above set forth."

No. 23,812. George W. Richardson, of Grayville, Ill., assignor to himself and John P. Williams, of White Co., Ill., for an "Improvement in seeding machines."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of the cam wheel H and lever F, with the seed slide X, and vibratory bar E of the Harrow D, D, when the whole are constructed for operation conjointly, in the manner and for the purpose herein set forth."

No. 23,813. Leonard B. Tinkharn, of Lawrence, Mass., assignor to himself and Charles Ryan, of said Lawrence, for an "Improved bed bottom."

"What I claim as new, and desire to secure by Letters Patent, is, the combination of S-formed springs, arranged so as to receive the movable rivet, and retain the slats in place, with bars B, and stirrups *a*, *b*, when the same are arranged substantially for the purposes, and in the manner herein-above specified."

No. 23,814. John L. Nicolai, of Chicago, Ill., assignor to himself, S. E. Knott, and R. F. Farrell, of said Chicago, for an "Improved egg beater."

"What I claim as new, and desire to secure by Letters Patent, is, 1, the within-described beaters C, arranged with diverging fingers F, which are attached to disks E, to operate substantially as and for the purpose set forth. 2, the arrangement of a series of beaters C, constructed as herein described on rotary shafts C, so that the several beaters can be operated substantially as and for the purpose specified."

RE-ISSUES.

THOMAS D. BURRALL, of Geneva, N. Y., for an "Improvement in grain harvesters."—Patented 5th April, 1853.—Re-issued 26th April, 1859.

"Having thus fully described the nature and object of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, first, the additional apron, to convert the usual rear discharge into a side discharge of the cut grain, substantially as herein described. I also claim the combination of the curved supports, and the adjustable journal box piece, to preserve the relative positions of the cogs in the mitre gearing, and at the same time allow of raising and depressing the driving wheel, substantially as described. I also claim the notches in the back corners of each knife to prevent clogging or lodgment of fine grass in the cavities of the guards; said notches effecting a good purpose and not weakening the cutter, as herein represented."

THOMAS D. BURRALL, of Geneva, N. Y., for an "Improvement in grain harvesters."—Patented 5th April, 1853.—Re-issued 26th April, 1859.

"Having thus fully described the nature and object of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, the location of the raker's seat with regard to the drive wheel and platform, as described, and for the purpose set forth. I also claim, in combination with a raker's seat located as described, extending of the rear of the platform far enough back to allow the raker from his seat to turn the grain upon the platform and rake it off in an arc of a circle by a circular sweep or quarter turn movement of his rake, substantially as described."

MATTHEW A. CROOKER, of New York, N. Y., for an "Improved arrangement of buckets of paddle-wheels."—Patented 28th October, 1856.—Re-issued 26th April, 1859.

"I claim arranging the floats or buckets of a paddle whee upon its arms or the equivalent thereof, whereby the buckets shall be continuously increasing and diminishing their depth in the water as the said wheel revolves, as and for the purposes herein set forth."

JOHN JAMES GREENOUGH, of New York, N. Y., for "Improvements in machines for pegging boots and shoes."—Patented 17th January, 1854.—Re-issued 4th July, 1854.—Re-reissued 26th April, 1859.

"Having thus fully described my invention or discovery for driving pegs into boots and shoes, what I claim therein as new, and for which I desire to secure Letters Patent, is, driving the pegs into boots and shoes automatically, by means of a peg driver, operated up and down by a positive mechanical movement whether impelled by a cam eccentric or crank, or other equivalent, substantially as and for the purposes specified."

JOHN JAMES GREENOUGH, of New York, N. Y., for an "Improvement in machines for pegging boots and shoes."—Patented 17th January, 1854.—Re-issued 4th July, 1854.—Re-reissued 26th April, 1859.

"Having thus fully described my improvement in feeding forward the soles of shoes and boots to receive the pegs in the act of pegging, what I claim therein, and desire to secure by Letters Patent, is, the moving the sole of the shoe along by means of the awl that forms the hole in which the peg is inserted, in combination with the peg driver, whether the peg driver be or be not employed to perform the additional function of presenting the peg, whereby each hole made by the awl is brought in succession in line for inserting the peg before the awl is withdrawn, as set forth."

JOHN JAMES GREENOUGH, of New York, N. Y., for an "Improvement in machines for pegging boots and shoes."—Patented 17th January, 1854.—Re-issued, 4th July, 1854.—Re-reissued 26th April, 1859.

"Having thus fully described my invention, for which I ask this re-issue, what I claim therein as new, and for which I desire Letters Patent, is, cutting off shoe pegs from a strip of peg wood, or other material, by means of a lateral or side cut, that will cut straight across, substantially as and for the purposes set forth, when combined with suitable ways in which the strip slides, and machinery for driving the pegs as specified. I also claim inclosing the peg by the cutter, until it is driven as specified, by making the cutter, when in position, a part of the guiding tube substantially as set forth. I also claim the combination of the endless feed with a cutter for severing the pegs in a shoe pegging machine, as above specified."

JOHN JAMES GREENOUGH, of New York, N. Y., for an "Improvement in machines for pegging boots and shoes."—Patented 17th January, 1854.—Re-issued 4th July, 1854.—Re-reissued 26th April, 1859.

"What I claim as my invention, and desire to secure by Letters Patent is, connecting the last with a horizontal slide or plate capable of presenting the shoe or boot, substantially as described, so that the shoe or boot attached thereto may be turned and moved in any direction, in a horizontal or inclined course, in combination with a mechanism, substantially, such as described, which tends constantly to force it upward against a rest or guide, but which will permit it to yield downward as described; but this combination I claim only when combined with the pegging mechanism above described, or any equivalent therefor. And I also claim as an automatic means of moving and guiding the last to present it to the pegging apparatus in the required line of pegging, the guide groove and guide, and pinion and curved rack, substantially as described in combination with the mechanism above described, or the equivalent thereof, which permit the last to be moved in any desired direction, as set forth."

JOHN JAMES GREENOUGH, of New York, N. Y., for an "Improvement in machines for pegging boots and shoes."—Patented 17th January, 1854.—Re-issued 4th July, 1854.—Re-reissued 26th April, 1859.

"Having thus fully described my shoe pegging apparatus, what I claim therein as new, and for which I desire to secure in this re-issue of my Letters Patent, is, the combination of the universal movement carriage and lateral awl movement for properly presenting the shoe to receive the pegs in succession, as herein specified. I also claim the combination of the mechanism for the cutting and feeding of the pegs, as herein described, or any equivalent therefor, with the automatic peg driver, as described. I also claim the combination of the following elements, or their mechanical equivalents, namely, the peg former, the peg-feeder, the peg-driver, and the mechanism for moving the shoe, herein described, thus, constituting an automatic machine for pegging shoes, as set forth."

JOHN JAMES GREENOUGH, of New York, N. Y., for an "Improvement in machines for pegging boots and shoes."—Patented 17th January, 1854.—Re-issued 26th April, 1854.—Re-reissued 26th April, 1859.

"Having thus fully described my improvement in the pegging of soles of boots and shoes with metal, what I claim therein, and desire to secure by Letters Patent, is, the pegging of boots and shoes with nails or pegs of drawn wire, substantially as above described. I also claim driving the pegs by means of the cutting nippers, said nippers cutting off the peg after it is driven substantially as specified."

ROCHUS HEINISCH, of Newark, N. J., for an "Improvement in tailors' shears."—Patented 13th July, 1858.—Re-issued 26th April, 1859.

"What I claim as new, and desire to secure by Letters Patent of the United States, is, the oblique rectilinear slot C, in the elongated shank of the lower blade A, in combination with the fulcrum D and a lever connecting the two portions of the shears behind the fulcrum, the whole constructed and operating substantially as and for the purposes set forth."

NORTH AMERICAN PAPER BAG AND ENVELOPE MANUFACTURING COMPANY, of Philadelphia, Pa., assignees of John A. Smith, Clinton, Mass., and S. E. Pettee, Foxboro', Mass., for a "Machine for making paper bags and envelopes."—Patented 1st May, 1855.—Re-issued 26th April, 1859.

"First, we claim the bar K, to relieve the end of the under sheet of the weight of the pile, partially or wholly. Second, the friction bar I, to separate the under sheet. Third, the guide bar L in connection with bar I, to hold the sheet in place for the jaws. Fourth, the lifter M, to relieve the sheet from the weight of the pile. Fifth, the feeding from the bottom of the pile. Sixth, the combination of the weight bar, friction bar, guide bar, and lifter, constituting a feeding

apparatus. Seventh, the jaws to place the paper in position. Eighth, in combination with machinery for making bags from paper of any size, we claim a former of the shape and dimensions required by the nature of the work to be done, over or around which the paper is to be folded, for the purpose of producing the bag or bags, substantially as described. We wish it understood, however, that we distinctly disclaim the use of a series of moulds in a machine for making paper boxes, such a series having been used in the paper box machine of R. L. Hawes, patented 16th January, 1855; nor do we claim moulds placed at the extremities of the arms of a wheel, and used in the manufacture of paper boxes, such an arrangement having been employed in the box machine of Louis Koch, patented 13th March, 1855. Ninth, the pasters and side folders. Tenth, the combination of the table, the bar B, the side folders and pasters, all constructed as herein set forth, or any other substantially the same."

EMELINE M. STEDMAN, of Vienna, N.J., executrix of Geo. W. Stedman, deceased, for an "Improvement in sewing machines."—Patented 12th December, 1854.—Re-issued 26th April, 1859.

"Having thus described these improvements in the sewing machines, what I claim as the invention of Geo. W. Stedman, deceased, and desire to secure by Letters Patent, is, first, the tube herein described, receiving thread in the manner specified, and acting in combination with the needle, so that each forms a series of loops, each of which loops receives one, and is received by the next one of the other series, as set forth. Second, I claim the auxilliary plate carrying the guide for the looping tube, and secured to the bed plate, substantially in the manner specified, so as to be adjustable to any desired position relatively with the needle, for the purposes set forth. Third, I claim a reciprocating tube or equivalent device co-operating with an eye-pointed needle to concatenate or form the stitch and produce sewing, essentially as specified, combined with and receiving its motion from one end of a lever, the fulcrum of which is at or near the bed or table of the machine, while the other end carries the said needle, substantially as described. Fourth, I claim feeding the cloth by means of a needle, which is made to pass through the same in a position with respect to its length, diagonal to its line of movement as specified, in combination with a spring to throw the needle into position to feed the cloth the next stitch, and the screw, or its equivalent, to determine and regulate the length of the stitch, substantially as specified."

ELIAKIM B. FORBUSH, of Buffalo, N.Y., for an "Improvement in grain and grass harvesters."—Patented 17th April, 1855.—Re-issued 26th April, 1859.

"Having described my improvements in grain and grass harvesters, what I claim therein as new, and of my invention, and desire to secure by Letters Patent, is, first, the arrangement and connection of the rear cross timber *x*, in relation to the main frame, in the manner and for the purposes specified. Second, the peculiar construction and arrangement of the gear frame B, in relation to the main frame, driving wheel, and gearing, in the manner and for the purpose specified." Third, the gear key D, in combination with the gearing shaft, constructed, arranged, and operated substantially in the manner described for the purpose specified. Fourth, the locks *n*, and *r*, *s*, in the clamp, as and for the purpose set forth. Fifth, the track clearer M, *m*, provided with the arms *y*, *y*, arranged in relation to each other, and socket piece *m*, to operate in the manner and for the purpose substantially as described. Sixth, a recess I, X, made in the outside shoe in rear of the cutter bar, as and for the purpose specified. Seventh, the second angle (at *c*, *r*,) formed by the brace bars of the guard finger, substantially as herein described."

DESIGNS.

SHERMAN S. JEWITT and FRANCIS H. ROOT, of Buffalo, N.Y., for a "Design for cook's stove."

"Having thus described our ornamental design for a cooking stove, what we claim as new, and desire to secure by Letters Patent, is, the ornamental configuration and design for the plates of a stove, as herein described and shown in the accompanying drawing."

G. W. SMITH, of Hartford, Conn., for "Design for tea pot, &c."

"What I claim as new, and desire to secure by Letters Patent, is, giving tea and coffee pots, and other articles of tea and coffee sets, the configurations, flutings, and ridges, embossings, and other adornments before described, so as to produce a simple, chaste, and highly ornamental design."

ADDITIONAL IMPROVEMENTS.

CHARLES CARLISLE, of Woodstock, Vt., for an "Improvement in machine for packing wool."—Patented 6th October, 1857.—Additional Improvement dated 26th April, 1859.

"What I claim as my invention, and desire to secure by adding a description thereof to the above-mentioned Patent, is, forming either or both of the leaves B, B, of my improved wool-packing machine, of two or more connected longitudinal sections, when the said jointed leaves are so arranged as to operate with the other parts of said machine, substantially in the manner and for the purpose herein set forth."

WILLIAM WELLS, of Boston, Mass., for an "Improvement in corn shellers."—Patented 4th January, 1859.—Additional Improvement dated 26th April, 1859.

"Having described my additional improvements, what I claim therein as new, and desire to secure by addition to my Letters Patent, is, the guide (B), in combination with the weighted or spring-presser (C), made movable and adjustable with reference to the centre of the disk (A), in the manner and for the purpose set forth."

EXTENSION.

GEORGE W. THAYER, of Springfield, Mass., for an "Improvement in wooden bridges." — Patented 22nd April, 1845.

"Having thus set forth my invention, I shall claim the combination of one or more series of iron screw rods (*h*, *h*, &c.), with the suspension posts and chords or string pieces of a truss, in the manner and so as to operate substantially as herein above specified. I do not claim the combining with the posts, braces, and strings of a truss a series of supplementary braces (*k*, *k*, &c.); but what I do claim is, the arrangement of such a series of braces upon the outer sides of the truss, and so that they shall extend above and below the chords thereof, and be confined to the truss, substantially as above described."

ASA FESSENDEN, of Templeton, and LUKE S. KNIGHT, of Barre, Mass., for an "Improvement in machines for making match splints and arranging them in the dipping frames."—Patented 26th April, 1845.

"Claim."—"The combination with the series of cutters (*o*) of the passages *e*, *e*, &c. leading from the cutters, whether there be one or more series of said cutters and passages, the whole being for the purpose of making match splints from a block or blocks, as described. Also, the combination with the aforesaid cutters and passages of one or more dipping frames, arranged and operating with respect to them, substantially as herein-before described. Also, our improved manner of making the dipping frames, viz., in sections of separate pieces or plates (*h*, *h*, *h*,) as described. Also, the combination of mechanism by which each of the blocks of wood is held down upon the carriage (B), and progressively forced forward against the board (F), the said mechanism being applied to the carriage (B) and board (F), and constructed and operating together substantially as herein-before set forth. Also, the combination of machinery by which the dipping frames are progressively moved forward, the said machinery being connected with and intervening between the carriage (B) and the said dipping frames, and operating substantially in the manner as herein-before explained."

Erratum in Journal of 13th May.

1024. For "Liseux" read "Lisieux."

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

List of Specifications published during the week ending 13th May, 1859.

No.	Price.	Subject-Matter.
2213	6*d.*	Manufacture of cartridges.
2215	3*d.*	Portable apparatus for administering hot air, vapour, and shower baths.
2216	9*d.*	Manufacture of bobbin net or twist lace, &c.
2217	1*s.* 1*d.*	Joining tubes.
2218	3*d.*	Boilers, furnaces, and flues.
2219	1*s.* 4*d.*	Yarn or thread winding machines.
2222	7*d.*	Reservoir or fountain pen.
2223	6*d.*	Apparatus for the manufacture of gas.
2224	2*s.* 5*d.*	Machinery for the manufacture of looped fabrics.
2225	10*d.*	Underground chambers for gas and water pipes, and telegraph wires.
2226	4*d.*	Manufacture of cloaks and other garments.
2228	3*d.*	Preparation of paper for rendering ink indelible.
2229	6*d.*	Stoppering bottles, &c.
2230	11*d.*	Looms for weaving carpets and other fabrics, &c.
2231	3*d.*	Tea kettles, &c.
2233	3*d.*	Machinery for changing the motion of steam engines, &c.
2235	3*d.*	Fire-arms.
2236	7*d.*	Fire-arms and artillery.
2237	3*d.*	Stoves and fire-places.
2239	3*d.*	Insulating, preserving, and laying submarine and other telegraphic wires or cables.
2241	10*d.*	Horse-hoes.
2242	3*d.*	Obtaining salts of soda and other alkalies.
2244	3*d.*	Instruments for inserting and fixing metal eyelets.
2245	3*d.*	Electric cables.
2246	6*d.*	Cartridge.
2247	3*d.*	Manufacture of aluminium and sodium.
2248	7*d.*	Portable fountains.
2249	6*d.*	Apparatus for preserving articles of value in case of shipwreck.
2250	3*d.*	Electric telegraphs.
2251	3*d.*	Electric telegraph cables.
2252	4*d.*	Weaving.
2253	7*d.*	Condensing and gasing smoke, &c.
2254	3*d.*	Pumps.
2255	6*d.*	Locomotive steam engines.
2256	3*d.*	Knives for shearing woollen cloths, &c.
2257	3*d.*	Reflectors.
2259	1*s.* 4*d.*	Locomotive and other steam engines.
2260	3*d.*	Dressing lace or other fabrics, &c.
2261	10*d.*	Agricultural implements.
2262	6*d.*	Apparatus for holding glass plates used in photography.
2263	3*d.*	Locks.
2264	3*d.*	Machinery for cutting and winding strips or shreds of steel, silver, &c.
2265	1*s.*	Lamps.
2266	9*d.*	Sustaining window sashes and sliding panels.
2267	3*d.*	Perforating bankers' cheques.
2268	8*d.*	Apparatus for facilitating submarine explorations.
2269	6*d.*	Fire-arms.
2270	4*d.*	Compounds for insulating electric telegraph wires.
2271	6*d.*	Obtaining motive power.
2272	11*d.*	Waterclosets and taps or valves.
2273	4*d.*	Transferring drawings.
2274	10*d.*	Construction of ships, boats, rafts, &c.
2275	6*d.*	Railway breaks, &c.
2276	3*d.*	Lever purchases.
2277	6*d.*	Air engines.
2278	3*d.*	Envelopes and fastenings.
2279	1*s.* 4*d.*	Apparatus for the cultivation of land, &c.
2280	10*d.*	Safety cages for mine shafts.
2281	3*d.*	Respirators.
2282	3*d.*	Collars and ties, &c.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2*d.* each, or 3*d.* free by post:—

Austria, No. 291.
Bavaria, No. 262.
Belgium, Nos. 292 and 348.
Baden, and Petty States of Germany, No. 325.
Canada, No. 279.
Cuba, No. 498.
Dutch West Indies, No. 322.
France, No. 228.

Saxony, No. 236.
Sicilies (the Two), No. 316.
Spain, No. 323.
Sweden, Nos. 327 and 354.
Victoria, Nos. 186 and 359.
Wurtemberg, No. 314.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

Museum of Patents, South Kensington.

NUMBERS of VISITORS for the Week ending 14th May, 1859.

Mornings - - - -	1145
Evenings - - - -	1142
Total - - -	2287

Since the opening of the Museum Free Daily (May 12, 1858),—97,934.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price 21*s.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.
BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(Registered for transmission abroad.)

No. 561. FRIDAY, MAY 20, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

818. To WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in cricket bats."—A communication from abroad by Michael Doherty, of Boston, in the United States of America.

On his petition, recorded in the Office of the Commissioners on the 1st day of April, 1859.

884. To WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in telegraphing and in telegraphic apparatus."—A communication from abroad by Mr. A. Wilson, of New York, in the United States of America.

On his petition, recorded in the Office of the Commissioners on the 8th day of April, 1859.

902. To WILLIAM BOALER, of Manchester, in the county of Lancaster, Merchant, for the invention of "Certain improvements in the manufacture of soap."—Partly a communication from abroad by Allan Hay, resident at New York, U. S. A.

On his petition, recorded in the Office of the Commissioners on the 11th day of April, 1859.

976. To WILLIAM EDWARD GEDGE, of No. 4, Wellington Street South, Strand, in the county of Middlesex, Patent Agent, for the invention of "An improved safety apparatus for clearing off condensed steam from steam engines."—A communication from abroad by Augustin Morel, of Roubaix, in the empire of France.

On his petition, recorded in the Office of the Commissioners on the 18th day of April, 1859.

984. To WILLIAM GOSLING, Architect, Civil Engineer and Surveyor, of 82, Wellington Street, Woolwich, Kent, for the invention of "Improving rifle cannon and projectiles."

On his petition, recorded in the Office of the Commissioners on the 19th day of April, 1859.

998. To JAMES APPERLY, Cloth Manufacturer, and WILLIAM CLISSOLD, Engineer, both of Dudbridge, in the county of Gloucester, for the invention of "Improved apparatus for oiling wool."

On his petition, recorded in the Office of the Commissioners on the 20th day of April, 1859.

1044. To WILLIAM MACKENZIE, Publisher, of Glasgow, county Lanark, Scotland, for the invention of "An improved method of printing impressions upon an enlarged or reduced scale, either from engraved plates, electrotypes, blocks, drawings, or other surfaces."

On his petition, recorded in the Office of the Commissioners on the 26th day of April, 1859.

1056. To JOHN STUART, of Musselburgh, in the county of Mid-Lothian, North Britain, and WILLIAM STUART, of the same place, Manufacturers, for the invention of "Improvements in machinery or apparatus for manufacturing nets for fishing, and for other purposes."

On their petition, recorded in the Office of the Commissioners on the 27th day of April, 1859.

1065. To CHARLES RANDOLPH and JOHN ELDER, of Glasgow, in the county of Lanark, North Britain, Engineers, for the invention of "Improvements in steam engines and boilers."

1067. To ROBERT HARRINGTON, Watch Maker, of No. 3, Colonnade, Albany Road, in the parish of Camberwell, county of Surrey, for the invention of "Improvements in umbrellas and parasols."

1069. To NATHANIEL JOHN HOLMES, Gentleman, of Glasgow, county Lanark, Scotland, for the

invention of "Improvements in electric telegraphs and apparatus connected therewith."

1070. To Eugène Lardenois, of Brussels, in the kingdom of Belgium, Merchant, for the invention of "Improvements in the manufacture of pulp for paper, pasteboard, and other like articles."—A communication from Bonnet Frederic Brunel, residing in Brussels.

1071. To Thomas Clarke, of Hackney, in the county of Middlesex, Engineer, for the invention of "Improvements in sheaves or pulleys for paying out and hauling in ropes, chains, and cables, for communicating motion to machinery, and for other useful purposes."

1073. And to William Alonzo Tompson, of 18, Cecil Street, Strand, in the county of Middlesex, and Weston Green, Thames Ditton, in the county of Surrey, Surgeon and Apothecary, for the invention of "Improvements in apparatus for applying liquids to the throat and air passages for medical purposes."

On their several petitions, recorded in the Office of the Commissioners on the 28th day of April, 1859.

1076. To William Corbett, of Clayton, near Manchester, in the county of Lancaster, and William Carmont, of the same place, Iron and Steel Manufacturers, for the invention of "Certain improvements in the construction and arrangement of furnaces employed in the manufacture of iron and steel, and for other similar purposes."

1077. To John Wellington Welch, of Manchester, in the county Lancaster, Warp Sizer, for the invention of "Improvements in sizing or dressing yarns or threads for weaving."

1079. To Edgar Andrew Porteus, of 18, Warwick Square, Paternoster Row, Engraver and Printer, and William Henry Burke, of 79, Cannon Street West, Manufacturer, for the invention of "Improvements in printing and other presses."

1081. And to Thomas Smith, of Bredfield, in the county of Suffolk, for the invention of "Improvements in cultivating implements."

On their several petitions, recorded in the Office of the Commissioners on the 29th day of April, 1859.

1083. To Joseph Toussaint, of No. 1 B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, for the invention of "A new process of modelling and moulding for galvano-plastic."

1084. To John Darlington, of No. 36, Cannon Street, in the city of London, county of Middlesex, Mining Engineer, for the invention of "Improvements in zinc retort furnaces.'

1085. To Edward Francis, of Wrexham, in the county of Denbigh, Grocer, for the invention of "Improved apparatus applicable to the treatment of tea and other useful purposes."

1086. To James Morison, senior, and James Morison, junior, of Paisley, in the county of Renfrew, North Britain, Machine Makers, for the invention of "Improvements in looms and in apparatus connected therewith."

1087. To William Clark, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for the invention of "Improvements in ventilating or supplying air to diving bells and divers, and in holding communication therewith from above."—A communication from abroad by François Aquilas Laurent, of Paris.

1089. To Joseph Bull, of Port Street, Manchester, for the invention of "Improvements in apparatus used for securing bales of cotton and other substances."

1090. To Charles Hanson Greville Williams, of 39, Regent Square, Gray's Inn Road, in the county of Middlesex, for the invention of "Improvements in the manufacture of colouring matters, and in applying the same for dyeing and printing fabrics and materials."

1091. And to Joseph Souquière (called Emile), of 29, Boulevart St. Martin, Paris, in the empire of France, Civil Engineer, for the invention of "A new or improved process for distilling coal."

On their several petitions recorded in the Office of the Commissioners on the 30th day of April, 1859.

1092. To Thomas Hall Arrowsmith, of Bolton, in the county of Lancaster, Cotton Spinner, for the invention of "Improvements in carding engines."

1093. To Ange Jumelais, Householder, of the city of Paris, in the empire of France, for the invention of "An apparatus yielding illimited power, "so-called French movement."

1094. To James Ferguson, of Kilmarnock, in the county of Ayr, North Britain, Tinsmith and Gasfitter, and James McGaveny, of Glasgow, in the county of Lanark, North Britain, Yarn Dresser, for the invention of "Improvements in fasteners for shutters and for similar uses."

1095. To William Bayliss, of the firm of W. and M. Bayliss and Co., Flat and Chain Cable, and Iron Hurdle and Fencing Manufacturers, of Monmore Green, Wolverhampton, in the county of Stafford, for the invention of "Improvements in the manufacture of iron hurdles and fencing."

1096. To Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improvements in, and in connection with, electro-magnetic engines."—A communication from abroad, by Alexandre Paul Marie Darlu, of Paris.

1097. To John Basford, of the Brick Yard, Oundle, in the county of Northampton, for the invention of "An improvement in the apparatus used when expressing clay or brick earth through dies.'

1098. To James Childs, of Windsor House, Putney, in the county of Surrey, for the invention of "Improvements in the manufacture of night light cases."

1099. To William Gossage, of Widnes, in the county of Lancaster, Chemist, for the invention of "Improvements in the manufacture and useful application of certain alkaline silicates, and in the production of liquor silicis, or liquid flint."

1100. To Daniel Moore, of Brooklyn, in the state of New York, United States of America, for the invention of "Improvements in machinery for rubbing or dressing types."

1101. To WILLIAM GOSSAGE, of Widnes, in the county of Lancaster, Chemist, for the invention of "Improvements in the manufacture of caustic soda and carbonate of soda, from certain alkaline liquors and salts."

1102. To CHARLES NUTTALL, of Rochdale, in the county of Lancaster, Machinist, for the invention of "Improvements in machinery or apparatus for grinding wire cards."

1103. And to FREDERICK WILLIAM EMERSON, of 110, Fenchurch Street, in the city of London, for the invention of "Improvements in treating ores to obtain a new metallic substance and its salts, and in the application of such matters, and also certain products of tungsten in dyeing, printing, and painting."

On their several petitions, recorded in the Office of the Commissioners on the 2nd day of May, 1859.

1104. To ABRAHAM GABÁY FRANKLIN, of No. 14, South Street, Finsbury, London, Merchant, for the invention of "Improvements in the manufacture of crayons."—A communication from abroad by M. Gottliel Wilhelm Sussner, of Nuremberg, in the kingdom of Bavaria.

1105. To WILLIAM JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Civil Engineer, for the invention of "Improvements in the manufacture or production of mineral oil and grease."—A communication from François Schütze, residing at Hemisem, near Anvers, in the kingdom of Belgium.

1107. To WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for the invention of "Improvements in obtaining or extracting quinine and the principal organic alkalies."—A communication from abroad by Lalonel de Sourdeval, 22, Rue Bergère, Paris.

1109. To WILLIAM SELLERS, of Philadelphia, in the state of Pennsylvania, United States of America, Engineer and Machinist, for the invention of "Improved machinery for making screw bolts and nuts."

1112. To HENRY CHAPMAN, of Battlebarrow, Appleby, in the county of Westmoreland, for the invention of "An improved military camp cooking apparatus."

1113. To HENRY CHAPMAN, of Battlebarrow, Appleby, in the county of Westmoreland, for the invention of "Improvements in the construction of kettles."

1114. To EDWARD WATKIN SCALE, of Merthyr Tydfil, in the county of Glamorgan, Gentleman, for the invention of "Improvements in railway signals."

1115. And to ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, for the invention of "An improvement in the manufacture of cast steel."

On their several petitions, recorded in the Office of the Commissioners on the 3rd day of May, 1859.

1116. To WILLIAM HOLLAND KINGSTON, A.B., Trinity College, Dublin, and of Bandon, county of Cork, Ireland, for the invention of "Improved means of communication between the passengers and guards, and guards and engine drivers of railway trains."

1117. To CHARLES FRÉDERIC VASSEROT, of 45, Essex Street, Strand, London, Patent Agent, for the invention of "An improved form of tuyere for blast furnaces."—A communication from François Charles Bierlein, residing at Lingolshein (Bas Rhin), in the empire of France.

1118. To JOSEPH ADOLPHUS, of No. 1, Serle Street, London, in the county of Middlesex, for the invention of "An improvement in locks, bolts, and latches."

1119. To WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in steam boilers."—A communication from abroad by Samuel Pierce, of Troy, in the state of New York, and United States of America.

1120. To JACOB GEOGHEGAN WILLANS, of 2, Clarence Place, Belfast, for the invention of "Improvements in utilizing bog stuff or peat, when, applied for treating metals and certain mineral and alkaline substances."

1121. And to JOHN GHARLES WILSON, of 1, Langley Place, Victoria Park, Manchester, for the invention of "Improvements in machinery for cleaning cotton."

On their several petitions, recorded in the Office of the Commissioners on the 4th day of May, 1859.

1122. To HENRY TURNER, of Park Street, Mile End, Engineer, for the invention of "Improvements in steam-engines and apparatus connected therewith."

1123. To JOSEPH FELIX ALLENDER, of Brierley Hill, in the county of Stafford, Manager of Works, and DANIEL ROWLEY, of Brierley Hill aforesaid, Iron Roller, for the invention of "Improvements in shears for cutting boiler plates and sheets, and for other like purposes."

1124. To JOHN SCHOLFIELD, of Milnrow, near Rochdale, in the county of Lancaster, Cotton Spinner, and WILLIAM CUDWORTH, of the same place, Manager, for the invention of "Certain improvements in machinery or apparatus for spinning cotton and other fibrous materials."

1125. To HENRY CHAPMAN, of Battlebarrow, Appleby, in the county of Westmoreland, for the invention of "Improved means or appliances for protecting ships against injury from shots, shells, or other warlike projectiles."

1126. To HENRY CHAPMAN, of Battlebarrow, Appleby, in the county of Westmoreland, for the invention of "Improvements in the construction of fortifications."

1127. To WILLIAM FOTHERGILL BATHO and EUGENE MORITZ BAUER, of Salford, near Manchester, in the county of Lancaster, Engineers and Tool Makers, for the invention of "Improvements in drills for recessing, cutting slots, keyways, and cotter holes."

1129. To WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for the invention of "Improvements in seed depositors or drills."—A communication from

abroad, by Louis Achille Pruneau, formerly notary of Paris.

1130. To Andrew Knox, of No. 2, Victoria Cottages, Hertford Road, Kingsland, in the county of Middlesex, Engineer, for the invention of "Improvements in gas regulators."

1131. To Henry Reynolds, of Denmark Hill, in the county of Surrey, Gentleman, for the invention of "Improvements in refining sugar and other saccharine substances."

1132. To Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improvements in cannon and other fire arms, and in projectiles, wads, and cartridges to be used therewith."—A communication from abroad by John Webster Cochran, of New York.

1133. To Henry Fletcher, of No. 42, Southampton Buildings, Chancery Lane, in the county of Middlesex, Patent Agent, for the invention of "A machine for scutching and carding tow, oakum, or waste cordage."—A communication from abroad by Frederick Maigron, Sulphur Baker, at La Cabucelle (St. Louis Ward), near Marseilles, in the empire of France.

1134. To William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "An improved steam gauge."—A communication from abroad by Anthoine Ernest Dupas, of New Orleans, in the United States of America.

1135. To William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Certain improvements in fish-hooks."—A communication from abroad by Theodore Frederic Weil, of New Orleans, in the United States of America.

1136. And to John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in piano-fortes."—A communication from abroad by George Vogt, of the city of Philadelphia, in the state of Pennsylvania, United States of America.

On their several petitions, recorded in the Office of the Commissioners on the 5th day of May, 1859.

1137. To William Kellingley, of No. 13, Mason Street, New Cross, Surrey, Carriage Builder, for the invention of "Improvements in the mode of lubricating the journals of the axles of locomotive engines of carriages and machinery."

1138. To Frederick Angerstein, of Kennington, in the county of Surrey, Esquire, Robert Clegg, of Islington, in the county of Middlesex, Gentleman, and George Thorrington, of Egham, in the said county of Surrey, Lighterman, for the invention of "Improvements in apparatus for obtainfng motive-power."

1139. To Frederic William Hart, of Horncastle, in the county of Lincoln, Philosophical Instrument Maker and Photographer, for the invention of "Improvements in photographic apparatus,"

1140. To Samuel Wright, of Sudbury, in the county of Suffolk, Gas Engineer, for the invention of "An improved gas governor or regulator."

1141. To James Dixon the younger, of Blackburn, in the county of Lancaster, Paper Stainer, for the invention of "Improvements in machinery or apparatus for staining paper."

1143. To William Shakspere Booth, of Birmingham, in the county of Warwick, Undertaker, for the invention of "A new or improved washing machine."

1144. To John Frearson, of Birmingham, in the county of Warwick, Mechanical Engineer, for the invention of "New or improved fastenings for wearing apparel, and for such other purposes as the same are or may be applicable to."

1145. To George Tomlinson Bousfield, of Loughborough Park, Brixton, in the county of Surrey, for the invention of "Improvements in apparatus for grinding grain and other substances."—A communication from abroad by Pierre Etienne Brisson, of Orleans, France.

On their several petitions, recorded in the Office of the Commissioners on the 6th day of May, 1859.

1146. To Julien Combe, of No. 23, Rue du Champ de Mars, in the city of Paris, in the empire of France, Gentleman, formerly a Colonel in the French Army, for the invention of "An improved plantoforme or apparatus for measuring the hoofs of horses for the purpose of forming their shoes."

1147. To Joseph Bray, of Staley Bridge, in the county of Chester, and James William Harrison, of Staley Bridge, in the county of Lancaster, for the invention of "Improvements in machinery or apparatus for spinning fibrous materials."

1148. To Adam Carlisle Bamlett, of Middleton Tyas, in the county of York, Farmer, for the invention of "Improvements in reaping machines, part of which improvements is applicable to other agricultural implements."

1149. To Michael Henry, of 84, Fleet Street, in the city of London, Patent Agent, for the invention of "Improvements in the manufacture and construction of locks and fastenings."—A communication from abroad by Joseph Napoleon Rebour, a foreigner residing at Paris, France.

1150. To Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, for the invention of "Improvements in puddling iron and steel."

1151. To Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, for the invention of "Improvements in the manufacture of iron."

1152. To Charles Frost, of Sun Tavern Fields, St. George's-in-the-East, in the county of Middlesex, for the invention of "Improvements in the construction of electric telegraph cables."

1153. To Richard Pearsall, of Smethwick, in the county of Stafford, Glass Blower, for the invention of "Improvements in the manufacture of glass shades."

1154. To William Edward Gedge, of the firm of John Gedge and Son, No. 4, Wellington Street

South, Strand, in the county of Middlesex, Patent Agents, for the invention of "Improvements in the manufacture of steel."—A communication from abroad by Claude Joseph Perinel, of Fourvoiry, departement de l'Isère, in the empire of France, Ironmaster.

1155. To Richard Dugdale Kay, of Accrington, in the county of Lancaster, Manufacturer of Patent Fabrics, for the invention of "Improvements in the preparation of certain colouring matters."—A communication from abroad by Dollfus Mieg and Cie., residing at Mullhouse, France.

1156. And to Walter Jeffery, of Eastgate Street, Gloucester, for the invention of "Rendering more convenient out-door manipulations in photography by means of an improved portable photographic tent and tent camera."

On their several petitions, recorded in the Office of the Commissioners on the 7th day of May, 1859.

1157. To John Ramsbottom, of Crawshaw Booth, near Rawtenstall, in the county of Lancaster, Machine Printer, for the invention of "Certain improvements in machinery for printing fabrics."

1159. To Clement Auguste Honoré Marcoux, of No. 71, Rue de Ruisseau, at Montmartre, near Paris, Sculptor, for the invention of "A new impelling mover by the pressure of water."

1163. To Alexander Morton, of Morton Place, Kilmarnock, county of Ayr, for the invention of "Improvements in means or apparatus employed in the weaving of figured fabrics."

1165. And to Thomas Green, junior, of Old Broad Street, in the city of London, for the invention of "Improvements in apparatus applicable to steam boilers, to obtain greater security against explosion."

On their several petitions, recorded in the Office of the Commissioners on the 9th day of May, 1859.

1167. To William Frost Nuthall, of North Lodge, Kilburn, in the county of Middlesex, a Major in Her Majesty's Bengal Army, for the invention of "Improvements in ordnance and fire-arms, and in projectiles to be used therewith."

1169. To William Wilkinson and Charles Whitley, of the city of Manchester, in the county of Lancaster, for the invention of "Improvements in buttons and fastenings for garments, harness, and other similar purposes, and in the method of securing the same."

1171. To John Norman, of Glasgow, in the county of Lanark, North Britain, Engineer, for the invention of "Improvements in furnaces."

1173. To George Bell, of Wandsworth, in the county of Surrey, Manufacturer, for the invention of "Improvements in matches or fusees."

1175. To Wedderspoon Keiller, of Perth, in county of Perthshire, for the invention of "Improvements in cartridges for guns or small fire-arms."

1177. And to John Absterdam, Mechanical Engineer, of the city of New York, United States, for the invention of "Improvements in impregnating illuminating gas with hydro-carbon vapor."

On their several petitions, recorded in the Office of the Commissioners on the 10th day of May, 1859.

1179. To Alexandre Manbré, of No. 10, Rathbone Place, Oxford Street, London, in the county of Middlesex, Brewer, for the invention of "The manufacture of a colouring matter for colouring spirits, beers, vinegar, and other liquids, from sugar produced from rice, maize, carrots, maple, ananas, pompions, chesnuts, mangel-wurtzell, sorgho, turnips, and Jerusalem artichoks."

1181. To Jozé Luis, of No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for the invention of "An improved burling and napping machine."—A communication from abroad by J. B. Duval, No. 10, Rue Mogador, Paris, in the empire of France.

1183. To Michael Henry, of No. 84, Fleet Street, in the city of London, Patent Agent, for the invention of "A mode of protecting the mariner's compass against local attraction."—A communication from abroad by Samuel C. Bishop, residing at New York, in the United States of America.

1185. To William Spence, of No. 50, Chancery Lane, in the county of Middlesex, Patent Agent, for the invention of "Improvements in knapsacks and other military equipments."—A communication from abroad by John Rider, of New York, United States.

1187. And to James Leadbetter, of Leeds, in the county of York, Brazier, and James Rhodes, of Armley, near Leeds, in the same county, Water-rate Collector, for the invention of "Improvements in pumps."

On their several petitions, recorded in the Office of the Commissioners on the 11th day of May, 1859.

Patents Sealed.

List of Letters Patent which passed the Great Seal on the

21st May, 1859.

2632. James Wadsworth, of Salford, in the parish of Manchester, and county of Lancaster, Machinist, for an invention of "Improvements in gas burners, and in the means or methods of, and in apparatus for, moderating or retarding, regulating or governing, the flow and pressure of gas used for purposes of illumination, and in street lamps or lanterns for shielding flame from the action of wind and rain."—Dated 20th November, 1858.

2635. Henry Ellis, of Holbeach, in the county of Lincoln, Engineer and Agricultural Implement Maker, for an invention of "Improvements in machinery or apparatus for cultivating, cleaning, and pulverising land."—Dated 20th November, 1858.

2636. Charles Tomlinson, of Worcester Street, Wolverhampton, in the county of Stafford, Accountant, for an invention of "Improvements in stop taps or valves."—Dated 20th November, 1858.

2637. Charles Cuit, of Paris, in the empire of France, Manufacturer, for an invention of "Improvements in railway brakes."—Dated 20th November, 1858.

2638. William Lea, of the firm of William and John Lea, of Wolverhampton, in the county of Stafford, Brass Founders and Cock Makers, for an

invention of "A method of lubricating cocks and taps."—Dated 20th November, 1858.

2640. Henry Jordan, of Liverpool, in the county of Lancaster, Ship Builder, for an invention of "Improvements applicable to navigable vessels."—Dated 20th November, 1858.

2646. Heman Gardiner, of the city of New York, in the United States of America, Mechanical Engineer, for an invention of "Improvements in the compound axle hub and wheel for railroad cars."—Dated 20th November, 1858.

2648. Robert Nelson, of New York, in the United States of America, temporarily residing at Ramsay, in the Isle of Man, Mariner, for an invention of "Improvements in apparatus for raising and lifting water and other liquids."—Dated 22nd November, 1858.

2650. Samuel Waite Johnson and James Varley, both of Peterborough, in the county of Northampton, Engineers, for an invention of "Improvements in pressure and vacuum gauges."—Dated 22nd November, 1858.

2656. William Gorman, of Glasgow, in the county of Lanark, North Britain, Engraver, for an invention of "Improvements in furnaces and in the combustion of fuel, and in apparatus connected therewith."—Dated 23rd November, 1858.

2662. Richard Hugh Hughes, of Hatton Garden, in the county of Middlesex, Engineer, for an invention of "Improvements in means or apparatus employed when lighting by gas."—Dated 24th November, 1858.

2759. John Baillie, of Vienna, in the empire of Austria, Engineer, for an invention of "Improvements in the construction of railway wheels."—Dated 2nd December, 1858.

2761. Michael Henry, of 84, Fleet Street, in the city of London, Patent Agent, for an invention of "Improvements in manufacturing and revivifying bone black or animal charcoal, and in kilns and apparatus employed therein."—A communication from J. A. Lagard, a foreigner residing abroad.—Dated 3rd December, 1858.

2771. John Cameron, of Glasgow, in the county of Lanark, North Britain, Engineer, for an invention of "Improvements in apparatus for the manufacture of sugar."—Dated 4th December, 1858.

2783. Michael Henry, of 84, Fleet Street, in the city of London, Patent Agent, for an invention of "Improvements in weaving, and in looms or apparatus employed therein."—A communication from Mr. F. Durand and Mr. Pradel, foreigners residing abroad.—Dated 4th December, 1858.

2787. John Jobson, of the Derwent Foundry, Derby, for an invention of "Improvements in the manufacture of stoves and fire places."—Dated 6th December, 1858.

2813. Michael Henry, of 84, Fleet Street, in the city of London, Patent Agent, for an invention of "Improvements in twisting fibrous materials, and in machinery or apparatus employed therein."—A communication from Messieurs F. Durand and Pradel, foreigners residing abroad.—Dated 8th December, 1858.

2872. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "An improved arrangement of condensing apparatus."—Dated 15th December, 1858.

2972. William Haworth, of the firm of Firth and Haworth, Cotton Spinners and Manufacturers, of that part of Todmorden which is in the county of York, and William Barker, of the same place, Overlooker, for an invention of "Improvements in the top clearers of machines for spinning."—Dated 29th December, 1858.

2977. Thomas Pickford, of Number 15, Mark Lane, in the city of London, Merchant, for an invention of "Improvements in the preparation and manufacture of manure."—Dated 29th December, 1858.

526. James Howden, of Glasgow, in the county of Lanark, North Britain, Engineer, for an invention of "Improvements in machinery or apparatus for cutting, sharpening, punching, and compressing metals."—Dated 28th February, 1859.

716. William Warne, John Americus Fanshawe, James Archibald Jaques, and Thomas Galpin, all of Tottenham, in the county of Middlesex, India Rubber Manufacturers, for an invention of "An improved compound or preparation of materials for, and mode of covering and insulating wires or conductors used for telegraphic or electrical purposes."—Dated 21st March, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 18th May, 1859, inclusive.*)

16th May.

1239. Thomas Herbert, of the firm of Thomas Herbert and Company, Nottingham Lace Manufacturers, and Edward Whitaker, of Nottingham aforesaid, Mechanic, for an invention of "An improvement in the manufacture of warp lace fabrics."—Dated 23rd May, 1856.

1291. Robert Jobson, of Wordsley, in the county of Stafford, Iron Founder, for an invention of "Improvements in apparatus for making moulds for casting metals."—Dated 31st May, 1856.

17th May.

1178. George Carter, of Mottingham, in the county of Kent, Gentleman, for an invention of "Improvements in the mode of propelling and steering vessels, and in the apparatus and machinery applicable thereto."—Dated 17th May, 1856.

1194. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "An improved mode of preparing the double chlorides of aluminium and sodium, and aluminium and potassium."—A communication from Rousseau, Brothers, and Paul Morin, of Paris.—Dated 20th May, 1856.

1297. Henry Cartwright, of the Dean Broseley, in the county of Salop, for an invention of "Improvements in the application of steam cocks to steam-engines, and in working such engines thereby."—Dated 2nd June, 1856.

18th May.

1180. Jeremiah Brown, of Kingswinford, in the county of Stafford, Machinist, for an invention of "New or improved machinery to be used in the manufacture of iron."—Dated 19th May, 1856.

1187. William Maugham, of Ifield Terrace, in the county of Surrey, for an invention of "An improvement in rendering wood fire-proof."—Dated 20th May, 1856.

FOREIGN PATENTS.

FRANCE.

CURRENT LIST of PATENTS of Invention and Certificates of Addition.

1859.

(Communicated by His Excellency the Minister of Agriculture, Commerce, and Public Works.)

NOTE.—The duration of a Patent is fifteen years, except where determined by that of a previously existing foreign Patent.*

1858. AARON SCHVOL, of 92, Rue des Carmes, Rouen, département de la Seine Inférieure, for "Purifying lighting gas."—Dated 18th April, 1859.

1859. EDOUARD BERTELÉ, of 11, Place Lafayette, Rouen, département de la Seine Inférieure, for "A thrashing machine."—Dated 20th April, 1859.

1860. AUGUSTE FRÉDÉRIC BRIENS, of 14, Rue d'Elbeuf, Rouen, département de la Seine Inférieure, a Certificate of Addition to his Patent of 21st May, 1858, for "A treadle."—Dated 20th April, 1859.

1861. PERNON, senr. and junr., of Section de St. Clément, Macon, département de Saône-et-Loire, for "Improved hollow tiles."—Dated 21st April, 1859.

1862. JULES NIÇOLAS POIVRET, of Troyes, département de l'Aube, a Certificate of Addition to his Patent of 23rd November, 1858, for "Making a kind of tricot on circular looms."—Dated 21st April, 1859.

1863. JEAN BAPTISTE MINISCLOUS, of 29, Rue de Roubaix, Lille, département du Nord, for "A cover of tinned wire for miners' lamps."—Dated 26th April, 1859.

1864. LOUIS LANDA, of Châlon-sur-Saône, département de Saône-et-Loire, for "A machine for making stained paper."—Dated 23rd April, 1859.

1865. JEAN ETIENNE THORIN, of Macon, département de Saône-et-Loire, for "Flat tiles."—Dated 23rd April, 1859.

1866. CHARLES AUGUSTE ROEHLER, of Betschwiller, département du Haut Rhin, a Certificate of Addition to his Patent of 25th October, 1858, for "Axles of locomotives and other transmission arbors, &c."—Dated 19th April, 1859.

* For the French Patent Law see No. 228 of this Journal.

1867. GUSTAVE LOUIS STANISLAS RÉZEAU, of Isle Lacroix, Rouen, département de la Seine Inférieure, for "An instrument for calling troops together and commanding them."—Dated 20th April, 1859.

1868. ETIENNE DEGRANGE, of 16, Rue Neyret, Lyon, département du Rhône, for "A machine for twisting all kinds of fringes."—Dated 22nd April, 1859.

1869. BENOIT RICHARD, of 54, Rue du Glayeul, Elbeuf, département de la Seine Inférieure, a Certificate of Addition to his Patent of 26th April, 1858, for "A kind of figured and plain velvet tissue."—Dated 23rd April, 1859.

1870. PIERRE VIGUIER, of Albi, département du Tarn, for "A system of pumps."—Dated 23rd April, 1859.

1871. JEAN FRANÇOIS TESTOU, represented by Corriard, of Grenoble, département de l'Isere, a Certificate of Addition to his Patent of 23rd October, 1858, for "A mechanism for mounting and unmounting bedsteads, &c."—Dated 23rd April, 1859.

1872. AUGUSTE GAY, of 5, Avenue de Noaille, Lyon, département du Rhône, for "A machine for washing, dyeing, and lustring silk."—Dated 23rd April, 1859.

1873. CHARLES ANDRÉ, of Lafère, département de l'Aisne, for "An apparatus for utilizing completely the steam of boiling juice."—Dated 23rd April, 1859.

1874. PIERRE FRÉDÉRIC SCHLOTTERBEEK, represented by Schmit, of Bar-le-Duc, département de la Meuse, a Certificate of Addition to his Patent of 8th January, 1859, for "A portable urinal."——Dated 26th April, 1859.

1875. JULES MAGUERO, of Nort, département de la Seine Inférieure, for "A sowing machine."—Dated 26th April, 1859.

1876. ADONIS FOURCEAUX, of Sault-les-Bethel, département des Ardennes, for "A kind of bricks."—Dated 26th April, 1859.

1877. HARINKOUCK and CUVILLIER, of Roubaix, département du Nord, for "A kind of tissues."—Dated 27th April, 1859.

1878. CHARLES LOUIS JOSEPH CARVILLE, of 1, Rue du Palais de Justice, Lille, département du Nord, for "Constructing and mounting smokeless generators with a reversed flame."—Dated 27th April, 1859.

1879. KŒCHLIN and Co., of Mulhouse, département du Haut Rhin, for "Improvements in weaving machines with several shuttles employed in the manufacture of figured fabrics."—Dated 23rd April, 1859.

1880. FRANÇOIS VITAL PELISSIER, of Salerme, département du Var, for "A plough with a double mould board."—Dated 27th April, 1859.

1881. ANDRÉ ISOARD and CLAUDE COUX, of 11, Rue Mission de France, Marseille, département des Bouches du Rhône, for "Straight and circular saws with moveable teeth."—Dated 20th April, 1859.

1882. LOUIS FÉLIX PERRIER, of 98, Boulevart Merentié, Marseille, département des Bouches du Rhône, a Certificate of Addition to his Patent of

13th January, 1858, for "A machine for making wax and wooden matches."—Dated 20th April, 1859.

1883. Paul Minvielle, of 69, Boulevart National, Marseille, département des Bouches du Rhône, for "A ribbed plate used in oil mills."—Dated 23rd April, 1859.

1884. Arnaud-Gaidan and Co., of Nîmes, département du Gard, a Certificate of Addition to his Patent of 23rd July, 1858, for "A fabric, called 'brocated Gobelin.'"—Dated 27th April, 1859.

1885. Antoine Torty, of Rue Passet, Lyon, département du Rhône, a Certificate of Addition to his Patent of 15th June, 1858, for "Manufacture of hats."—Dated 27th April, 1859.

1886. Saint Cyr Prieur, of Rue des Lyces, Avignon, département de la Vaucluse, for "An apparatus for distilling wine."—Dated 27th April, 1859.

1887. Paul Jacquel, of Cernay, département du Haut Rhin, for "An independent sash for looms."—Dated 28th April, 1859.

1888. Faure and Pernod, of 9, Rue Collége de la Croix, Avignon, département de la Vaucluse, for "A product, called 'madder residue.'"—Dated 27th April, 1859.

1889. François Louis Bourguignon, of La Lucerne d'Outremer, département de la Manche, for "A machine for making wooden shoes, soles of galoshes, &c."—Dated 29th April, 1859.

1890. Louis Pellissier, of 4, Rue des Ayres, Bordeaux, département de la Gironde, a Certificate of Addition to his Patent of 11th October, 1858, for "A system of transmission, whereby the breaks may be worked by the engine driver, &c."—Dated 29th April, 1859.

1891. Jean Rollet, of 38, Rue des Remparts d'Ainay, Lyon, département du Rhône, for "A double-action condenser."—Dated 29th April, 1859.

1892. Jacques Vencherre, of Roubaix, département du Nord, for "A kind of carriages."—Dated 29th April, 1859.

1893. Garoty, of Toulon, represented by Aubin, at the Préfecture, Draguignan, département du Var, a Certificate of Addition to his Patent of 19th November, 1856, for "Isolating felt."—Dated 30th April, 1859.

1894. Charles Joseph Charoy-Lefranc, of Bar-le-Duc, département de la Meuse, for "A cylinder, being a substitute for cards in looms for weaving stays."—Dated 28th April, 1859.

1895. Jules Bain, domiciled at Condé sur Noireau, département de l'Orne, a Certificate of Addition to his Patent of 3rd January, 1859, for "Brushes for cleaning fluted cylinders of drawing-frames and other machines."—Dated 29th April, 1859.

1896. Pierre Isaac Garin, and his Sons, Pierre Isaac and Moise, of La Vallée Aubles, département de l'Aisne, for "A reversed chimney, applicable to thrashing machines."—Dated 30th April, 1859.

1897. Jean François Dubois, of Rue de la Marine, Caen, département du Calvados, for "A machine for bruising apples in making cyder."—Dated 2nd May, 1859.

1898. Jean Bonnin and Louis Joseph Quillon of 25, Rue St. Joseph, Lyon, département du Rhône, for "An hydraulico-pneumatic apparatus for raising water."—Dated 29th April, 1859.

1899. Jeane Baptiste Pinay, of 3, Rue de la Monnaie, Lyon, département du Rhône, for "A stop for doubling silk, wool, cotton, and all textile substances."—Dated 30th April, 1859.

1900. Lucien Pagès, domiciled with Fourès, Place St. Câme, Montgolfier, département de l'Hérault, for "A machine for knitting waistcoats having no wrong side."—Dated 30th April, 1859.

1901. Joseph Charles Péan, of Château Gontheir, département de la Mayenne, for "An apparatus for cutting thistles."—Dated 2nd May, 1859.

1902. Jules Jannesse, of Rue Tour de Gassier, Bordeaux, département de la Gironde, a Certificate of Addition to his Patent of 9th October, 1858, for "An apparatus for mixed navigation."—Dated 2nd May, 1859.

1903. Jules Deschin, of 44, Rue Bourdeau, Lille, département du Nord, for "A fire-engine."—Dated 2nd May, 1859.

1904. Pierre Léopold Chotard, of Lorient, département du Morbihan, for "A process for governing balloons."—Dated 19th April, 1859.

1905. François Chapon, of Nîmes, département du Gard, for "A process for making tiles."—Dated 29th April, 1859.

1906. Jean Pierre Emile Gaitte, of Avignon, département de la Vaucluse, for "A syphoid cooler."—Dated 2nd May, 1859.

1907. Jean Baptiste Meillard, of Lyon, département du Rhône, for "A mechanism called 'melophonium,' applicable to organs and harmoniums."—Dated 2nd May, 1859.

1908. Mrs. Lacassagne, of Route de Vaise Maison Aury, near La Demi-Lune, Ecully, département du Rhône, for "A water meter."—Dated 2nd May, 1859.

1909. Jean Reverchon, of Rue d'Annonay Maison Laprade, St. Etienne, département de la Loire, for "A pump for beer and other beverages."—Dated 3rd May, 1859.

1910. Jacques Valat, of Carcassonne, département de l'Aude, for "An improved weaving machine."—Dated 4th May, 1859.

1911. Jean Lacou, of Arcachon, département de la Gironde, for "A mode of closing jars of preserved food and fruit."—Dated 4th May, 1859.

1912. Jean Lacou, of Arcachon, département de la Gironde, for "A combined gas and steam engine."—Dated 4th May, 1859.

1913. Marcel Richier, of Ludon, département de la Gironde, for "A plough for tilling vineyards."—Dated 4th May, 1859.

1914. Couillard-Fautrel, his Sons and Nephew, represented by Mathieu, of 45, Rue St. Sébastien, Paris, for "Improvements in conglomerating coal-dust."—Dated 20th April, 1859.

1915. Eloi Amable Caré and Frédéric Moïse Claparède, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to their Patent of 8th January, 1859, for "An apparatus for loading and unloading, &c."—Dated 20th April, 1859.

1916. Jules Ernest Boulogne and Jean Etienne Chauvet, represented by Mathieu, of 45, Rue St. Sébastien, Paris, a Certificate of Addition to their Patent of 29th April, 1858, for "An apparatus for drying fecula and flour in general."—Dated 20th April, 1859.

1917. Jules Grivotet, of 23, Rue de Paris, Courbevoie, for "A system of universal straps."—Dated 20th April, 1859.

1918. Silvain Rateau, of 3, Place du Château Rouge, Montmartre, for "A system of iron and wooden floors."—Dated 20th April, 1859.

1919. François Emery Rougier, represented by Le Blanc, of 2, Rue Ste. Appoline, Paris, for "Improvements in measures for tailors."—Dated 20th April, 1859.

1920. Remy François Dubois, of 27, Rue du Buisson St. Louis, Paris, for "Improvements in saddlery."—Dated 20th April, 1859.

1921. Alfred Louis Martin, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Bellows for destroying insects."—Dated 20th April, 1859.

1922. Anselme Louis Marie de Fontenay, of 49 bis, Rue de la Chaussée d'Antin, Paris, a Certificate of Addition to his Patent of 6th October, 1857, for "A smoke-consuming fire-place for furnaces in general."—Dated 21st April, 1859.

1923. Joseph Isidore Morel, represented by Daubréville, of 60, Boulevart de Strasbourg, Paris, a Certificate of Addition to his Patent of 16th November, 1858, for "A fountain pen."—Dated 21st April, 1859.

1924. Victor Helant and Poulet, of 17, Rue de l'Echiquier, Paris, for "A case for cigaret paper."—Dated 21st April, 1859.

1925. Clarck Samuel Putnam, represented by Barrault, of 33, Boulevart St. Martin, Paris, a Certificate of Addition to his Patent of 10th August, 1858, for "A steam apparatus for vulcanizing and hardening caoutchouc, &c."— Dated 21st April, 1859.

1926. Pierre Joseph Jarre, represented by Barrault, of 33, Boulevart St. Martin, Paris, for "A kind of pistols, guns, rifles, &c., firing any number of shots."—Dated 21st April, 1859.

1927. Philippe Antoine Mathieu, domiciled with Dr. Tampier, of 7, Rue de la Boule Rouge, Paris, a Certificate of Addition to his Patent of 14th March, 1859, for "Sprinkling baths."—Dated 21st April, 1859.

1928. Crisol Fauconnier, of 15, Rue Parmentier, Paris, for "Improvements in fixed or moveable horse-gins."—Dated 21st April, 1859.

1929. Pierre Patrice Leterme, of 192, Rue du Temple, Paris, for "An harmonic flutina."—Dated 21st April, 1859.

1930. Christofle and Co., represented by Champetier de Ribes, of 56, Rue de Bondy, Paris, for "Applying bronze of aluminium."—Dated 21st April, 1859.

1931. Christofle and Co., represented by Champetier de Ribes, of 56, Rue de Bondy, Paris, for "Means of making massive galvano-plastic objects."—Dated 21st April, 1859.

1932. Parfait Giot, represented by Ricordeau, of 23, Boulevart de Strasbourg, Paris, for "A system of trelliswork for enclosures, &c." — Dated 21st April, 1859.

1933. George Mallory, represented by Gardissal, of 29, Boulevart St. Martin, Paris, for "Improvements in crinoline petticoats."—Dated 21st April, 1859.—(American Patent, expiring 19th October, 1872.)

1934. Julien Alexandre Roch, of 26, Rue des Gravilliers, Paris, for "A lathe for obtaining oval or spiral grooves on handles of umbrellas, parasols, &c."—Dated 21st April, 1859.

1935. Ozier and Co., domiciled 19, Rue aux Ours, Paris, for "Applying lithography and printing to foils."—Dated 22nd April, 1859.

1936. Aspord and Co., represented by Rigo, of 61, Rue de l'Empereur, Montmartre, a Certificate of Addition to their Patent of 1st May, 1858, for "Seamless pipes of tissues, &c."—Dated 22nd April, 1859.

1937. Auguste Jean Denis Félix Alan, domiciled with Mrs. Deschamps, of 40, Rue du Bac, Paris, for "Ventilating millstones." — Dated 22nd April, 1859.

1938. Jean Louis Georges Ledoux, of 62, Rue du Faubourg St. Denis, Paris, a Certificate of Addition to his Patent of 1st February, 1859, for "A pen-wiper."—Dated 22nd April, 1859.

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

A Free Library and Reading Room, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

Note.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Limerick.
Liverpool (*Free Public Library, Duke Street*).
——— (*Royal Institution*).
London (*British Museum*).
——— (*Society of Arts, John Street, Adelphi*).
Macclesfield (*Useful Knowledge Society*).
Maidstone.
Manchester (*Chetham Hospital*).
——— (*Free Library, Camp Field*).
Montrose.
Newark, Nottingham (*Mechanics' Institute, Middle Gate*).
Newcastle-upon-Tyne (*Literary and Philosophical Society*).
Newport, Monmouth (*Commercial Room, Town Hall*).
Northampton.
Norwich (*Free Library, St. John's, Maddermarket*).
Nottingham (*Corporation Rooms, St. Peter's Church side*).
Oxford (*Public Free Library, Town Hall*).
Paisley (*Government School of Designs, Gilmour Street*).
Plymouth (*Mechanics' Institute, Princess Square*).
Preston (*Dr. Shepherd's Library, the Institution, Avenham*).
Reading (*Literary, Scientific and Mechanics' Institution, London Street*).

Stockport (*Court House, Vernon Street, Warren Street*).
Sunderland (*Corporation Museum, Athenæum, Fawcett Street*).
Tiverton.
Wakefield (*Mechanics' Institution, Barston Square*).
Warrington (*The Museum and Library*).
Waterford (*Town Hall, The Mall*).
Wednesbury (*Board of Health Offices*).
Wexford (*Mechanics' Institute, Crescent Quay*).
Wigan.
Wolverhampton (*School of Practical Art, Darlington Street*).
Wolverton (*Railway Station*).
Yarmouth, Norfolk (*Public Library, South Quay*).
York (*Lower Council Chamber, Guildhall*).

The Commissioners' publications have also been presented to the following Public Offices, Seats of Learning, British Colonies, and Foreign States:—

Public Offices, Institutions, &c.

Admiralty, Department of the Surveyor of the Navy.
——— Steam Branch.
——— Deptford Dockyard.
——— Woolwich ditto.
——— Chatham ditto.
——— Sheerness ditto.
——— Portsmouth ditto.
——— Devonport ditto.
——— Pembroke ditto.
Artillery Institute, Woolwich.
Board of Trade, Whitehall.
Ordnance Office, Pall Mall.
——— Small Arms Factory, Enfield.
War Office, Pall Mall.
Government School of Mines, &c., Jermyn St., Piccadilly.
Dublin Castle, Dublin.
Rolls Office, Chancery (Four Courts), Dublin.
Office of Chancery, Edinburgh.
East India House. Military Stores, Leadenhall Street.
Incorporated Law Society, Chancery Lane, London.

Seats of Learning.

Cambridge University.
Trinity College, Dublin.
Queen's College, Galway.
University College, London.

British Colonies.

Malta.
Cape of Good Hope.
Mauritius.
India—Bengal.
North-West Provinces.
Madras.
Bombay.
Ceylon.
Victoria—Patent Office, Melbourne.
Parliamentary Library, Melbourne.
New South Wales.
South Australia.
Tasmania.

The Free Library, Boston.
The Philadelphia Library Company.
Wurtemberg—Bibliothek des Musterlagers, Stuttgart.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE REFERENCE INDEX of PATENTS, pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. I.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in each Series. Edited by BENNET WOODCROFT, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions, &c. By SIMON STURTEVANT. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By JOHN ROVINSON (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether NICHOLAS PAGE or Sir NICHOLAS HALSE was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent, Nos.* 33 *and* 85, *respectively dated* 8*th April*, 1626, *and* 23*rd July*, 1635.) Price 2*d.*
4. DUD DUDLEY'S Metallum Martis; or iron made with pit-coale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated* 22*nd February*, 1620, *and* 2*nd May*, 1638. Price 8*d.*
5. Description of the nature and working of the patent Water-scoop Wheels invented by WILLIAM WHELER, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated* 24*th June*, 1642.) Price 2*s.*
6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) EDWARD SOMERSET, Lord Marquis of WORCESTER, &c. &c. (*Stat.* 15 *Car. II. c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By THOMAS SAVERY. (*Letters Patent, No.* 347, *dated* 10*th January*, 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By THOMAS SAVERY. (*Letters Patent, No.* 356, *dated* 25*th July*, 1698, *and Stat.* 10 *&* 11 *Will. III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By JOHN ALLEN, M.D. (*Letters Patent, No.* 513, *dated* 7*th August*, 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By JONATHAN HULLS. (*Letters Patent, No.* 556, *dated* 21*st December*, 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By SAMUEL SUTTON, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated* 16*th March*, 1744.) Price 1*s.*

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.

TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.

BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.

PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.

MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.

PRODUCTION AND APPLICATIONS OF GAS.

STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

(*Registered for transmission abroad.*)

No. 562. TUESDAY, MAY 24, 1859. Price 2d.

Notices to Proceed.

NOTICE IS hereby given, that

92. WILLIAM OLIVER, of Shadwell, in the county of Middlesex, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "Improvements in boats and in the mode of propelling them."

As set forth in his petition, recorded in the said office on the 12*th day of January*, 1859.

106. And WILLIAM BENNETTS, of Tuckingmill, in the county of Cornwall, Workman, has given the like notice in respect of the invention of "Improvements in mechanism used for preventing accidents when raising or lowering skips, baskets, or apparatus, particularly applicable to mines."

110. And JOHN PICKSLEY and REUBEN SIMS, of Bedford Foundry, Leigh, in the county of Lancaster, Machine Makers, have given the like notice in respect of the invention of "Improvements in lawn mowing machines."

120. And JOSEPH BARRANS, of 2, Caledonian Terrace, Queen's Road, Peckham, in the county of Surrey, has given the like notice in respect of the invention of "Improvements in traction and portable steam engines."

As set forth in their respective petitions, all recorded in the said office on the 13*th day of January*, 1859.

122. And SAMUEL HOLT, of the city of Manchester, in the county of Lancaster, Silk Manufacturer, has given the like notice in respect of the invention of "A new and improved manufacture of woven silk fabrics."

125. And WILLIAM DAVIS, of 2, Ann Street, Globe Fields, Mile End, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in sluice valves."

As set forth in their respective petitions, both recorded in the said office on the 14*th day of January*, 1859.

128. And JOSEPH ECCLES, of Blackburn, in the county of Lancaster, Cotton Manufacturer, has given the like notice in respect of the invention of "Improvements in the manufacture of articles from clay earths for building purposes, as substitutes for such articles as are usually formed of stone and other materials."

130. And POLYNICE AUGUSTE VIETTE, of No. 25, Faubourg de Shaerbeck, near Brussels, a Major in the Service of His Majesty the King of the Belgians, has given the like notice in respect of the invention of "Certain inks, applicable for engraving and lithographic purposes."

As set forth in their respective petitions, both recorded in the said office on the 15*th day of January*, 1859.

143. And ROGER GEORGE ALTER, of Alphington, in the county of Devon, Engineer, has given the like notice in respect of the invention of "Improvements in apparatuses for collecting or picking up letters, papers, and other articles requiring to be stamped or printed."

145. And ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "Improvements in the manufacture of cast steel."

As set forth in their respective petitions, both recorded in the said office on the 17*th day of January*, 1859.

146. And JOZÉ LUI. of the British and Foreign Office for Patents, No. 1 B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, has given the like notice in respect of the invention of "A new machine for putting-on, equalizing, and drying the colors on paper for hangings, bookbinding, boarding, and fancy paper, of every description."—A communication from

J. P. Faure, residing in Paris, in the empire of France.

149. And George Hamilton, of Liverpool, in the county of Lancaster, Professor of Chemistry, Queen's College, Liverpool aforesaid, has given the like notice in respect of the invention of "Improvements in treating rosin and resinous substances to obtain products therefrom, and in treating the products obtained from rosin and resinous substances."

150. And Henry Gallon, Joseph Henry Bean, and Samuel Lumb, of Leeds, Machine Makers, have given the like notice in respect of the invention of "Improvements in machinery for slotting, morticeing, tennoning, and cutting wood, iron, and other substances."

151. And Charles Dickson Archibald, of Rusland Hall, in the county palatine of Lancaster, England, Esq., at present being in the city of New York, United States of America, has given the like notice in respect of the invention of "Generating force."—A communication from Henry Munro Paine, residing at Worcester, Mass.

156. And William Trotter, of South Acomb, in the county of Northumberland, Farmer, has given the like notice in respect of the invention of "Improvements in reaping machines."

As set forth in their respective petitions, all recorded in the said office on the 18th day of January, 1859.

---

162. And Edward Thomas Hughes, of the firm of Hughes and Son, Patent Agents, 123, Chancery Lane, London, W.C., has given the like notice in respect of the invention of "Improvements in machinery or apparatus for measuring and sorting silk and other textile materials."—A communication from Jules Veyrni, Silk Merchant, residing at Lyons, in the empire of France.

163. And James Whitehead, of Halifax, in the county of York, Wire Manufacturer, has given the like notice in respect of the invention of "Improvements in the means or machinery for the manufacture of 'purled' wire."

164. And Ebenezer Stevens, of No. 5, Patriot Row, Cambridge Road, in the county of Middlesex, has given the like notice in respect of the invention of "An improved cooking utensil."

168. And John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in apparatus for making cigarets."—A communication from Jacques Louis Lemaire Daimé, residing at Paris, in the empire of France, Merchant.

169. And William Clark, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, has given the like notice in respect of the invention of "Certain improvements in boots and shoes, and in the machinery, apparatus, and means employed in such manufacture."—A communication from Charles Jules Pierre Desnos, of 29, Boulevard St. Martin, Paris, in the empire of France.

As set forth in their respective petitions, all recorded in the said office on the 19th day of January, 1859.

---

173. And William Woofe, of the city of Gloucester, Agriculturist, has given the like notice in respect of the invention of "Improvements in implements for ploughing, tilling, and paring land."

181. And Josiah Latimer Clark, of Haverstock Hill, and John Muirhead, of Gloucester Road, Regent's Park, both in the county of Middlesex, have given the like notice in respect of the invention of "Improvements in electric telegraphs, and in the apparatus used in working the same."

As set forth in their respective petitions, both recorded in the said office on the 20th day of January, 1859.

---

190. And Charles O'Hara, of Toronto, Canada West, but now residing at No. 4, Upper Seymour Street, Hyde Park, in the county of Middlesex, Esquire, has given the like notice in respect of the invention of "Improvements in propellers for propelling steam boats, ships, and vessels."

192. And Alfred Davenport, of Birmingham, in the county of Warwick, Gas Purifier Manufacturer, has given the like notice in respect of the invention of "An improved regulating burner for gas."—A communication from Henry Woodward, residing at New York, in the United States of America.

193. And James Childs, of Windsor House, Windsor Road, Putney, in the county of Surrey, has given the like notice in respect of the invention of "An improvement in applying heat in the manufacture of artificial gums and teeth, and other articles composed of india rubber or gutta percha combined with sulphur."

197. And James Newman, of Birmingham, in the county of Warwick, Manufacturer, has given the like notice in respect of the invention of "Improvements in the manufacture of chains."

As set forth in their respective petitions, all recorded in the said office on the 21st day of January, 1859.

---

203. And Edward Dorsett, of 76, Old Broad Street, in the city of London, Tar Distiller, and John Bennington Blythe, of Minerva Place, New Cross, in the county of Kent, Merchant, have given the like notice in respect of the invention of "Improvements in the distillation of oil from coal tar, and in apparatus for preserving timber therewith."

208. And Richard Barter, of St. Ann's Hill, Blarney, in the county of Cork, Doctor of Medicine, has given the like notice in respect of the invention of "Improvements in heating and ventilating buildings, and in apparatus connected therewith."

As set forth in their respective petitions, both recorded in the said office on the 22nd day of January, 1859.

---

223. And John Henry Johnson, of No. 47, Lincoln's Inn Fields, in the county of Middlesex, and of No. 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for cutting and shaping wood."—A communication from Peter H. Niles, residing at Boston, in the United States of America.

As set forth in his petition, recorded in the said office on the 25th day of January, 1859.

252. And George Francis Bradbury, of Oldham, in the county of Lancaster, and Joseph Jackson King, of Glasgow, in the county of Lanark, North Britain, have given the like notice in respect of the invention of "Improvements in certain apparatus applicable to sewing machines."
As set forth in their petition, recorded in the said office on the 27th day of January, 1859.

258. And Charles Edwards Amos, of the Grove, in the Borough of Southwark, Engineer, and John Francis, of Bangor, in North Wales, Engineer, have given the like notice in respect of the invention of "Improvements in water-pressure engines, and their application to pumping machinery."
As set forth in their petition, recorded in the said office on the 28th day of January, 1859.

278. And John Peter Booth, of Cork, in the kingdom of Ireland, Feather Factor, has given the like notice in respect of the invention of "Improvements in ventilating ships."
As set forth in his petition, recorded in the said office on the 31st day of January, 1859.

295. And William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "An improved blowing machine." — A communication from Antoine Louis Hyacinthe Fiefnet de Sauville, of Paris, in the empire of France.
As set forth in his petition, recorded in the said office on the 1st day of February, 1859.

312. And Samuel Dodson Davison, of Leith, in the county of Midlothian, North Britain, Engineer, has given the like notice in respect of the invention of "Improvements in locomotive steam engines."
As set forth in his petition, recorded in the said office on the 3rd day of February, 1859.

314. And Mark Smith, of the firm of William Smith and Brothers, of the Sun Foundry, Heywood, in the county of Lancaster, Machine Makers, has given the like notice in respect of the invention of "Certain improvements in looms for weaving."
As set forth in his petition, recorded in the said office on the 4th day of February, 1859.

509. And Alexander Reid, of the city of Manchester, Merchant, and Richard Tonge, of the same place, Manufacturer, have given the like notice in respect of the invention of "Certain improvements in weaving, and in the machinery employed therein."
As set forth in their petition, recorded in the said office on the 25th day of February, 1859.

724. And John Talbot Pitman, of the American and European Patent Offices, No. 67, Gracechurch Street, London, has given the like notice in respect of the invention of "Improvements in springs for rail road cars, and for other purposes."—A communication from abroad by John I. Fields, of Brooklyn, in the state of New York, one of the United States of America.

725. And Edward Maynard, of the city of Washington, in the district of Columbia, and United States of America, has given the like notice in respect of the invention of "Improving breech loading firearms."
As set forth in their respective petitions, both recorded in the said office on the 22nd day of March, 1859.

868. And Robert Wardell, of Stanwick, in the county of York, and Henry Kearsley, of Ripon, in the county of York, have given the like notice in respect of the invention of "Improvements in reaping machines."
As set forth in their petition, recorded in the said office on the 7th day of April, 1859.

875. And John Bindley, of Birmingham, in the county of Warwick, Engineer, and Joseph Lester Hinks, of Birmingham aforesaid, Manufacturer, have given the like notice in respect of the invention of "Improvements in rototary steam engines and pumps, a portion of which improvements may also be applied to the bearings of shafts or axles and other rotating bodies."

877. And Matthew Wheeldon, of 174, Liverpool Road, Burslem, in the county of Stafford, Glass Cutter, has given the like notice in respect of the invention of "An improvement in looking glasses and mirrors."

884. And William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in telegraphing and in telegraphic apparatus." — A communication from abroad by Mr. A. Wilson, of New York, in the United States of America.

885. And Elias Robison Handcock, of No. 23, Norfolk Street, Strand, in the county of Middlesex, Esquire, has given the like notice in respect of the invention of "Improvements in steam and other motive power engines."
As set forth in their respective petitions, all recorded in the said office on the 8th day of April, 1859.

899. And Rudolph Wappenstein, of the city of Manchester, in the county of Lancaster, Medallion Engraver, has given the like notice in respect of the invention of "Improvements in cop tubes, and in machinery or apparatus for placing the same on the spindles used for spinning and doubling fibrous materials."
As set forth in his petition, recorded in the said office on the 11th day of April, 1859.

948. And John Chapman, of Wolverhampton, in the county of Stafford, Ironmaster, has given the like notice in respect of the invention of "An improvement or improvements in the manufacture of angle iron."
As set forth in his petition, recorded in the said office on the 15th day of April, 1859.

962. And Henry Hussey Vivian, of Swansea, M.P., has given the like notice in respect of the invention of "Improvements in smelting copper."
As set forth in his petition, recorded in the said office on the 16th day of April, 1859.

986. And Christopher Batty, of Manchester, in the county of Lancaster, Collector, has given the like notice in respect of the invention of "An

improved means or apparatus for effecting instantaneous communication on railways between passengers and officials."

As set forth in his petition, recorded in the said office on the 19th day of April, 1859.

1002. And JAMES NAPIER, Gentleman, Partick, near Glasgow, in the county of Lanark, Scotland, has given the like notice in respect of the invention of "Improvements in producing figures or representations upon glass."

As set forth in his petition, recorded in the said office on the 21st day of April, 1859.

1056. And JOHN STUART, of Musselburgh, in the county of Mid-Lothian, North Britain, and WILLIAM STUART, of the same place, Manufacturers, have given the like notice in respect of the invention of "Improvements in machinery or apparatus for manufacturing nets for fishing, and for other purposes."

As set forth in their petition, recorded in the said office on the 27th day of April, 1859.

1065. And CHARLES RANDOLPH and JOHN ELDER, of Glasgow, in the county of Lanark, North Britain, Engineers, have given the like notice in respect of the invention of "Improvements in steam engines and boilers."

1073. And WILLIAM ALONZO TOMPSON, of 18, Cecil Street, Strand, in the county of Middlesex, and WESTON GREEN, Thames Ditton, in the county of Surrey, Surgeon and Apothecary, have given the like notice in respect of the invention of "Improvements in apparatus for applying liquids to the throat and air passages for medical purposes."

As set forth in their respective petitions, both recorded in the said office on the 28th day of April, 1859.

1096. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E. C., Patent Agent, has given the like notice in respect of the invention of "Improvements in, and in connection with, electro-magnetic engines."—A communication from abroad by Alexandre Paul Emile Marie Darlu, of Paris.

As set forth in his petition, recorded in the said office on the 2nd day of May, 1859.

1116. And WILLIAM HOLLAND KINGSTON, A.B., Trinity College, Dublin, and of Bandon, county of Cork, Ireland, has given the like notice in respect of the invention of "Improved means of communication between the passengers and guards, and guards and engine drivers of railway trains."

1119. And WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in steam boilers."—A communication from abroad by Samuel Pierce, of Troy, in the state of New York, and United States of America.

As set forth in their respective petitions, both recorded in the said office on the 4th day of May, 1859.

1136. And JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in piano-fortes."—A communication from abroad by George Vogt, of the city of Philadelphia, in the state of Pennsylvania, United States of America.

As set forth in his petition, recorded in the said office on the 5th day of May, 1859.

1144. And JOHN FREARSON, of Birmingham, in the county of Warwick, Mechanical Engineer, has given the like notice in respect of the invention of "New or improved fastenings for wearing apparel, and for such other purposes as the same are or may be applicable to."

1145. And GEORGE TOMLINSON BOUSFIELD, of Loughborough Park, Brixton, in the county of Surrey, has given the like notice in respect of the invention of "Improvements in apparatus for grinding grain and other substances."—A communication from abroad by Pierre Etienne Brisson, of Orleans, France.

As set forth in their respective petitions, both recorded in the said office on the 6th day of May, 1859.

1148. And ADAM CARLISLE BAMLETT, of Middleton Tyas, in the county of York, Farmer, has given the like notice in respect of the invention of "Improvements in reaping machines, part of which improvements is applicable to other agricultural implements."

As set forth in his petition, recorded in the said office on the 7th day of May, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

24th May, 1859.

2663. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for an invention of "An improvement in cigar cases."—A communication from G. Scriba, residing in Paris.—Dated 24th November, 1858.

2668. CHARLES PETERSON, of Lowcliffe Lodge, Isle of Wight, in the county of Hants, Gentleman, for an invention of "Improvements in the manufacture of paper cartridges, and in paper applicable for waterproof purposes."—Dated 24th November, 1858.

2671. CHARLES EDWARDS AMOS, of the Grove, in the borough of Southwark, Engineer, for an invention of "Improved apparatus for raising and supporting ships or vessels while undergoing repair, which apparatus is also applicable for facilitating the passage of ships or vessels over bars, sandbanks, or in shallow waters."—Dated 25th November, 1858.

2678. Frederick Herbert Maberly, of Stowmarket, in the county of Suffolk, Master of Arts, for an invention of "Improvements in candlesticks."—Dated 25th November, 1858.

2680. Frederick Loos, of Mercer Street, Long Acre, London, for an invention of "Improvements in gas regulators."—Dated 25th November, 1858.

2687. Michael Meyers, of No. 9, Great Alie Street, Goodman's Fields, London, Umbrella and Parasol Manufacturer, for an invention of "Improvements in parasols."—Dated 26th November, 1858.

2691. John Billington Booth, of Preston, in the county of Lancaster, Spindle Manufacturer, for an invention of "Improvements in machinery or apparatus for preparing, spinning, doubling, and winding cotton and other fibrous materials."—Dated 26th November, 1858.

2693. Price Griffiths and John Brennand, both of Burnley, in the county of Lancaster, Engineers, &c., for an invention of "Improvements in lubricators for introducing lubricating matter into steam cylinders and other chambers or parts under pressure."—Dated 26th November, 1858.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 21st May, 1859, inclusive.*)

20th May.

1219. John Charles Pearce, of the Bowling Iron Works, near Bradford, in the county of York, Engineer, for an invention of "Improvements in apparatus for generating and economizing steam."—Dated 22nd May, 1856.

1226. Robert Bell, of 93, Glassford Street, Glasgow, for an invention of "An improvement in the manufacture or production of ornamental fabrics."—Dated 22nd May, 1856.

1315. Edwin Heywood, of Sutton Cross Hills, Leeds, Designer, and Thomas Ogden Dixon, of Steeton, near Keighley, Bobbin Manufacturer, both in the county of York, for an invention of "Improvements in the means of attaching drawer and other knobs or handles."—Dated 3rd June, 1856.

21st May.

1250. Benjamin Nadault de Buffon, of 13, Rue du Cherche Midi, Paris, in the empire of France, and 4, South Street, Finsbury, London, Ingénieur en Chef du Gouvernement, for an invention of "A new apparatus for clarifying and purifying water and other fluids."—Dated 26th May, 1856.

1267. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in printing machinery."—A communication.—Dated 27th May, 1856.

FOREIGN PATENTS.

BELGIUM.*

List of Patents of Invention Delivered on the 12th May, 1859.†

(*Communicated by the Belgian Government.*)

(For previous List, see No. 559 of this Journal.)

7396. A. Larose, represented by A. Hennelle, Brussels, for an imported invention of "So-called 'rational and anti-putrid manure.'"—Dated 13th April, 1859.—(French Patent, 10th March, 1859.)

7397. A. Larose, represented by A. Hennelle, Brussels, for an imported invention of "A process for purifying and assimilating phosphate of fossil lime."—Dated 13th April, 1859.—(French Patent, 10th March, 1859.)

7446. J. Tietard, of Ixelles, for "A machine for mixing substances of hydraulic lime, mortar, and other substances."—Dated 21st April, 1859.

7447. A. Rives, of Brussels, for "A substitute for Swedish tar."—Dated 21st April, 1859.

7448. T. Ziane, of Marchienne-au-Pont, for "A process for rolling cramp iron and knotted iron."—Dated 23rd April, 1859.

7449. F. J. Bolle, of Bouffioulx, for "A machine for descending workmen into mines."—Dated 23rd April, 1859.

7450. Ed. Vienne, of Mons, for "A lift and force beer-pump."—Dated 25th April, 1859.

7451. Couillard-Fauvrel, of Bouffioulx, a Patent of Improvement for "Conglomerating coal."—Dated 26th April, 1859.—(Original Patent, 23rd June, 1858.)

7452. The Belgian Artificial Wood and Marble Company, of Ixelles, a Patent of Improvement for "Manufacture of artificial marble."—Dated 22nd April, 1859.—(Original Patent, 23rd October, 1858.)

7453. J. L. Bandelot, represented by A. Picard, of Brussels, a Patent of Improvement for "A cooling apparatus for the manufacture of beer."—Dated 22nd April, 1859.—(Original Patent, 11th October, 1858.)

7455. J. Stainthorp, represented by H. Biebuyck, of Brussels, for an imported invention of "A machine for moulding candles."—Dated 22nd April, 1859.—(French Patent, 13th April, 1859.

* For the Belgian Patent Law, see Nos. 292 and 348 of this Journal.

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

7456. F. N. Meynier and L. A. Le Bleu, represented by H. Biebuyck, of Brussels, for an imported invention of "An apparatus for washing coals." — Dated 22nd April, 1859. — (French Patent, 18th April, 1859.)

7457. F. N. Meynier and L. A. Le Bleu, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in steam generators."—Dated 22nd April, 1859.—(French Patent, 15th April, 1859.)

7458. A. M. E. Lefaure, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in Tranter's revolver."— Dated 22nd April, 1859.—(French Patent, 11th April, 1859.)

7459. G. Abeillon, represented by X. Raclot, of Brussels, for "A system of centered planes and ploughs with variable curves, &c."—Dated 22nd April, 1859. — (French Patent, 23rd September, 1858.)

7461. E. L. Montefiore, of Val-Benoit, for "Treating the residue of zinc-works, &c., for extracting chloride of zinc therefrom." — Dated 23rd April, 1859.

7462. J. Crossdall, represented by A. Crooy, of Brussels, for an imported invention of "Improvements in the manufacture of boots and shoes."— Dated 23rd April, 1859.— (English Patent, 12th April, 1859.)

7463. A. Evrard, of Brussels, for an imported invention of "A system of journals with a lubricating apparatus, applicable to all revolving axles."—Dated 23rd April, 1859.—(French Patent, 12th April, 1859.)

7464. H. J. Rigaux and W. Olivier, represented by H. Biebuyck, of Brussels, for "A system of tiles for covering all sorts of houses."—Dated 26th April, 1859.

7465. H. J. Rigaux, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "A system of tiles for vaults." — Dated 26th April, 1859.—(Original Patent, 15th March, 1859.)

7466. J. J. Meunier, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "A system of propulsion."—Dated 26th April, 1859. —(Original Patent, 12th May, 1858.)

7467. C. R. Neustadt and J. J. J. Bonnefond, represented by H. Biebuyck, of Brussels, for an imported invention of "An apparatus for distributing water."—Dated 26th April, 1859.—(French Patent, 23rd September, 1858.)

7468. J. F. Ricquier, represented by H. Biebuyck, of Brussels, for an imported invention of "A syphoid cock for rendering fermented beverages sparkling."—Dated 26th April, 1859. — (French Patent, 14th April, 1859.)

7469. L. V. Lemaignen, represented by H. Biebuyck, of Brussels, for an imported invention of "A process of manufacturing cloth, Lisieux fabrics, and beaver for foot coverings."—Dated 26th April, 1859.—(French Patent, 2nd November, 1858.)

7470. H. A. Archeran and P. E. Couillard, of Marcinelle, for an imported invention of "A system of washing coals."—Dated 26th April, 1859.

7471. H. A. Archeran and P. E. Couillard, of Marcinelle, for "Treatment of ceramic substances." —Dated 26th April, 1859.

7472. J. J. J. Fraikin, of Grivegnée, a Patent of Improvement for "A system of kitchen ranges."— Dated 26th April, 1859.—(Original Patent, 15th April, 1858.)

7473. J. J. Pirson, of Liége, a Patent of Improvement for "Manufacture of tacks."—Dated 26th April, 1859. — (Original Patent, 4th November, 1858.)

7474. B. Bekker, of Liége, a Patent of Improvement for "Bylandt's revolvers." — Dated 27th April, 1859.—(Original Patent, 16th April, 1859.)

7475. L. B. Ricciardi, of Ixelles, for "A photographic process by using mica sheets."— Dated 28th April, 1859.

7476. C. F. Zorès, represented by H. Biebuyck, of Brussels, for "A system of special arrangements of iron for building purposes."— Dated 28th April, 1859.

7477. Count A. de Bylandt, of Brussels, a Patent of Improvement for "A system of fire-arms." —Dated 28th April, 1859.

7478. F. H. Ouin, represented by A. Crooy, of Brussels, for "A kind of broom."—Dated 28th April, 1859.

7479. J. P. Dusterwald, represented by X. Raclot, of Brussels, for "A trough for washing linen." —Dated 28th April, 1859.

7480. L. Foucault, represented by J. B. A. Foucault, of Brussels, for an imported invention of "An apparatus with a circular action for crushing, compressing, and punching."—Dated 28th April, 1859.—(French Patent, 8th January, 1859.)

7481. B. F. Brunel, of Brussels, for "Manufacture of pulp for making paper and pasteboard."—Dated 29th April, 1859.

7482. J. Vandingertaelen, of Brussels, a Patent of Improvement for "A system of hygienic and safety corks."—Dated 29th April, 1859.—(Original Patent, 17th May, 1858.)

7483. J. J. Monnié, represented by X. Raclot, of Brussels, for an imported invention of "An apparatus for dry-rubbing floors."—Dated 29th April, 1859.—(French Patent, 11th August, 1858.)

7484. J. F. Delavier, represented by X. Raclot, of Brussels, for "A system of coffee and tea pot."— Dated 29th April, 1859.

7485. H. Winnen, of Brussels, for "A machine for cutting horn into spiral thongs."—Dated 29th April, 1859.

7486. J. Vankoolbergen, represented by T. J. Van Lach, for "An expeditious process of tanning."— Dated 29th April, 1859.

7487. J. B. Miniscloux, of Marquain, for an imported invention of "A cover of tinned wire applicable to miners 'safety lamps.' "—Dated 30th April, 1859.—(French Patent, 26th April, 1859.)

7488. A. Guilloteau, of Brussels, for an imported invention of "A system of furnaces for steam engines." — Dated 30th April, 1859. — (French Patent, 31st January, 1859.)

7490. A. Fongue, represented by Ravet-Anceau, of Brussels, for "A twisting system, applicable to machines for spinning cotton."—Dated 30th April, 1859.

7491. Th. Malon, of Ghent, for "A composition for dyeing the hair instantaneously."—Dated 28th April, 1859.

7492. L. Daxhelet, of Ampsin, for "A machine for pressing crucibles used in zinc furnaces."—Dated 30th April, 1859.

7493. J. Derouillon and M. Jamar, of Liege, for "A system of warlike arms."—Dated 29th April, 1859.

7494. F. J. Lalmand-Lefort, of Bothey, for "A mode of fastening locks of furniture."—Dated 30th April, 1859.

7496. J. F. Licon, of Namur, for "A spring cork-screw."—Dated 29th April, 1859.

7497. H. German and A. Evrard, of Bouffioulx, for "A moderator of draught in locomotives."—Dated 30th April, 1859.

7498. H. German and A. Evrard, of Bouffioulx, for "A hand-punch."—Dated 30th April, 1859.

7499. E. Pasquier, represented by A. Depuichault, of Schaerbeek, for "An apparatus for washing wool and other filamentous substances."—Dated 30th April, 1859.

7501. A. Bourdin, represented by H. Biebuyck, of Brussels, for "Cooking and preserving food by means of steam."—Dated 30th April, 1859.

7502. E. Souquière, represented by O. Daillencourt, of Brussels, for an imported invention of "A process for distilling coal."—Dated 30th April, 1859.—(Freneh Patent, 14th April, 1859.)

7503. A. Marque, of Brussels, for "Manufacture of grease-proof hats."—Dated 2nd May, 1859.

7504. A. Audigier, represented by E. Oulif, of Brussels, for an imported invention of "Manufacture of disinfecting powder."—Dated 2nd May, 1859.—(French Patent, 5th September, 1857.)

7506. E. Dumont and B. Delforge, of Liége, for "An apparatus for regulating the pressure and carburetting of gas."—Dated 3rd of May, 1859.

7507. J. Whitworth, represented by H. Biebuyck, of Brussels, a Patent of improvement for "A system of fire-arms."—Dated 3rd May, 1859.—(Original Patent, 11th June, 1855.)

7508. J. H. Merril, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in breech-loading fire-arms."—Dated 3rd May, 1859.—(French Patent, 24th March, 1859.)

7509. Ed. Davelny-d'Elhougne, of Bruges, a Patent of Improvement for "A printing press for obtaining proofs."—Dated 4th May, 1859.—(Original Patent, 13th April, 1859.)

UNITED STATES OF AMERICA.

(*Communicated by the Commissioner of Patents.*)

List of Patents, with Claims annexed, issued from the United States Patent Office, for the week ending 3rd May, 1859, and each bearing that date.

No. 23,815. Fanning Albert, of Brooklyn, N. Y., for an "Improvement in manufacture of white lead."

"What I claim as my invention, and desire to secure by Letters Patent, is, the application of a rotating self-feeding cylinder for the drying of wet carbonate of lead, substantially in the manner within described."

No. 23,816. W. R. Andrews and John Oswald, of Chicago, Ill., for an "Improved alarm water gauge."

"What I claim as my invention, and desire to secure by Letters Patent, is, the disc valve E, its stem B, and spring I, applied in combination with the enclosing sockets F and G, the latter of which contains an annular passage *d*, communicating with a whistle, the whole being arranged and operating as herein set forth."

No. 23,817. Silas Barker, of Hartford, Conn., for an "Improvement in faucets."

"What I claim as my invention, and desire to secure by Letters Patent, is, the vertical discharging orifice A, as herein described, and the concave end cut off to the face slide E, in the manner and for the purpose substantially as set forth."

No. 23,818. Albert Betteley, of Boston, Mass., for an "Improvement in elevators."

"Having described my invention, what I claim as new therein, and desire to secure by Letters Patent of the United States, is, first, the combination of the air reservoir with the movable car or platform of an elevator. Second, constructing the base of the car (*c*) in the parachute form, for the purpose set forth."

No. 23,819. Amos S. Blake, of Waterbury, Conn., for an "Improved door spring."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement and combination of the spring D, links (*e*), and arms A, B, as and for the purpose herein shown and described."

No. 23,820. James Boss, of Philadelphia, Pa., for an "Improvement in the manufacture of watch cases."

"I do not claim as new the process of plating metal, as herein described, for I am aware that has been done before; but what I claim, and desire to secure by Letters Patent, is, first, spinning up of watch cases by the employment of a mandrel and spinning wheels, constructed to operate in the manner substantially as set forth. Second, spun plated sheet metal watch case, constructed as herein specified."

No. 23,821. William Z. W. Chapman, of New York, N. Y., for an "Improvement in fastening for curtains of carriages, &c."

"Having thus fully set forth my devices, what I claim as new, and for which I desire Letters Patent, is, a curtain knob fastening, constructed and arranged substantially as above set, so as to be readily opened from the base or on either side of the curtain, as herein described."

No. 23,822. Chandler Cheney, of Milford, Mass., for a "Skate fastening."

"What I claim as new, and desire to secure by Letters Patent, is, securing the back part of the skate to the boot or shoe by means of the spring band, in connection with the screws, or their equivalents, when constructed and operating in the manner and for the purposes substantially as above set forth and described."

No. 23,823. D. W. Clark, of Bridgeport, Conn., for an "Improvement in sewing machines."

"Having thus described my invention, I claim and desire to secure by Letters Patent, I claim as my invention, and as an improvement on my Patent of 31st August, 1858, the combination and arrangement of mechanism herein described, for the purpose of controlling the feed wheel, in the manner set forth."

No. 23,824. William N. Clark, of Chester, Conn., for an "Improved water-cask life boat."

"Having thus fully described my invention, what I claim, and desire to secure by Letters Patent of the United States, is, 1st, I claim making the staves upon the lower side of the water cask more curved than those are upon the upper side, in order to give the life boat a proper bearing and greater stability in the water, substantially as described. 2, I claim the ballast floor G, water tank, and hatch when they are used in connection with the water cask and life boat, substantially as set forth."

No. 23,825. Henry Clayton, of Tamaqua, Pa., for an "Improved smoke stack for locomotive engine houses."

"I do not broadly claim the invention of telescope pipes for carrying off the gases arising from stoves, &c. But having described my invention, I claim and desire to secure by Letters Patent, the arrangement and combination with the smoke pipes of locomotive engines of a sliding tube (*b*), flue D, and stack C, substantially as and for the purpose herein shown and described."

No. 23,826. John H. Coe and William B. Sniffen, of Stratford, Conn., for "Skate fastening."

"What we claim as new, and desire to secure by Letters Patent, is, 1st, the employment of the curved adjustable slotted bars E, F, at the front of the foot or base plate A, combined, arranged and adjusted in relation to each other, and secured together and to the said base or foot plate A, in position to correspond with the length of the foot and form of the front part of the same, substantially in the manner and for the purpose described. 2nd, we claim the combination of the right and left screw K, and the clamps H, with the heel part of the skate frame so that both clamps are simultaneously moved, substantially as herein shown and described. 3rd, we claim the combination of a hinged handle L, with the screw which operates the clamps, so that after the skate is fastened to the foot the handle may be folded out of the way of the ice, as herein shown and described."

No. 23,827. Paschal B. Comins, of San Francisco, Cal., for an "Improvement in bomb-lance."

"What I claim as my invention, and desire to secure by Letters Patent, is, the employment of wings formed of a flexible material in connection with metal springs, as described, when so arranged as to be folded on the cylinder (for containing the powder) between the head and wad, in the manner and for the purposes set forth."

No. 23,828. Matthias P. Coons, of Brooklyn, N. Y., for an "Improvement in apparatus for generating gas."

"I do not claim the use of a perforated diaphragm as a means of purifying gas, nor the connection of said diaphragm to a retort, except when the same is combined as set forth; but what I do claim as my invention, and desire to secure by Letters Patent, is, the form and mode of arrangement of the retorts, as specified, for the purpose of combininning a series of gas generating retorts as combined for extending or diminishing its capacity of generating gas indefinately, in the manner specified. I also claim the combination of a diaphragm surrounding a condensing chamber and escape pipe, the whole arranged and operated as set forth and described."

No. 23,829. Joseph Cox, of Philadelphia, Pa., for an "Improvement in cooking stoves."

"I am aware that external air has been brought into the fire chamber to aid combustion, and therefore do not claim that as the scope of my invention; but what I do claim is, the chamber *f* above the top oven plate, communicating with the external air and fire chamber, substantially as described, whereby there is effected the double function of aiding combustion and equalizing the temperature of the upper portion of the oven."

No. 23,830. Alexander Crumbie and Russell D. Briggs, of Brooklyn, N. Y., for an "Improved variable cut-off for steam engines."

"We do not claim any portion of the device patented by N. T. Green, March 13, 1855; but having described our invention, we claim, and desire to secure by Letters Patent, the arrangement and combination of the toggle-rods D, D^1, slide E, rockers C, C^1, stems A^1, and lifters (a, a^1), substantially as and for the purpose herein shown and described."

No. 23,831. Edward Cunningham and William B. Cunningham, of Powhatan Court House, Va., for an "Improvement in tobacco press."

"We do not, of course, intend to be understood as limiting ourselves to any particular method of operating our improved hand presses. What we claim as our invention, and desire to secure by Letters Patent, is, producing an improved hand press, which is especially calculated to aid in compressing bunches of leaf tobacco into the proper shape for packing or 'prising,' the said press being composed of a narrow open box, which has a fulcrum piece and a false bottom combined therewith, and a removable lever adapted thereto, substantially as herein set forth."

No. 23,832. Michael A. Dietz, of Brooklyn, N. Y., for an "Improvement in lamps."

"I do not claim, generally, the use of the deflector in the chimney band, or connecting them to the other part by means of a hinge; but what I claim as my invention, and desire to secure by Letters Patent, is, securing or connecting the deflector B to and into the chimney band A by means of a groove *c*, substantially as and for the uses and purposes set forth and described."

No. 23,833. P. F. Dodge, of West Cambridge, Mass., for an "Improved lock for pianofortes."

"What I claim as my invention, and desire to secure by Letters Patent, is, actuating the bolt by means of the arm E of the tumbler B and the recess D in the bolt A."

No. 23,834. Spencer B. Driggs, of New York, N. Y., for an "Improvement in pianofortes."

"What I claim as new, and desire to secure by Letters Patent, is, so arranging and applying the sound board and strings, and so constructing and applying the bridge or bridges of a pianoforte that the depths of the bridge or bridges, at the bearing points of the several strings, and the distances of the several strings from the board are all in the same proportion or thereabouts to the length of string, as herein described."

No. 23,835. James W. Elliott, of Prattville, Alabama, for an "Improved machine for filing gin saws."

"Having thus fully described my invention, what I claim, and desire to secure by Letters Patent of the United States, is, I do not claim making the table X adjustable at one end only, but I claim making said table adjustable at boths ends, substantially as set forth. 2, I claim the standard A with the adjustable post A^1 and slotted bar B for supporting the cylinder of saws, substantially as described. 3, I claim making the way H adjustable both perpendicularly and laterally for bringing the frame I to any desired position, substantially as described. 4, I claim the use of the clamp screw N in combination with the way H for holding the frame I in position, as set forth. 5, I claim a pawl *f* held in place by the coiled spring *g*, and operated by the connecting rod *b*, rock shaft *h*, and levers or arms *c* and *d* for rotating the saws, substantially as set forth. 6, I claim the friction plates *k* for holding and moving the saws, said plates being arranged and operated substantially as described. 7. I claim the adjustability of the guides W for the purpose of pressing the files more or less against the saws at pleasure, as set forth."

No. 23,836. William H. Elliot, of Plattsburgh, N. Y., for a "Mode of forming curved electrotype plates."

"I make no claim to the broad principle of forcing the back of a flexible impression sheet against a cylindrical form, for the purpose of giving it the required shape; but what I do claim, and wish to have secured to me by Letters Patent, is, first, the employment of ledges *i* in combination with the form A for the purpose of holding a compound flexible impression sheet or type matrix in the required form with or without screws R, as specified. Second, the employment

of curved edges B^1, in combination with the form A when said edges are so arranged in relation to said form that the edges of the compound impression sheet shall be held firmly between them, for the purpose of holding said impression sheet or type matrix in a cylindrical form, as set forth. Third, the employment of air escapes F, in combination with form A, box B, and the flexible impression sheet C, so as to provide for the escape of air from between the said impression sheet and form, as and for the purpose specified. Fourth, the combination and arrangement of the concave form A with the adjustable wires D, for the purpose of holding the impression sheet in contact with the concave side of said form, as and for the purpose set forth. Fifth, the employment of a curved impression sheet of sufficient elasticity that it may be straightened out while the matrix is being formed by the type, and then spring up again by its own power to the form required, in combination with curved form A when used for the construction of a curved type matrix, as and for the purpose specified."

No. 23,837. Joseph W. Gardner, of Shelburne Falls, Mass., for an "Improved handle for cutlery."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent is, attaching the handle D to the knife or other implements or tool, by means of a tang C, provided with a cylindrical projection E and bolsters B, the tang and projection being fitted in a longitudinal kerf or cut and hole in the handle, the bolster bearing on the end thereof, and the tang secured in the handle by a rivet *a*, substantially as described."

No. 23,838. Thomas C. Gleason, of Rochester, N. Y., for an "Improvement in machine for cleaning grain."

"Having described the construction and operation of my machine, what I claim therein as new, and desire to secure by Letters Patent is, the arrangement of the screens I and K, vibrating longitudinally with the fan G, removable apron M, and detachable smut cleaner T, the whole made to operate in conjunction, as specified, for the purposes set forth."

No. 23,839. Thomas Hawkins, of Mobile, Ala., for an "Improvement in valve gear of steam engines."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination of the bearing and suspending plates, one on the toe and the other on the lifter, with a self-acting (or pendulum) catch for the purpose of holding open the steam valve to any desired point of the stroke, substantially as described."

No. 23,840. Thomas L. Hawkins, of Sturgeon, Mo., for an "Improved wheelwrights' machine."

"What I claim in this machine is the arrangement of the several parts, substantially as described, for the purpose set forth."

No. 23,841. John Holmes, of Boston, Mass., for an "Improvement in ladies' hoop skirts."

"Having described my self-adjusting 'netted skirt,' what I claim as new, and of my invention, and desire to secure by Letters Patent is, first, constructing a skirt of 'knotted' or 'net work,' and this I claim whether the meshes on the front and back of the skirt are alike or not. Second, enlarging the rear upper portion of a skirt, formed by a series of meshes to form the bishop shape, by increasing the relative size or number of meshes on the rear upper portion thereof, as compared with those in the same course on the front of the skirt, substantially as described. Third, the horizontal bustle supporting spring E, in combination with the compressing tape *g*, and the upper part of the skirt, as shown and described, and for the purposes set forth. Fourth, the combination of the 'netted skirt' with the hoops *e, e, e*, spring E, compressing tape *g*, and waistband A, substantially as shown and described."

No. 23,842. Elwood Ivins, of Waterbury, Conn., for an "Improvement in hair crimper."

"Having described my invention, I claim an improved article of manufacture, a hair crimp composed of a fork A and clasp B or C, made as herein shown and described."

No. 23,843. Samuel F. Jones, of St. Paul, Ind., for an "Improved egg-beater."

"I do not claim, broadly, the driving of an egg whip by a cord; but having described my invention, I claim, and desire to secure by Letters Patent, as an improved article of manufacture, an egg-beater, having a cup B, shaft C, strap (*d*), tube (*e*), slotted bar D, cords (*g, h,*) attached to shaft C, and to adjusting screws in bar D, and otherwise made as herein shown and described."

No. 23,844. Uriel Josephs, of Quincy, Mass., for an "Improvement in skates."

"The particular improvements which constitutes my said invention, and which I claim as having been originally and first invented by me, are, first, the combination of the braces or struts B, B^1, with the plates C, C^1, either with or without the screw D, substantially as and for the purposes set forth. Second, the combination of the bar F, with the runner, substantially as described, for the purposes set forth."

No. 23,845. Ira Kinman, of Freeport, Ill., for an "Improvement in measuring faucets."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the employment of an endless screw, or its equivalent, in combination with the rotating slide F, eccentric chamber E, all arranged and operating in the manner and for purposes substantially as set forth. 2nd, I claim the register wheel P, and index hand *i*, in combination with the stop S, when the same is operated by the stem of the endless screw A, so as to indicate the quantity of liquor drawn through the faucet, substantially as above described."

No. 23,846. William Kirkpatrick, of Lancaster, Pa., for an "Improved shingle machine."

"I wish it to be understood that I make no claim to any of the devices embraced in A. V. B. Orr's Patent of July 8th, A.D. 1856, as originating with me; but what I do claim as my invention, and wish to secure by Letters Patent, is, 1st, I claim the added plate A^2, constructed as described, and when acting in combination with the wrought iron piece D, *d*, and spring S substantially as described. 2nd, I claim the guide piece *c, c, c, c*, as arranged and for the purpose specified. 3rd, I claim the combination of the rod O, with the pieces *g, g*, and *a, a*, by means of which the frow is enabled to accommodate itself to the winding grain of the timber, as already specified."

No. 23,847. David Knowton, of Camden, Maine, for an "Improved windlass."

"I claim the winch shaft G, provided with barrels J, J, and connected to the windlass by gears, as described, and so arranged that the windlass may be worked by the winch shaft on the winch shaft, and barrels may be worked independent of the windlass, substantially as and for the purpose described."

No. 23,848. L. Lefebvre, of Donaldsonville, La., for an "Improvement in steam boilers."

"I do not claim the corrugation of boiler plates, broadly considered, but claim the longitudinal fluted boiler, braced as described, in combination with the conformable under surface of the exterior flue B^1, substantially as and for the purpose set forth."

No. 23,849. A. W. Lloyd, of Otis, Mass., for an "Improvement in pumps."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the arrangement and combination of the side tube F, pipe D, valve E, and piston G, as and for the purpose herein shown and described."

No. 23,850. Joseph C. Lyons, of Auburn, N. Y., and H. F. Phillips, of Senecca Falls, N. Y., for an "Improvement in grinding mills."

"What we claim as new, desire to secure by Letters Patent, is, the within-described arrangement and combination of the grinding cone F, and the corn cracker J, when the former is arranged on a shaft C, which receives a longitudinal motion by means of a hand wheel D, and from which motion is conveyed to the corn cracker by means of wheels *k* and *l*, substantially in the manner and for the purpose herein specified."

No. 23,851. Henry Marcellus of Amsterdam, N. Y., for an "Improvement in harvesting machines."

"I do not claim a finger bar of angular form, nor angular clearing edges upon a finger bar, such features having been before employed; but what I do claim as new, and desire to secure by Letters Patent, is, the corrugated finger bar

cast with the cutting projections *e*, in combination with the detachable fingers B, constructed and applied in the manner and for the purpose specified."

No. 23,852. CHARLES MILLER, of Belleville, Ill., for an "Improved rotary engine."

"I claim a patent for all the parts above specified in combination, being and constituting a rotary steam engine, as asked for in my petition herewith presented."

No. 23,853. WARREN P. MILLER, of Marysville, Cal., for an "Improvement in locomotive machine for propelling ploughs, &c."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination of the endless chain or track with the leading and driving wheels C, C, and supporting trucks E, E, the whole constructed and operated substantially as and for the purposes set forth in said specification."

No. 23,854. AARON PARKER, of Coventry, N. Y., for an "Improved mode of attaching harness breeching to wagon thills."

"Having thus described my discovery, what I claim as useful, and desire to secure by Letters Patent, is, the mode of attaching the hold back straps to thills of vehicles, by having a metal ring to slide under a spring snap in such manner that it will unfasten of itself when the traces are unhiched, as set forth."

No. 23,855. DUBOIS D. PARMELEE, of New York, N. Y., for an "Improvement in vulcanizing caoutchouc."

"What I claim, is, firstly, the method herein described of treating caoutchouc, gutta-percha, and their compounds for the purposes set forth, by employing agents in an acriform or gaseous state combined with a solvent in the liquid state. Secondly, in combination with a solution prepared in the manner hercin specified to operate on caouchouc, gutta-percha, or their compounds, as set forth, I claim preparing the said caoutchouc, gutta-percha, or their compounds by blending or incorporating therewith sulphur substantially as described. And, thirdly, I claim dissolving sulphur in the proportions set forth or thereabouts in the solution prepared as specified herein, when the same is used in combination with rubber, gutta-percha, or their compounds previously free from sulphur."

No. 23,856. NELSON PARMETER, of Gardner, Mass., for an "Improvement in cements."

"Having described my improved fireproof cement for furnaces and other purposes, what I claim as new, and desire to secure by Letters Patent, is, an improved fireproof cement composed of the above ingredients, in the proportions and in the manner substantially as herein set forth."

No. 23,857. GEORGE B. PHILLIPS, of Albany, N.Y., for an "Improved wrench for gasfitters."

"I claim the jaw D, arranged to slide substantially as described, so as to wedge, gripe, or tighten and hold the article to be turned, as described. I claim the nut K, arranged to slide freely on the bar A, and so that it may be locked to the bar when desired, in combination with the bar, when both are constructed, substantially as described. And in combination with the nut K, I claim the tightening nut I, arranged substantially as described."

No. 23,858. THOMAS PLACE, of Alfred Center, N. Y., for an "Improvement in adjustable pile driver."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, 1st, attaching the frame A to the axles *a*, *c*, by means of the bolt *b*, and rack plate B, and guides e^1, to admit the lateral adjustment of the monkey guide C, C^1, substantially as described. 2nd, securing the monkey guides C, C^1, in the frame A, by means of the universal joint *k*, and the sliding joint *i*, aranged with the lever D, and rack catch *l*, or their equivalents, to admit of the lateral inclining of the guides, as well as the forward and backward movement of the same, for the purpose set forth. 3rd, the combination of the frame A, and guides C, C, when constructed and arranged to operate conjointly, and to admit of the adjustment, as described. 4th, the arrangement of the button or stop g^1, levers J, H, I, and catch f^1, substantially as shown, for automatically releasing the shaft *a*, from the windlass G, as and for the purpose set forth."

No. 23,859. JOHN PLANT, of Washington, D. C., for an "Improvement in latch hinges."

"Having thus described my improvement, what I claim as my invention, and desire to secure by Letters Patent, is, the hinge (*a*, *b*,) when provided with projections *c*, *c*, and latch (*g*), and when constructed and operating in the manner and for the purposes substantially as set forth."

No. 23,860. H. W. RANDLE, of Burnsville, Ala., for an "Improvement in cotton presses."

"I do not claim a spirally grooved shaft, without longitudinal motion for taking up the cord; but I claim the vertical screw shaft W, as described, in combination with the levers L, L^1, cords D, D^1, D^{11}, and the follower, substantially as and for the purposes set forth."

No. 23,861. JOSEPH RIDER, of Newark, Ohio, for an "Improvement in revolving fire-arm."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the cocking dog E, with its notches *c*, *d*, applied in combination with the hammer and trigger, and with a stationary stop *e*, to operate substantially as herein set forth, to effect the cocking of the hammer and firing. 2nd, in combination with the above, providing the said cocking dog with a notch *f*, in its extremity to be operated upon by a tooth *g*, on the trigger, substantially as described, to operate the piece entirely by the trigger, for rapidly repeated firing without cocking. 3rd, combining the locking lever G, with the cocking dog E, by means of a tooth *i* upon the lever, and a tooth *h* upon the dog, the teeth being formed to operate substantially as herein specified. 4th, the construction and application of the trigger guard, in combination with the locking levers, to serve three purposes, viz.: as the guard, as the lever for operating the rammer, and as the spring, for operating the locking lever, or its equivalent, substantially as herein described."

No. 23,862. JOSEPH ROSENCRANS, of Avoca, N.Y., for an "Improvement in cider mills."

"What I claim as my invention, and desire to secure by Letters Patent is, 1, the arrangement of the cutting cylinder and the tearing within the hopper, the one acting upon a plane, and the other upon a curved surface, and the tearing cylinder so geared as to have rapid rotation as regards the rotation of the cutting cylinder. 2d, I claim the arrangement of the grinding cylinders and pressing cylinders with the endless apron, chute, and hopper, when they are geared, as herein set forth."

No. 23,863. WASHINGTON RUDDACH, of Baltimore, Md., for an "Improvement in mail bags."

"Having thus fully described my improved mail bag, what I claim as my invention, and desire to secure by Letters Patent, is, the arrangement in the manner and for the purpose herein before specified, of the jointed plates B, C, staples D, jointed slide F, with projection F^1, when applied to bags with riveted and stitched seams."

No. 23,864. STEPHEN P. RUGGLES, of Boston, Mass., for an "Improved punching and stamping press.

"Having thus fully described the nature and object of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, so combining in a press for punching, stamping, &c., a coarse and fine threaded screw with the power that drives the press, as that the coarse screw may be in action when speed or motion is required, and the fine screw when power is required; the former ceasing its action and the latter coming into action according to the resistance against the punch or die, substantially as described."

No. 23,865. SAML. B. SHINN, of Philadelphia, Pa., for an "Improvement in corn and cob cutter."

"What I claim is, the peculiar construction of the cutter head A, as specified, with or without the combination of the knives B and crushers C, arranged and operating in the manner and for the purpose set forth and specified."

No. 23,866. OLLOF SHOSTROM, of Altona, Ill., for an "Improved washing machine."

"Having thus fully described my invention, what I claim, and desire to secure by Letters Patent, is, the combination and arrangement of slats *c*, levers D, serrated plates F, with rods *h*, false bottom G, endless apron 5, lever 3, and pawl 4, the several parts being constructed and operated substantially in the manner and for the purpose herein set forth."

No. 23,867. JONATHAN P. SIMMONS, of Baldwinsville, N. Y., for an "Improvement in coffee roasters."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination of the revolving ring with the spherical case, constructed, arranged, and operating substantially as herein specified."

No. 23,868. D. F. SMITH, of Manchester, N. H., for an "Improvement in spinning flyers."

"What I claim as my invention, and desire to secure by Letters Patent, is, the construction of the arm and stem of the compresser of one piece, and the stop of a separate piece, so applied as to confine the stem in the ears on the flyer tube, as herein specified."

No. 23,869. JOSEPH D. SMITH, of Lancaster, Ohio, for an "Improvement in harvesting machines."

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the arrangement of the mechanism for adjusting the cutting apparatus consisting of the rack bars a, a, hinged to the cutting apparatus shaft e, provided with pinions b, b, and ratchet wheel and pawl c, d, when employed in combination with the adjustable wheel i, in the manner and for the purpose specified. 2nd, the employment of the ball journals m, m, of the reel shaft in combination with the offside horizontally turning timber n of the reel frame, substantially as and for the purposes set forth. 3rd, the combination of the secondary standard q^1, arranged on the sickle bar with the hinged laterally adjustable brace r, in the manner herein described, and for the purpose set forth. 4th, the combination with the upward curved edge f^1 of the sickle bar f, of the overhanging upper lip v, and the under back extension flanch w of the sickle guard or tooth u, in the manner and for the purpose set forth. 5th, the spring catch z^1, arranged on the sickle back y, in combination with stop notch z^2 formed in the pitman z, for the purpose of fastening the sickle or cutter back y to the pitman z, in the manner set forth."

No. 23,870. WM. H. SMITH, of Newport, R. I., for an "Improvement in rotary planing machines."

"But I do claim as new, and desire to secure by Letters Patent, the combination of the rotating cutter head C with the central adjustable bearing plate D, arranged substantially as and for the purpose set forth."

No. 23,871. GEO. W. SWIFT, of Oxford, Miss., for an "Improvement in portable horse powers."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of band wheel F, shafts A and C, idlers D and E, roller B, and cord or chain H, the whole constructed and operating substantially as and for the purpose herein set forth."

No. 23,872. ISAAC P. TICE, of Baltimore, Md., for an "Improved machine for cutting wooden curved mouldings."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the adjustable bed formed of the blocks g in connection with the flexible guide plate C, rotary cutter head F, and the feed and pressure rollers D, E, or their equivalents, substanfially as and for the purpose set forth."

No. 23,873. HEZEKIAH D. TREADWELL, of Elmira, N. Y., for an "Improvement in signals for firemen."

"What I claim as my invention, is, the combination of the catch plates C, D, and conical stops c, c, c, or their equivalents, on the cords b, b, b, working through a series of holes in the catch plates, arranged substantially as set forth."

No. 23,874. WM. WALKER, of Pontiac, Mich., for an "Improvement in water wheels."

"I do not claim the employment or use of curved buckets, or those having surfaces composed of two planes placed at right angles with each other, for buckets of such form, or its equivalent, has been previously used; but having thus described my invention, what I claim as new, and desire to secure by Letters Patent is, 1st, the employment or use of the adjustable plates f, attached to the inner parts of the plates e of the buckets G, substantially as and for the purpose set forth. 2nd, providing the buckets G with adjustable plates g, arranged substantially as shown, to prevent injury to the buckets by the entrance into the scroll of hard foreign substances, as described."

No. 23,875. CHARLES and ANNA C. WILHELM, of Philadelphia, Pa., for an "Improvement in lamp shades."

"Having thus described our improvement, what we claim as our invention, and desire to secure by Letters Patent, is, the combination of the metallic shade A, A^1, A^{11}, with the paper pictures C^1, D^1, E^1, between sheets of mica, as above described."

No. 23,876. STEPHEN WILCOX, jr., of Westerly, R. I., for an "Improved air engine."

"Having thus fully described my invention, and the advantages thereof, what I claim as my invention, and desire to secure by Letters Patent is, first, the within-described arrangement of the changing cylinder B and working cylinder A, and the valve or valves by which piston b is made both to change the air from the cold to the hot end of the cylinder, and to receive a fresh volume of air for the next stroke, with the advantages within set forth. Second, automatically regulating the temperature of the interior of the heating sufaces, by the employment of the parts H and L, arranged relatively to the heating surfaces of the cylinders A and B, and to the damper n, or its equivalent, in the flue O, as within described. Third, giving the regenerator an increasing area from the cold to the hot side, substantially as and for the purpose herein set forth. Fourth, working the single valve M in combination with the two pistons a and b, as described, so as to thereby accomplish the threefold purpose of induction, eduction, and equilibrium valve, substantially in the manner and with the advantages herein set forth."

No. 23,877. WM. E. WORTHEN, of New York, N.Y., for an "Improvement in metallic lath."

"I claim, as of my own invention, a corrugated pierced sheet of metal, substantially such as herein specified, either with or without rods or tubes passed through the apertures substantially in the manner and for the purposes specified."

No. 23,878. W. A. WOOD, of Hoosick Falls, N. Y., for an "Improvement in harvesting machines."

"Having thus fully described the nature and object of my invention, what I claim therein as new, and desire to secure by Letters Patent, is, effecting an oblique delivery of the cut grain from the platform where it falls, by a series of carrying belts of different lengths, substantially as described."

No. 23,879. AUGUST WULZE, of St. Louis, Mo., for an "Improvement in machine for making pearl barley."

"Having thus described the construction and operation of my machine, what I claim as new, and desire to secure by Letters Patent is, the construction and arrangement of the before-described machinery, that is to say, the arrangement and combination of the frame or wheel H, pinions t and u, and wheel L with each other, in the manner described, and with the pulleys x^1, x, and y, y^1, and A, as set forth."

No. 23,881. F. P. CAVANAH, of Pioneer Mills, N.C., assignor to himself and R. H. Northrop, of same place, and W. A. McColloch and E. C. Aiken, of Albany, N. Y., for an "Improved amalgamator."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement and combination of the elevated quicksilver channels (f, g), near the rim of the oscillating amalgamating pan E, as and for the purpose herein shown and described."

No. 23,882. NATHAN A. DYAR, of Medford, Mass., assignor to himself and Rufus Kendrick, of Cambridge, Mass., for an "Improvement in cements for roofing."

"I claim, as a new article of manufacture, the waterproof roof covering herein described, the same consisting of a central layer or web of cloth, or its equivalent, covered on both sides with adhering layers of waterproofing, the outward side of one which is covered with a layer of paper fixed thereto by contact with the waterproofing while it is in a warm and plastic state, while upon and embedded in the outward side of the other layer of waterproofing, while in the state just described, is a layer of sand, or its equivalent, forming the uppermost or weather surface of the article."

No. 23,883. Moses G. Farmer, of Salem, Mass., assignor to Wm. F. Channing, of Boston, Mass., for an "Improved mechanism for operating steam or air signal whistles."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination of an electro-magnetic escapement with the mechanism herein described, for operating a steam or air whistle, as set forth."

No. 23,884. Theophile Auguste Rousseau, of Belleville (near Paris), France, assignor to Edoward Alexander of Paris, France, for an "Improvement in reed organs."—Patented in France, 23rd January, 1857.

"Having thus described the nature of my invention, and the manner in which the same is or may be carried into effect, I wish it to be distinctly understood that what I claim as my invention, and desire to secure by Letters Patent, is, first, the arrangement of the wind chambers *h* and registers or stops *b*, in combination with the reeds *g*, *g*, as set forth, whereby each key (a^1) operates as many valves as there are stops in the instrument, but only those notes are caused to sound where the register (*b*) is open, as set forth, thus rendering the fingering easy, whatever may be the number of stops. Second, I claim the arrangement of the valves *e*, *e*, and knecpieces *f*, *f*, in the manner and for the purposes specified. Third, I claim the manner herein specified, of arranging the various plans or stories of the instrument, as shown in Fig. 1, and hinging the same together for affording access to the different parts, as set forth."

No. 23,885. Wm. Shepherd, jr., of Brooklyn, Eastern District, N. Y., assignor to Thos. Holmes and Van Wyck Foster, of same place, for an "Improvement in valves for steam engines."

"Having thus fully described my said invention, I wish it distinctly understood that I do not claim the prevention of the slamming of the valve, without reference to the means by which such result is accomplished; neither do I claim, broadly, the interposition of a steam cushion to check the motion of the valve. The particular improvement which constitutes my said invention, and which I claim as having been originally and first invented by me, is, the combination of the steam ports *f*, *f*, with the cover G, operated by the action of the valve C, substantially as described, for the purpose set forth."

Re-issues.

John K. O'Neil, of Kingston, N. Y., assignee of Yarnell Bailey, of Philadelphia, Pa., for an "Improvement in gas burners."—Patented 12th October, 1858.—Re-issued 3rd May, 1859.

"I do not claim the employment of heaters, or their equivalents, for carrying heat from the flame of lamps to the oil or vaporizing fluid thereof for the purpose of generating the gas therefrom; but what I claim as the aforesaid invention is, producing a light, which may be increased or diminished at pleasure by means of the adjustable heater D, or heat receivers *l*, *l*, operating in connection with a wick tube or holder B, and the flame of the lamp or burner, substantially as herein specified, or within the meaning and intention thereof."

Nelson P. Aiken, of Troy, N. Y., for an "Improvement in knitting machines."—Patented 13th July, 1858.—Re-issued 3rd May, 1859.

"What I claim as my invention, and desire to secure by Letters Patent, is, stopping a knitting machine when the yarn accumulates in its needles by the action of the accumulated yarn, substantially as herein set forth."

James Baldwin, of Nashua, N. H., for an "Improvement in shuttles for weaving cloth."—Patented 31st January, 1840.—Extended for seven years from and after 31st January, 1854.—Re-issued 3rd May, 1859.

"What I claim, and desire to secure by Letters Patent, is, furnishing the shuttle with a spring and catch, so arranged that the bobbin will be received or released at one operation, substantially as described."

Henry B. Meyer, of Buffalo, N. Y., for an "Improvement in the mode of converting the backs of car seats into beds or lounges."—Patented 19th September, 1854.—Re-issued 3rd May, 1859.

"What I claim as my invention, and desire to secure by Letters Patent, is, 1st, the use of the backs of car seats for forming upper horizontal beds or lounges, substantially as set forth. 2nd, so arranging the backs of contiguous seats that they may meet and remain in the same horizontal plane, substantially as and for the purposes set forth. 3rd, the use of a cushioned surface intermediate between the cushioned surfaces of two car seats, so to form with the same a horizontal bed, berth, or lounge, said intermediate cushion forming an attachment to, and appearing as part of, the car seat, when not adjusted to aid in forming a berth, bed, or lounge, substantially as set forth. 4th, forming a continuous line of lower horizontal beds, berths, or lounges of a series of car seats in railroad cars, by uniting the several seats so as to fill up the entire space between the seats with adjustable cushioned attachments of the seats, whatever be the character or disposition of said attachments, so long as they form and appear as parts of the seats, when not adjusted to form said continuous line of lower beds, berths, or lounges, substantially as and for the purposes set forth."

John Nicholson, of Allegheny, Pa., for an "Improvement in retorts for distilling oils from coal."—Patented 15th February, 1859.—Re-issued 3rd May, 1859.

"What I claim as my invention, and desire to secure by Letters Patent of the United States, is, 1st, the use of a straight or curved blade or blades, placed on the agitators or arms (*h*) of shaft (*e*), for the purpose of agitating, lifting, mixing, and bringing all parts of the mass within the retort in contact with the heat, as herein described and set forth. Second, the arrangement near the outer edge of one end of a retort, of four or more supply and discharge openings, and on the other end, near the outer edge, of four or more exit pipes, placed on a line with and opposite to the supply and discharge openings, as herein described."

Designs.

John McMurtry, of Fayette, N. Y., assignor to Geo. C. McMurtry, of same place, for a "Design for a burial case."

"What I claim, and desire to secure by Letters Patent, is, the design for a burial case of the form and style represented in the accompanying drawings."

Wm. H. Lewis, of Glastenbury, Conn., for a "Design for spoon and fork handles."

"I claim the configuration of a grape vine foliage upon both sides of a spoon, fork, or other handle as shown in Fig. 1 and 2 of the accompanyings."

Sherman S. Jewitt and Francis H. Root, of Buffalo, N. Y., for a "Design for stoves."

"Having thus described our ornamental design for a stove, what we claim as new, and desire to secure by Letters Patent, is, the ornamental configuration and design for the plates of a stove as described and shown in the accompanying drawings."

Additional Improvements.

William Baker, of Utica, N. Y., for journals of railroad cars."—Patented 11th August, 1857.—Additional improvement, dated 3rd May, 1859.

"I claim as new, and desire to add to my Patent, the above-described improvements, first, placing a cylindrical coiled spring around the piston, immediately above the socket, to be used instead of the volute spring below the piston and within the socket, as described. Second, I do not claim generally a ball valve, as this is in common use in various connections; but I claim the use of the ball valve T, in combination with the enlarged chamber P, and the arrangement described for communicating and sustaining the oil in contact with the journal. Third, I claim the use of the flat spring *e*, (Figs. 2 and 3,) constructed and arranged as described, to be used for vibrating the piston, together with the arrangement I have described for seating the piston on the spring as herein set forth."

D. Cumming, jr., of Mobile, Ala., for an "Improvement in mangles."—Patented 27th July, 1858.—Additional improvement dated 3rd May, 1859.

"What I claim as my invention, and desire to secure by Letters Patent, is, the employment or use of the cylinder (C), having an elliptical surface upon a portion of its periphery, and having a fixed axis of rotation, the cylinder (D) having a movable axis of rotation, and the excentric cams (h), arranged upon a movable rod, and their pressure being regulated by suitable springs, the whole being arranged to operate substantially, as and for the purposes set forth."

Extensions.

Stephen R. Parkhurst, of New York, N.Y., for "Improvements in machine for ginning cotton and wool."—Patented 1st May, 1845.

"What I claim as my invention in the above-described machine is, arranging the metallic rings, composing the burring cylinder so near together that no burs or seeds, &c. can fall in between them, the rings (e^1) having hooked teeth cut in the periphery, as described, and so placed around the cylinder as not to have the teeth on any two adjoining rings to come opposite each other, by which the wool or cotton is drawn in below the surface of the rings, and the seeds or burs are cleaned off. Secondly, I claim the combination of the burring cylinder (e^1), constructed as above described, with the feeding cylinders (*d*) and trash cylinder (*g*), to separate the fibers of cotton or wool from foreign or useless substances."

Richard M. Hoe, of New York, N.Y., for an "Imrovement in printing presses."—Patented 1st May, 1845.

"I claim the lifting of the cylinder when it is desired that it should not bear on the form as it revolves, such lifting being effected by means of the apparatus connected with the lever J, arranged and operating substantially as described. I claim the manner herein made known of constructing the spring box or apparatus used by me for checking the momentum of the bed in a cylinder press, but which may be advantageously applied in other machines for a like purpose, said spring box or apparatus being furnished with a centre shaft carrying a toothed wheel that gears into wheels or pinions on several surrounding shafts, the whole of which shafts carry spiral springs, arranged and combined as herein made known, so as to co-operate with each other in the manner described."

List of Specifications published during the week ending 20th May, 1859.

No.	Price.	Subject-Matter.
2283	5*d.*	Lay figures or toys for tuition, &c.
2284	1*s.* 2*d.*	Wheels and wheeled carriages, &c.
2285	7*d.*	Cotton gins.
2286	3*d.*	Machinery for polishing or finishing yarns or threads.
2287	3*d.*	Apparel for preserving life at sea, &c.
2288	4*d.*	Manufacture of articles from hard vulcanized india rubber and gutta percha, &c.
2289	5*d.*	Manufacture of iron and steel.
2290	3*d.*	Apparatus for propelling boats and vessels.
2291	9*d.*	Signalling on railway trains.
2292	8*d.*	Tanning hides, &c.
2293	10*d.*	Machinery for extracting oil from cocoa nut and other vegetable matters.
2294	6*d.*	Separating starch from gluten, &c.
2295	4*d.*	Coloring photographic pictures.
2296	1*s.* 3*d.*	Apparatus for preventing the explosion of steam boilers.
2297	1*s.*	Looms for weaving.
2298	10*d.*	Air-tight cabins or state rooms.
2299	3*d.*	Ornamental textile fabrics.
2301	11*d.*	Valves, valve cocks, &c.
2302	9*d.*	Manufacture of gloves, &c.
2303	10*d.*	Refrigerators.
2304	3*d.*	Crossing bankers' cheques and drafts.
2305	3*d.*	Respirators.
2306	7*d.*	Machinery for cutting the threads of wood screws.
2307	3*d.*	Preparing compounds for preventing and destroying blight, mildew, &c.
2308	1*s.* 1*d.*	Reaping machine.
2309	6*d.*	Ornamenting skin and leather.
2310	9*d.*	Breech-loading fire-arms and cannon.
2311	3*d.*	Machinery for the manufacture of truss springs.
2312	8*d.*	Generating and applying hydrogen gas for lighting and heating.
2313	1*s.* 1*d.*	Governors or regulators for prime movers.
2314	3*d.*	Apparatus for governing or regulating the speed of marine engines.
2315	3*d.*	Starching fabrics.
2316	4*d.*	Preparation of marking compounds for linen and other fabrics.
2317	7*d.*	Electric telegraphs.
2318	9*d.*	Combined thrashing and dressing machines.
2319	3*d.*	Washing machines, &c.
2320	3*d.*	Stopping or closing jars and bottles.
2321	4*d.*	Insulating and covering wire.
2322	3*d.*	Machinery for paying-out and raising electric telegraph cables.
2323	3*d.*	Manufacture of small chains and links.
2324	3*d.*	Advertising.
2325	3*d.*	Apparatus for lighting lamps.
2326	6*d.*	Submarine telegraphic cables.
2327	8*d.*	Rough shoeing beasts of draught and burden.
2328	8*d.*	Filter.
2329	6*d.*	Guns, gun carriages, and ammunition.
2330	3*d.*	Screws, worms, and wheels, &c.
2333	3*d.*	Valves for water meters, &c.
2336	3*d.*	Utilization of alkali waste.
2368	8*d.*	Electric lamps.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

Errata in Journal of 20th May.

1104. For "M." read "Mr."
1155. For "Mullhouse" read "Mulhouse."
1183. For "United States of America" read "United States."

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

A FREE LIBRARY and READING ROOM, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

NOTE.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Limerick.
Liverpool (*Free Public Library, Duke Street*).
——— (*Royal Institution*).
London (*British Museum*).
——— (*Society of Arts, John Street, Adelphi*).
Macclesfield (*Useful Knowledge Society*).
Maidstone.
Manchester (*Chetham Hospital*).
——— (*Free Library, Camp Field*).
Montrose.
Newark, Nottingham (*Mechanics' Institute, Middle Gate*).
Newcastle-upon-Tyne (*Literary and Philosophical Society*).
Newport, Monmouth (*Commercial Room, Town Hall*).
Northampton.
Norwich (*Free Library, St. John's, Maddermarket*).
Nottingham (*Corporation Rooms, St. Peter's Church side*).
Oxford (*Public Free Library, Town Hall*).
Paisley (*Government School of Designs, Gilmour Street*).
Plymouth (*Mechanics' Institute, Princess Square*).
Preston (*Dr. Shepherd's Library, the Institution, Avenham*).
Reading (*Literary, Scientific and Mechanics' Institution, London Street*).
Rochdale (*Commissioners Room, Smith Street*).
Rotherham (*Board of Health Offices, Howard Street*).
Salford (*Peel Park*).
Sheffield (*Free Library, Surrey Street*).
Shrewsbury (*The Public Museum, College Street*).
Southampton (*Corporation Library, Audit House*).
Stirling (*Burgh Library, Town House, Broad Street*).
Stockport (*Court House, Vernon Street, Warren Street*).
Sunderland (*Corporation Museum, Athenæum, Fawcett Street*).
Tiverton.
Wakefield (*Mechanics' Institution, Barston Square*).
Warrington (*The Museum and Library*).
Waterford (*Town Hall, The Mall*).
Wednesbury (*Board of Health Offices*).
Wexford (*Mechanics' Institute, Crescent Quay*).
Wigan.
Wolverhampton (*School of Practical Art, Darlington Street*).
Wolverton (*Railway Station*).
Yarmouth, Norfolk (*Public Library, South Quay*).
York (*Lower Council Chamber, Guildhall*).

The Commissioners' publications have also been presented to the following Public Offices, Seats of Learning, British Colonies, and Foreign States:—

Public Offices, Institutions, &c.

Admiralty, Department of the Surveyor of the Navy.
——— Steam Branch.
——— Deptford Dockyard.
——— Woolwich ditto.
——— Chatham ditto.
——— Sheerness ditto.
——— Portsmouth ditto.
——— Devonport ditto.
——— Pembroke ditto.
Artillery Institute, Woolwich.
Board of Trade, Whitehall.
Ordnance Office, Pall Mall.
——— Small Arms Factory, Enfield.
War Office, Pall Mall.
Government School of Mines, &c., Jermyn St., Piccadilly.
Dublin Castle, Dublin.
Rolls Office, Chancery (Four Courts), Dublin.
Office of Chancery, Edinburgh.
East India House. Military Stores, Leadenhall Street.
Incorporated Law Society, Chancery Lane, London.

Seats of Learning.

Cambridge University.
Trinity College, Dublin.
Queen's College, Galway.
University College, London.

British Colonies.

Malta.
Cape of Good Hope.
Mauritius.
India—Bengal.
North-West Provinces.
Madras.
Bombay.
Ceylon.
Victoria—Patent Office, Melbourne.
Parliamentary Library, Melbourne.
New South Wales.
South Australia.
Tasmania.
New Zealand.
Newfoundland.
Canada—Quebec.
Toronto.
New Brunswick.
Prince Edward Island.
Antigua.
Barbados.
Jamaica.
Trinidad.
British Guiana.

Foreign States.

Austria—Handels Ministerium, Vienna.
Bavaria—Königliche Bibliothek, Munich.
Belgium—Ministère de l'Intérieur, Brussels.
France—Bibliothèque Impériale, Conservatoire des Arts et Métiers, Hôtel de Ville. } Paris.
Gotha—Ducal Friedenstein Collection.
Hanover—Ministerium des Innern, Hanover.
Netherlands—Ministère de l'Intérieur, The Hague.
Prussia—Handels Ministerium, Berlin.
Russia—Bibliothèque Impériale, St. Petersburg.
Sardinia—Ufficio delle Privative, Turin
Saxony—Polytechnische Schule, Dresden.
Sweden—Stockholm.
United States—The Patent Office, Washington.
The Astor Library, New York.
The State Library, Albany.
The Franklin Institute, Philadelphia.
The Free Library, Boston.
The Philadelphia Library Company.
Wurtemberg—Bibliothek des Musterlagers, Stuttgart.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE REFERENCE INDEX of PATENTS, pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

Museum of Patents, South Kensington.

Since the opening of the Museum Free Daily (May 12, 1858),—99,845.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price 21*s.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.
BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

(*Registered for transmission abroad.*)

No. 563. FRIDAY, MAY 27, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

808. To DAVID BLAIR WHITE, of Newcastle-upon-Tyne, in the county of Northumberland, Doctor of Medicine, for the invention of "An improved indicating guage lead or plummet."

On his petition, recorded in the Office of the Commissioners on the 31st day of March, 1859.

1012. To HENRY KEACH and GEORGE HENRY FARRINGTON, of Bush Lane, in the city of London, Wholesale Stationers, for the invention of "Improved advertising circulars."

On their petition, recorded in the Office of the Commissioners on the 23rd day of April, 1859.

1189. To DANIEL FOXWELL, of the city of Manchester, in the county of Lancaster, Card Manufacturer, for the invention of "Improvements in sewing machines, and apparatus connected therewith."

1193. And to THOMAS RIDLEY OSWOLD, of Sunderland, Shipbuilder, for the invention of "Improvements in building ships and other vessels."

On both their petitions, recorded in the Office of the Commissioners on the 12th day of May, 1859.

1195. To JOHN WOODLEY, of Church Row, Limehouse, in the county of Middlesex, Cooper, for the invention of "Improvements in sawing machines."

1197. To WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for the invention of "Certain improvements in knitting machines."—A communication from abroad by Mr. Jonas Bradley Aiken, of Manchester, in the county of Hillsborough, and state of New Hampshire, in the United States of America, Manufacturer.

1199. To WILLIAM WHITEHOUSE, of New Ferry, near Birkenhead, in the county of Chester, Gentleman, for the invention of "Improvements in steam vessels."

1201. To THOMAS VICARS, senior, and THOMAS VICARS, junior, and THOMAS ASHMORE, of Liverpool, Engineers, and JAMES SMITH, of the same place, in the county palatine of Lancaster, Baker, for the invention of "Improvements in the manufacture of bread, biscuits, and like articles, and in the machinery and apparatus connected therewith."

1203. To JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in machinery or apparatus for treating india rubber and other similar gums."—A communication from abroad by Austin G. Day, of Seymour, Connecticut, United States of America.

1205. And to JOSHUA TAYLOR BEALE, of Greenwich, in the county of Kent, Engineer, and THOMAS NESHAM KIRKHAM, of Upper Halliford, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in the preparation of colors for dyeing and printing."

On their several petitions, recorded in the Office of the Commissioners on the 13th day of May, 1859.

1207. To JOHN MAY MUNRO, of the city and county of Bristol, Agricultural Machine and Implement Manufacturer, for the invention of "Improvements in the manufacture and arrangement of chain harrows."

1209. To WILLIAM EDWARD GEDGE, of the firm of John Gedge and Son, of No. 4, Wellington Street South, Strand, in the county of Middlesex, Patent Agents, for the invention of "Improvements in dyeing."—A communication from abroad by J. B. Thénault, of Triancourt, France.

1211. To THOMAS COOPER, of West Bromwich, in the county of Stafford, Builder, and THOMAS JONES EVANS, of West Bromwich aforesaid, Manager of Iron Works, for the invention of "A new or improved oven or stove for baking, for drying japanned and lacquered goods, and for such other purposes as the same is or may be applicable to."

1213. And to JOHN CHATTERTON, of 7, Devonshire Street, Islington, in the county of Middlesex, for the invention of "Improvements in covering wires and other metal conductors for telegraphic purposes."

On their several petitions, recorded in the Office of the Commissioners on the 14th day of May, 1859.

1215. To EDWARD ADAMS, of the Stanton Iron Works, in the county of Derby, Furnace Manager, for the invention of "The employment of machinery for drawing or extracting the gas flame or smoke from furnaces, and forcing the same into them, or into the cupola, to be used as blast or fuel for melting iron or mines of any description."

1217. To JOHN JONES, of Dorstone, in the county of Hereford, Gentleman, for the invention of "Improvements in musical instruments."

1219. To GEORGE ALLCRAFT, of Upper Thames Street, in the city of London, for the invention of "Improvements in pressure guages."—A communication from John Allcraft, of Bedford Street, New York.

1221. And to WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in manufacturing instruments for sharpening knives."—A communication from abroad by Mr. Charles S. Pomeroy, of New York.

On their several petitions, recorded in the Office of the Commissioners on the 16th day of May, 1859.

Inventions protected for Six Months by the Deposit of a Complete Specification.

NOTICE is hereby given that the petition of

1249. GEORGE ROBINSON SAMPSON, of the state of Massachusetts, of the United States of America, praying for Letters Patent for the invention of "A new and useful improvement in propelling navigable vessels through water,"—a communication from John Taggart, a resident of Roxbury, of the state of Massachusetts, of the United States of America,—was deposited and recorded in the Office of the Commissioners on the 20th day of May, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

And Notice is hereby also given that the petition of

1259. EUGÈNE PASQUIER, Mechanic, residing at Reims, Hinemar Prolongée Street, Marne, in the empire of France, praying for Letters Patent for the invention of "Apparatus for drying wool, and all filaceous matters," was deposited and recorded in the Office of the Commissioners on the 23rd day of May, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

And Notice is hereby also given that the petition of

1286. MARC ANTOINE FRANÇOIS MENNONS, of the British and Foreign Patent Offices, 39, Rue de l'Echiquier, Paris, in the empire of France, praying for Letters Patent for the invention of "An improved apparatus for the preparation of sand moulds for metal casting,"—a communication from Messieurs Maudoy and Couty, residing in Paris,—was deposited and recorded in the Office of the Commissioners on the 24th day of May, 1859, and a complete specification accompanying such petition, was at the same time filed in the said office.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

27th May, 1859.

2696. JOHN RAMSBOTTOM, of Accrington, in the county of Lancaster, Engineer, for an invention of "Improvements in machinery or apparatus applicable to water meters, and to indicating and regulating the flow and pressure of fluids generally, and in obtaining motive power from the same."—Dated 27th November, 1858.

2704. SQUIRE DIGGLE, of Radcliffe, in the county of Lancaster, Machine Maker, for an invention of "Improvements in pattern chains or other such apparatus used in weaving."—Dated 27th November, 1858.

2706. LOUIS ANTOINE POSSOZ, Chemist, of Rue Neuve St. Augustin, No. 9, Paris, in the empire of France, for an invention of "Manufacturing alkalies and obtaining simultaneously other chemical products."—Dated 29th November, 1858.

2707. GEORGE OATES, of Gatefield Works, Sheffield, in the county of York, Scissors Manufacturer, for an invention of "Improvements in the manufacture of scissors." — A communication from a Foreigner residing abroad. — Dated 29th November, 1858.

2710. GEORGE COLLIER and WILLIAM NOBLE, both of Halifax, in the county of York, for an invention of "Improvements in means or apparatus for the manufacture of spokes for carriage wheels, which improvements are also applicable to the cutting of wood for other purposes."—Dated 29th November, 1858.

2712. GEORGE HADFIELD, of Carlisle, Varnish Manufacturer, for an invention of "Improvements in the construction of carboys, barrels, and other vessels of capacity." — Dated 29th November, 1858.

2713. WILLIAM PARSONS, of Bittern, near Southampton, in the county of Hants, Bricklayer, for an invention of "Doing away with the smell arising

from the melting fat, tallow, &c., and also for an improvement in stirring and straining the same."—Dated 29th November, 1858.

2714. Charles Hancock, of West Street, Smithfield, in the city of London, Gutta Percha Manufacturer, for an invention of "Certain improvements in the insulation and manufacture of electric telegraph wires and cables."—Dated 29th November, 1858.

2716. William Arthur Henry, of Sheffield, in the county of York, Engineer, for an invention of "Improvements in machinery or apparatus for attaching the soles and heels of boots and shoes to the upper leathers, and in the fastenings employed for that purpose."—Dated 29th November, 1858.

2729. John Thow and Thomas Mitcheson Hall, both of Preston, in the county of Lancaster, Engineers, for an invention of "Preventing the fusion of the fire bars in locomotive or other furnaces."—Dated 30th November, 1858.

2733. Joseph Colyer, of Leman Street, in the county of Middlesex, Cooper and Back Maker, for an invention of "Improvements in machinery and apparatus for cutting and shaping staves and other parts of casks."—Dated 30th November, 1858.

2734. John Coulson, of the firm of J. and W. Midworth, of Newark, in the county of Nottingham, Engineers, for an invention of "Improvements in threshing and dressing machines."—Dated 30th November, 1858.

2740. Richard Laming, of Hayward's Heath, in the county of Sussex, for an invention of "Improvements in purifying gas, and in turning sulphuretted hydrogen, carbonic acid, and ammonia, or their compounds, to profitable account."—Dated 1st December, 1858.

2770. Henry Bevan, of Shrewsbury, in the county of Salop, Accountant, for an invention of "New or improved machines for effecting or facilitating arithmetical operations."—Dated 3rd December 1858.

2788. James Greene Arnold, of Worcester, Massachusetts, in the United States of America, for an invention of "Improvements in envelopes for letters and similar purposes."—Dated 6th December, 1858.

2795. Frederick William Fletcher, of Erdington, near Birmingham, in the county of Warwick, Tube and Nail Manufacturer, for an invention of "Improvements in bolts for securing doors, and for other similar purposes."—Dated 6th December, 1858.

2831. Bernard Lauth, late of Pitsburgh, state of Pennsylvania, U.S.A., but now residing at Morley's Hotel, Trafalgar Square, in the city of Westminster, Mechanician, for an invention of "An improved mode of manufacturing rods and shafts."—Dated 9th December, 1858.

2863. George Williams Baker, of Park Farm, Woburn, in the county of Bedford, Farm Steward, for an invention of "An improved construction of manger fastening."—Dated 14th December, 1858.

2892. James Jones Aston, of 41, Doughty Street, in the county of Middlesex, and of the Middle Temple, Barrister-at-Law, for an invention of "Improvements in machinery or propellers applicable for the propulsion of ships, boats, and other vessels on and through the water, and in the propelling of all such vessels on and through the water by means of such propellers."—Dated 17th December, 1858.

2925. William Spence, of 50, Chancery Lane, in the county of Middlesex, Patent Agent, for an invention of "Improvements in granaries or apparatus for preserving grain."—A communication from Charles Joseph Emile Pavy, of Girardet, Indre et Loire, in the empire of France, Farmer and Landowner.—Dated 22nd December, 1858.

3007. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in the manufacture or production and casting of steel, and in the apparatus employed therein."—A communication from Monsieur Sudre, a foreigner residing abroad.—Dated 31st December, 1858.

80. Charles Middleton Kernot, of Gloucester House, West Cowes, Isle of Wight, in the county of Southampton, Doctor of Medicine, Doctor of Laws and Logic, Doctor of Philosophy, and Member of the Royal College of Surgeons, England, &c., for an invention of "Improvements in purifying and decolorising paraffine, and rendering the same white, hard, and sweet."—Dated 11th January, 1859.

155. Richard Bradley and William Craven, of Westgate Common Foundry, Wakefield, in the county of York, Engineers, for an invention of "Improvements in machinery or apparatus for manufacturing bricks, tiles, and other similar articles."—Dated 18th January, 1859.

209. William Collett Homersham, of Adelphi Terrace, Strand, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in floating 'gridirons' or stages for repairing ships or other vessels."—Dated 24th January, 1859.

222. Henry Owen, of Portswood, Southampton, in the county of Hampshire, for an invention of "Improvements in stockings."—Dated 24th January, 1859.

809. Samuel Stephen Bateson, of 17, Bolton Street, Mayfair, in the county of Middlesex, Barrister-at-Law, for an invention of "Improvements in generating steam, and in the apparatus employed therein."—Dated 31st March, 1859.

819. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "An improved process of manufacturing sulphate of lead, carbonate of lead, nitrate of potash, and sulphate of soda." — A communication from Samuel Cooper, of Boston, in the United States of America.—Dated 1st April, 1859.

821. William Tod, of Glasgow, in the county of Lanark, North Britain, Marine Engineer, for an invention of "Improvements in marine steam engines."—Dated 1st April, 1859.

849. George Haseltine, of the United States of America, now of 4, Southampton Buildings, Holborn, in the county of Middlesex, for an invention of "Improvements in sewing machines."—Dated 5th April, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 25th May, 1859, inclusive.*)

23rd May.

1244. William Illingworth, of Manchester, in the county of Lancaster, Gentleman, for an invention of "Certain improvements in printing or colouring and glazing china, earthenware, or other ceramic manufactures, and in the machinery or apparatus connected therewith, and also improvements in the subsequent treatment of such manufactures."—Dated 24th May, 1856.

1252. Alphonse Rene le Mire de Normandy, of 67, Judd Street, Brunswick Square, in the county of Middlesex, Analytical and Consulting Chemist, for an invention of "Improvements in obtaining fresh water from salt water."—Dated 26th May, 1856.

24th May.

1275. George Bell and George Grimes, Fuzee and Match Manufacturers, No. 1, Vauxhall Walk, Lambeth, for an invention of "Improvements in the manufacture of frictional matches and fuzees."—Dated 28th May, 1856.

1288. William Needham, and James Kite (secundus), both of Vauxhall, in the county of Surrey, Engineers, for an invention of "Improvements in machinery or apparatus for expressing liquids or moisture from substances."—Dated 31st May, 1856.

25th May.

1263. James Baird, of the city of Edinburgh, Wool Merchant, for an invention of "A method of freeing the wool upon skins from burrs and other extraneous substances."—Dated 26th May, 1856.

FOREIGN PATENTS.

BELGIUM.*

List of Patents of Invention Delivered on the 19th May, 1859.†

(*Communicated by the Belgian Government.*)

(For previous List, see No. 562 of this Journal.)

7445. H. G. Mondt, of Antwerp, for "Bellows for organs."—Dated 20th April, 1859.

7495. J. B. Tips, of Thielrode, for "A churn."—Dated 29th April, 1859.

7510. Th. Birchard, of La Plante-lez-Namur, for "A system of letter-cases."—Dated 3rd May, 1859.

7511. Panwels, senr. and junr., of Antwerp, for "A system of kitchen ranges."—Dated 4th May, 1859.

7513. J. Amory, represented by H. Bosch, of Brussels, a Patent of Improvement for "Furnaces of steam boilers."—Dated 4th May, 1859.—(Original Patent, 5th May, 1856.)

7514. J. A. J. Liebermann, represented by Cail, Halot, and Co., of Molenbeek St. Jean, for an imported invention of "Applying centrifugal apparatus to the manufacture of fecula, starch, and other products."—Dated 4th May, 1859.—(French Patent, 2nd June, 1856.)

7515. J. H. Pape, of Brussels, for an imported invention of "Improvements in key board instruments."—Dated 4th May, 1859.—(Original Patent, 1st October, 1858.)

7516. A. Van Opstal and Co., of Molenbeek St. Jean, for "A mode of winding up yarns and other fibrous substances into balls."—Dated 6th May, 1859.

7517. C. J. E. Pavy, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "An apparatus for preserving corn and grains."—Dated 6th May, 1859.—(French Patent, 22nd December, 1858.)

7518. G. F. Aroux, represented by H. Biebuyck, of Brussels for an imported invention of "Improvements in the method of sowing."—Dated 6th May, 1859.—French Patent, 27th January, 1859).

7519. J. T. Jones, represented by H. Biebuyck, of Brussels, for an imported invention of "Improve- in sewing machines."—Dated 6th May, 1859.—(English Patent, 15th February, 1859.)

7520. M. Bomèrè, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in lubricating machinery."—Dated 6th May, 1859.—(French Patent, 4th March, 1859.)

7521. J. B. Gaubert, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in the manufacture of fire-arms."—Dated 6th May, 1859.—(French Patent, 30th April, 1859.)

7522. F. Faucheux, of Brussels, for "A so-called perchloroformile substance for making hat-bodies."—Dated 6th May, 1859.

7523. A. Lapène, represented by X. Raclot, of Brussels, for an imported invention of "Using gases which are soluble in a liquid, or which may be absorbed by a solid substance, as a motor for superseding steam."—Dated 6th May, 1859.—(French Patent, 26th April, 1859.)

7524. N. J. Defuisseaux, née Messinne, of Bandour, for "A bread-oven."—Dated 19th April, 1859.

7525. R. Romaine, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in steam apparatus for agricultural purposes."—Dated 5th May, 1859.—English Patent, 25th September, 1858.)

* For the Belgian Patent Law, see Nos. 292 and 348 of this Journal.

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

7527. E. Pavy, represented by Bredael, of Brussels, for an imported invention of "Applying colza straw to the manufacture of paper."—Dated 7th May, 1859.—(French Patent, 16th October, 1858.)

7528. J. Vincent, of Alost, for "An apparatus for winding thread, wool, and cotton on bobbins."—Dated 7th May, 1859.

7529. J. B. Huymans, of Brussels, for "A machine for cutting sugar into tablets."—Dated 9th May, 1859.

7530. A. F. Van Hulst, of Brussels, a Patent of Improvement for "A malt-kiln." — Dated 10th May, 1859. — (Original Patent, 1st February, 1859.)

7532. Buisson, represented by X. Raclot, of Brussels, for "An horizontal mill."—Dated 10th May. 1859.

7533. C. J. Perinel, represented by X. Raclot, of Brussels, for "A process for puddling steel by means of wood."—Dated 10th May, 1859.

7534. D. Hubert, of Brussels, for "A perpetual movement."—Dated 10th May, 1859.

7535. P. E. Brisson, represented by H. Biebuyck, of Brussels, for an imported invention of "A system of mills."—Dated 11th May, 1859.—(French Patent, 31st March, 1859.)

7536. F. de Haynin, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "Évrard's machine for conglomerating fuel."—Dated 11th May, 1859.—(Original Patent, 29th January, 1859.)

7537. J. L. Jullion, represented by D. de Vos-Verraert, of Brussels, for an imported invention of "Improvements in the manufacture of paper."—Dated 11th May, 1859.—(English Patent, 9th November, 1858.)

7538. P. Olivier, of Herstal, for "Improvements in Lefaucheux' fire-arms." — Dated 9th May, 1859.

7539. H. Bayet and L. Briand, of Liége, for "Breech-loading guns."—Dated 10th May, 1859.

7540. Ch. Lenders, of Liége, for "Breech-loading rifles firing seven shots at once."—Dated 11th May, 1859.

7541. J. and S. Tixhon, of Fléron, for "A system of cast or wrought iron naves, applicable to all carriages."—Dated 11th May, 1859.

7542. J. G. Bunting, represented by J. Piddington, of Brussels, for an imported invention of "An apparatus for subduing horses." — Dated 11th May, 1859.—(English Patent, 15th November, 1858.)

7543. F. Faucheux, of Brussels, for "Manufacture of felt hats."—Dated 12th May, 1859.

7544. P. J. Wergifosse, of Brussels, a Patent of Improvement for "Arrangements in furnaces of steam boilers for the manufacture of lighting gas."—Dated 12th May, 1859.—(Original Patent, 27th October, 1857.)

7545. J. B. Thénault, represented by X. Raclot, of Brussels, for "A process for dyeing tissues."—Dated 13th May, 1859.

7546. A. E. C. J. Reynaud de Trets, represented by H. Biebuyck, of Brussels, for an imported invention of "An explosive composition for blasting rocks in mines."—Dated 13th May, 1859.—(French Patent, 10th May, 1859.)

7547. J. B. T. Doutié and E. Gavrel, represented by A. Biebuyck, of Brussels, for an imported invention of "An apparatus for torrefying and roasting by means of hot air."—Dated 13th May, 1859.—(French Patent, 5th February, 1858.)

7548. W. B. Johns, represented by J. Piddington, of Brussels, for an imported invention of "An article for military equipment." — Dated 13th May, 1859.—(American Patent, 12th April, 1859.)

7550. H. Rongy and E. Dufour, of Brussels, for "A system of heating the feed water of steam-engines."—Dated 14th May, 1859.

7551. J. Reisler, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "Manufacture of starch."— Dated 14th May, 1859.—(Original Patent, 29th May, 1858.)

Errata.

In Journal of 20th May.

1073. For "and Weston Green" read "of Weston Green."

In Journal of 24th May.

312. For "Samuel Dodson Davison" read "Samuel Dobson Davison."

Wurtemberg, No. 314.

A FREE LIBRARY and READING ROOM, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

NOTE.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Limerick.
Liverpool (*Free Public Library, Duke Street*).
——— (*Royal Institution*).
London (*British Museum*).
——— (*Society of Arts, John Street, Adelphi*).
Macclesfield (*Useful Knowledge Society*).
Maidstone.
Manchester (*Chetham Hospital*).
——— (*Free Library, Camp Field*).
Montrose.
Newark, Nottingham (*Mechanics' Institute, Middle Gate*).
Newcastle-upon-Tyne (*Literary and Philosophical Society*).
Newport, Monmouth (*Commercial Room, Town Hall*).
Northampton.
Norwich (*Free Library, St. John's, Maddermarket*).
Nottingham (*Corporation Rooms, St. Peter's Church side*).
Oxford (*Public Free Library, Town Hall*).
Paisley (*Government School of Designs, Gilmour Street*).
Plymouth (*Mechanics' Institute, Princess Square*).
Preston (*Dr. Shepherd's Library, the Institution, Avenham*).
Reading (*Literary, Scientific and Mechanics' Institution, London Street*).
Rochdale (*Commissioners Room, Smith Street*).
Rotherham (*Board of Health Offices, Howard Street*).
Salford (*Peel Park*).
Sheffield (*Free Library, Surrey Street*).
Shrewsbury (*The Public Museum, College Street*).

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE REFERENCE INDEX of PATENTS, pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. 1.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in that Series. Edited by BENNET WOODCROFT, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions, &c. By SIMON STURTEVANT. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By JOHN ROVINSON (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether NICHOLAS PAGE or Sir NICHOLAS HALSE was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent, Nos.* 33 *and* 85, *respectively dated* 8*th April*, 1626, *and* 23*rd July*, 1635.) Price 2*d.*
4. DUD DUDLEY'S Metallum Martis; or iron made with pit-coale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated* 22*nd February*, 1620, *and* 2*nd May*, 1638. Price 8*d.*
5. Description of the nature and working of the patent Water-scoop Wheels invented by WILLIAM WHELER, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated* 24*th June*, 1642.) Price 2*s.*
6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) EDWARD SOMERSET. Lord Marquis of WORCESTER, &c. &c. (*Stat.* 15 *Car. II. c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By THOMAS SAVERY. (*Letters Patent, No.* 347, *dated* 10*th January*, 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By THOMAS SAVERY. (*Letters Patent, No.* 356, *dated* 25*th July*, 1698, *and Stat.* 10 & 11 *Will. III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By JOHN ALLEN, M.D. (*Letters Patent, No.* 513, *dated* 7*th August*, 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By JONATHAN HULLS. (*Letters Patent, No.* 556, *dated* 21*st December*, 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By SAMUEL SUTTON, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated* 16*th March*, 1744.) Price 1*s.*

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.

TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.

BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.

PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.

MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.

PRODUCTION AND APPLICATIONS OF GAS.

STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 564. **TUESDAY, MAY 31, 1859.** **Price 2d.**

Notices to Proceed.

NOTICE is hereby given, that

152. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "An improved silk thread, and a new fabric made entirely or partially from the same."—A communication from C. Depoully, senior, residing at Paris.

As set forth in his petition, recorded in the said office on the 18th day of January, 1859.

160. And PEHR AMBJÖRN SPARRE, of Stockholm, but now of 50, Chancery Lane, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in the manufacture of paper suitable for bank notes, cheques, bills, and similar articles."

As set forth in his petition, recorded in the said office on the 19th day of January, 1859.

176. And SAMUEL PHILLIPS, of Moseley, in the county of Worcester, Gentleman, has given the like notice in respect of the invention of "Improvements in sliding sashes, shutters or doors."

179. And JOSEPH BENT, of Newhall Street, Birmingham, in the county of Warwick, Military Ornament Manufacturer, has given the like notice in respect of the invention of "Certain improvements in clasps or fastenings applicable for belts, garters, and other purposes."

As set forth in their respective petitions, both recorded in the said office on the 20th day of January, 1859.

185. And LOUIS LE PRINCE, of 261, Regent Street, in the county of Middlesex, Boot Maker, has given the like notice in respect of the invention of "The improvement of ladies' boots and shoes, called the caméleon boot and the caméleon shoe."

187. And GEORGE ELLIS, of No. 4, Collier Street, Pentonville, in the county of Middlesex, Merchant, has given the like notice in respect of the invention of "The improvement of muffs, to be called the 'patent reticule muff.'"

189. And RICHARD HOWELL, of Smethwick, in the county of Stafford, Gas Fitter, and RICHARD JAMES WILLDER, of Birmingham, in the county of Warwick, Hatter, have given the like notice in respect of the invention of "An improvement or improvements in taps or stop-cocks."

198. And BERNARD LAUTH, late of Pittsburgh, state of Pennsylvania, U.S.A., but now residing at Surrey Street, in the city of Westminster, Mechanician, has given the like notice in respect of the invention of "An improved mode of and improved machinery for rolling plates, bars, rods, and shafts."

199. And JOHN EDWARDS, of 77, Aldermanbury, in the city of London, has given the like notice in respect of the invention of "Improvements in the manufacture of buckles."

As set forth in their respective petitions, all recorded in the said office on the 21st day of January, 1859.

206. And THOMAS WEBSTER RAMMELL, of No. 16, Spring Gardens, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in atmospheric propulsion and the structures, tubes, machinery, and apparatus applicable thereto."

As set forth in his petition, recorded in the said office on the 22nd day of January, 1859.

210. And ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "Improvements in the manufacture of cast steel and iron."

211. And ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "An improvement in the manufacture of cast steel."

212. And Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, has given the like notice in respect of the invention of "Improvements in pumps." —A communication from François Ruff, residing at Paris.

213. And Joseph Laubereau, of Paris, in the empire of France, Civil Engineer, has given the like notice in respect of the invention of "Improvements in air engines."

As set forth in their respective petitions, all recorded in the said office on the 24th day of January, 1859.

---

226. And William Hodgson and Henry Hodgson, of Bradford, in the county of York, Tool and Machine Makers, have given the like notice in respect of the invention of "Improvements in machinery or apparatus for preparing and spinning wool and other fibrous substances."

As set forth in their petition, recorded in the said office on the 25th day of January, 1859.

---

236. And Isaac Hammond, of the city of Winchester, in the county of Hants, Gun Maker, has given the like notice in respect of the invention of "Improvements in breech loading fire-arms, and in cartridges to be used therewith."

240. And Frederick Carl Christian Paulsen, and Albin Alsing, both of Emmett Street, Limehouse, in the county of Middlesex, have given the like notice in respect of the invention of "Improvements in preparing beverages, usually called punch."

As set forth in their respective petitions, both recorded in the said office on the 26th day of January, 1859.

---

254. And James Gathercole, of Bath Terrace, Camberwell New Road, in the county of Surrey, Gentleman, has given the like notice in respect of the invention of "Improved machinery for manufacturing envelopes and paper bags."

As set forth in his petition, recorded in the said office on the 27th day of January, 1859.

---

270. And Jean Justin Albert de Bronac and Augustin Joseph Martial Deherrypon, Civil Engineers, of Paris, in the empire of France, have given the like notice in respect of the invention of "A new or improved process for treating metallic sulphurets, phosphurets, arseniurets, antimoniurets, and particularly sulphuretted ores of lead, antimony, copper, silver, zinc."

As set forth in their petition, recorded in the said office on the 29th day of January, 1859.

---

281. And Laurent Rigolier, Engineer, residing at Lyon, Place Grolier, 5, Rhône, in the empire of France, has given the like notice in respect of the invention of "A new brake for railway carriages."

294. And Edward Hammond Bentall, of Heybridge, near Maldon, in the county of Essex, Ironfounder, has given the like notice in respect of the invention of "Improvements applicable to machinery for grinding or pulverizing various substances."

As set forth in their respective petitions, both recorded in the said office on the 1st day of February, 1859.

---

320. And Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Editor of the Mechanics' Magazine and Patent Agent, has given the like notice in respect of the invention of "An improvement in cooling worts and beer." —A communication from Madame Jolibois, residing at Dijon, France.

As set forth in his petition, recorded in the said office on the 4th day of February, 1859.

---

372. And William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Certain improvements in breech-loading firearms, and in cartridges to be used in such fire-arms." — A communication from abroad by Gilbert Smith, of the state of New York, in the United States of America.

As set forth in his petition, recorded in the said office on the 9th day of February, 1859.

---

497. And George Turnbull, of Calcutta, in the province of Bengal, in the East Indies, Civil Engineer, has given the like notice in respect of the invention of "Improvements in the permanent way of railways."

As set forth in his petition, recorded in the said office on the 23rd day of February, 1859.

---

603. And George Twigg, of Birmingham, in the county of Warwick, Manufacturer, has given the like notice in respect of the invention of "An improved fusee-igniter for the use of smokers."

As set forth in his petition, recorded in the said office on the 8th day of March, 1859.

---

676. And Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, has given the like notice in respect of the invention of "Treating barley so as to obtain new alimentary substances therefrom."—A communication from Pierre Marmay, residing at Riom, France.

As set forth in his petition, recorded in the said office on the 17th day of March, 1859.

---

731. And Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, has given the like notice in respect of the invention of "Improvements in fire-arms and ordnance, and in projectiles and apparatuses to be employed therewith."—A communication from Charles Rochaz, residing at Paris.

As set forth in his petition, recorded in the said office on the 22nd day of March, 1859.

---

766. And George Naylor, of No. 7, Durnford Street, East Stonehouse, in the county of Devon, a Lieutenant in the Royal Marines Light Infantry, has given the like notice in respect of the invention of "An apparatus for measuring and indicating the distance passed over or travelled by the same."

As set forth in his petition, recorded in the said office on the 26th day of March, 1859.

---

844. And Matthew Augustus Crooker, of New York, United States of America, Engineer, has given the like notice in respect of the invention of "Improvements in paddle wheels for steamers."

As set forth in his petition, recorded in the said office on the 4th day of April, 1859.

896. And Henry Francis Gardner, of Boston, in the United States of America, has given the like notice in respect of the invention of "Improvements in machinery for blocking or crimping the uppers of boots and shoes, and in treeing boots."—Partly a communication from abroad by William Willmott and Philander Shaw of the United States of America.

As set forth in his petition, recorded in the said office on the 9th day of April, 1859.

910. And William Clark, of Laughaugh, Galashields, Scotland, a Lieutenant in Her Majesty's Navy, has given the like notice in respect of the invention of "An improved safety block to be used for lowering ships' boats, the same being applicable to other like or analagous purposes."

As set forth in his petition, recorded in the said office on the 12th day of April, 1859.

926. And Richard Coleman, of Chelmsford, in the county of Essex, Agricultural Implement Manufacturer, has given the like notice in respect of the invention of "Improvements in agricultural implements."

As set forth in his petition, recorded in the said office on the 13th day of April, 1859.

934. And John Gillett, of Upper Brailes, in the county of Warwickshire, Agricultural Implement Maker, has given the like notice in respect of the invention of "Improved mill used for grinding, crushing, and reducing bones and other mineral and vegetable substances."

As set forth in his petition, recorded in the said office on the 14th day of April, 1859.

1043. And Herbert Allman, of Mornington Place, Hampstead Road, London, Consulting Engineer, has given the like notice in respect of the invention of "Certain improvements in the construction of window-blind mountings, and in apparatus connected therewith."

As set forth in his petition, recorded in the said office on the 26th day of April, 1859.

1083. And Joseph Toussaint, of No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, has given the like notice in respect of the invention of "A new process of modelling and moulding for galvano-plastic."

1090. And Charles Hanson Greville Williams, of 39, Regent Square, Gray's Inn Road, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in the manufacture of colouring matters, and in applying the same for dyeing and printing fabrics and materials."

As set forth in their respective petitions, both recorded in the said office on the 30th day of April, 1859.

1124. And John Scholfield, of Milnrow, near Rochdale, in the county of Lancaster, Cotton Spinner, and William Cudworth, of the same place, Manager, have given the like notice in respect of the invention of "Certain improvements in machinery or apparatus for spinning cotton and other fibrous materials."

As set forth in their petition, recorded in the said office on the 5th day of May, 1859.

1153. And Richard Pearsall, of Smethwick, in the county of Stafford, Glass Blower, has given the like notice in respect of the invention of "Improvements in the manufacture of glass shades."

1155. And Richard Dugdale Kay, of Accrington, in the county of Lancaster, Manufacturer of Patent Fabrics, has given the like notice in respect of the invention of "Improvements in the preparation of certain colouring matters."—A communication from abroad by Dollfus Mieg and Cie., residing at Mulhouse, France.

As set forth in their respective petitions, both recorded in the said office on the 7th day of May, 1859.

1167. And William Frost Nuthall, of North Lodge, Kilburn, in the county of Middlesex, a Major in Her Majesty's Bengal Army, has given the like notice in respect of the invention of "Improvements in ordnance and fire-arms, and in projectiles to be used therewith."

As set forth in his petition, recorded in the said office on the 10th day of May, 1859.

1203. And John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for treating india-rubber and other similar gums."—A communication from abroad, by Austin G. Day, of Seymour, Connecticut, United States of America.

As set forth in his petition, recorded in the said office on the 13th day of May, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

List of Letters Patent which passed the Great Seal on the

30th May, 1859.

2739. Thomas Paramore Purssglove, of Battersea, in the county of Surrey, for an invention of "An improved pressure gauge for steam, gas, or other fluids."—Dated 1st December, 1858.

2742. James Samuel, of Great George Street, in the city of Westminster, Civil Engineer, and John Nicholson, of Wellington Street, Bromley, in the county of Middlesex, Engineer, for an invention of "Improvements in and in connexion with marine and other steam engines."—Dated 1st December, 1858.

2743. Ebenezer Viney, of the firm of John Viney and Son, of Cornhill, in the city of London, Portmanteau Manufacturers, for an invention of "An improvement in the construction of portmanteaus, desks, dressing cases, despatch boxes, and other like articles."—Dated 1st December, 1858.

2744. Henry Adcock, of the City Road, in the county of Middlesex, for an invention of "Improvements in furnaces and apparatus for annealing wire."—Dated 1st December, 1858.

2745. Frederick Warner, of Jewin Street, in the city of London, John Derbyshire, of Longton, in the county of Stafford, and Alexander Mann, of Little Britain, in the city of London, for an invention of "An improvement in the manufacture of cocks or taps."—Dated 1st December, 1858.

2748. Samuel Newington, of Ticehurst, in the county of Sussex, for an invention of "Improvements in agricultural implements."—Dated 1st December, 1858.

2760. George Spiller, of No. 15, Upper Southwick Street, in the county of Middlesex, a Lieutenant-Colonel in Her Majesty's Royal Artillery, for an invention of "Improvements in knapsacks for military and other purposes."—Dated 2nd December, 1858.

2772. Robert Legg, Millwright and Engineer, of 11, Ashby Street, Clerkenwell, in the county of Middlesex, for an invention of "A machine for combining the operation of compressing and cutting tobacco during the process of manufacture."—Dated 4th December, 1858.

2777. Thomas Sibley, of Ashton-under-Lyne, in the county of Lancaster, Machine Maker, for an invention of "Improvements in looms for weaving."—Dated 4th December, 1858.

2806. William Burness, of 2, Prospect Terrace, Brixton, in the county of Surrey, for an invention of "Improvements in pumping and forcing liquids."—Dated 7th December, 1858.

2818. Henry Meidinger, of the University of Heidelberg, Germany, for an invention of "Improvements in electric batteries."—Dated 8th December, 1858.

2828. John Wilson, of Wansford, Northamptonshire, for an invention of "Improvements in machinery for tilling and cultivating land."—Dated 9th December, 1858.

2833. John Lightfoot, of Accrington, in the county of Lancaster, Calico Printer, for an invention of "Improvements in printing or staining yarns, fabrics, or fibrous substances, and in the manufacture of certain compounds for that purpose."—Dated 10th December, 1858.

2838. William Beardmore, of Deptford, in the county of Kent, Engineer, for an invention of "Improvements in steam boilers."—Dated 10th December, 1858.

2840. George William Bryant Kiallmark, of Bridgewater, in the county of Somerset, and William Thomas Timewell, of North Wharf Road, Paddington, in the county of Middlesex, for an invention of "Improvements in the manufacture of cements."—Dated 10th December, 1858.

2842. John Bonar Guthrie, of Manchester, in the county of Lancaster, Warehouseman, for an invention of "Improvements in the manufacture of india-rubber overshoes."—Dated 11th December, 1858.

2860. Ebenezer Bow, of Port Dundas, in the county of Lanark, North Britain, Coalmaster, for an invention of "Improvements in pumps."—Dated 14th December, 1858.

2873. John Bullough, of Blackburn, in the county of Lancaster, Manager, for an invention of "Improvements in looms."—Dated 15th December, 1858.

2875. William Clark, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for an invention of "Improved agricultural implements."—A communication from Louis Jacques, Château Public Notary, of Paris, in the empire of France.—Dated 15th December, 1858.

2891. William Clark, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for an invention of "Improvements in submarine electric telegraph cables or conductors."—A communication from Felix Marie Baudouin, of Rue des Recollets, Paris.—Dated 16th December, 1858.

2899. John Aitken, of Irwell Vale Mill, Edenfield, near Bury, in the county of Lancaster, Manufacturer, and John Brooks, of the same place, Overlooker, for an invention of "Improvements in looms."—Dated 18th December, 1858.

2901. Alexander Mitchell, of Glasgow, Machinist, for an invention of "Improved apparatus for registering the speed of engines and other machinery."—Dated 18th December, 1858.

2916. Auguste Stanislas Beliard, of Bordeaux, in the empire of France, Hatter, for an invention of "An improved machine for pumicing felts, tissues, and skins."—Dated 21st December, 1858.

544. John Pile, of West Hartlepool, in the county of Durham, Shipbuilder, for an invention of "Improvements in the construction of floating docks."—Dated 1st March, 1859.

558. Joseph Kershaw, of Allerton, near Bradford, in the county of York, Overlooker, for an invention of "Improvements in means or apparatus employed in weaving."—Dated 2nd March, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 28th May*, 1859, *inclusive.*)

27th May.

1310. Edward Marsden, of Handley Wood, in the county of Derby, Agriculturalist, for an invention of "Improvements in implements for pulverizing and cleaning land."—Dated 2nd June, 1856.

1313. Thomas William Willett, of 89, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in the manufacture of gunpowder."—Dated 3rd June, 1856.

28th May.

1283. Frederick Luke Stott, of Rochdale, Mechanic, Thomas Belward, of the city of Manchester, Joiner, and James Findlow, of the same

place, Joiner, all in the county of Lancaster, for an invention of "Improvements in machinery or apparatus for washing wool, or garments and other articles made of textile fabrics."—Dated 30th May, 1856.

1292. Henry Bessemer, of 4, Queen Street Place, New Cannon Street, in the city of London, for an invention of "Improvements in the manufacture of iron and steel."—Dated 31st May, 1856.

FOREIGN PATENTS.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

List of Patents, with Claims annexed, issued from the United States Patent Office, for the week ending 10th May, 1859, and each bearing that date.

No. 23,886. Milton Alden, of Auburn, N. Y., for an "Improvement in cultivators."

"I claim the within described arrangement and combination of the adjustable shares B, the frame A, and the raised thills C, which are made out of one piece with the handles D.

No. 23,887. Wm. H. Auld, of Brighton, Iowa, for an "Improved machine for sawing shingles."

"I claim the adjustable saws C, C, in connection with the reciprocating bolt carriage L. I also claim the arrangement of the notched racks *l*, *l*, gearing *k*, *k*, weight *r*, pins *s*, *s*, levers *v*, *v*, a^1, and bars *x*, b^1, attached to the bolt carriage in connection with the stops $a\times$, for automatically feeding the bolt M, to the saws C, C."

No. 23,888. Chas. Bamberg and Roman Blaser, of Chicago, Ill., for an "Improvement in machines for separating stones, &c. from clay."

"We claim the conical rotating screen C, in connection with the separator F, placed within suitable boxes A, G, constructed and arranged relatively with each other to operate."

No. 23,889. Jacob Batchelder, of Salem, Mass., for an "Improvement in sole cutting machines."

I claim, first, the particular and relative arrangement of the levers *e*, *e*, and e^1, e^1, with the cranks *n*, *p*, and *f*, f^1, for giving the required motions to the cutting knives. Second, the use and arrangement of the adjustable and intermediate gauge board w^1, whereby each alternate sole can be cut of equal or unequal width."

No. 23,890. John Bean and Benjn. Wright, of Hudson, Mich., for an "Improvement in straw cutters."

"We claim the arrangement and combination of the knife C, lever D, and rock shaft E.

No. 23,891. Sidney A. Beers, of Brooklyn, N.Y., for an "Improvement in railroads for streets."

"I claim the construction of upright self-sustaining rails of cast or other iron, with car and carriage track combined, to be laid in public streets and highways, and for no other purpose."

No. 23,892. Hamilton T. Beggs, of Liberty, Va., and James Allen, of Lynchburg, Va., for an "Improvement in brick machines."

"We claim the combination of the bevel wheel C, cast with the cells P therein, for the reception of the moulds D, the plungers E, with the friction rollers and axles F, circular inclined plane ring *g*, and guard H, and top plate B, when the several parts are constructed and arranged for joint operation."

No. 23,893. Edwd. Behr, of New York, N.Y., for "Skate fastening."

"I claim drawing or tightening the toe and heel straps G, E, of the skate around the foot of the wearer, by means of the screw rods F, I, and nuts *d*, *i*, fitted in the stock A, one end of the straps being attached to the stock A, and the opposite ends to the nuts by means of the cords *b*, *f*, or their equivalents."

No. 23,894. A. J. Bentley and Wm. H. Allen, of New York, N.Y., for an "Improved ships'-stop block."

"We claim the arrangement of rollers and wedges."

No. 23,895. L. F. Bingham and N. O. Pierce, of Chicago, Ill., for an "Improvement in corn planters."

"We claim the arrangement of the rotating planter A, square tube 10, beam O, lever N, 'spat down' or leverler 12, and scraper *p*."

No. 23,896. A. W. Brinkerhoff, of Upper Sandusky, Ohio, for an "Improvement in corn planters."

"I claim the adjustable coverer D and opener P in combination with lever L, the weighted lever A operating the rollers and rod B."

No. 23,897. James Brown, of London, England, for an "Improvement in the manufacture of paper and paper pulp."—Patented in England, June 10th, 1857.

"I claim the treatment of paper and paper material with glycerine, substantially as described, to be employed for printing or other purposes."

No. 23,898. C. M. Bryan, of Wright City, Mo., for an "Improvement in ploughs."

"I claim attaching the mould board D, by means of the bolts *h*, *h*, *i*, *i*, passing through cleets *b*, *b*, at the inner side of the mould board, and into the land side E, and handle C^1, the bolts *g*, d^1, and the brace bar *d*."

No. 23,899. Elisha J. Burrall, of Geneva, N.Y., for an "Improvement in machines for sowing fertilizers."

"I claim the arrangement of the revolving cylinder *a*, divisions k^1, and adjustable perforated slides 3, 3."

No. 23,900. Dexter H. Chamberlain, of West Roxburg, Mass., for an "Improvement in machines for splitting leather."

"I claim inclosing the cutting blade within an external casing throughout its entire length."

No. 23,901. Robt. I. Colvin, of Lancaster, Pa., for an "Improvement in convertible carriage shafts."

"What I claim, is, 1, the attachment of removable shafts, by means of the adjustable braces I, I, and the hinged caps Z, Z, of the pole crab N. 2, the curved or segment bars A, forming a transverse horizontal slot, in which the shafts are supported at their rear end, both when separated in the ordinary way, and when united together as a pole. 3, the hinged and pivoted thill attachment for accommodating the width of the same to the different positions of the clips upon the axle."

No. 23,902. NATHAN COPE and WM. HODGSON, of Cincinnati, Ohio, for an "Improvement in butterfly valves."

"We claim the arrangement and combination of the curved slotted plate E, valve box B, stops F, F¹, and slotted valve lever G."

No. 23,903. JAMES B. CRIST, of Evansville, Ind., for an "Improvement in grain separators."

"I claim the arrangement of the blast passage G, fan B¹, screen I, and riddle K, with chute L attached, placed within the case or box A, and in relation with the spouts or discharge passages *d*, *e*, *f*, N."

No. 23,904. EDWD. DAVIDSON, of Batesville, Ark., for an "Improvement in ploughs."

"I claim the combination of the bar *e*, stirrup *c*, rod *f*, with the adjustable supplemental land side F, share G, and the stationary share E, and land side C."

No. 23,905. HIRAM T. DEWEY, of Sandusky, O., for an "Improved fence post."

"I claim the combination of the ribbed post A, and horizontal flange plate C, when jointed to each other."

No. 23,906. WM. C. DOSS, of Lavaca, Texas, for an "Improvement in cultivators."

"I claim the arrangement on the triangular frame A, A, B, of shears J, K, with mould boards that may be taken off at pleasure, scraper N, and cultivators L, M."

No. 23,907. B. WELLS DUNKLEE, of Boston, Mass., for an "Improvement in furnaces for heating buildings."

"I claim combining with the fire pot and its dome one or more gas circulating pipes *g*, arranged with respect to the same, and in the hot-air chamber of the case E. I also claim the arrangement of the hot-air discharge pipes *c*, *c*, and the wings *d* of the arch of the fire dome. I also claim, in connection with air register to the front of the ash pit, an air pipe *v*, carried through the hot-air chamber, and into the rear part of the ash pit. I also claim the combination and arrangement of the hoe valve *p*, and the plate or door *r*, with the flue *n*, the pipe H, and the opening *t*."

No. 23,908. LEWIS EIKENBERRY, of Easton, Pa., for an "Improved method of compensating for expansion and contraction of metallic fences."

"What I claim is, the method of making provision for expansion and contraction in an iron lattice or other open-work fence."

No. 23,909. STEPHEN ELLIOTT, of Richmond, Ind., for an "Improvement in straw cutters."

"I claim the arrangement of boards E, cross piece F, rods I and G, and lever H, with boards B and D, canvas C, rods R and S, and lever Q."

No. 23,910. ANDREW ELLISON, of Boston, Mass., for an "Improved smoothing iron."

"I claim attaching the handle plate A to the separate heater or block B by means of the guide *b* and slot D, the angular recess E, and lips *c*, *c*, and the latching devices *a*, F."

No. 23,911. SAML. V. ESSICK, of Moultrie, Ohio, for an "Improvement in machines for loading hay."

"What I claim is, the adjustable frame (*d*), the rake (*j*), the rakers (*h*), and (*m*), and the conveyors (*g*) and (*l*)."

No. 23,912. JOHN L. FIELD, of Syracuse, N. Y., for an "Improved method of strapping wood in bending."

"I claim the method for connecting metallic straps for bending timber, when the parts are so arranged as to operate in connection with the forming frames."

No. 23,913. DAVID S. FISHER, of Mauckport, Ind., for an "Improvement in seed planters."

"I claim the combination and arrangement of the spring hoe J, adjustable spring roller I, with the seeding and regulating apparatus."

No. 23,914. J. H. FRENCH, of Syracuse, N. Y., for an "Improvement in harrows."

"What I claim is, 1st, the combination and arrangement of three triangular harrows, in such a manner as to form one triple triangular harrow, by connecting the angles with flexible joints or couplings, which admit of the free vibration of the parts, and their ready adaptation to the inequalities of the ground. 2nd, I also claim constructing triangular harrows of metallic bars or flat strips of metal, by folding over the same at the angles, in such a manner that the draught strain of the teeth upon one side shall counteract that upon the other, and forming the couplings at the same operation, by folding in links or hooks at the angles, no bolts being required to secure them, in consequence of the self-bracing of the parts."

No. 23,915. R. B. GILBERT, of Sutherland Springs, Texas, for an "Improvement in corn planters."

"I claim the arrangement of the shear *a*, coverers *i*, *i*, conductor *c*, cylinder *d*, and hopper *e*, wheel *g*, and scraper *p*, for joint operation."

No. 23,916. RICHD. GORNALL, of Baltimore, Md., for an "Improvement in mail bags."

"I claim the employment with a mail bag, constructed with a socket G, and furnished with a lock or other safe fastening of the plates B, B, which terminate in nearly complete tubes D, D, and with the jointed rod or bolt H, provided with a hasp or other similar attachment."

No. 23,917. HENRY GORTNER, of Irville, Ohio, for an "Improvement in rat traps."

"I claim the rotating disks C, C, connected by the plates *b*, *b*, in connection with the treadle platform C plates *c*, *c*, and bar *d*, and the supplemental platform D, the whole being fitted to the box A."

No. 23,718. BENJN. T. HARRIS, of Brooklyn, N.Y., for an "Improved mechanism by which employees register their time."

"What I claim is, first, the manner of mounting the cylinder D on the spring barrel *f* and with the connecting coupling 3. Second, I claim the binding plate *d*, fitted and acting to retain the ends of the paper to the cylinder D. Third, I claim the arrangement and manner of constructing the slides *i*, *i*, and impression points *m*, *m*. Fourth, I claim the rollers *l*, and their pawls *o* and *p*, in connection with the slide *i* and openings (*k*) in the front plate (*g*)."

No. 23,719. SAML. E. HARTWELL, of New York, N.Y., for an "Improvement in corn planters."

"I claim the arrangement of the slide *d*, shoe *c*, and hoe *i* connected, and acting in the manner and for the purposes substantially as specified."

No. 23,720. SAML. HENRY, of Chenoa, Ill., for an "Improvement in seeding machines."

"I claim the slide bar or seed distributor G, with slide H, fitted therein, and placed relatively with the seed box F."

No. 23,721. MOSES G. HUBBARD, of Penn., Yan., N.Y., for an "Improvement in harvesting machines."

"I claim the conformation of the intermediate fingers of a reaping and mowing machine, having a conical form with a straight outline from point to heel, so as to present a straight gradual taper on the underside as well as above. I also claim the safety flanch 's,' for securing the pitman connection."

No. 23,722. CHAS. W. KENNEDY and RICHD. T. BROWN, of Williamsburgh, N.Y., for an "Improvement in machines for breaking coal."

"We claim the arrangement and combination of the polygonal spiked drum E, spiked crushing plate H, and spiked clearing plate I."

No. 23,923. LEWIS KIRK, of Reading, Pa., for an "Improvement in R. R. car brakes."

"What I claim as new is, 1st, the arrangement of the hand wheel J and the rod K, in combination with the pump B, so that by depressing the rod K the pump is placed in working order, and that the same can be operated by means of the hand wheel J¹. 2nd, the arrangement of the spring catch *k*, which is attached to the piston rod d^3 of one of the pump cylinders in combination with the bell crank *l*, or its equivalent, which is operated by means of an eccentric m^1. 3rd,

arranging the coupling M on a rod p in such relation to the spring catch k and to the cock E that by exercising a pressure on the coupling the rod p is turned sufficiently to open the cock E, and to depress the spring catch k."

No. 23,924. Thos. J. Lamdin, of Baltimore, Md., for an "Improvement in mail bags."

"I claim the placing of the staples or buckles on the flap of the bag or pouch, so that when the flap is turned down said staples or buckles will pass through the grummets. I also claim the manner of forming the seams of the bag or pouch so that they cannot be cut open and resewn from the outside of the bag without instant detection on looking at the seam, as its whole character must be changed in any such attempt or effort."

No. 23,925. Jabes Lewis, of New Orleans, La., for an "Improved apparatus for conducting water to cisterns."

"I claim making the change in openings from the box A, or its equivalent, by the employment of a weight containing water supplied from a roof, when the weight can lose the water it contained, and thus reduce its force of gravity to allow another change to be made, by which the water is conducted separate directions from and to the cistern."

No. 23,926. Chas. L. Linnell, of Truro, Mass, for an "Improved jib boom for vessels."

"I claim the application of the after jib boom to the bowsprit by means not only of the slide rod applied to the bowsprit but the slider connected with the boom."

No. 23,927. Benjn. Tolman, of Pembroke, Mass., assignor to himself and A. T. Ramsdell, of same place, for an "Improved spoke shave."

"What I claim is an improved spoke connected with an adjustable knife and an adjustable throat gauge, arranged and applied to the stock, and so as to move with respect to one another."

No. 23,928. Wm. S. Loughborough, of Rochester, N. Y., for an "Improved bench plane."

"What I claim as my invention, is, 1st, the combination of the screw 2 (which takes effect in the projection R), spring or yielding cap C, bit B, and screw 1, for the purpose of varying the cut of the bit, and at the same time and proportionally the space of the throat, the base of the bit B being the fulcrum upon which it swings when said changes are made, the said combination being applicable for the adjustment of the bit in all kinds of planes. 2nd, the adjustable parallel fence F constructed with diagonal slots D for the set screws Y, said fence being applicable to match planes, and also the stop P with the slot running up diagonally from the face, the set screw K and the guide pin U keeping it in position, said stop being applicable to panel plows and dadoes."

No. 23,929. Saml. D. Lount, of Summerville, Mich., for an "Improved rotary engine."

"I claim the arrangement and combination of the rotating head I, provided with sliding pistons, and placed eccentrically within the case A, the saddles M applied to the pistons, and the valves N, O."

No. 23,930. Robt. Marcher, of New York, N. Y., for an "Apparatus for laying metal leaf on mouldings, &c."

"What I claim is, the method of laying leaf metal on mouldings and other surfaces by means of a roller. And I also claim operating the roller in laying leaf metal on surfaces by the force of capillary attraction. And I also claim the combination of the rails, the table for holding the book of leaf metal, and the means for holding the article to be gilded or silvered, or the equivalents of the said elements, in combination with the roller. And, finally, I claim the combination of the roller and rails, or equivalent guide ways, with the rebate or equivalent gauge."

No. 23,931. T. Mayhew, of Poughkeepsie, N. Y., for an "Improvement in railroad switch."

"What I claim is, the employment or use of the adjustable platform E, in connection with the switch bar B, and gearing d, h^{1}, h^{11}, h^{111}, h^{1111}, springs c, c, and stops i, g."

No. 23,932. Wm. McAllister, of South Reading, Mass., for an "Improvement in windmills."

"What I claim is, the series of narrow sails 1, 2, 3, 4, attached to vertically sliding rods a, b, c, d, and united by means of the cords s, s, and operating in combination with the adjusting ropes I."

No. 23,933. James C. Molthrup, of Bucyrus, Ohio, for an "Improvement in ploughs."

"What I claim is, giving the beam B, B^{1}, longitudinal and vertical motion by means of the bearing plates d^{11}, slots c, c^{1}, short rear bolt b, and long vibrating front bolt f."

No. 23,934. James Monach, of Rahway, N. J., for an "Improvement in the manufacture of felt hats."

"I claim the corrugation of the brims of felt or soft hats, by the employment of dies on both sides of the brim, whereby the corrugation is attained without stretching the brim, both the surfaces being finished at one operation."

No. 23,935. Eli Mosher, of Flushing, Mich., for an "Improvement in plant protectors."

"I claim the arrangement and combination of the folding sides (a, a, a^{1}, a^{11}), cover B, and fastening cord (b)."

No. 23,936. James Mulligan, of New York, N.Y., for an "Improvement in roasters."

"I claim the detachable journal bearings b, b, constructed so as to be clamped on to the edges of the openings in the stove or range and receive the spit c."

No. 23,937. John Munson, of San Jose, Cal., for an "Improvement in pump boxes."

"I claim constructing the pump boxes of the rings a, bands e, provided with the uprights g, g, and the traverse plates h, when the boxes thus constructed are provided with the valves l fitted thereon. I further claim securing the lower box C in the bottom of the cylinder A, by means of the traverse plate h on said box and flanch $a\times$, secured to the inner side of the cylinder."

No. 23,938. Williamson Nichols, of Floyd County, Geo., for an "Improvement in ploughs."

"What I claim is, the arrangement of the forked beam G, segmental head F, holes g, bolts 4 and 5, clevis f, stock H, handle I, rivets c, and holes 1, 2, 3."

No. 23,939. R. B. Norvell, of Huntsville, Ala., for an "Improvement in bridles."

"I claim the cord F, attached to a bridle or halter, by passing the same through the bit rings, or halter rings, and over the pulleys c, c^{1}, or their equivalents, and under the throat of a horse, or other animal."

No. 23,940. James Nuttall, of New Orleans, La., for an "Improvement in iron ties for cotton bales."

"What I claim is, the combination of the plate s, and movable clasp c, when made use of in confining the hooks a and b, as a fastening for iron ties for cotton bales."

No. 23,941. Henry A. Nutting, of South Amherst, Mass., for an "Improved clothes frame."

"What I claim is a clothes frame, composed substantially of the rod or stem c, the two hubs A, B, and the two sets of arms D, E.

No. 23,942. Isaac B. Palamountain, of Tarboro', N.C., for an "Improvement in cultivators."

"What I claim is, the arrangement of the beam A, stock B, centre bar B, standard F, wings G, G, and J, share D, and seat H, for joint operation."

No. 23,943. Geo. S. Reynolds, of East Bethel, Vt., for an "Improvement in horse hay rakes."

"I claim the arrangement of the boxes k, arch arm b, elastic spring g, shoe d, strap t, frame r, and strap l."

No. 23,944. Augustus Rebetey, of Norwich, Conn., for an "Improvement in tools for manufacture of fire-arms."

"I claim the use of a crank shaft A, B, C, to carry a cutter I, such crank shaft suspended at the centres of an engine, lathe, or any similar machine, and receiving its motion from the counter shaft of such lathe or similar machine, for the purpose of cutting an eccentric-shaped slot in the barrel of a pistol or anything else."

No. 23,945. SYLVANUS RICHARDSON, of Jericho, Vt., for an "Improvement in water wheels."

"What I claim is, the construction and arrangement of the shutes formed by irons *g* in Figure 3, and irons *i* in Figure 5, and the arrangement of openings in plate shown in Figure 3, marked *f*, and corresponding openings in plate shown in Figure 5, also marked *f*, and the arrangement of plate *c*, *c*, and wheel *e*, *e*, *e*, *e*, and case *a*, *a*, and draft tube *d*, and the combination of the same."

No. 23,946. JOHN W. RINEHART, of Lexington, Mo., for an "Improvement in hemp brakes."

"I claim the particular manner of operating the beater frame B, to wit, by means of the lever *j*, links *k*, *k*, lever *l*, shaft C, arm *m*, connecting rod *n*, and crank *o*."

No. 23,947. S. S. RITTER, of Philadelphia, Pa., for an "Improvement in hernial trusses."

"I claim the construction of a surgical truss having a short spring, with one or more plates of metal, extending in front about half around the body and held by a strap or straps, forming the other half of the girdle, when the said spring is curved, as shown in Fig. 7, for the purpose of making a more agreeable pressure upon the hernia, and for fitting the ends of the spring better to the hips, thus rendering the truss more comfortable to the patient. 2, I claim the above described pad (Figs. 3 and 4), having a central prominence surrounded by a groove and ridge, when the face of said pad is made in one piece."

No. 23,948. EDWD. A. L. ROBERTS, and WM. J. DEMOREST, of New York, N.Y., for an "Improvement in apparatus for vulcanizing rubber."

"I claim the general arrangement of the stove, boiler, and vulcanizing chamber."

No. 23,949. DAVID B. ROGERS, of Pittsburgh, Pa., for an "Improvement in grain shovels."

"What I claim, is, the so bending a plate of iron into the shape of a shovel as to form a socket for the handle out of the same piece of iron."

No. 23,950. S. E. ROOT, of Bristol, Conn., for an "Improved clock dial."

"I claim as a new and useful improvement, the combination of a clock dial B, metallic back A, frame C, as a new manufacture specifically as and for the purpose described."

No. 23,951. STEPHEN P. RUGGLES, of Boston, Mass., for an "Improvement in printing presses."

"What I claim as new, is, first, the combination of two screws having different sized threads and operating together substantially as described, to give a greater motion to a platen, or its equivalent, at one time, and more power at another time, as may be desired. I also claim connecting two such screws together, and to the lever or bar that actuates them, by a strong helical spring, that by being wound up becomes a clamp, so as to put the two screws in action, one after the other, substantially as herein described. I also claim running out the bed of the press on inclined ways for the purpose of increasing the distance between the bed and platen, which makes a better entrance for the frisket, blankets, sheet, form, &c. by affording more space when they are being run under the platen, as described."

No. 23,952. JACOB RUPERTUS, of Philadelphia, Pa., for an "Improvement in automatic primer for fire-arms."

"What I claim, is, 1st, the feeding slide lever B, applied in combination with the hammer, to constitute a portion of the thumb-piece thereof, and with an interposed spring *l*, substantially as herein described. 2nd, constructing and applying the feeding piston *q*, to roll within the magazine, substantially as and for the purpose herein set forth. 3d, attaching the feeding piston *q*, which drives the priming forward in the magazine, to a spring or flexible driver, which winds on and off a spring barrel, substantially as and for the purpose herein described."

No. 23,953. JOHN SELSER, of Williamsport, Pa., for an "Improvement in pumps."

"What I claim as new, is, first, draining the standing pipe D, and relieving the air chamber C from pressure, by allowing the water to escape upwa·d through the cylinder B whenever the plunger rod E is sufficiently depressed, thereby draining the pipe without draining the pump itself, substantially in the manner herein set forth. Second, the splash plate G, with its aperture *o*, when used in connection with the vertical termination D^1, of the discharge pipe, substantially as and for the purpose within set forth."

No. 23,954. THEODORE SHARP, of Bloomington, Ill., for an "Improvement in shafting for endless chain horse powers."

"What I claim as my invention, is, the sliding shaft A, A, reels with slotted or mortised hubs R, R, constructed and operating in the manner and for the purpose substantially as described."

No. 23,955. DAVID M. SMITH, of Springfield, Vt., for an "Improvement in seed planters."

"I claim the combination of the following devices for operating the dropping slide, viz., the spring *k*, the rack C, the pinion D, the rack lifter, the groove *r*, of the rack, and the latch *u*, arranged substantially as specified. I also claim the application of the rack lifter *m* to the rack, so as to be adjustable thereon, in the manner and for the purpose as set forth. I also claim combining with the rack C and apparatus carried by it the latch elevator *y*, for moving the rack out of gear with the pinion, and holding the rack from slipping on being thrown backward, the object being not only to prepare the rack for causing the machine to plant the first dropping of seed in the right place, but to hold the rack out of gear with the pinion while the machine is being moved over the ground and it may not be desirable to have it plant seed."

No. 23,956. MATTHEW SMITH, of Pittsburgh, Pa., for an "Improvement in rotary steam engines."

"What I claim is, the combination and arrangement of a revolving cylinder, steam chest, cam yoke, supply and exhaust passages, with a stationary cam, supply and exhaust chambers, when arranged, combined, and operated as herein described, and for the purposes set forth."

No. 23,957. CHAS. SPRING and ANDREW SPRING, of Boston, Mass., for an "Improvement in lathes for turning irregular forms."

"What we claim is, the combination of a griping chuck, by which an article can be so held by one end as to present the other free to be operated upon, with a rest preceding the cutting tool, when it is combined with a guide cam, or its equivalent, which modifies the movement of the cutting tool, all operating together for the purpose set forth."

No. 23,958. GEO. A. STONE, of Roxbury, Mass., for an "Improved apparatus for superheating steam."

"I claim, as of my own invention, a steam jet, or the equivalent thereof, located substantially in the position and serving the purpose specified, in combination with a superheating apparatus, which is heated by a portion of the gaseous products of combustion, and is otherwise substantially the same as herein-before set forth."

No. 23,959. GEO. TATLOCK, of Salem, Ind., for an "Improvement in raking attachment for harvesting machines."

"I claim operating the rake head D, which is pivoted to the sliding bar C, through the medium of the rotating shaft *r*, connecting rod *p*, rock shaft *l*, connected respectively with the rod *p*, and sliding box C, by the arms *k*, *o*, in connection with the arm E, attached to the rake head, the loop or guide *d* attached to the arm E, and the bars or arms *g*, *i*, attached to the platform; the whole being arranged substantially as and for the purpose set forth."

No. 23,960. H. L. THISTLE, of New York, N. Y., for an "Improved bureau bedstead."

"What I claim as my invention is, combining the bedstead frame with the wardrobe or other case, by means of the hinged links and movable slides, substantially as described, whereby the bed can be let down to a lower level than by any other construction before known, while at the same time it can be let down by a single movement, and within a space no longer than the bedstead, and without the necessity of first drawing out part of the structure from the wall, or making joints in the side rails or pieces, the hinged links or slides giving to the structure all the foregoing advantages, as set forth. And I also claim, in combination with the bedstead frame connected with the case by the hinged links and slides, the weighting of the head end of the frame to balance the weight of the foot end when lifting it up, and thereby facilitate the manipulation, substantially as described. And I also claim forming the support for the foot end of the bedstead frame, by a hinged panel, substantially as described, so that the said support, when the bed is thrown up, shall form part of the front of the wardrobe, or other piece of furniture, as set forth."

No. 23,961. Saml. Thomas, of Burnett, Wis., for an "Improvement in harvesting machines."

"What I claim as my invention is, the 'false pole' K, B, with its attached sliding gage E, C, which may be adjusted at pleasure, so as to prevent side draft and pressure upon the near horse, in the manner and for the purpose specified."

No. 23,962. Geo. W. Toleman, of Augusta, Ky., for an "Improvement in rotary harrows."

"What I claim is, the arrangement of the frame A, shaft 3, iron circle 1, roller 2, rods B, B', C, and rod or hook 4, operating conjointly, as set forth for the purposes specified."

No. 23,963. John Van and Henry V. Barringer, of Cincinnati, O., for an "Improvement in stoves."

"What we claim as new is, the swinging grated door or hearth h, and sliding and swinging register g, in combination with the supporting legs r, r, and stove A, arranged and operating substantially, as and for the purposes herein set forth."

No. 23,964. Edwd. Van Camp, of Readington, N.J., for an "Improvement in hill-side ploughs."

"But what I do claim is, making the share, the landside, and the landside brace of hill-side ploughs, each in one piece, and uniting them together to the mould boards and beam, in the manner and for the purpose set forth, thus making a cheap, strong, and efficient plough for hill-side ploughing."

No. 23,965. James Vaughn, of Magnolia, Ill., for an "Improvement in grain separators."

"What I claim is, the arrangement and combination of the semi-cylindrical hopper F, having a depression (b) in its centre, with the screen E, buckets (d), spout D, fan J, and spout I, as and for the purpose herein shown and described."

No. 23,966. Wm. Vine, of Hartford, Conn., for an "Improved meat slicer."

"What I claim is, the beveled lip T, and the pendant G, for the purpose described, in combination with the other parts of the dried-meat slicer, substantially as herein set forth."

No. 23,967. Thos. K. Webster, of Lawrence, Mass., for an "Improved lock."

"I claim the guard or fender E, as described in the Specification, and for the purpose therein described."

No. 23,968. Leonardo Westbrook, of New York, N.Y., for an "Improved churn."

"What I claim is, the use of the projecting rim X, X, X, and the revolving disc C working over the same, in combination with the fixed and revolving radial dashers, and with or without the regulating thumb screw S; all constructed and operating substantially as described and for the purposes herein set forth."

No. 23,969. Milton White, Howard White, Henry T. White, and Joseph White, of Philadelphia, Pa., for an "Improved ice-pick."

"What we claim as our invention is, the combination of the ball A and tube B, B, sliding upon the stem C, C, in such a manner that the blow may be struck upon the head of the stem, substantially as above described."

No. 23,970. John Geo. Widmann, of New York, N.Y., for an "Improvement in stoves."

"What I claim as new is, the arrangement and combination of the gas tubes (d) with the cylinder D, and fire openings (b), so that the gases which arise from the heating of the coal will be compelled to pass down into the fire, as herein shown and described."

No. 23,971. Hosea Willard and Robt. Ross, of Vergennes, Vt., for an "Improvement in harvesting machines."

"We claim, 1, the arrangement and combination of the hinged bar J with the lever I, substantially as and for the purpose herein shown and described. 2, the arrangement and combination of the adjustable spring (b^1), bar D, adjustable rod (i^1), spring (h^1), and finger bar G, as and for the purpose herein shown and described."

No. 23,972. Wm. H. Wilson, of Denton, Md., for an "Improvement in harvesting machines."

"What I claim as new is, 1stly, the combination of the vibrating sector A, rack p, lattice frame C, and carriage j, with the beam B, or its equivalent, and the rake D, the several parts being arranged substantially as described, for the purpose set forth. 2ndly, in combination with the rake D, having its center driven backward and forward over the platform, the swiveling plate f, ratchet r, and pawl n^1, and adjustable shifting stop g^4, or its equivalent, whereby the rake is turned upon its center, and caused to sweep the grain off, as herein before specified. 3dly, in combination with a rake D, having center driven back and forth over the platform, as specified, the guiding plate w, and rolls p^1, p^{11}, or their equivalents, whereby the rake is thrown back into the proper position to sweep across the platform, after having discharged a sheaf, as herein-before described. 4thly, the combination of the rod M with the rod S, arm r, cam y, and spring N, the whole arranged and operating as and for the purpose set forth. 5thly, the stop n, arranged as described, for the purpose set forth."

No. 23,973. Wm. E. Worthen, of New York, N. Y., for an "Improvement in combined metallic street kerb and gutter."

"Having thus described my invention, I claim as of my own invention the compound metallic curb and gutter, constructed substantially in the manner herein-before specified, whereby advantages substantially such as are herein set forth are attained."

No. 23,974. T. J. De Yampert, of Shohola, Pa., for an "Improvement in ploughs."

"What I claim is, first, a revolving cone having under-cut or overhanging curved flanges or wings that extend entirely from the base to the point of the cone, so that it will revolve upon its shaft or journal by the resistance of the earth alone against it, and without being driven by other forces, as herein described. I also claim, in combination with a cone furnished with spiral under-cut flanges, and revolving by the resistance of the earth against it, the mould board and land side, for turning over the loosened earth and directing the plough in its path, substantially as described."

No. 23,975. G. G. Belcher, of Worcester, Mass., assignor to himself and Jos. S. Hill, of same place, for an "Improved pruning knife."

"What I claim as new, is, 1, arranging the blade of a knife, in such a manner that it opens and closes, by turning one or both parts of the handle, substantially as specified. 2, the pins i, i^1, on the blade B, arranged in combination with the slots h in the plates a, a^1, of the handle, for the purpose of operating the blade, and keeping the same rigid when it is opened as well as when it is closed, substantially as herein set forth. 3, the slide C, or its equivalent, arranged in combination with the eye d, for the purpose of securing the two parts of the handle together, substantially in the manner described."

No. 23,976. John B. Collen, of Philadelphia, Pa., assignor to himself and Pascal Yearsley, of same place, for an "Improved horse shoe machine."

"I claim, and desire to secure by Letters Patent, first, bending the heated bar of iron to the requisite form by applying it to a revolving former of the shape of the inside of the shoe, when the said former is arranged to hold the bent iron while it is acted upon by the dies, as herein set forth. Second, the combination of the revolving former q, with the cutter x, when the latter is so arranged in respect to the former that the edge of the cutter shall coincide, or nearly coincide, with the circular path traversed by the outer edge of the former, and when the cutter is hung to the movable bar y, or its equivalent, as set forth and for the purpose specified. Thirdly, the die N, the spindle Q, its former q, and the sleeve S, in combination with the counter die T on the spindle u, when the whole of the parts are arranged in respect to each other for joint action, substantially as and for the purpose specified."

No. 23,977. James D. Black, of Boston, Mass., assignor to himself and Ezekiel Hallet, jr., of same place, for an "Improvement in boot-crimping machines."

"What I claim as my invention in machines for crimping boot legs, in which the 'hitch on' is raised by the hand of the operator, is, pivoting the device, by which the 'hitch on' is raised to a spring block, or its equivalent, for the purpose set forth. 2nd, I claim the peculiar construction of 'hitch on' herein described, the movable jaws p being temporarily closed upon both sides by a spring r, so that

they may be separately opened, as set forth, for the insertion of the leather, and may be permanently closed by a single screw, as described."

No. 23,978. SIMEON S. DODGE, of Sunapee, N. H., assignor to himself and Edmund Burke, of Newport, N. H., for an "Improved hand plane."

"What I claim is, first, the curved adjustable cap iron D' constructed and operating substantially as above described. Second, the combination of the adjustable cap iron D, with the bolt H, the set screws G, G, the thumb screw E, and the break iron C, constructed and operating substantially as above described."

No. 23,979. WM. GRIFFITHS, of Philadelphia, Pa., assignor to himself and Joseph H. Lambert, of same place, for an "Improvement in knapsacks."

"What I claim is, a military knapsack, having the usual frame or case made and adapted thereto, so as to be convertible, substantially as and for the purposes described, as an improved article of manufacture."

No. 23,980. WM. H. KING, of Charleston, Ill., assignor to himself and Nelson Colson, of same place, for an "Improvement in corn planters."

"What I claim is, 1st, in combination with the cams L and the arm M, I claim the arrangement of the rods *e*, in such relation to the seed cells *c*, that they push out the corn contained in the same, substantially as described. 2nd, the arrangement of the marker *g*, in combination with scraper *h*, so that the same never fails to make a clear mark in the track of the driving wheel, substantially in the manner set forth."

No. 23,981. CHAS. LEARNED, of Indianapolis, Ind., assignor to himself and Geo. P. Stevens, of same place, for an "Improvement in seed drills."

"What I claim is the guard or series of straps K, in combination with the toothed roller G, and elastic guard J, when operated in connection with the roller H, and agitator I."

No. 23,982. SAML. LEE, of Taunton, Mass., assignor to Chas. S. Pomeroy, of same place, for an "Improvement in making steels for sharpening knives."

"What I claim is the combination of these devices, so that, by their continued action, they shall produce a steel with sharp ribs or edges, in the direction of its length, substantially as set forth."

No. 23,983. HENRY G. LEONARD, of Taunton, Mass., assignor to Lemuel M. Leonard, of same place, for an "Improvement in cooking stoves."

"I claim so constructing and arranging one or more of the oven plates of the stove, that it or they can be removed, and the flue or flues cleaned, and the plates replaced, substantially as described, without loosening or separating the plates which form the outside of the stove, I also claim making one or more of the interior flue plates, so that it can be removed and the flue cleaned, and the plate replaced, substantially as described, without loosening or separating the plates which form the outside of the stove."

No. 23,984. JAMES S. MCCURDY, of Brooklyn N.Y., assignor to Elias Howe, jr., of same place, for an "Improvement in single-thread stitches."

"What I claim, is, a single thread interloped stitch, in which each successive loop is encircled by a tight coil of the thread of the preceding loop, substantially as described."

No. 23,985. DANIEL P. MEALEY, of Washington, D. C., assignor to himself and A. E. H. Johnson, of same place, for an "Improved device for suspending and liberating ships' boats."

"Having thus described my improvements, I claim the hanger, constructed with a seat or seats, for the ring of the boat to rest upon, in combination with the seat formed in the tumbler, in such manner that the seat or seats of the hanger shall coincide with the seat in the tumbler, that a large proportion of the weight and strain may be supported by the hanger, which increases the power of the device to resist strains, and facilitates the unlatching of the tumbler, substantially as described. I claim also, in combination with the above, the arrangement of the opening E in the tumbler, in combination with the seats *c*, *c*, and that portion *m* of the hanger which rises above and overhangs them, in such manner that when the seats of the hanger and tumbler coincide, the mouth of said opening will pass and be inclosed by the hanger, in the manner and for the purposes described. I also claim, in combination with the tumbler and hanger, arranged as above described, extending the legs of the hanger below the range of motion of the opening in the tumbler, so as to form a cut off to the passage of the ring, and thus prevent it from being carried round with the motion of the tumbler, substantially as described. I also claim, in combination with a boat detacher, making a recess or shoulder *f* in the tumbler, in combination with a snug or projection *g*, on the dead eye, whereby the connection of the ring of the boat with the tumbler may be made with one hand, when necessary, substantially as described."

No. 23,986. JAMES O. MERRILL, of Chichester, N. H., assignor to Wm. A. Swain, of same place, for an "Improved churn."

"What I claim is, the arrangement of the oscillating lever L and its weight W, with the vibrating shaft M, the vibrating lever E, the auxiliary levers F, F^1, and the alternate reciprocating dasher arms G, G^1, with their dasher N, N^1, constructed and operating substantially as above set forth, by which the oscillating power of the pendulum is applied to the process of churning butter."

No. 23,987. JAMES W. MUNROE, of Fall River, Mass., assignor to John Southworth and Wm. R. McKenzie, of same place, for an "Improvement in factitious enameled leather."

"What I do claim as my invention, and desire to secure by Letters Patent as a new article of manufacture, is, the within-described artificial leather composed of two or more thicknesses of cloth united by cement and varnish, as set forth."

No. 23,988. JONATHAN B. PARVIN, of Heightstown, N. J., assignor to himself and Elias Stratton, of same place, for an "Improvement in machines for digging and gathering potatoes."

"What I claim is, the combination of the weed cutter D and roller C when mounted on a swivel, and applied to a potato digger, substantially in the manner and for the purpose herein described. I also claim hinging the frame that carries the plow and the endless apron K on the shaft *c*, when used in combination with the lever, links, and rods, by which the operator from his seat can raise up, lower, or hold up the plow and apron, substantially as described. I also claim the combination of the adjustable endless apron K, horizontal and vertically vibrating grate Q, and the elevating apparatus, substantially as described."

No. 23,989. GEO. W. RANDALL, of Boston, Mass., assignor to Reuben J. Todd, of same place, for an "Improved basin cock."

"I claim the wash basin cock or faucet as made with cold and hot water inlet passages *d*, *e*, and the column passage *h*, arranged in the socket C and column A, and with respect to the discharging spout B, substantially as described, in order to enable a person, by turning the movable part or parts, to discharge either cold or hot water, or a mixture of the same, from the faucet, or to close off both hot and cold water induction passages, as circumstances may require."

No. 23,990. AUGUSTUS REBETEY, of Norwich, Conn., assignor to the Manhattan Fire-arms Manufacturing Company, of New York, N. Y., for an "Improvement in tools for manufacturing pistols."

"What I claim is, the use of a frame, constructed as herein described, having a profile in one plate of it, to shape and finish a corresponding recess in the side plate of a pistol by means of a revolving cutter governed by the outlines of said profile."

No. 23,991. FRIEDRICH SCHUTTE, of Philadelphia, Pa., assignor to himself and Philip P. Weis, of same place, for "Improved rotary cutters and mode of operating them for mouldings."

"I claim a revolving cutter with any convenient number of double cutting edges of the form of the tongue-groove bead or hollows to be cut, one cutting edge being the reverse of the other in each pair, so that one cutting edge only of each pair shall have a cutting effect when the cutter revolves in one direction, the other edge to cut when the cutter revolves in a contrary direction, and so that one cutting edge of each

pair shall act as a guard to prevent the adjacent edge from penetrating too deep into the wood, when the said cutter with double cutting edges, thus constructed, is secured to a spindle capable of having the direction of its rotation readily reversed, as and for the purpose set forth."

No. 23,992. Geo. F. Lombard, of New Orleans, La., for an "Improvement in steam engines."—Patented in England, 10th October, 1857.

"What I claim is, 1st, the relative arrangement of two cylinders, four pistons, two rocking beams, two steam chests with valves, and the specified connections which combine and operate the same, in the manner and for the purpose herein set forth. 2nd, the application of the exhaust steam of the engine to the crank or eccentric shaft, through a fly-wheel, constructed and combined with the engine and crank shaft, substantially as and for the purposes set forth."

No. 93,993. James A. Whipple, of Boston, Mass., assignor to James Whipple and Benjn. F. Cooke, of same place, for an "Improved steam engine."

"What I claim is, the above-described intermittent rotary engine, consisting of the cylinder F, the heads *l*, and pistons *h*, *h*[1], operating in the manner substantially as described."

No. 23,994. Cornelia H. Williams, of Williamsburg, N. Y., (administratrix of the estate of Augustus Williams, deceased), assignor to Anthony Pollak, of Washington, D. C., assignor to A. N. Clark, of Beverley, Mass., for an "Improved steam and water gauge."

"What is claimed as the invention of the said deceased is, firstly, combining the vessel separate and distinct from, but connected to the boiler by means of two pipes, as described, containing a float, having an indicator or pointer attached thereto, with the transparent tube or steam chamber, when said parts are constructed and arranged in relation to each other, to operate in the manner and for the purposes substantially as set forth herein. Secondly, the general arrangement of the instrument for forming an alarm water gauge, by combining with the indicator water gauge, constructed as described, a whistle attached to a separate chamber, containing a valve arranged to be operated by the float, so as to admit steam to said whistle, to give alarm, when required, substantially as set forth."

No. 23,830. Albert Albertson, of New York, N. Y., assignor to Curtis C. Bean, of said New York, for an "Improved cork machine."

"I claim, 1st, the stationary cylinder D, *d*, or any substantially equivalent device when employed to gripe a cork by its periphery, so as to effectually prevent its rotation, while being cut by a rotary cylindrical cutter. 2nd, the feed rollers F, H, H, (with or without the band G), arranged and adapted to rotate a cork by friction upon its periphery, while under the action of a longitudinal cutter."

Re-issues.

Wm. H. Elliot, of Plattsburgh, N. Y., for an "Improvement in coffee-pots."—Patented 25th January, 1859.—Re-issued 10th May, 1859.

"I claim, first, the combination of boiler A, still worm condensor *b*, conducting plate *g*, and the external opening of the still worm at *g*[1], when these devices are so arranged in relation to each other that an opening to the external air shall be provided for the non-condensable gases, while the condensable vapors are reduced to a liquid without coming in contact with the condenser water, and there turned by conductors into the boiler. Second, the arrangement of the joint *c* below the spout, so that no vapor can pass through the spout without first passing the joint, as set forth. Third, the employment of conductors in combination with the condenser, for the purpose of filling the water joint, or keeping it full, as and for the purpose specified."

Jeremiah W. Mulley, of Amsterdam, N. Y., for an "Improvement in mowing and reaping machines."—Patented 16th December, 1856.—Re-issued 10th May, 1859.

"I claim, 1st, connecting the frame of the platform with the frame carrying the driver and raker's seat, in the manner substantially as set forth; namely, securing the relative position of the two frames by means of the brace J in the rear, and the laterally inclined draw shoe in front, when the above parts are constructed and arranged as described. I claim, secondly, the shoe K, in combination with the tongue attachment in front thereof, the said shoe being constructed and arranged, substantially as described, to perform the functions as set forth herein. I claim, thirdly, the rod 4 and the rails 5, connected in the manner described, in combination with the pole N, the rocking shaft 3, and the lever 2; the whole being constructed, arranged, and operated in the manner specified, and for the purpose set forth. I claim, fourthly, the arrangement, in relation to the driver's seat, of the lever, and mechanism connected therewith for raising and lowering the cutter bar, substantially as set forth herein, whereby the sickle may be raised in the manner described."

Designs.

George Blanchard, of New York, N. Y., for a "Design for watch guards."

"I claim making a watch guard to represent a fire-engine, hose, and pipe, as represented in the accompanying Drawings."

J. W. Lane, of Newton, R. I., for a "Design for a stove plate."

"I claim the star and crescent for circular plates for stoves."

Additional Improvement.

D. H. Fox and John Fink, of Reading, Pa., for an "Improvement in modes of ventilating railroad cars."—Patented 8th May, 1855.—Additional Improvement, dated 10th May, 1859.

"We claim as an improvement on our patent aforesaid the construction of the fan chambers D, D[1], with outlets at each extremity, and their combination with the other portions of the ventilating apparatus, as described."

Extension.

Francis L. Hedenberg, of New York, N. Y., for an "Improvement in stoves."—Patented 7th May, 1845.

"I claim the particular manner, as above set forth, in which I arrange and combine the flue and air-heating spaces, and the pedestal of my stove; the hot-air space being between the ascending and descending draught, the descending draught spreading around the base of the stove."

List of Specifications published during the week ending 27th May, 1859.

No.	Price.	Subject-Matter.
2115	3*d.*	Casting steel.
2300	3*d.*	Machinery for sizing yarn.
2331	10*d.*	Looms.
2332	1*s.*	Apparatus for maintaining the water level in steam boilers, gas meters, &c.
2334	6*d.*	Apparatus for washing clothes and other fabrics.
2335	1*s.* 2*d.*	Hanging and arranging springs for railway carriages.
2337	6*d.*	Propelling vessels.
2338	1*s.* 9*d.*	Ovens for baking bread.
2339	3*d.*	Packing merchandise.
2340	3*d.*	Machinery for moulding washing blues.
2341	5*l.*	Screws.
2342	3*d.*	Photographic plates.
2343	5*d.*	Baths.
2344	3*s.*	Machinery for embroidering fabrics.
2345	6*d.*	Ventilating houses, &c.
2346	7*d.*	Apparatus for crossing bankers' cheques.
2347	5*d.*	Cupola furnaces.
2348	10*d.*	Power looms.
2349	3*d.*	Winding watches, chronometers, &c.
2350	3*d.*	Locomotive and other steam boilers.
2351	10*d.*	Printing machines.

No.	Price.	Subject-Matter.
2352	5*d.*	Compensating apparatus for watches or timepieces.
2353	5*d.*	Self-acting cartridge pouch.
2354	5*d.*	Files or holders for papers, letters, bags, &c.
2355	3*d.*	Knitting frames.
2356	3*d.*	Apparatus for regulating the supply of fluids.
2357	3*d.*	Cocks, taps, and other apparatus for regulating the flow of fluids.
2358	10*d.*	Apparatus for lubricating railway axles, &c.
2359	3*d.*	Fire lighters.
2360	6*d.*	Machinery for the manufacture of cap fronts.
2361	8*d.*	Manufacture of iron.
2362	3*d.*	Raising nap on the linings of sheep skins.
2363	7*d.*	Obtaining motive power.
2364	10*d.*	Kiln for drying grain
2365	1*s.* 4*d.*	Apparatus for harrowing, scarifying, and cultivating land.
2366	1*s.* 4*d.*	Machinery for cutting hay, straw, &c.
2367	3*d.*	Taking life-size pictures from smaller pictures.
2369	10*d.*	Toy.
2370	3*d.*	Weaving.
2371	3*d.*	Manufacture of metal moulds for moulding plastic substances.
2372	10*d.*	Pumps.
2373	2*s.* 1*d.*	Telegraphic apparatus.
2374	3*d.*	Internal fittings for carriages.
2375	3*d.*	Elevating stands or stages.
2376	3*d.*	Manufacture of neck scarfs.
2377	10*d.*	Umbrellas and parasols.
2378	10*d.*	Propellers for ships and boats.
2380	6*d.*	Connecting links of harness hames.
2381	9*d.*	Churn.
2382	6*d.*	Manufacture of candles.
2383	5*d.*	Cotton gins.
2384	3*d.*	Self acting feeding apparatus for letter-press printing machines.
2385	9*d.*	Machinery for moulding clay and other plastic materials.
2386	3*d.*	Chronometers, watches, &c.
2387	1*s.*	Steam engines.
2388	3*d.*	Water wheel.
2389	10*d.*	Machines for boring.
2390	3*d.*	Boilers, flues, &c.
2392	10*d.*	Steam engines and pumps.
2393	3*d.*	Construction of floors and ceilings.
2395	3*d.*	Plaits and curls for head dresses, &c.
2396	6*d.*	Letter-press printing machines.
2397	3*d.*	Furnaces for annealing steel.
2401	4*d.*	Composition to be used in the manufacture of articles from plaster of Paris, &c.
2402	3*d.*	Apparatus for cooling oil used for annealing steel.
2403	6*d.*	Lubricating steam cylinders.
2409	3*d.*	Manufacture of capsules, &c.
2416	6*d.*	Attaching wheels to the axles of railway carriages.
2438	6*d.*	Railway brakes.
2439	5*d.*	Producing and applying voltaic electricity for curative purposes.
2420	2*s.* 8*d.*	Agricultural apparatus for ploughing, &c.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

Museum of Patents, South Kensington.

Numbers of Visitors for the Week ending 28th May, 1859.

Mornings - - - -	1070
Evenings - - - -	1102
Total - - -	2172

Since the opening of the Museum Free Daily (May 12, 1858),—102,017.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. Woodcroft.

Great Seal Patent Office,
Southampton Buildings.

Gallery of Portraits of Inventors, Discoverers, and Introducers of Useful Arts.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. Curtis for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(Registered for transmission abroad.)

No. 565. FRIDAY, JUNE 3, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

1088. To ARCHIBALD McKECHNIE, of Carron, in the county of Stirling, North Britain, Engineer, for the invention of "Improvements in hammers and in apparatus for working the same."

On his petition, recorded in the Office of the Commissioners on the 30th day of April, 1859.

1128. To EDWARD THOMAS HUGHES, of the firm of Hughes and Son, Patent Agents, 123, Chancery Lane, London, W.C., for the invention of "Improvements in the manufacture of sheet iron."—A communication from abroad by David A. Morris, of Pittsburg, Pennsylvania, United States of America.

On his petition, recorded in the Office of the Commissioners on the 5th day of May, 1859.

1142. To THOMAS JONES, of Liverpool, in the county of Lancaster, Slater and Plasterer, for the invention of "An improved apparatus and arrangement of flues for heating and ventilating buildings, ships, and other structures, and for causing draughts in chimnies."

On his petition, recorded in the Office of the Commissioners on the 6th day of May, 1859.

1160. To FREDERICK VERNON HADLOW, of 8, Prince Albert Street, Brighton, in the county of Sussex, Engraver, for the invention of "An improved stamp for marking linen and other wearing apparel."

1162. To ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "An improved construction of lamp."—A communication from abroad by William Henry Racey, of St. Augustine, St. John's county, state of Florida, in the United States of America.

1164. To EDWARD THOMAS HUGHES, of the firm of Hughes and Son, Patent Agents, 123, Chancery Lane, London, W.C., for the invention of "Improvements in obtaining motive power."—A communication from abroad by Aimé François Lapène, of Paris, in the empire of France.

1166. And to NICHOLSON BARKER, of Heyford and JAMES ALFRED CARTER, of Blisworth, both in the county of Northampton, for the invention of "Improvements in apparatus for lubricating the pistons of steam engines."

On their several petitions, recorded in the Office of the Commissioners on the 9th day of May, 1859.

1168. To ROBERT JOHN LEES, of Woolley Bridge, near Hadfield, in the county of Derby, for the invention of "Improvements in steam generators or boilers."

1170. To MOSS DEFRIES, of Houndsditch, in the city of London, Manufacturer, for the invention of "Improved apparatus for regulating the pressure of gas."

1172. To ROBERT THOMSON, of Glasgow, in the county of Lanark, North Britain, Manager, for the invention of "Improvements in shuttles."

1174. And to MICHAEL HENRY, of 84, Fleet Street, in the city of London, Patent Agent, for the invention of "Improvements in heating and in supplying air, and in the apparatus employed therein, part of which improvements is also applicable to exhausting fluids."—A communication from abroad by Louis Cyrille Bureau, residing at Paris, in the French empire.

On their several petitions, recorded in the Office of the Commissioners on the 10th day of May, 1859.

1178. To ALEXANDRE MANBRÉ, of No. 10, Rathbone Place, Oxford Street, London, in the county of Middlesex, Brewer, for the invention of "An

improved method of extracting and purifying sugar, called glucose and 'sirop de fecule,' from potatoes or fecula, or starch or dextrine for the purposes and uses of brewers, distillers, vinegar makers, colouring makers, or otherwise."

1180. To THOMAS PETER BENNETT, of Gilnow Mills, near Bolton-le-Moors, in the county of Lancaster, Manager, for the invention of "Certain improvements in or applicable to carding engines."

1182. To HENRY CLARKE, of Wakefield, in the county of York, Corn Factor, for the invention of "Improvements in balancing mill-stones to the running as well as the standing state."—A communication from abroad, by Thomas Narburgh, of St. Louis, Misouri, North America.

1184. To CHARLES FRÉDERIC VASSEROT, of 45, Essex Street, Strand, London, Patent Agent, for the invention of "An improved musrol or noseband for horses' bridles."—A communication from Louis Marque, residing at Vienne (Isère), in the empire of France.

1186. To WALTER SALTER, junior, of Lea, in the county of Wilts, for the invention of "Improvements in hay-making machines."

1188. And to JAMES BAGSTER LYALL, of Castle Frome, in the county of Hereford, Gentleman, and FREDERICK WILLIAM CAMPIN, of the Strand, in the county of Middlesex, Patent Agent, for the invention of "Improvements in the 'saloon' omnibus and other omnibuses, the wheels and springs whereof, and mode of attaching them, being applicable to other carriages."

On their several petitions, recorded in the Office of the Commissioners on the 11*th day of May*, 1859.

1190. To JOHN SAXBY, Engineer, of Brighton, Sussex, for the invention of "Improvements in the mode of securing the rails on railways."

1191. To RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Editor of the Mechanics' Magazine and Patent Agent, for the invention of "Improvements in machinery for solidifying, pressing, and moulding."—A communication from abroad by Felix Dehaynin, residing at Paris.

1192. And to ANDRÉ PROSPER ROCHETTE, of Brighouse, in the county of York, for the invention of "An improvement in the manufacture of soft soap."

On their several petitions, recorded in the Office of the Commissioners on the 12*th day of May*, 1859.

1196. To THOMAS SCOTT, of Rouen, in the empire of France, Engineer, for the invention of "An improved surface condenser and refrigerator."

1198. To JOSEPH FELIX ALLENDER, of Brierley Hill, in the county of Stafford, Manager of Works, and JOB RICHARDS the younger, of Brierley Hill aforesaid, Manager of Works, for the invention of "Improvements in furnaces for puddling iron."

1200. To ROBERT GOURLAY, of the firm of Alston and Gourlay, of Glasgow, in the county of Lanark, North Britain, Ironfounders, for the invention of "Improvements in making moulds for casting."

1202. To RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improvements in cooking, preserving, and drying animal and vegetable substances."—A communication from abroad by Anthony Bourdin, of Paris.

1204. To WILLIAM SPARKS THOMSON, of New York, in the United States of America, but now of St. Martin's-le-Grand, London, Skirt Manufacturer, for the invention of "Improvements in the manufacture of hooped skirts."—Partly a communication from abroad by William Wilmot, of New York, in the United States of America.

1206. And to GEORGE ROBERT CLOVER, of the firm of Clover and Royle, of Liverpool, in the county of Lancaster, Ship Builders, for the invention of "Improvements in ships' night signals."

On their several petitions, recorded in the Office of the Commissioners on the 13*th day of May*, 1859.

1208. To MATTHEW LEAHY, of 53, Hereford Road, Westbourne Park, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in apparatus for facilitating the draught of carriages."

1210. To DAVID SMITH, of Glasgow, in the county of Lanark, North Britain, Civil Engineer, for the invention of "Improvements in projectiles for fire-arms."

1212. And to EDWIN MAW, of the Doncaster Iron Works, Yorkshire, for the invention of "Improvements in the construction of buildings made of iron or other metals."

On their several petitions, recorded in the Office of the Commissioners on the 14*th day of May*, 1859.

1214. To SCHOFIELD CROWTHER SHEARD, Engineer, of Smethwick, in the county of Stafford, for the invention of "Certain improvements in fire-bars, which bars are applicable to all furnaces where great heat and economy of fuel are required."

1216. To WILLIAM MIDWORTH, of the firm of Messrs. John Midworth and William Midworth, of Newark-upon-Trent, in the county of Nottingham, Engineers, Iron Founders, and Ironmongers, for the invention of "An improved iron for the use of laundries, tailors, or other purposes."

1218. To JOHN CLARK, of Glasgow, in the county of Lanark, North Britain, Wholesale Stationer, for the invention of "Improvements in envelopes, and in machinery or apparatus for gumming, embossing, folding, counting, and otherwise treating the same, in part applicable in the treatment of note and other writing paper."

1220. And to WILLIAM EDWARD GEDGE, of the firm of John Gedge and Son, No. 4, Wellington Street South, Strand, in the county of Middlesex, Patent Agent, for the invention of Improvements in mixing, combining, and otherwise treating certain matters and substances for the production of manure."—A communication from abroad, by Louis Parent, of Saint Marcel-les-Chalon, France.

On their several petitions, recorded in the Office of the Commissioners on the 16*th day of May*, 1859.

1222. To LEMUEL DOW OWEN, of 192, Tottenham Court Road, in the county of Middlesex, Engineer, for the invention of "An improved menstrual receiver or truss."—A communication from abroad by Herman W. Ladd, of Boston, Massachusetts, United States of America.

1223. To JOHN BROWN the younger, of the Rotherham Iron Works, Rotherham, in the county of York, Ironfounder, for the invention of "Improvements in buffers, draw springs, and bearing-springs."

1224. To ALEXANDRE RÉNÉ LANDRE, POLYDORE GRAS, and ANTOINE LOUIS AUGUSTE BOUCHERIE, all of the city of Marseilles, in the empire of France, Merchants, trading under the firm Landre Gras and Co., for the invention of "Distilling schist or boghead coal and other minerals for lighting."

1225. To HENRY DOLLEY, of Paris, in the empire of France, Manufacturer, for the invention of "An improvement in the manufacture of hooped petticoats, and in the metal ribs employed in the manufacture of hooped petticoats."

1226. To AMÉDÉE ETIENNE CHARLES JOSEPH REYNAUD DE TRETS, of Marseilles, in the French empire, Gentleman, for the invention of "An improved composition for splitting rock."

1227. To JAMES NASMYTH, of Surrey Street, Strand, in the city of Westminster, Engineer, for the invention of "Improved apparatus for obtaining and applying motive power."

1228. And to CHARLES LAW, of Wolverhampton, in the county of Stafford, Lockmaker, for the invention of "Improvements in the construction of locks."

On their several petitions, recorded in the Office of the Commissioners on the 17th day of May, 1859.

1229. To ROBERT ROMAINE, late of Canada West, but now of Chapel Street, Bedford Row, in the county of Middlesex, Gentleman, for the invention of "Improvements in the means of applying steam power to the cultivation of the soil."

1231. To EDWARD CHARLESWORTH, of No. 1, De Grey Street, York, and No. 3, King William Street, Strand, in the county of Middlesex, for the invention of "Counteracting the recoil of small fire-arms, and lessening the risk of injury arising from the bursting of the same."

1232. To SAMUEL NORTON EVANS, of Chapel Yard, North Street, Wolverhampton, in the county of Stafford, Commission Agent, for the invention of "Improved mechanism for preventing accidents at mines from overwinding."

1233. To JOHN HASLAM, of Preston, in the county of Lancaster, for the invention of "An improved construction of healds or harness used in warp dressing and sizeing machines, and in looms for weaving."

1235. To JOHN DEAN, Cotton Manufacturer, JAMES PARKINSON, Manager, EDMUND RILEY, Overlooker, and WILLIAM BURTON, Mechanic, all of Syke Mill, Haslingden, in the county of Lancaster, for the invention of "Improvements in certain self-acting mules for spinning fibrous materials."

1236. To WILLIAM NICHOLLS, of Tregolls Road, Truro, in the county of Cornwall, Millwright, &c., for the invention of "Improvements in portable corn mills."

1237. To JOHN HENRY JOHNSON, of No. 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in lubricating certain portions of machinery."—A communication from abroad by Michael Bonière the younger, of Paris, in the empire of France, Manufacturer.

1238. To RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improvements in heating."—A communication from abroad by Stanislas Lebobe, of Paris.

1239. And to JAMES CHILDS, of Windsor House, Putney, in the county of Surrey, for the invention of "Improvements in hardening and vulcanizing compounds of sulphur with india rubber and gutta percha."

On their several petitions, recorded in the Office of the Commissioners on the 18th day of May, 1859.

1240. To JOHAN VALDA, of London, in the county of Middlesex, for the invention of "Improvements in stud fastenings, and a system of ornamenting and adapting belts, cravats, ribbons, draperies, and other articles to stud fastenings."

1241. To GEORGE WALKER, of Old Nickol's Street, Church Street, Shoreditch, in the county of Middlesex, for the invention of "Certain improvements in swing looking-glasses."

1242. To ROBERT WILSON, of Patricroft, near the city of Manchester, Engineer, for the invention of "Improvements in hydraulic machinery."

1243. To HENRY NEWMAN, of Liverpool, in the county of Lancaster, Dentist, for the invention of "Improvements in the construction of artificial teeth, and in the mode or manner of affixing the same to the frame."

1245. To ROBERT VALENTINE LEACH, of Taibach, in the county of Glamorgan, and of Devizes, in the county of Wilts, Tin Plate Manufacturer, for the invention of "Improvements in the manufacture of iron, and in the machinery connected therewith."

1246. To DAVID KIRKALDY, of Glasgow, in the county of Lanark, North Britain, Engineer, for the invention of "Improvements in the manufacture or treatment of steel."

1247. To JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in the roasting or calcining of ores, applicable also to the oxidising of other substances."—A communication from abroad by Professor Jean François Persoz, of Paris, in the empire of France.

1248. To WILLIAM TEASDEL, of Pier, Great Yarmouth, in the county of Norfolk, Engineer, for the invention of "Improvements in coffer dams."

1250. To JAMES PALMER BUDD, of Ystalyfera, near Swansea, for the invention of "Improvements in the manufacture of tin and terne plates."

1251. And to WILLIAM COLBORNE CAMBRIDGE, of Bristol, Agricultural Implement Maker, for the invention of "Improvements in thrashing and winnowing machines."

On their several petitions, recorded in the Office of the Commissioners on the 20th day of May, 1859.

1253. To JOHN ROBINSON SCARTLIFF, of Wolverhampton, in the county of Stafford, Mechanic, for the invention of "Improvements in the construction of lubricating and other cans, in order to regulate the discharge or flow of the liquids they contain."

1254. To JOHN THOMPSON, of Witton, near Northwich, Cheshire, and JOHN THOMPSON the younger, of Castle, Northwich aforesaid, for the invention of "The manufacture of salt by an improved and more economical mode."

1255. To ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "An improved construction of cartridge."—A communication from abroad by T. F. Henderson, of Baltimore, Maryland, in the United States of America.

1256. To WILLIAM PEACOCK SAVAGE, of Roxham, Downham Market, in the county of Norfolk, for the invention of "Improvements in traction steam engines and machinery for moving agricultural implements and machines."

1257. And to WILLIAM HENRY PERKIN, King David Fort, St. George-in-the-East, in the county of Middlesex, and MATTHEW GRAY, of the Dalmonach Print Works, Bonhill, Dumbartonshire, for the invention of "Improvements in mordanting and dyeing fabrics of cotton and other vegetable fibres."

On their several petitions, recorded in the Office of the Commissioners on the 21st day of May, 1859.

1261. To JOHN KNOWLES, of Lower Broughton, near Manchester, in the county of Lancaster, Machinist, for the invention of "Certain improvements in power looms for weaving."

1263. To WALTER CRUM, of Thomliebank, in the county of Refrew, Bleacher and Calico Printer, for the invention of "Improvements in printing and dyeing textile fibres and fabrics."

1265. To JOHN HUTCHINSON MASON, of the town and county of the town of Nottingham, Lace Manufacturer, and GEORGE LEE BAXTER, also of the said town and county of the town of Nottingham, Dyer, for the invention of "Ornamenting lace or other twisted fabrics."

1267. To JOHN LOUIS JULLION, Paper Maker, of Stoneywood Works, Aberdeen, N.B., for the invention of "Improvements in dressing and finishing textile fabrics."

1269. To RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Editor of the Mechanics' Magazine and Patent Agent, for the invention of "Improvements in axles and in fitting wheels thereto."—A communication from abroad by M. Masson, residing at Paris.

1271. And WILLIAM CLARK, of Greenock, in the county of Renfrew, North Britain, Marine Painter, for the invention of "Improvements in machinery or apparatus for propelling and manœuvring ships, vessels, and boats."

1273. To ANDREW BARCLAY, of Kilmarnock, in the county of Ayr, North Britian, Engineer, for the invention of "Improvements in steam hammers."

1275. And to ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "An improved construction of washing machine."—A communication from abroad by David Parker, of Shaker Village, New Hampshire, in the United States.

On their several petitions, recorded in the Office of the Commissioners on the 23rd day of May, 1859.

1277. To GEORGE DAVIES, of No. 1, Serle Street, Lincoln's Inn, in the county of Middlesex, and No. 28, Saint Enoch Square, in the city of Glasgow, Civil Engineer and Patent Agent, for the invention of "Atmospheric apparatus for the submarine transport of blocks of stone, and for raising sunken vessels."—A communication from abroad by T. Bandier, of Paris, in the empire of France.

1279. To GILBERT DANIEL JONES, of Clerkenwell, in the county of Middlesex, Engineer, for the invention of "Improvements in mills or machinery for grinding, reducing, and pulverizing."

1281. To WILLIAM THOMAS DENHAM, of Wilmington Square, in the county of Middlesex, Trimming Manufacturer, for the invention of "Improvements in the manufacture of goffering machines."

1283. To EDWARD PAGE, of Bedford, Agricultural Implement Manufacturer, for the invention of "Improvements in horse drags or rakes."

1285. And to BENJAMIN FRANKLIN GREENOUGH, of Boston, in the county of Suffolk, Massachusetts, U. S. A., for the invention of "An electrical conductor for submarine telegraphs, which he denominates a hydro-electric conductor."

On their several petitions, recorded in the Office of the Commissioners on the 24th day of May, 1859.

1287. To JAMES HARMER, of St. James Street, Lower Road, Islington, in the county of Middlesex, for the invention of "Improvements in parts of dry gas meters."—Partly a communication from abroad by William Sinderby, of Boston, Massachusetts, in the United States of America.

1289. To RICHARD ATWOOD GLASS, of 115, Leadenhall Street, in the city of London, Submarine Telegraph Cable and Wire Rope Manufacturer, for the invention of "Improvements in submarine electric telegraph cables."

1291. To ALEXANDER PRINCE, of the Office for Patents, 4, Trafalgar Square, Charing Cross, in the county of Middlesex, for the invention of "Improvements in the construction of ships and vessels."—A communication from abroad by Hermann Hirsch, resident at Berlin, in the kingdom of Prussia.

1293. To ALBERT JOHN DAVIS, of 29, George Street, Hanover Square, in the county of Middlesex, Surgeon Dentist, for the invention of "Improvements in apparatus for protecting persons when employed in cleaning windows, painting, or working at the exterior of houses and ships' sides, and such like operations, applicable also for purposes of military and other observation."

1295. To ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "Improved machinery applicable to the manufacture of rivets, bullets, and other like articles."—A communication from abroad by Charles Bartholomew Allen, of Philadelphia, United States of America.

1297. And to CHARLES EDWARDS AMOS, of the Grove, in the borough of Southwark, Engineer for the invention of "Improved apparatus for raising vessels for repair, and for floating vessels in shallow water."

On their several petitions, recorded in the Office of the Commissioners on the 25th day of May, 1859.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

2nd June, 1859.

2556. DANIEL FRODSHAM, of Rose Cottage, Gurney Road, Stratford, in the county of Essex, for an invention of "Improvements in apparatus used in combination with fire-boxes of tubular steam boilers, in order to supply air and steam thereto."—Dated 13th November, 1858.

2774. JAMES BROOKES FISHER and JOHN FISHER, of Stourbridge, in the county of Worcester, Fire-Brick Manufacturers, and JAMES BIRD, the younger, of Kingswinford, in the county of Stafford, Agent, for an invention of "An improvement in the doors and dampers of furnaces and other places where intense heat has to be resisted."—Dated 4th December, 1858.

2781. HENRY THOMAS YATES, of Hounds Gate, Nottingham, for an invention of "Improvements in the manufacture of boards or sheets when wood sawdust is used."—Dated 4th December, 1858.

2793. DAVID BLAIR WHITE, of Newcastle-upon-Tyne, in the county of Northumberland, Doctor of Medicine, for an invention of "Improvements in indicating gauges."—Dated 6th December, 1858.

2794. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for an invention of "Improvements in the manufacture of gloves."—A communication from Messrs. A. and L. Fontaine, residing at Paris.—Dated 6th December, 1858.

2808. JAMES FERRABEE, of the Phœnix Iron Works, Stroud, in the county of Gloucester, Engineer, and FREDERICK HENRY ENGLAND, Manager of Foomhall Mills, Stroud, for an invention of "Improvements applicable to machinery for carding, scribbling, and condensing wool and other fibrous substances."—Dated 7th December, 1858.

2847. MAXIMILIEN SCHAFFNER, Civil Engineer, of Eisenach, for an invention of "Improvements in smelting zinc ores, and in furnaces employed for this purpose."—Dated 11th December, 1858.

2856. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for an invention of "Improvements in the manufacture of cranked axles and shafts."—A communication from Messrs. Russery, Lacombe, and Co., residing at Rive de Gier, France.—Dated 13th December, 1858.

2858. JAMES FERRABEE, of the Phœnix Iron Works, Stroud, in the county of Gloucester, Engineer, for an invention of "Improvements in the construction of steam engines, and in the mode of working the same."—Dated 13th December, 1858.

2870. FRANÇOIS CHRISTOPHE NICOLAS JUVENAL VIELLARD-MIGEON, of Morvillars, department of Haut Rhin, France, Manufacturer of Wood Screws, for an invention of "Improvements in manufacturing screws, rivets, nails, spikes, and all similar articles made of metallic wire, and in the machines connected therewith."—Dated 15th December, 1858.

2904. EMILE WEBER, of Mulhouse, in the empire of France, Chemist, for an invention of "Improvements in dyeing or coloring textile fabrics and materials, and in the machinery or apparatus connected therewith."—Dated 18th December, 1858.

2963. HENRY LOWE, of Birmingham, in the county of Warwick, Manufacturer, and WILLIAM TRUEMAN, of Birmingham aforesaid, Axle Maker, and JOHN LINWOOD PITTS, of Birmingham aforesaid, Accountant Clerk, for an invention of "A new or improved axle for carriages."—Dated 27th December, 1858.

59. WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in machinery for winding, twisting, and doubling fibrous materials."—A communication from Louis Barnabé Duboc, junior, of Paris, in the empire of France.—Dated 7th January, 1859.

153. RICHARD GARRETT, junior, of Leiston Works, Saxmundham, in the county of Suffolk, and JAMES KERRIDGE, Foreman to Messrs. Garrett and Sons, of Leiston Works aforesaid, for an invention of "An improved arrangement of combined thrashing and dressing machine."—Dated 18th January, 1859.

177. WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improved apparatus for measuring water and other liquids."—A communication from Mr. Alfred Nobel, Engineer, of Paris, in the empire of France.—Dated 20th January, 1859.

463. SAMUEL WHEATCROFT, of Brudenell Place, New North Road, county of Middlesex, Engineer, for an invention of "Improvements in the method of and the means for uniting lace to blond and other fabrics, and also in the apparatus used for manufacturing or converting the same into bonnet and cap fronts, rouches, and such like similar articles of millinery."—Dated 19th February, 1859.

654. BENJAMIN RIDER, of 61, Red Cross Street, Borough, in the county of Surrey, Leather Dresser and Hat Leather Manufacturer, for an invention of "Improvements in hats, caps, and other coverings

for the head, and in apparatus used in the manufacture of such articles."—Dated 15th March, 1859.

734. JOHN MACINTOSH, of North Bank, Regent's Park, Gentleman, and GODFREY RHODES, of Regent Street, Major in Her Majesty's Army, for an invention of "Improvements in tents and such like coverings for shelter against the weather."—Dated 22nd May, 1859.

Patent on which the Stamp Duty of £50 has been Paid.

(30*th May*, 1859.)

1298. THOMAS WILSON, of Birmingham, in the county of Warwick, Engineer, for an invention of "Improvement or improvements in screw wrenches."—Dated 2nd June, 1856.

FOREIGN PATENTS.

UNITED STATES OF AMERICA.

(*Communicated by the Commissioner of Patents.*)

LIST of PATENTS, with Claims annexed, issued from the United States Patent Office, for the week ending 17th May, 1859, and each bearing that date.

No. 23,995. ELISHA H. ADAMS, of Taladega, Ala., for an "Improvement in cotton presses."

"What I claim, is, the combination and arrangement of guide rod D, toggle levers E, E, connecting rod H, lever G, and rack lever I, all operating substantially in the manner a d for the purposes herein set forth."

No. 23,996. DAVID AHL, of Newville, Pa., for an "Improvement in surgical splints."

"I claim, as a new article of manufacture, my improved splint, made of the ingredients, and in the manner set forth."

No. 23,997. V. R. ALLEN, of St. Louis, Mo., for a "Stencil brush."

"What I claim as my invention, is, the mode of making the handle of the brush in two parts, and fastening the two parts by means of a screw turned on the wedge (which I term a wedge screw,) which is driven through the bristles in the iron band, thereby wedging the bristles in the band and enabling the main handle to entirely cover the ends of the bristles and band, which prevents the handle and bristles, when in use, from working through the iron band holding the brush together."

No. 23,998. EDWD. R. ARNOLD, of Providence, R.I., for an "Improvement in cut-off gear of steam engines."

"What I claim, is, the combination of an adjustable cam or sector H^1, H^2, Fig. 4, or its equivalent, located on the rock shaft, a stop block J^1, J^2, Fig. 5, or its equivalent, and an arm I^1, I^2, Fig. 3, or its equivalent, attached to the devices which lift the valve; the three so combined, operating to regulate the cut off of the steam in its passage into the engine, at any desired point of the stroke, in the manner and on the principle substantially as described. 2nd, I claim the same combination above specified for the purpose of working the exhaust valves of a steam engine by means of the same rock shaft and eccentric motion with which the steam valves are operated."

No. 23,999. WM. S. G. BAKER, of Chicago, Ill., for an "Improvement in variable exhaust of locomotive engines."

"What I claim, is, the plug E, arranged in combination with the shell D, and with the exhaust pipes A, A^1, of a double cylinder steam engine, in such a manner that the exhaust of each cylinder can be varied, while both are separate from each other, substantially as and for the purpose specified."

No. 24,000. ABRAHAM BARTHOLF, of New York, N. Y., for an "Improvement in sewing machines."

"But what I claim, is, applying the said lever to work on a fixed fulcrum in combination with a friction clamp, which though it permits the said lever to be moved by and with the needle arm, or needle carrier, during a portion of the movement of the latter in either direction, for the purpose of drawing back the thread through the cloth and completing the stitch, and letting it slack again to form the loop of a succeeding stitch, holds the said lever in a positively stationary condition during the first part of the movement of the said arm, or carrier, in either direction, and so prevents the thread getting slack, till the needle has entered the cloth, and prevents it being drawn up through the cloth till the heel of the shuttle has arrived at the loop, substantially as herein described. And in combination with the thread controlling lever, constructed and applied as specified and operated as described by the needle arm or needle carrier, I claim the stationary eye *k*, made adjustable, relatively to the said lever, substantially as and for the purpose herein set forth."

No. 24,001. E. O. BAXTER, of Foreston, Ill., for an "Improvement in seeding machines."

"I do claim as new, 1st, the clearers formed of the bars *i*, *i*, placed on the seed tubes F, connected with the bar I, and operated through the medium of the lever J, or its equivalent, substantially as and for the purpose set forth. 2nd, the frame A, fitted to the axle B, as shown in connection with the cams *t*, *t*, interposed between the axle B and frame A, substantially as shown, so as to raise the frame A, when desired, to throw the seed-distributing device out of gear with the driving wheel. 3rd, the arrangement of the frame A, lever N, connected with frame A, by the rod *v*, and the upright M, on draught pole D, substantially as shown, for the purpose of regulating the depth of the furrows as described."

No. 24,002. DOUGLAS BLY, of Rochester, N. Y., for an "Improvement in artificial legs."

"What I claim is, 1st, I claim curving or deflecting the jointed extremities of the bars (J), so as to bring their axes of motion back of their line of direction, substantially as and for the purpose set forth. 2d, I claim the cord T, and spring X, acting upon the parts (D and L), substantially in the manner and for the purpose herein set forth. 3d, I am aware that metallic springs have been employed to similate the functions of the natural muscles, but experience has proved their inadequacy, both as respects the results obtained and their durability. I am also aware that india rubber, or elastic cords, have been used for the same purpose, and with no better results, and these I d not claim; but I claim the combination of the non-elastic tendon F, with the india-rubber spring (E), in such a manner that the required effect is derived from the compression and expansion of the material, and not from its elongation and contraction, substantially as set forth."

No. 24,003. AMOS H. BOYD, of Saco, Maine, for an "Improvement in sewing machines."

"The employment of lever I, a shoe and shoe-shaft spring *j*, plate *b*, and sliding bar *h*, with an under feed-plate *e*, the shoe and the feed plate having an intermittent direct horizontal reciprocating motion, and the shoe having an intermitting direct vertical reciprocating motion, the same being given substantially in the manner herein specified, and for the purpose set forth."

No. 24,004. JAMES BOYLE, of Roxbury, Mass., for an "Improvement in apparatus for cooling beer."

"What I claim as my invention, is, the combination with two or more vessels, containing a series of tubes inserted in

diaphragm plates, so arranged as to allow communication from the upper part of each vessel to the lower part thereof, and vice versa, by means of and through the said tubes of pipes, so arranged on either side of the diaphragm, as to connect the said vessels alternately at the top and bottom thereof, and of a pump or any suitable device for forcing beer, or any other liquid to be cooled, down through one set of tubes and up the other, while a supply of cold water surrounding said tubes is forced in a direction opposite to that of the liquid contained therein, substantially as set forth."

No. 24,005. MERRITT S. BROOKS, of Chester, Conn., for an "Improved drill stock."

"I claim the arrangement and combination with a spiral or screw-shaped shaft A, of a tube D, ratchet (*a*), and stop (*c*), within the socket E, as and for the purpose herein shown and described."

No. 24,006. JOHN D. BUCKLEY and S. F. MOSHER, of Schaghticoke, N. Y., for an "Improvement in plug for blasting rocks."

"The particular improvement which constitutes our said invention, and which we claim as having been originally and first invented by us, is, the combination of the tapered screw with the expanding metallic plug, having ledges, or other equivalents, to penetrate the rock, and provided with an aperture for the fuse, as set forth."

No. 24,007. GEO. E. COWPERTHWAIT, of Danbury, Conn., for an "Improvement in machinery for hardening hat bodies."

"I claim the method of hardening hat bodies by means of a cradle sustained in an inclined position, and having a tremulous movement, substantially as herein set forth. I also claim the method of subjecting hat bodies to greater or less pressure during hardening by inclining the cradle of the hardening machine to a greater or less extent, substantially as herein set forth."

No. 24,008. JESSE A. CRANDALL, of New York, N. Y., for an "Improved rocking toy."

"But what I claim as novel, and what I wish to secure by Letters Patent of the United States, are, the flat wound spings (C, C^1,) pole or bar (D), elastic string (F), pin or thumb screw (*i*), or their equivalent, in combination with the box (A) and frame (B), arranged and operated in the manner and for the purpose set forth and shown in the drawings."

No. 24,009. C. L. CROWELL and ROBT. SMITH, of Peoria, Ill., for an "Improved machine for upsetting tire."

"What we claim is, the combination of the lever and the intermediate slide, arranged substantially as described, for the purpose of giving movement to the sliding jaw."

No. 24,010. JAMES E. CROWELL, of Chelsea, Mass., for an "Improvement in drawing heads for spinning machines."

"What I claim as my invention, is, so constructing and gearing the two pairs of drawing rollers D^2, d^2, and D^3, d^3, that each pair will draw and release the sliver or roping in turn, and so allow the twist to pass and run back to the first rollers D^1, D^1, d^1, substantially as and for the purpose herein set forth."

No. 24,011. WM. DAWES, of Washington County, Tenn., for an "Improvement in soap."

"What I claim is, the use of the ingredients when combined in the proportions herein set forth, the whole forming an improved soap."

No. 24,012. GEO. W. DEAN, of Glenn's Falls, N. Y., for an "Improved tuyere."

"What I claim is, the adjustable rotating chambered cylinder C, arranged substantially as shown, with the slot B in the bed plate A, and relatively with the blast pipe D to operate as and for the purpose set forth."

No. 24,013. OLIVER H. DENNIS, of Altona, Ill., for an "Improvement in cultivators."

"What I claim is, the arrangement and combination of the hinged handles C, C, hinged side beams B, B, and connecting bars H, H, in relation to the central beam A, substantially in the manner and for the purpose herein specified."

No. 24,014. J. B. DRAKE, of Goshen, Ind., for an "Improvement in straw cutters."

"The particular improvement which constitutes my said invention, and which I claim as having been orignally and first invented by me, is, the arrangement of the hinged forked feeding-pawl frame Q, feeding and stop pawls P and T, centrally-arranged ratchet wheel N, spiked feed-roller M, and rising and falling knife frame, substantially as and for the purposes set forth."

No. 24,015. JOHN L. DRAKE, of Cincinnati, Ohio, for an "Improvement in lamps."

"But what I do claim, is, first, a wick tube for containing two or more flat wicks, one at least of which wicks is a conductor, said tube having a double chamber brace and opening, as herein stated, so that the burning wick may receive the oil from the conductor and still be free to move upon or against it, as it is raised or lowered, to regulate the burning, substantially as described. I also claim, in combination with a slotted and perforated dome and a flat wick for burning heavy oils, an auxilliary flat wick and wick tube, substantially as herein described, and for the purpose stated."

No. 24,016. DANIEL INGHAM DURFEY, of Croton, Ohio, for an "Improvement in apparatus for evaporating saccharine juices."

"I claim herein as new and of my invention, 1, a descending series of evaporating pans, each having a well or depression on the side next its immediate successor in the range, closable by sluices, substantially as set forth. 2nd, the arrangement of the sluices B, alternately on the right and left of the range, when used in the described combination with the wells or depressions above referred to, for the purpose set forth. 3rd, the strainer D, in the described combination, with the clarifier A, operating in the manner and for the purpose set forth."

No. 24,017. JOHN L. FRISBIE, of Cincinnati, O., for an "Improved water indicator for steam boilers."

"I claim, 1st, the described combination and arrangement of the box C, H, adjustable pipe B, I, J, valve K, sleeve Q, *q*, and sector M, N, operating in the described connection with the float arm O, for the purpose of varying the point of alarm from the outside of the boiler, as set forth. 2nd, the cogged sector M, N, provided with a segmental slot *n*, in the described combination with the sliding sleeve Q, *q*, float arm O, and bolt P, to enable the application of the alarm, to any part of the boiler, as set forth."

No. 24,018. RUSSELL FRISBIE, of Middleton, Conn., for an "Improved nut cracker."

"I claim the nut cracker, substantially as described, as a new and improved article of manufacture."

No. 24,019. OMRI C. FORD and JARVIS O. FORD, of Collinsville, Conn., for an "Improvement in water wheels."

"We claim the application of the reversed curved buckets, or guides to form a reversed action, centripetal and centre vent turbine water wheel, in combination with the inner and outer cut-off F and K, in the manner substantially as herein set forth and described."

No. 24,020. A. W. FOX, of Athens, Pa., for an "Improvement in straw cutters."

"I claim, first, the arrangement described and shown of the wheels D and E, or their equivalent, in connection with the crank G, connecting rod H, sliding frame I, and shafts B and C, by which I obtain an accelerated upward and retarded downward motion to the knife of a straw cutter, as set forth. Second, the combination of the sliding frame I with the knife J sliding in the said frame, by means of the action of the angular slot and roller, or their equivalent, by which combination of parts a drawing cut is given to the knife, without interfering with the attachment and operation of the connecting rod H, communicating motion from a shaft placed crosswise to the machine, as set forth."

No. 24,021. ALFRED GOULD and CYRUS MARSH, of Seneca Falls, N. Y., for an "Improved arrangement of key board for pianos, &c."

"What we claim is, the arrangement of two, three, or more ranges of keys of the key board, in the manner and in relation to each other substantially as and for the purposes herein specified."

No. 24,022. Joshua Gray, of Medford, Mass., for an "Improvement in sewing machines."

"What I claim is, 1stly, the combination of the reciprocating bar G, with its side inclines 10 and 11, and upper incline *w*, with the bar N, stop *v*, and adjustable stop *t*, arranged and operating as herein described, for the purpose set forth. 2ndly, in combination with the slide bar G, which operates the feeder, the bent lever *f*, and universally adjustable cam I, the several parts being arranged to operate substantially as described for the purpose set forth."

No. 24,023. Wm. D. Guseman, of Morgantown, Va., for an "Improvement in weighing scales."

"What I claim is, in a weighing apparatus, a pendulum drum, or roller, which has, in addition to a rolling motion, a traveling movement, substantially as and for the purposes described. I also claim, in combination with a rolling and traveling drum or roller, and an index, a traveling vernier or dial, substantially as described. I also claim the combination of the horizontal levers G of a platform scale, with the pendulum drums C, and bands F, substantially in the manner and for the purpose herein described."

No. 24,024. Josiah D. Harrington, of Rochester, N. Y., for an "Improved machine for roasting coffee."

"What I claim are, first, the construction and arrangement of the divided handle *h*, whereby the crank *e* not only serves to hold the two halves of the ball together, while rotating, but also to lift up one half of the ball when moved into the position shown in Figure 1. Secondly, I claim my method of uniting the two halves of a coffee roaster by means of the hinge E, formed of the curved jaw attached to one half of the ball, and passing into a slot in the second jaw, said slot having the pin R, beneath which the curved jaw passes."

No. 24,025. Elijah Harris, of Princeton, Ill., for an "Improvement in mode of applying lever power."

"But what I do claim is, the use of a weight B, a single or double lever C, axle and pivots D, *d*, acting in combination with the circular plate E, ratchet clicks G, and ratchet wheel H, in applying lever power to machinery, substantially in the manner and for the purposes specified."

No. 24,026. Joseph Hawthorn, of Thomas county, Geo., for an "Improvement in cotton press."

"What I claim is, the combination of the screw B, the tap block C, and the levers D and H, with the packing cases M, and their followers G, substantially in the manner and for the purpose herein described and shown."

No. 24,027. Albert H. Hook, of New York, N.Y., for an "Improvement in sewing machines."

"What I claim is, the combination of the cam *b*, the lever *e*, and spring *g*, arranged and combined substantially as and for the purposes herein set forth."

No. 24,028. Sherman S. Jewett, of Buffalo, N.Y., for an "Improvement in cooking stoves."

"I claim the bricks B, B^2, B^3, when constructed, arranged, and supported within the stove, for the purposes of an oven, substantially as herein described."

No. 24,029. Wm. W. Johnson, of Clarksburgh, Va., for an "Improved machine for manufacturing picket fencing."

"What I claim is, 1st, operating a series of twisters B, by means of pulleys and cords, arranged as set forth, so as to give a twist and reverse twist to the wire, in combination with vibrating fingers J, hollow shafts C, and tension plates S, or their equivalents, substantially as and for the purposes herein above set forth. 2nd, I claim the segmental roller N, constructed of three pieces *r*, r^1, r^{11}, for the purposes herein above explained."

No. 24,030. Isaac E. Jones, of Cincinnati, Ohio, for an "Improvement in adjustable canopy for railroad cars."

"I claim the combination of springs, covers, and hinges, all arranged and operating substantially in the manner and for the purposes herein set forth."

No. 24,031. Wm. Joslin, of Cleveland, Ohio, for an "Improvement in centrifugal gun."

"What I claim is, 1st, arranging the barrel G upon the same shaft with cog wheel F, which is secured near the periphery of the plate I, and revolving the barrel around the wheel K, substantially in the manner and for the purpose herein set forth. 2nd, the combination of the bevel and spur gear wheels with plate I and barrel G, the same being arranged in the manner and for the purpose herein specified. 3rd, I claim the arrangement of the slide *a* with the barrel and bevel table *d*, for the purpose of elevating the balls to the barrel, substantially as is set forth. 4th, the arrangement of the revolving hopper bottom, plate J, and cylinder *e*, for the purpose of conveying the balls down to the barrel, as is herein fully set forth."

No. 24,032. Albert B. Keeley and James S. Beek, of Philadelphia, Pa., for an "Improvement in pumps."

"What I claim is, the combination of a solid or valveless oscillating piston, with the peculiar shaped piston chamber, and with the upper and lower valves, all arranged and operating substantially as and for the purposes set forth."

No. 24,033. Henry S. Lesher, of Brooklyn, N.Y., for an "Improvement in breast pads and perspiration shields."

"What I claim is, the combination of the arm-pit shields or protectors H, and breast pads D, substantially as described, so as to produce a new article of female apparel of the character set forth."

No. 24,034. David D. Lewis, of Tamaqua, Pa., for an "Improvement in railroad frogs."

"I claim the steel point K dove-tailed to the body of the frog, in combination with the tread plate *k* and the block *i* when the said tread plate overlaps and is riveted to the said point, and when the block *i* is of such a tapering or wedge-shaped form, that during the process of riveting it and the tread plate to the body of the frog, the said block may serve the purpose of driving the point tight up into its socket, for the purpose specified."

No. 24,035. Arthur Maginnis, of Philadelphia, Pa., for an "Improvement in ventilating hats."

"What I claim is, the combination of the perforated hat body, the perforated sweat leather, and the intervening corrugated band C, when said band is provided with corrugations upon its two sides, and made plane and smooth on it, rear and front, the whole being constructed and arranged substantially in the manner and for the purpose herein specified."

No. 24,036. Robt. A. Maingay, of Pottsville, Pa., for an "Improved filterer and purifier."

"What I claim is, 1st, the combination of the lime water hopper D, agitator *h*, turbine i^1, *i*, *i*, and hogshead A, substantially as and for the purposes set forth. 2nd, the combination of the alkali keg E, hogsheads A^1, A^2, and turbine F, *o*, *o*, substantially as and for the purpose set forth. 3rd, the arrangement and combination of the purifying and filtering hogsheads A, A^1, A^2, A^3, filtering tank C, turbines F, *o*, *o*, i^1, *i*, *i*, purifier and alkali kegs or hoppers D, E, substantially as and for the purposes set forth."

No. 24,037. Albert H. Manchester, of Providence, R.I., for an "Improved anti-friction support for the backs of rudders."

"But what I claim is, the device or apparatus before described, viz., supporting the rudder from behind, by means of a backer or brace rising from the deck, or attached above it, and having rollers in its face, constructed, arranged, and operating substantially as described."

No. 24,038. Alfred Marsh, of Detroit, Mich., for an "Improvement in gas retorts."

"I do claim the employment of the secondary lid *h*, for the purposes set forth, when the same is arranged and connected with the feed pipe, substantially as shown and described."

No. 24,039. Thos. J. Mayall, of Roxbury, Mass., for an "Improvement in composition for emery sticks and wheels."

"What I claim is, the composition for the manufacture of emery wheels, sticks and tools of more or less flexible nature, formed of gutta percha, or india rubber and sulphur, emery

and olive oil, substantially in the manner and for the purposes set forth."
